SUPPLEMENT TO

THE CRITIC

JOURNAL OF BRITISH AND FOREIGN LITERATURE AND THE ARTS:

A Guide for the Library and Book-Club, and Booksellers' Circular.

SATURDAY, NOVEMBER 1, 1845.

PROSPECTUS

OF THE

METROPOLITAN

SEWAGE MANURE COMPANY.

WITH AN ANALYSIS OF EVIDENCE GIVEN BEFORE THE HEALTH OF TOWNS COMMISSION: AND EXTRACTS FROM WORKS OF AUTHORITY, PROVING THE ADVANTAGES, SANITARY, ECONOMICAL, AND PRODUCTIVE, OF THE APPLICATION OF THE REFUSE OF TOWNS IN THE FORM OF LIQUID MANURE, TO THE SURROUNDING AGRICULTURAL DISTRICTS.

Projector.

JOHN MARTIN, Esq., K. L., 30, Allsop-terrace.

Consulting Agricultural Chemist.

Professor BRANDE, F. R. S., Royal Mint, Tower.

Consulting Agricultural Engineer.

JAMES SMITH, Esq., of Deanston, 13, Queen-square, Westminster.

Engineer.

WILLIAM C. MYLNE, Esq., F. R. S., New River Head.

Architect.

CHARLES FOWLER, Esq., 1, Gordon-square.

Solicitors.

Messrs. BAILEY, SHAW, & SMITH, 5, Berners-street.

Secretary.

JOHN JAMES MOORE, Esq., 3, Queen-sq., Bloomsbury.

Provisional Committee.

WILLIAM AYRTON, Esq., F.R.S., 39 Dorset Square.
EDWARD WILLIAM COX, Esq., 1 Torrington Square.
THOMAS GEORGE EVERILL, Esq., 26 New Broad Street, and Birmingham.
H. P. FULLER, Esq., 112 Piccadilly.
W. A. GUY, Esq., M.D., Professor, King's College, 15 Bloomsbury Square.
Rev. FRANK HEWSON, Southall, Middlesex.
THOMAS HODGKIN, Esq., M.D., 9 Brook Street, Hanover Square.
CHARLES JOPLING, Esq., 4 Pelham Crecent, Brompton
JOHN MARTIN, Esq., K.L., 30 Allsop Terr,, New-rd.
F. G. P. NEISON, Esq., 25 Pall Mall.
GEORGE H. PINCKARD, Esq., 78 Great Russell Street, Bloomsbury Square.
The Hon. Captain PLUNKET, R.N., Travellers' Club, Pall Mall.
THOMAS OTTREY RAYNER, Esq., M.D., F.S A., St. Matthew's Place, Hackney.
JAMES REID, Esq., M.D., 10 Bloomsbury Square.
WILLIAM SHAW, Esq., 346 Strand.
THOMAS WILMOT, Esq., Isleworth.
JAMES WHISHAW, Esq., Barrister-at-Law, Gray's Inn.

PROSPECTUS.

THE great value of Sewage Water, from its highly fertilizing qualities, has long since been proved and appreciated; and the importance, in a sanitary point of view, of preserving the natural streams of the country from the pollution now caused by the discharge of the sewers, has also been much felt and insisted on. The intention therefore of the plan now proposed is to prevent the evil and obtain the benefit, thus conferring the most important advantages on the public.

These objects are of sufficient importance to the welfare of the community to warrant their being undertaken at the public expense; but it must be satisfactory to learn that they can be effected with considerable profit, and consequently form a legitimate object of commercial enterprise. It is therefore proposed to establish a Company for carrying out this purpose. With this view a plan was long since formed, which has undergone the consideration of practical and scientific men; and the result is that a complete scheme has been matured for conveying the Sewage-Water of London, by means of a system of pumping engines and pipes, analogous to that of the great Water Companies, and thus distributing the fertilizing fluid over the land, in such manner and proportions as may be best adapted to the various kinds of field and garden cultivation.

The Company does not, however, preclude itself from the use of railways, canals, or other cheap and convenient means of conveyance.

The average quantity required for agriculture is estimated at eighty tons per acre, which can be supplied within about twenty miles round the metropolis, at less than a quarter of the cost of stable or farm-yard manure, containing an equal proportion of fertilizing matter; and it will not only prove much more efficient, but can be distributed more conveniently, and at one-tenth of the expense.

The surprising results of sewage water as a manure have been long since exemplified in the neighbourhood of Edinburgh and other places, as explained in the Report of Mr. Smith, of Deanston, to the Health-of-Towns Commission, showing in some instances more than a tenfold increase of produce. It should further be observed, that several eminent horticulturists in the neighbourhood of London have practically demonstrated the value of this manure on their own grounds, and can be referred to for the satisfaction of those who take an interest in the matter.

The scope of the Company's first operations upon which the calculations are based, will be limited to the drainage of the District comprised by the King's Scholars' Pond, and Ranelagh Sewers, with the concurrence of the Commissioners, who have evinced the most cordial disposition to facilitate the objects of the Company. The contents of these sewers will be raised by powerful steam engines, and distributed by pipes over an extent of sixty square miles through the gardening and agricultural districts to the westward. Another important feature of this undertaking will be the application of the manure to poor and waste lands, which will be thereby rendered abundantly productive with great profit to the cultivators.

A sum of £300,000 only will be required to carry this part of the plan into effect; and it is, therefore, proposed for the present, to limit the calls to this amount, being £10 per share. The remainder of the capital will only be required after this portion of the undertaking shall have been in operation, and then only with the sanction of two-thirds of the shareholders at a special general meeting to be convened for that purpose.

A careful and moderate calculation of the annual outlay and income has been made, from which it can confidently be stated that the undertaking will realize a net profit of at least 15 per cent.

It is intended to apply to Parliament in the next Session for an Act to incorporate the Company, by which, besides giving all necessary powers, the interests of the shareholders will be secured, and their liability limited to the amount of their shares.

It is confidently assumed that this measure will receive the cordial support of all persons of authority and influence, on the ground of the great public benefit it is calculated to effect in regard both to health and productiveness; and as it is evident that the proposed plan also presents the opportunity of a most eligible and safe investment, it equally merits the attention and support of the capitalist.

The following Extracts from different works of high authority show the general and great benefits resulting from the application of Sewage Manures:—

"Edinburgh has many advantages over many of her sister cities; and the large supply of excellent spring water is one of the greatest blessings to her inhabitants, both in respect to household purposes and in keeping the streets clean, and lastly in irrigating the extensive meadows situated below the town, by the rich stuff which it carries along in a state of semi-solution, where the art of man, with the common-sewer water has made sand-hillocks produce riches far superior to any thing of the kind in the kingdom or in any country."

"By this water about 150 acres of grass land, laid into catch-work beds, is irrigated, whereof upwards of 100 belong to W. H. Miller, Esq., of Craigintinny; and the remainder to the Earls of Haddington and Moray, the heirs of the late Sir James Montgomery; and some small patches to other proprietors. The meadows belonging to the last-mentioned noblemen, and part of the Craigintinny meadows, or what is called the Old Meadows, containing about fifty acres, have been irrigated for nearly a century; they are by far the most valuable, on account of the long and continual accumulation of the rich sediment left by the water; indeed, the water is so very rich, that the proprietors of the meadows lying nearest to the town have found it advisable to carry the common shore through deep ponds, where the water deposits part of the superfluous manure before it is carried over the ground. Although the formation is irregular, and the management very imperfect, the effect of the water is astonishing; they produce crops of grass not to be equalled, being cut from four to six times a year, and given green to milch cows. The grass is let every year by public auction, in small patches, from a quarter of an acre and upwards, which generally brings from 24 to 30*l.* per acre. This year (1826) part of the Earl of Moray's meadow gave as high as 57*l.* per acre."—*From Mr. George Stephen's Essay on Irrigated Meadows, published in* 1826, pp. 72, 73.

"The value of town manure may be estimated, by the fact, that a portion of the drainage of Edinburgh spread upon certain level lands towards the sea, has increased the value of these lands by more than 5,000 a-year; and that, if the whole drainage of London could be so used, at a sufficient distance from the town, the value would exceed 500,000*l.* a year. Now engineers, who pump from the Thames many miles above London to supply pure water to the inhabitants, could as easily, by pumping away to any desired distance the fluid from the drains, supply the most valuable manure yet known (fluid town manure) to the horticulture and agriculture of the district; and the purity and beauty of the Thames, where it passes through London, would be preserved. Fluid manure, by sinking at once into the earth, is much less offensive to the neighbourhood, and affects less the purity of the atmosphere, than an equal quantity of solid manure spread, as it usually is, on the surface of the earth."—*From Dr. Arnott's Report on the Fevers which have prevailed in Edinburgh and Glasgow*, p 12.

Cleansing of Milan, and application of the refuse to Agriculture by Irrigation.

"Some of the meadows irrigated by the sewage-water of Milan yield a net rent of 21*l.* per *tornatura* (a measure of 10,000 square metres, equal to about two acres and a half), besides a land-tax of 61 francs 10 cents, the expenses of administration, repairs of buildings, &c. These meadows are mowed in November, January, March, and April, for stable-feeding; in June, July, and August they yield three crops of hay for the winter; and in September they furnish an abundant pasture for the cattle, till the beginning of the winter irrigation."—*From the First Report of the Health of Towns' Commission.* Vol. 2, p. 403.

"In respect to the difference of productiveness of irrigation and top-dressing, instances have been adduced where lands, by the use of stable or town manure as a top-dressing, have only had the ordinary produce increased one-fold under favourable circumstances; whilst portions of the same land lying convenient for irrigation have had the produce increased at the least five-fold by the application of the same manure in the liquid form. *From the evidence of James Dean, Esq., before the Health of Towns' Commission. First Report*, vol. ii., p. 406.

Speaking of the application of liquid manure to garden culture, he says:—

"I have known some instances, where the land has been favourably circumstanced, where the water

SUPPLEMENT TO THE CRITIC

has been applied to drill crops, such as peas, beans, and the usual garden products; with which it was very successful, especially with strawberries, producing more abundant crops, and much earlier, than could have been obtained by any mode of top-dressing."

In reference to the economical application of liquid manure, Mr. Dean says:—

"The expense of distributing the same quantities of manure, irrespective of the different degrees of productiveness from the different modes of application, would be on the average, for distribution in the solid form, about 3*l*, and in the liquid form. by irrigation, about 6s."

The value of this mode of agriculture nas also been proved on an extended scale, in the Duke of Portland's water meadows at Clipstone Park. The course there pursued has been chiefly one of irrigation, the water being but slightly imbued with Sewage Manure. It is, however, a striking illustration of the still greater advantages obtainable from fluid Sewage Manure.

"The land immediately occupied by these meadows was, in its wild state, a line of hill sides covered with gorse and heather—a rabbit warren, over which a few sheep wandered,—and a swampy valley below, thick set with hassocks and rushes, the favourite haunt of wild ducks and snipes; through which the little stream, the Maun, wound its way in its descent from the town of Mansfield.

"The whole tract, both upland and lowland, was of very little value. The valley was in many parts from nine to ten feet deep in bog, and almost worthless; the hill sides varied in quality, but 80*l*. a-year would have been a full rent for the 300 acres. Indeed, the whole of the Clipstone Park Farm, when taken in hand in the year 1816, containing 1,487 acres, had been let for the sum of 346*l*.

"The effect of this irrigation has been to raise the annual value of this land to 11*l*. 4*s*. per acre."—*Journal of the Royal Agricultural Society of England.* Vol. i., 1840, pp. 356, 357.

In the face of these proofs of the high value of Sewage Manure, the refuse of the Metropolis has been allowed to flow into the Thames—wasting every year manure equal in value to nearly £1,000,000—polluting the water—and when the tide recedes, leaving on its banks a quantity of animal and vegetable matter in a state of decomposition, producing effluvia highly injurious to health—at the very time that we are importing manure from Africa and America at an annual cost of between one and two millions sterling.

FORM OF APPLICATION FOR SHARES.

TO THE DIRECTORS OF THE METROPOLITAN SEWAGE MANURE COMPANY.

GENTLEMEN—*I hereby request you to allot me Shares in the above Company, and I undertake to accept the same, or any less number that may be allotted to me, and to pay the deposit of £1 per Share thereon, and to execute the necessary deeds when required.*

Address to Messrs. Bailey, Shaw, and Smith, Solicitors, 5, Berners-street, Oxford-street, London.

ANALYSIS OF EVIDENCE, &c.

The present mode of cleansing and draining our large towns, and disposing of their refuse, will doubtless be regarded by the next generation with the same feelings of surprise with which we view the strange customs of barbarous people. It is a striking example, on the grandest scale, of inefficiency and extravagance. We shall search in vain for any similar instance of wholesale waste of re sources. Not content with polluting our rivers and heaping up upon their banks masses of offen sive matter most injurious to health, we are constantly pouring into them treasures which cannot be estimated at a less sum than several millions a-year. In the metropolis alone the value of the liquid refuse annually carried into the Thames, and lost to agriculture, amounts, according to the very lowest estimate, to half a million pounds, and according to the highest to little short of four miilions.

To restore the waters of the Thames to their purity, to put a stop to the poisonous exhalations which are constantly rising from the banks of the river, and to apply this valuable refuse to the purposes of agriculture, are the objects of the METROPOLITAN SEWAGE MANURE COMPANY.

As the application of liquid manure to agricultural and horticultural purposes, though by no means unknown to the ancients, and long practised in many parts of Europe, and for a still longer period and more systematically in China, has not yet come into general use in England, it has been thought that an analysis of the valuable evidence recently laid before the Health of Towns Commission, together with extracts from works of authority, might prove useful, not merely by shewing the security of the data on which the Metropolitan Sewage Manure Company proposes to base its operations, but by imparting instruction to agriculturists into whose hands this Prospectus may chance to fall.

The principal results established by the quotations contained in the following analysis may be briefly stated thus:—

1. The very substances which, if allowed to collect and decompose in the midst of our large towns, give rise to fevers and other destructive diseases, may, by a proper system of conveyance, be made the source of great fertility to the surrounding country. (Sec. 1—5.)

2. These same substances diluted with water may be conveyed into the country, and applied to the land with perfect safety, and without giving rise to offensive exhalations. (Sec. 6—8.)

3. The refuse of towns, which it is thus proposed to apply to the purposes of agriculture, contains all the elements of fertility, and has a very high money value. (Sec. 9—14.)

4. Though the employment of liquid manure is, as yet, by no means general, instances of increased produce attending its use are on record,

(sec. 15—18), and very striking illustrations have been afforded of the increased value which it gives to land. (Sec. 19—26.)

5. From very accurate experiments on the relative fertilising power of different kinds of manure, it results that an equal produce may be raised by liquid manure at a far cheaper rate than by any other manure whether domestic or foreign; and that liquid manure is consequently by far the most economical which can be made use of. (Sec. 26—31). There are also certain incidental advantages attending the use of liquid manure, such as a more rapid growth of the plants watered by it, the destruction of some kinds of insects, and its applicability to every kind of cultivation. (Sec. 32—34).

6. It is admitted on all hands that the value of liquid manure is such as amply to repay the expense of its conveyance, (sec. 35), it is also proved that the conveyance by pipes is by far the most economical means of transport (Sec. 36); and on comparing the relative expense of conveying solid and liquid manure, we arrive at the striking conclusion, that the cost of the conveyance of liquid manure by pipes is, at the very outside, one-twentieth of the transport of solid manure by carts, (sec. 37—40); while the cost of distributing the liquid manure, so conveyed, over the land is exactly one-tenth. (Sec. 41).

7. The practicability of the plan proposed by the Sewage Manure Company is amply proved by experiment. (Sec. 42).

8. The several contents of our sewers, (the excreta of animals, gas-water, &c.), which it is proposed thus to convert to the use of the agriculturist, when separately applied, are found to possess highly fertilizing properties.

It is not pretended that the subject of the application to agriculture of the liquid manure as collected from the sewers of large towns is exhausted by the following analysis, but it is confidently expected that the considerations brought forward will suffice to prove the enormous value of that which is now allowed to run to waste, and the entire feasibility of the plan here proposed for its collection and distribution. Nor can it be reasonably doubted that a Company formed to effect so great a saving, to confer so great a boon on the inhabitants of the metropolis and on the agriculture of the surrounding districts, will receive the cordial support of the public, and the sanction of the legislature, alive to the vast importance of providing, by a system of wise economy, for the rapid increase of our already crowded population. An annual addition to our population of 400,000 inhabitants cannot but excite the most lively apprehensions, if we continue a system of wasteful extravagance, by which the richest elements of fertility, having an acknowledged value of several millions a-year, are constantly being thrown into the sea. Unlike all other sources of manure, the refuse of towns bears a constant relation to the increase of population, and promises a perennial supply of fertilizing matter, which not only cannot fail, but must be continually on the increase.

☞ It is but justice to Mr. John Martin to state that he long since brought forward and enforced many of the considerations contained in the following extracts, as the reader will perceive on referring to his "Thames and Metropolitan Improvement Plan," published in 1842.

1. *The very substances which, if allowed to collect and decompose in the centre of our large towns, give rise to destructive diseases, may be made the source of great fertility to the country.*

1. "The very refuse of the materials which have served as food and clothing to the inhabitants of the crowded city, and which, if allowed to accumulate there, invariably and inevitably taint the air, and render it pestilential, promptly removed and spread out on the surface of the surrounding country, not only give it healthfulness, but clothe it with verdure, and endue it with inexhaustible fertility."—*Dr. Southwood Smith's evidence before the Health of Towns' Commission.* First Report, p. 79.

2. "The condition of large rural districts in the immediate vicinity of the towns, and of the poorest district of the towns themselves, presents a singular contrast in the nature of the agencies by which the health of the inhabitants is impaired. Within the towns, we find the houses and streets filthy, the air fetid, disease, typhus, and other epidemics rife amongst the population; bringing, in their train, destitution and the need of pecuniary as well as medical relief; all mainly arising from the presence of the richest materirls of production, the complete absence of which would, in a great measure, restore health, avert the recurrence of disease, and, if properly applied, would promote abundance, cheapen food, and increase the demand for beneficial labour. Outside the afflicted districts, and at a short distance from them, as in the adjacent rural districts, we find the aspect of the country poor and thinly clad with vegetation, except rushes and plants, favoured by a superabundance of moisture, the crops meagre, the labouring agricultural population few, and afflicted with rheumatism and other maladies, arising from damp and an excess of water, which, if removed, would relieve them from a cause of disease, the land from an impediment to production; and, if conveyed for the use of the town population, would give that population the element of which they stand in peculiar need, as a means to relieve them from that which is their own cause of depression, and return it for use to the land as a means of the highest fertility."—*Report from the Poor Law Commissioners*, &c. 8vo, p. 97."

3. "The most effectual, as well as the most economical method of restoring the balance between the town and country, would be to avail ourselves of that enormous accumulation of animal exuviæ which the existence of a crowded city necessarily occasions, and to convert that which is now a pabulum of disease into a source of life and abundance.

"As indeed the geologists of the present day cite, as a proof of the ignorance or neglect of their predecessors, that the stone required for the fortifications at Gibraltar was brought out from England, when it might have been obtained upon the very spot; so I conceive our descendants will marvel at the inattention to chemical science evinced by the present generation of farmers, in importing from distant regions, such as South America, substitutes, and those perhaps but imperfect ones, for that fertilizing

material, of which the greater part is allowed to deposit itself unprofitably in the beds of our rivers."—*On the Application of Science to Agriculture, by C. Daubeny, M.D., F.R.S. Journal of the Royal Agricultural Society.* 1842.

4. "Thousands of hundred-weights of those phosphates flow annually into the sea, with the Thames and with other of the British rivers. Thousands of hundred-weights of the same materials, arising from the sea, annually flow back again into that land in the form of guano."—*Liebig's Chemistry of Agriculture, &c.*

5. "It is to the use of this substance (town refuse) drawn from reservoirs in the towns, that Belgium, in a great degree, owes her fertility; while, in many large cities of Germany, it is allowed to drain into the rivers. Since 1200 pounds weight of it yearly may be reckoned for each unit of population, it is easy to see, where population is counted by millions, how important its application must be."—*Professor Sprengel, on Animal Manures. Journal of the Royal Agricultural Society.* 1840.

II. *The offensive and unwholesome qualities sometimes attributed to liquid manure are due to the solid deposits, and not to the fertilizing liquid.*

6. "I observed, on going over the meadows (in the neighbourhood of Edinburgh) so irrigated with the Sewer Water, that the offensive smells complained of by some of the neighbouring inhabitants, as arising from the meadows, emanated mainly from the masses of decomposing matter left in the ponds, and not so much, if at all, from the water holding only fertilizing matter in solution."—*Evidence of James Smith, Esq., of Deanston. Health of Towns Commission.* Part ii., Appendix, p. 325.

7. Dr. Lyon Playfair, speaking of some imperfect attempts to apply the refuse of towns, made in the case of Preston and Bury, says:—

"This" the failure of the attempts, "is mainly owing to the want of dilution of the refuse, which not only would prevent the escape of odour, but also render the manure more fit for reception by the plants."—*Evidence before the Health of Towns' Commission.* Part ii., Appendix, p. 46.

8. "The pernicious effects arising from the moisture generated in such stagnant waters, would, doubtless, be much diminished by the conveyance to a distance, and the application of the liquid manure which is thrown into them and wasted."—*Second Report of Health of Towns Commission,* p. 18.

III. *Estimates of the value of the refuse of towns.*

9. "Human excrements contain (with the exception of one ingredient, silicate of potash) all the conditions essential to fertility. . . . In fact, when we recollect that a pound of urine contains all the ingredients necessary for the production of a pound of wheat, it seems incredible folly to allow all the valuable refuse to run to waste in our large towns, and to send whole fleets to Ichaboe and the Incas, for what we are wasting at home. In Flanders, where much manure is used, the collected excrements of a man for one year are valued at 1*l.* 17*s.*"—*Dr. Lyon Playfair. Health of Towns Commission.* Part ii., Appendix, p. 47.

10. "Taking a general view of the subject, we may assume a clear revenue from the Sewer Water of all towns of 1*l.* for each inhabitant, either in a direct money return, or partly to the inhabitants in a reduced price, from the increased abundance of produce."—*Evidence of J. Smith, Esq., of Deanston. Health of Towns Commission.* Part ii., Appendix, p. 328.

11. "The general conclusions deducible from these experiments (made in dry weather during the months of May, June, and July, 1844) are:—

"That the mean discharge per acre, taking the whole surface drained, urban and suburban, is about 256 cubic feet in twenty-four hours.

"Assuming (as regards the relative proportion of urban and suburban) the district to which the accompanying observations refer to be a fair type of that included within the whole of the Metropolitan Commissions of Sewers, and taking the extent of the active jurisdictions of those on the north side of the river Thames at forty-three square miles, and the jurisdiction of the Surrey Commission at fifteen square miles, the ordinary daily amount of sewage discharged into the river on the north side would be 7,045,120 cubic feet, and on the south side 2,457,600 cubic feet, making a total of 9,502,720 cubic feet, or a quantity equivalent to a surface of more than thirty-six acres in extent and six feet in depth."—*Extracts from a Report of the Average Discharge of Sewage through principal outlets, printed by order of the Court of Sewers for Westminster and Middlesex, 3d. Oct.* 1845.

12. "I have ascertained that the quantity of sewer water due to a town of 50,000 inhabitants amounts to about 1,190,080,946 gallons per annum, which quantity will yield an annual application of 17,920 gallons per acre to an extent of 66,410 acres. Taking the average cost of guano and farm-yard manure at 2*l.* per acre, and deducting 12*s.* 9*d.*, the cost of the application of the Sewer Water, there will appear a saving due to the Sewer Water of 1*l.* 7*s.* 3*d.* per acre; allowing one half thereof to go to the farmer, there will remain a free income due to the Sewer Water of 45,241*l.*, which is nearly 1*l.* per head of the population."—*Evidence of James Smith, Esq., Deanston. Report of the Health of Towns Commission.* Part ii., Appendix p. 328.

13. "London is only one huge instance of this thoughtless waste of the agricultural riches of the soil of England; from every other English city, every town, every hamlet, is hourly passing into the sea a proportionate waste of liquid manure; and I have only spoken of the solid or mechanically suspended matters of the sewerage; the absolutely fluid portion is still rich in urine, ammoniacal salts, soda, &c., when all the mechanically suspended matters have been separated from the other portion. According to very careful experiments, this fluid part often contains 16 per cent of animal matters, salts, &c., intimately or chemically combined with the water."—*Essay on Liquid Manure, by Cuthbert Johnson, Esq., Journal of the Royal Agricultural Society.* 1840.

14. "The solid substances contained in urine, if all added to the land, would be more fertilizing than guano, which now sells at £10 a ton. If we estimate the urine of each individual on an average at only 600 pounds, then there is carried into the common sewers of a city of 15,000 inhabitants a yearly weight of 600,000 pounds, or 270 tons of manure, which at the present price of guano is worth £2700; which would no doubt prove more fertilizing than its own weight of guano, and might be expected to raise an increased produce of not less than 1,000 quarters of grain."—*Johnson's Lectures on Agricultural Chemistry.*

IV. *Instances of Increased Produce from the use of Liquid Manure.*

15. "In the case of the Union Workhouse of Rye and

Aylesbury, soil pans were fixed at the instance of Mr. Parker, the Assistant Commissioner. When the situations have been favourable, as at Rye, for giving a rapid fall to the drain, I placed a loose covered tank or cesspool at some distance from the building: the tank was formed for the preservation of the refuse, and its application to agricultural purposes as liquid manure. In one instance of some land manured by the liquid manure applied by water-carts, the produce of the land was stated to have been doubled."—*Evidence of Mr. S. O. Foden. Health of Towns Commission.* First Report p. 353.

Speaking of the application of liquid manure to garden culture, Mr. Dean says :—

16. "I have known some instances, where the land has been favourably circumstanced, where the water has been applied to drill crops, such as peas, beans, and the usual garden products, with which it was very successful, especially with strawberries, producing more abundant crops, and much earlier than could have been obtained by any mode of top-dressing."—*First Report of the Health of Towns Commission* Vol. ii., p. 406.

17. "I have been trying the liquid from our Union for some months in several ways, all of which I am perfectly satisfied with, and have no doubt but it will be generally used, and may be seen on my ground at any time."—*Extract of a Letter addressed to Mr. Bailey, the Solicitor of the Metropolitan Sewage Manure Company, by Mr. J. Wilmot, Isleworth.*

18. "The effect of liquid manure on poor loose sand, if not seen, would not be credited. If a portion of the unimproved original soil were produced, and compared with that which has been many years in cultivation, it would be difficult to persuade a stranger, not acquainted with the system of gradual improvement, that the latter was as poor as the former."—*Agriculture of the Netherlands, by the Rev. W. L. Rham. Journal of the Royal Agricultural Society.* 1842.

Instances of the increased value given to land by the use of liquid manure.

The following extracts refer to the city of Edinburgh ;—

19. "In the case of Edinburgh the increase of the value of poor lands thus irrigated, is shewn to have been from 30*s.* to 15*l.*, and, in some cases, to 20*l.* per acre; other lands, once let for 40*s.* to 50*s.* per acre, now let for very high sums. It is true, that the inhabitants around those meadows object to it as offensive (see sec. 6 and 7) ; the value, however, of the irrigation is seen by the parties interested in about three hundred acres of land, estimating the compensation that would induce them to discontinue that practice at the sum 150,000*l.*." *Evidence of Mr. Roe, C. E., Health of Towns Commission.* First Report, p. 407.

20. "The practical result of this application of Sewer Water is, that land which let formerly at from 40*s.* to 6*l.* per Scotch acre, is now let annually at from 30*l.* to 40*l.*; and that poor sandyland on the sea shore, which might be worth 2*s.* 6*d.* per acre, lets at an annual rent of from 15*l.* to 20*l.* That which is nearest the city brings the higher rent chiefly because it is near and more accessible to the points where the grass is consumed, but also partly from the better natural quality of the land. The average value of the land irrespective of the Sewer Water application may be taken at 3*l.* per imperial acre, and the average rent of the irrigated land at 30*l.*, making a difference of 27*l.*; but 2*l.* may be deducted as the cost of management, leaving 25*l.* per acre of clear annual income due to the Sewer Water." *Evidence of James Smith, Esq., Deanston. Report of the Health of Towns Commission.* Part ii. Appendix, p. 326.

21. "The lowest sum obtained per Scotch acre for meadow land in the vicinity of Edinburgh, irrigated with the refuse of that town, is 20*l.*, and the average amounts to about 40*l.*" *Evidence of Dr. Lyon Playfair.* Part ii. Appendix, p. 46.

22. "The value of town manure may be estimated by the fact, that a portion of the drainage of Edinburgh spread upon certain level lands towards the sea has increased the value of these lands by more than 5,000*l.* a-year; and that, if the whole drainage of London could be so used, at a sufficient distance from the town, the value would exceed 500,000*l.* a-year. Now engineers, who pump from the Thames many miles above London to supply pure water to the inhabitants, could as easily, by pumping away to any desired distance the fluid from the drains, supply the most valuable mannre yet known (fluid town manure) to the horticulture and agriculture of the district; and the purity and beauty of the Thames, where it passes through London, would be preserved. Fluid manure, by sinking at once into the earth, is much less offensive to the neighbourhood, and affects less the purity of the atmosphere, than an equal quantity of solid manure spread, as it usually is, on the surface of the earth."—*Dr. Arnott's Report on the Fevers which have prevailed in Edinburgh and Glasgow*, p. 12.

23. The water *containing the soluble partsi s of great use*, and is carefully applied to the irrigating of grass lands." "Such ground is annually kept in grass, and yields from *three to six cuttings* in the season." *Extract from a Letter of Mr. Thomas Olliver of Lockend, addressed to a Committee of Gentlemen appointed to Report upon Mr. Martin's Plan, printed* 1836.

24. "Edinburgh has many advantages over many of her sister cities; and the large supply of excellent spring water is one of the greatest blessings to her inhabitants, both in respect to household purposes and in keeping the streets clean, and lastly in irrigating the extensive meadows situated below the town, by the rich stuff which it carries along in a state of semisolution, where the art of man, with the common-shore water, has made sand-hillocks produce riches far superior to anything of the kind in the kingdom or in any country."

"By this water about 150 acres of grass-land, laid into catch-work beds, is irrigated, whereof upwards of 100 belong to W. H. Miller, Esq., of Craigintinny, and the remainder to the Earls of Haddington and Moray, the heirs of the late Sir James Montgomery, and some small patches to other proprietors. The meadows belonging to the last-mentioned noblemen, and part of the Craigintinny meadows, or what is called the Old Meadows, containing about fifty acres, have been irrigated for nearly a century; they are by far the most valuable, on account of the long and continual accumulation of the rich sediment left by the water; indeed, the water is so very rich, that the proprietors of the meadows lying nearest the town have found it advisable to carry the common sewer through deep ponds, where the water deposits part of the superfluous manure before it is carried over the ground. Although the formation is irregular, and the management very imperfect, the effect of the water is astonishing; they produce crops of grass not to be equalled, being cut from four to six times a-year, and given green to milch cows. The grass is let every year by public auction, in small patches, from a quarter of an acre and upwards, which generally brings from 24*l.* to 30*l.* per acre. This year (1826) part of

the Earl of Moray's meadow gave as high as 57*l.* per acre."—*From Mr. George Stephen's Essay on Irrigated Meadows, published in* 1826, pp. 72, 73.

Cleansing of Milan, and application of the refuse of Agriculture by irrigation.

25. "Some of the meadows irrigated by the Sewage Water of Milan yield a net rent of 21*l.* per *tornatura* (a measure of 10,000 square metres, equal to about two acres and a half), besides a land-tax of 61 francs 10 cents, the expenses of administration, repairs of buildings, &c. These meadows are mowed in November, January, March, and April, for stable feeding; in June, July, and August they yield three crops of hay for the winter; and in September they furnish an abundant pasture for the cattle, till the beginning of the winter irrigation."—*First Report of the Health of Towns' Commission.* Vol. ii, p. 403.

The value of this mode of agriculture has also been proved on an extended scale, in the Duke of Portland's water meadows at Clipstone Park. The course there pursued has been chiefly one of irrigation, the water being but slightly imbued with Sewage Manure. It is, however, a striking illustration of the still greater advantages obtainable from fluid Sewage Manure.

26. "The land immediately occupied by these meadows was, in its wild state, a line of hill sides covered with gorse and heather—a rabbit warren, over which a few sheep wandered—and a swampy valley below, thick set with hassocks and rushes, the favourite haunt of wild ducks and snipes; through which the little stream, the Maun, wound its way in its descent from the town of Mansfield.

"The whole tract, both upland and lowland, was of very little value. The valley was in many parts from nine to ten feet deep in bog, and almost worthless; the hill sides varied in quality, but 80*l.* a-year would have been a full rent for the 300 acres. Indeed the whole of the Clipstone Park Farm, when taken in hand in the year 1816, containing 1,487 acres, had been let for the sum of 346*l.*

"The effect of this irrigation has been to raise the annual value of this land to 11*l.* 4*s.* per acre."—*Journal of the Royal Agricultural Society of England.* Vol. i., 1840, p. p. 356, 367.

V. *Relative fertilizing power of Farm Manure, Guano, Sewer Water, and its principal constituents.*

27. "By an experiment made last season, on a portion of meadow in Lancashire, applying at the rate of 15 tons of farm yard manure per acre, and 3 cwt. of guano to another equal portion, their effects were found to be inferior to the 8 tons of Sewer Water applied to a similar extent of ground."

Cost of manuring one acre with Sewer Water	0	12	9
Ditto with Guano, 2½ cwt. at 8*s.* . .	1	0	0
Ditto with farmyard manure, 15 tons, at 4*s.*	3	0	0
Sewer Water is cheaper than Guano .	0	7	3
Ditto than farm-yard manure . . .	2	7	3
Ditto than the average of the two . .	1	7	3
Cost of manuring one acre with Sewer Water	0	16	6
Ditto with Guano, 5 cwt. at 8*s.* . .	2	0	0
Ditto with farm-yard manure, 30 tons at 4*s.*	6	0	0
Sewer Water is cheaper than Guano . .	1	3	6
Ditto than farm-yard manure . . .	5	3	6
Ditto than the average of the two . .	3	3	6

—*Evidence of James Smith, Esq., of Deanston. Report of Health of Towns Commission.* Part ii., Appendix, p. 328.

28. "In respect to the difference of productiveness of irrigation and top-dressing, instances have been adduced where lands, by the use of stable or town manure as a top-dressing, have only had the ordinary produce increased one-fold under favourable circumstances; whilst portions of the same land lying convenient for irrigation have had the produce increased at the least five-fold by the application of the same manure in the liquid form."—*From the evidence of Mr. James Dean, before the Health of Towns Commission.* First Report, vol. ii., p. 406.

29. "It is, from long experience, an admitted fact among the German farmers, that there are no manures so powerful in their operation as those which are liquids, such as human urine or bullocks' blood; so that no English farmer need fear deception as to their asserted value. This very fact was submitted, some years since, to the consideration of Professor Hembstadt, of Berlin, by the Saxon and Prussian authorities, who were anxious to apply the contents of the city drains towards fertilizing the barren lands in the neighbourhood of Dresden and Berlin. This talented agriculturist undertook, in consequence, a series of valuable experiments, which, varied in every possible way, were carried on for a considerable period: the result of them, so highly advantageous to the prosperity of Germany, Hembstadt then published. They were repeated with unvaried success by Professor Schübler, and the results may be stated in the following order:—

If the soil, without any manure, yield a produce of three times the quantity of seed originally sown, then the same quantity of land will produce—

5 times the quantity of seed sown, when dressed with old herbage, grass, leaves, &c.
7 times when dressed with cow-dung.
9 times, with pigeons' dung.
10 times, with horse-dung.
12 times, with *human urine.*
12 times, with sheep's dung.
14 times with *human manure*, or *bullocks' blood.*

—*Essay on Liquid Manure, by Cuthbert Johnson, Esq. Journal of the Royal Agricultural Society.* 1840.

30. One hundred parts of the urine of a healthy man are equal to 1300 parts of the fresh dung of a horse, according to the analysis of Macaire and Marat, and to 600 parts of the fresh dung of a cow. The powerful effects of urine as a manure are well known in Flanders, and they are considered invaluable by the Chinese, who are the oldest agricultural people we know. Indeed, so much value is attached to the influence of human excrements by these people, that laws of the state forbid that any of these excrements should be thrown away; and reservoirs are placed in every house, in which they are collected with the greatest care. No other kind of manure is used for their corn-fields."—*Liebig's Chemistry of Agriculture.*

31. One hundred parts of wheat grown on a soil manured with cow-dung (a manure containing the smallest quantity of nitrogen) afforded only 11·95 parts of gluten, and 62·34 parts of amylin or starch; whilst the same quantity, grown on a soil manured with human urine, yielded the maximum of gluten, namely 35·1 per cent, or nearly three times the quantity."—*Liebig's Chemistry of Agriculture.*

Incidental advantages attending the use of Liquid Manure.

32. "A great, but not sufficiently estimated advantage, which arises from manuring with urine, consists, undoubtedly, in the quicker return effected on the capital of manure, in consequence of its being applied to plants already in a growing state. In the case of

manuring with solid excrements, a period of two or three years may elapse before complete decomposition ensues, and the plants have derived the full advantage. The crops, too, during this period, lose much of the manure, in consequence of its best portions being drained away by the snow and rain water."

33. "Lastly, one of the uses of manuring with urine, which has hitherto been little regarded, consists in this,—that earth-worms, and the larvæ or grubs of various insects, which in many countries, for instance, on the Upper Weser, do such extraordinary injury to the young rye, are destroyed by it; this effect is produced, as my own experiments made expressly on this point have shown, by the ammonia of the urine; for, if we water a field much infested with earth-worms, with a solution of carbonate or caustic ammonia, the worms come immediately to the surface, writhe for some time, and then die. Probably, also, the cock-chafer grub, when not too deep in the ground, might be destroyed in the same manner; a fact that would be of great importance to many districts."—*On Animal Manures, by Professor Sprengel. Journal of the Royal Agricultural Society.* 1840.

Applicability of Liquid Manure to different kinds of culture.

34. "I have often employed, with decided effect, in my own garden, for vines, peach, and standard apple-trees, liquid manure, prepared either by mixing one part, by weight, of cow-dung with four parts of water, or the collected drainage of the stable and cow-house; of these, the vine is by far the most benefited by the application; but to whatever fruit-tree the gardener has occasion to apply manure, there is no form so manageable and so grateful to the plant as the liquid."—*Essay on Liquid Manure, by C. W. Johnson, Esq. Journal of the Royal Agricultural Society.* 1840.

VI. *Liquid Manure would amply repay the expense of its transport.*

35. "If the contents of all the sewers could be brought to a convenient situation for disposal, it could sell for a very considerable sum, and amply repay the cost of any means that might be used to bring it there."—*Mr. E. Cresy. First Report of the Health of Towns Commission*, p. 152.

Expense of Conveying the Liquid Manure by means of Pipes.

36. "There would be no impracticability or difficulty, if the sewers were collected into shafts, as it could be passed out through loop mains to any districts that it might be required. The expense of doing so would be less than that of passing water through the mains and minor distributionary branches required for supplying a district" (with fresh water).—*Evidence of Mr. Joseph Quick. First Report of Health of Towns' Commission*, p. 396.

Relative Expense of the Conveyance and Distribution of Solid and Liquid Manure.

37. "The cost of transmitting water to a distance of five miles, and to a height of 200 feet, including wear and tear of pumping machinery, fuel, labour, interest of capital invested in pipes, reservoirs, engines, &c., amounts to about 2½d. per ton. The cost of cartage to the same distance and height will, under favourable circumstances, amount to 4*s.* per ton."—*Evidence of T. Hawksley, Esq. First Report of the Health of Towns' Commission*, p. 322.

38. "It is quite clear that a very great weight of liquid material may be moved by pumping, more cheaply than by any other known mode of conveyance."—Ibid. p. 322.

39. "On a full examination of the evidence adduced, and of the evidence indicated, it will, I trust, be found to be satisfactorily established, that the houses of towns may be constantly and rapidly cleansed of noxious refuse by adaptation of drains and public sewers, and that by such an adaptation, for one street or one district cleansed at the present expense, three may be cleansed by the proposed mode; that the natural streams flowing near towns may be preserved from the pollution caused by the influx of the contents of the public rivers, by the conveyance of all refuse through covered pipes; and that the existing cost of conveyance, by which its use for production is restricted, may be reduced to less than one-fortieth or fiftieth of the present expense of removal by hand labour and cartage."—*Report of the Poor Law Commissioners*, &c., p. 63.

40. "By the application of capital and machinery, the cost of conveyance of substances in suspension in a fluid, even at the water companies' prices, may be rendered thirty and even more than forty times as cheap as collection by hand labour and removal by cartage. In the metropolis, where the persons who water the roads may obtain water gratuitously from pumps, the water supplied by stand-pipes by some of the water companies at 1*l.* per 100 tons is found to be twice as cheap as the mere labour of pumping the water into the cart."—Ibid p. 53.

41. In reference to the economical application of liquid manure, Mr. Dean says,—

"The expense of distributing the same quantities of manure, irrespective of the different degrees of productiveness from the different modes of application, would be on the average, for distribution in the solid form, about 3*l.*, and in the liquid form, by irrigation, about 6*s.*"

VII. *Practicability of the Proposed Plan of Conveying the Liquid Manure by Pipes, and Distributing it over the Land by Jets.*

42. "The water could not well be distributed over the open tillage land by irrigation; it would therefore be necessary to resort to some mode of distributing it by jet. This requires the conveyance of the water in pipes, under a pressure of from 100 to 150 feet of altitude, to a number of convenient points in the different farms where it is to be used. In this there is no difficulty: it is a simple engineering question, the success of which is certain, while the cost can be estimated on known data. I made an experiment, on a large scale, at the Southwark Water Works, which satisfied me of the practicability of distribution by the jet. With an altitudinal pressure of 120 feet of water, and using a 2½ inch hose with a discharging orifice or nozzle of one inch in diameter, I found that I could, from one point, distribute water over an area of two statute acres—but, to be safe, say one statute acre. Dividing the quantity so required annually into three portions, for separate applications, one jet of one-inch orifice will deliver each portion in about an hour, as ascertained from data founded on an experiment made the same day to ascertain the quantity of water discharged in a given time from a similar orifice with a similar pressure."—*Evidence of James Smith, Esq., of Deanston. Report of Health of Towns' Commission.* Part ii., Appendix p. 327.

LONDON: Printed by HENRY MORRELL COX, of 74, Great Queen-Street, in the Parish of St. Giles in the Fields, in the County of Middlesex, Printer, at his Printing Office, 74 & 75, Great Queen Street aforesaid, and published by JOHN CROCKFORD, of 29, Essex Street, Strand, in the Parish of St. Clement Danes, in the City of Westminster, Publisher, at the Office of THE CRITIC, 29 Essex Street, aforesaid, on Saturday, the 1st day of November, 1845.

THE CRITIC,
And Journal of Literature.

SATURDAY, MAY 3, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present* and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

TO READERS.

THE present number of THE CRITIC introduces it as one of the established journals of Great Britain to a greatly extended circle of readers. On an occasion of so much moment, an address to friends, both old and new, as to its position and prospects, may, we hope, be excused.

To few is the history of THE CRITIC known, for but a fraction of its present readers have followed its fortunes from its birth. A short account of its origin and progress will serve to make its plans for the future more intelligible, and may help to enlist in its favour the sympathies of those who may approve the line of conduct it has adopted, and to which it will steadfastly adhere.

At its first birth, THE CRITIC was merely a monthly appendage to another journal. But so much was it approved, and so steadily did its circulation grow among others than the class for whom it was originally designed, that we were encouraged to make of it a publication entirely distinct. But nevertheless we resolved to proceed with cautious steps, and only to keep pace with the progress of public favour, always slowly won. With this view, THE CRITIC was, in the first instance, advanced from a monthly to a fortnightly publication, the subscribers being at the same time informed that the arrangement was only temporary, and that it depended upon the growth of public favour how soon should be carried out its ultimate design of assuming the formal position of a weekly Journal. This it was resolved not to attempt until success was assured; until the public voice had declared so unequivocally in its favour that THE CRITIC should appear in the character of an established Journal, and with a certainty of circulation and influence. To advance these, a multitude of improvements were introduced; the shape was changed to its present convenient form; the contents were enlarged in quantity, and we believe we may say, improved in quality; many novelties were adopted, and the result was, that during the progress of the second volume the circulation presented a rapid and steady increase. Advertisements came in with advancing numbers, and the publishers began to recognize its influence, to ask its judgment of their works, and cite its opinions as authorities.

At the close of the second volume, or rather the first volume of the new series, the following was the position to which THE CRITIC had attained, even under all the disadvantages attending a fortnightly issue.

Its circulation was considerably greater than that of the the *Literary Gazette*, and not much inferior in number to that of the *Athenæum*.

But for the purposes of a literary journal, its influence was equal to that of any of its contemporaries. It had succeeded in winning the confidence of the principal book buyers in the United Kingdom, namely, the circulating libraries and the book clubs. Satisfied that THE CRITIC was at least an honest and independent guide in the choice of books; assured that it was connected with no publisher, and swayed by no private interest, they adopted it as their counsellor in their purchases. Many hundreds of private persons have done the like, and at this moment THE CRITIC can exhibit a list of upwards of *five hundred* book clubs and circulating libraries in England, Ireland, and Scotland, besides many in the colonies, who are guided in the choice of publications mainly by advice whose honesty never has been questioned, however its judgment might be disputed.

With such encouragement from the most influential quarters, with fast growing circulation among the general public, with works crowding upon us for notice faster than a fortnightly issue could possibly treat with due regard to their merits, advertisements advancing with each successive number, and readers urging the adoption of the weekly issue, we could hesitate no longer. All the elements of success were assured; THE CRITIC was *established*; and the close of a volume afforded the opportunity for the final step.

One difficulty remained. Should there be a change of price? Hitherto it had been *sixpence*, for a sheet of no less than thirty-two pages. The *Literary Gazette*, scarcely one-half its size, was *eightpence*. Deducting its eight pages of advertisements, the *Athenæum* did not present to its readers for *fourpence* above *one-half* of the reading matter given by THE CRITIC for sixpence, We took counsel of our friends among the booksellers. Their opinions were unanimously in favour of a reduction in price coincident with the more frequent publication, so as to add but a trifle to the annual cost; they expressed their confidence that the increase of circulation thus obtained would more than compensate the reduction of price. Accordingly we resolved to adopt that bold course; to reduce the price of THE CRITIC to *fourpence* only, although the number will never contain less than twenty-four pages, and, whenever advertisements or press of matter demands it, will be enlarged to thirty-two pages.

The success of THE CRITIC is mainly due to two prominent features, which will, we trust, continue to be exhibited throughout its future career; namely, its PRINCIPLES, and its INDEPENDENCE.

In a summary such as this, it would be impossible to present even an outline of its PRINCIPLES, which have been elaborately set forth in so many previous articles, and must continually hereafter form the subject of comment and discussion. But they may be briefly indicated by stating that they are opposed to the *sceptical* philosophy so ably advocated by the *Athenæum*. The aim of THE CRITIC is, on the contrary, to infuse into literature and art the spirit of RELIGION in its highest and holiest meaning; to inculcate a philosophy which recognizes existences and duties above and beyond the material interests which only are taken cognizance of by the misapplied utilitarianism of the times; to assert for MAN, as a living SOUL, the inheritor of an IMMORTALITY, the image of GOD, a respect and a consideration in the eyes of statesmen and of individuals which it has been the unhappy tendency of recent philosophy and legislation to neglect. It is upon this ground that we appeal to the sympathies of the *new* generation, and have sought, not quite unsuccessfully, to gather round THE CRITIC, as contributors and as readers, "the *young* heart and hopes of the country."

Its INDEPENDENCE has been another cause of its success. Established and conducted by private gentlemen, and altogether unconnected with any bookseller, it is subjected to no undue influence of any kind. Every article is written with strict regard to truth; the honest judgment of the reviewer is declared upon every book. It had been long a current opinion in the literary world that an independent critical journal could not possibly exist. THE CRITIC has proved this notion to be a fallacy, and the experience of the past will serve only to make it adhere the more firmly to the same stern independence for the future.

Many internal improvements are contemplated which time only can mature. Its growing resources will be applied to securing the aid of the best writers in all its departments. Foreign literature will receive more at-

tention than hitherto, with its restricted space, has been practicable. It is resolved, however, to adhere to the present method of arrangement, and not to occupy its pages with the proceedings of scientific societies, and the other "dead weight" with which nearly one-half of its contemporaries' columns are burdened, and which is without the slightest interest for the great majority of readers. The aim of the conductors of THE CRITIC is, so to select its contents that every line of it, from beginning to end, shall be interesting to every reader. They hope never to forget that the purpose of such a Journal as this is simply, as was said, we believe, by Lord BROUGHAM, to enable people who cannot read all the books published, to talk about them as if they had read them; to which we would add,—and to inform them what *mind* is doing throughout the wortld.

Still, as hitherto, THE CRITIC must mainly rely upon the personal recommendations of its subscribers to their friends for the extension of its circulation; and if they approve it, they will thus best aid an undertaking which is peculiarly difficult for private persons wanting the advantages of connection possessed by the great booksellers, in whom hitherto all such works have been vested.

LITERATURE.

HISTORY.

History of the Consulate and the Empire of France under Napoleon. Forming a sequel to the History of the French Revolution. By M. A. THIERS, late Prime Minister of France, Member of the French Academy, and of the Institute, &c. &c. Translated by D. FORBES CAMPBELL, Esq. with the sanction and approval of the Author. Vols. I. II. London, 1845. Colburn.

THE anxiety with which this work, long announced as in preparation, has been looked for throughout Europe, will not be disappointed altogether, although they who expected to find in it the wisdom of a practical statesman teaching by example, will be compelled to exchange their anticipations of such a philosophy for a lively and graphic narrative, which never for a moment permits the attention to flag, even amidst the driest details of statistical facts. M. THIERS is, in reality, a clever journalist; he writes like one practised in the columns of the newspaper and the pages of the magazine, where the brilliant is always preferred to the profound, and the amusing to the didactic. There are other traces of the periodical writer in this history. Ideas are not tersely put, but diluted with abundance of words, and when a good thought is hit upon it is inflated by large expressions beyond its real worth, as if the author were delighted with his own invention and desired to make the most of it. The matter of the history is of necessity important and interesting, and M. THIERS has been permitted access to information which lesser men could not have commanded. In spirit, he is essentially French, and of that class of Frenchmen which seems to inherit a sort of natural antipathy to England. When this prejudice does not come into operation, he is sufficiently candid and impartial in his judgments of men and events; but whenever England is concerned, forthwith he loses his equanimity and his passions so colour all objects to his mind's eye, that "fair is foul and foul is fair" to him; whatsoever England does is ill done and wickedly done; while the deeds of her foes have grace and virtue in his estimation. With these drawbacks, the History, the translation of which now lies before us, will be read always with interest, and generally with profit.

How it is elaborated will be judged from this, that the two volumes conduct the history only through a period of about eighteen months, from Nov. 1799 to April 1801. But the period was full of events of mighty moment to the world. It witnessed the reaction from the revolutionary fever, the formation of a strong government under the Consuls, the establishment of peace at home, and active negotiations with belligerent powers abroad. M. THIERS asserts that these olive branches tendered to the Sovereigns of Europe by the First Consul were in good faith, and prompted by an earnest desire for a general peace. However that may be, they failed of their ostensible purpose, and then followed the memorable campaign of MOREAU, which ended in the entire defeat of the Austrians at Marengo. We are then transported to Egypt, and are there presented with a vivid picture of the country and the people, the hostile forces, the great men engaged, some in the warfare and others in the pursuits of science; the condition of the army, the skirmishes with the Mamelukes, the assassination of KLEBER, are vigorously portrayed, with the ease of one confident in the resources of his knowledge, and intimately familiar with the characters of the parties whose doings he is narrating. Turning from the plains and pyramids of Egypt, he proceeds to the various courts of Europe, exhibits their internal machinery, it may be rightly, but probably as often erroneously, since it can be little more than ingenious guess-work, and he details the negotiations that were conducted so long between France and Austria, that, even while the latter hesitated, the war was renewed, a campaign fought, and more humiliations endured in the disastrous battle of Hohenlinden, and the march of MOREAU upon the very capital of the empire. But misfortune subdued pride—protocols were indulged no longer; peace was concluded, and then M. THIERS reverts to the domestic affairs of France, the sagacious endeavours of the First Consul to restore public credit and reconstruct society; this being, to our taste, by far the most interesting and instructive portion of the two volumes as yet published. They conclude with an account of the gigantic scheme projected by BONAPARTE to close the continent against the commerce of Great Britain, and which will ever be a proof of the superiority of the smuggler to the law, and of the impossibility of regulating trade by edict. The battle of Copenhagen follows, and the renewal of negotiations for peace with England, in which M. THIERS accuses PITT of insincerity, forms an appropriate resting-place.

From such a work so many striking extracts may be made, whether to exhibit the style of the writer, or as being very attractive in themselves, that we are perplexed by their abundance. To attempt any thing like an analysis of this History would of course occupy more space than a weekly journal could venture to devote to it; that task must be left for the quarterly reviews. Our business as journalists of literature is simply to give such a brief account of new publications as may acquaint the reader with their general scope and design, and the manner of their execution, so as to enable him to form a fair judgment of their merits and defects, and whether they be such as tempt him to further acquaintance. And having given such an outline of the History of M. THIERS, it remains only that we present a few illustrative extracts, and conclude with a hearty commendation of it, as peculiarly adapted for purchase by the book-club.

M. THIERS strips of its romance one of the most famous passages in the life of NAPOLEON, which poets and painters have so delighted to celebrate. This is his description of

THE PASSAGE OF THE ALPS.

He set out to cross the Col, before daylight on the 20th [May 1800]. He was accompanied by Duroc, his aide-de-camp, and De Bourrienne, his secretary. Artists have delineated him crossing the Alpine heights mounted on a fiery steed. The plain truth is, that he ascended the St. Bernard in that gray surtout which he usually wore, upon a mule, led by a guide belonging to the country; evincing even in the difficult passes, the abstraction of a mind occupied elsewhere; conversing with the officers scattered on the road, and then, at intervals, questioning the guide who attended him, making him relate the particulars of his life, his pleasures, his pains, like an idle traveller who has nothing better to do. This guide, who was quite young, gave him a simple recital of the details of his obscure existence, and especially the vexation he felt because for want of a little money he could not marry one of the girls of his valley. The First Consul, sometimes listening, sometimes questioning the passengers with whom the mountain was covered, arrived at the Hospice; where the worthy monks gave him a warm reception. No sooner had he alighted from his mule than he wrote a note, which he handed to his guide, desiring him to be sure and deliver it to the quartermaster of the army, who had been left on the other side of the St. Bernard. In the evening, the young man, on returning to St. Pierre, learned with surprise what powerful traveller it was whom he had guided in the morning; and that General Bonaparte had ordered that a house and a piece of ground should be given to him immediately, and that he should be supplied, in short, with the means requisite for marrying and for realizing all the dreams of his modest ambition. This mountaineer died

not long since, in his own country, the owner of land given to him by the ruler of the world. This singular act of beneficence, at a moment when his mind was engaged by such mighty interests, is worthy of attention. If there were nothing in it but a mere conqueror's caprice, dispensing at random good or evil, alternately overthrowing empires or rearing a cottage, it may be useful to record such caprices, if only to tempt the masters of the earth to imitation; but such an act reveals something more. The human soul in those moments when it is filled with ardent desires is disposed to kindness; it does good by way of meriting that which it is soliciting of Providence.

The First Consul halted for a short time with the monks, thanked them for their attentions to his army, and made them a magnificent present for the relief of the poor and of travellers.

He descended rapidly, suffering himself, according to the custom of the country, to glide down upon the snow, and arrived the same evening at Etroubles.

M. THIERS excels in the sketching of character. He revels in portraits of the many great men with whom he makes acquaintance in the progress of his narrative. Here is

CAMBACERES.

The First Consul prized the plain good sense of M. Fouché, relished the graces of M. de Talleyrand, but absolutely believed neither the one nor the other on any subject; and as for his confidence, had given that, given it wholly and entirely, but not to either of those two men—to his colleague Cambacérès. The latter, with an understanding far from brilliant, had extraordinary good sense, and an unbounded attachment to the First Consul. Having trembled for ten years of his life under proscribers of all sorts, he loved with a kind of affection the powerful master who at length procured him the faculty of breathing at his ease. He loved his power, his genius, his person, from which he had not received, and hoped never to receive, any thing but favours. Acquainted with the weaknesses of men, even of the greatest, he counselled the First Consul, as one ought to counsel when one wishes to be attended to, with perfect sincerity, with extreme discretion, never for the purpose of shewing off his own wisdom, but always to be serviceable to a government which he loved as dearly as himself, always approving of all its acts in public, whatever they might be, and never disapproving of them but in private, in an absolute *tête-à-tête* with the First Consul; keeping silence when there was no good to be done, and when censure could be but a vain pleasure of finding fault; sure to speak his mind, and with a courage highly meritorious in a man so extremely timid, when he was in time to prevent a blunder or influence the general conduct of affairs. And, as if a character which is incessantly under self-restraint must needs be betrayed into some weakness, the Consul Cambacérès exhibited a puerile vanity with his inferiors, lived with some subaltern courtiers, who paid him fulsome homage, walked every day in the Palais Royal in a ridiculously magnificent dress, and sought in the gratification of a *gourmandise* that has become proverbial, pleasures which were suited to his vulgar but prudent soul. Of what consequence, however, are a few foibles, redeemed by superior reason!

The First Consul cheerfully forgave these foibles in his colleague, and made much of him. He appreciated that superior good sense which never wished to shine, but to be useful, and which threw a tempered and true light upon every thing. He appreciated above all the sincerity of his attachment, laughed at his weaknesses, but always with delicacy, and paid him the very high compliment of confiding every thing to him alone, of never being concerned but about his judgment. Hence he was susceptible of no influence but his; an influence scarcely suspected, and on that account very great.

The state papers of BONAPARTE were not the least wonderful of his works. Here is a specimen of a letter from

BONAPARTE TO THE KING OF ENGLAND.

"Paris, 5th Nivôse, year viii. (Dec. 26, 1799.)

"Sire,—Called by the wish of the French nation to fill the chief magistracy of the Republic, I think it fitting, on entering upon office, to make a direct communication on the subject to your Majesty. Is the war which for eight years has ravaged the four quarters of the globe to be eternal? Are there then no means of coming to an understanding? How can the two most enlightened nations in Europe, stronger and more powerful than their safety and independence require, sacrifice to ideas of vain greatness the blessings of commerce, internal prosperity, and domestic happiness? How can they help feeling that peace is the first of wants, as well as the first of glories? These sentiments cannot be strange to your Majesty, who governs a free nation, and with the sole aim to render it happy. In this overture your Majesty will only discover my sincere desire to contribute efficaciously, for the second time, to the general pacification by a prompt procedure, entirely confidential, and divested of those forms which, necessary perhaps for disguising the dependence of weak states, betray only in strong states a mutual desire to deceive one another. France, England, by the abuse of their strength, may for a long time to come, for the misfortune of all nations, retard its exhaustion; but I dare assert, the lot of all civilized nations is attached to the termination of a war which has thrown the whole world into a conflagration."—Vol. i. p. 76.

Take now a full-length portrait of

THE KING OF SPAIN.

The King of Spain was an honest man; not harsh and blunt like Louis XVI.; more agreeable in person, but less informed, and surpassing him in weakness. He rose very early, not to attend to his royal duties, but to hear masses, and then go down to his workshops, where, surrounded by turners, smiths, and armourers, and stript of his clothes like them, he wrought in their company at all sorts of work. Though very fond of the chase, he liked still better to manufacture arms. From his shops he went to his stables, to assist in dressing his horses, and indulged in the most incredible familiarities with his grooms. After spending the first half of the day in this manner, he took a solitary repast, to which neither the Queen nor even his children were admitted, and devoted the rest of the day to the chase. Several hundred horses and servants were set in motion for this daily pleasure, which was his predominant passion. After riding like a young man, he would return to his palace, give a quarter of an hour to his children, half an hour to the signature of the papers submitted to him by the Queen and his Ministers, sit down to play with some of the nobles of his court, sometimes take a nap with them, till the hour for his last meal, which was followed immediately by his retirement to bed, always at one and the same fixed time. Such was his life, without a single variation throughout the year, unless during Passion-week, which was devoted entirely to religious exercises. In other respects, an honest man, faithful to his work, mild, humane, religious, of exemplary chastity, though not cohabiting with his wife, ever since his physicians had, by her directions, ordered him to abstain from it: he had no other share in the scandals of his court, in the faults of his government, than in suffering them to be committed, without perceiving them, without believing them, during the course of a long reign.

A good specimen of M. THIERS's powers of description is this account of the close of the

BATTLE OF MARENGO.

It was now three o'clock. If no new circumstance intervened, the battle might be considered as lost by the French, unless they could on the morrow, with the troops shifted from the Tessino and the Adda to the Po, retrieve the misfortune of the day. Desaix, however, with Boudet's whole division, had not yet come up. Would he arrive in time? On this circumstance depended the issue of the battle. The aides-de-camp of the First Consul had been galloping in quest of him ever since morning; but, long before they reached him, Desaix, on the first cannon-shot fired in the plain of Marengo, had instantly wheeled about. He had marched the whole of the day, and at three o'clock his heads of columns at length appeared at the entrance into the plain, in the vicinity of San Giuliano. He himself, preceding them at a gallop, rode up to the First Consul. Happy inspiration of a lieutenant equally intelligent and attached! Happy fortune of youth! If, fifteen years later, the First Consul, now so well seconded by his generals, had found a Desaix on the field of Waterloo, he would have preserved the empire, and France her preponderant position among the Powers of Europe. The presence of Desaix changed the aspect of things. He was surrounded; he was made acquainted with the occurrences of the day. The generals formed a circle about him and the First Consul, and discussed with warmth the critical position of the army. Most of them advised retreat. The First Consul was not of this opinion, and he earnestly pressed Desaix for his. Desaix, surveying the devastated field of battle, then drawing out his watch and looking at the hour, replied in these simple and noble terms:—"Yes, the battle is lost, but it is only three o'clock; there is time enough to gain another."

We conclude with a companion picture to those we have copied above.

FOUCHE.

M. Fouché, charged to exercise this power, formerly an Oratorian and a Conventionalist, was an intelligent and a crafty personage, neither good nor wicked, well acquainted with men, especially the bad, and despising them: employing the funds of the police in supporting the agents of troubles as much as in watching them; always ready to procure bread or a place for every person weary of political agitations; thus making friends for the government, and more especially for himself; creating for himself obliged dependants, far superior to credulous and

deceitful spies, who never failed to inform him of every thing that it was his interest to know; having persons under obligations to him in all the parties, even among the Royalists, whom he knew how to manage, and to repress at the right time; always forewarned, never overrating danger, nor exaggerating it to his master; clearly distinguishing an imprudent man from one really to be feared; knowing when to caution the one, to proceed against the other; in short, managing the police better than it ever was managed, for it consists in disarming animosities as much as in repressing them; a superior Minister, if he had had elevated intentions—if his indulgence had sprung from any other principle than an indifference to good and evil—if his activity had proceeded from any other motive than a passion for interfering in every thing, which rendered him irksome and suspicious to the First Consul, and frequently gave him the appearance of a vulgar intriguer. For the rest, his intelligent but ignoble countenance was a faithful mirror of the qualities and vices of his soul.

* * * * * *

M. Fouché, half faithful to the Revolutionary party [Jacobins], took pleasure in shewing indulgence to his old friends, and dared, in reference to them, to contradict the First Consul. Well knowing their moral situation, appreciating more especially the villains of Royalism, he was incessantly repeating that the danger, if there were any, was from the Royalists much more than from the Revolutionists, and that they should soon have occasion to perceive this. He had even the merit, but not for a long time, of insisting that it would be well not to forsake the Revolution and its ideas quite so much. Hearing already the flatterers of the day assert that it was necessary to proceed more rapidly in reaction, to disregard the prejudices of the Revolution, and to return to something that should resemble monarchy minus the Bourbons, he dared to censure, if not the aim, at least the imprudence with which certain persons pursued that track. While admitting the justice of his opinions, given with good sense, but without frankness and without dignity, the First Consul was struck but not pleased with them. He acknowledged the services of this personage, but had no esteem for him.

We shall again have occasion to invite the attention of our readers to the work as the successive volumes make their appearance.

SCIENCE.

Practical Remarks on some Exhausting Diseases, particularly those incident to Women. By Sir James Eyre, M.D. 8vo. London, 1845. Churchill.

This is an eminently useful and practical book. Its author, Sir James Eyre, is a physician of many years' standing, who, in addition to the opportunities for observation afforded by an extensive private practice, has also enjoyed the valuable opportunity of acquiring experience at a well-supported and extensive public charity.

It is the fashion now-a-days for adventurers, empirics, and men commencing the practice of medicine, to adopt some specious and often empty crotchet, or cry up some nostrum which they boldly call a specific, and on the tide of this float themselves at once into practice, regardless of honesty and doubtless often laughing in private at the gullibility of the public. When, therefore, men who pursue the reverse of this course, who force their way to fame and practice unaided by such means, come before the public in the capacity of authors, we may be sure they have something of value to offer—something the result of careful observation and well tested by experience. Such is the case with the work before us. During a series of years Sir James Eyre has been trying the effects of the oxide of silver, especially in cases of hæmoptysis, gastrodynia, pyrosis, menorrhagia, hæmatemesis, and certain uterine diseases, with the happiest of results. Impressed with the extreme importance of this therapeutic, he now lays before the public his opinion of its value, backed by a great number of cases (selected out of some hundreds), which shew its mode of action and the success which has attended its exhibition.

The thanks of the profession equally with the public are due to Sir James Eyre for the honesty and candour, the disinterestedness and liberality, which characterize his conduct in this measure. The result of his experiments has been in the highest degree beneficial to his patients, and, believing that the promulgation of the value of the oxide of silver as a remedial agent will eventually tend to mitigate many of the evils which flesh is heir to, he does not withhold his secret for the sake of emolument, but generously makes it known in the most effectual manner for the benefit of of the world.

Of the judgment, acumen, singleness of purpose, and shrewdness of observation evinced in this book, we feel justified in speaking in the warmest praise. Medical men are seldom good writers; it is rarely we have seen a work of this nature equal in point of literary merit to the one before us. Not only to our medical friends, but to such of our readers as may be afflicted with any of the complaints above enumerated, do we cordially commend this useful and valuable book.

New System of Architecture, &c. By William Vose Pickett. London, 1845. Longman and Co.

This is a bold and original book, and therefore deserves notice. Its design is nothing less than to preach an entirely new system of architecture, founded on the forms of nature, and developing the properties of metals.

The idea has, at least, plausibility. Whatever is founded on nature has a truth for its basis, and the highest art is always that which nearest approaches to the forms of nature. Mr. Pickett so far establishes a *primâ facie* case for our consideration.

He tells us in his preface that the first idea of his system was suggested by a visit to the stalactite caverns of Derbyshire. The forms he there beheld struck him as capable of application to architecture, but he found that *stone* was unfitted for the purpose, and he turned to *metals*. An examination of their capacities satisfied him that by them new forms of beauty might be realized, and their extensive application to shipbuilding, bridges, and other large works, assured him that metals might be successfully employed as a substitute for stone in architectural construction.

His system, therefore, is to substitute *metallurgic* for *masonic* architecture.

We cannot intrude upon our readers the details of the manner in which he proposes to accomplish his bold design. They whom the announcement of it may interest, should seek them in the volume, which describes the materials, the forms of which they are capable, the constructive principle, the economy of the new system, and the advantages it offers as viewed commercially, professionally, and universally.

We are glad to see by the preface that specimens will shortly be exhibited in the metropolis. We hope to inspect them, and then we will report to our readers as to the practice of the ingenious theory before us.

An Essay on Tropical Agriculture, with some Remarks on certain Analyses of Barbadian Soils, &c. By R. Lovell Phillips, M.D. Glasgow, 1845. Hadderwick.

Although the subject of this treatise is foreign, we can assure the scientific agriculturist at home that it is not without interest and instruction for him also, for the author has gone to the foundation of his theme, and described, with singular clearness, the principles of agricultural chemistry. To all who have estates in the West Indies, Dr. Phillips has presented a work of incalculable value, which they cannot too widely diffuse among their agents and managers in the colonies, nor too carefully peruse themselves. Its teachings will be a surer protection to them than an Act of Parliament, and indeed, if the instructions here given be followed, the West Indies may speedily resign the tutelage of the Senate, set up for themselves and beat the world in fair and open competition.

VOYAGES AND TRAVELS.

Lands, Classical and Sacred. By Lord Nugent. In 2 Vols. London, 1845. C. Knight and Co.

He whose duty it is to chronicle from week to week the productions of the press is able to appreciate the difficulty experienced by modern tourists in noting any thing new for the entertainment or instruction of readers at home. Every civilized land has been explored so often and so thoroughly, that the most observant wanderer can scarcely find an object that has not been depicted before, and rendered as familiar to the stay-at-home traveller as if he had seen it with his own eyes. In this strait, the aspect of external nature exhausted, the book-making tourist must rest his hopes of popularity upon his portraiture of the ever-changing and inexhaustible

character of man, as modified by climate and institutions; his manners, his habits, his peculiarities. Travels that abound in these, even though the route be the most worn of the highways of Europe, and described a thousand times before, will still have freshness and novelty and worth; must still amuse, still instruct, still be read with eagerness, and take their permanent place in the library.

The country explored by Lord NUGENT has been the subject of at least a hundred tourists before him—Greece, Egypt, Palestine. In themselves these names will offer no attractions to the reader wearied of their continual repetition in title-pages and in reviews. Whatever value there is in these volumes must be sought in the idiosyncrasies of the writer, and the aspects under which he has painted men and the doings of men. To these, as alone possessing novelty, we shall chiefly confine our extracts, contenting ourselves with but one or two of the author's sketches of natural objects, by way of exhibiting his descriptive powers.

The travel here recorded occupied the noble lord from the beginning of December 1843, to near the end of May 1844, and, wisely shunning preliminaries, he starts with his reader on the very second page at the moment of his arrival in Greece.

The noble lord makes the best use of his time. He sees every thing, and brings a great deal of classical knowledge to aid his descriptions. But as Athens and its faded glories have been familiarized by so many preceding travellers, we will pass over the scenes more attractive to the spectator than to the reader, and even the more novel account of the *last* revolution in Greece, and land at once at

ALEXANDRIA.

The impression produced by the first view of the interior of the city of Alexandria is one of melancholy, which deepens into deadly weariness on further acquaintance with its details. The filth of its streets and suburbs, the squalid, unhealthy, and penury-stricken look of its population, the unfinished condition of the new buildings and the ruinous condition of the old,—every thing has an air of neglect, of suffering under a discouragement which has quenched all energy, all power and desire to struggle against it. Some incomplete efforts at modern ostentation there are, but few advances towards comfort or prosperity. In the midst of a spacious square near the eastern end of the new town, into which you suddenly emerge from the narrow dingy lanes of the old, stands a handsome fountain of Oriental alabaster. But no water has yet been conducted to it. On each side is a good and commodious hotel, and the houses of the foreign consuls shew a bold and ample front; and at the further end, the southern, is a large and handsome edifice, the Wekáleh, used as a storehouse for merchandise. It is a fine space; but for many years it has been, and still remains, as when the houses were begun, encumbered with scaffolding and rubbish.

The aspect of the place was altogether so melancholy, that our travellers were glad to depart for Cairo. One of the most graphic passages is the description of

THE NILE.

The whole course of the Nile from hence up to Cairo, a distance of 120 miles, and at this time of the year about as wide as the Thames at Gravesend, is studded with lofty date palms, with straggling villages and marabouts (tombs of Moslim saints), the small white cupolas of which group very agreeably with the rest of the scenery. It presents a succession of scenery, as agreeable and as much diversified as is consistent with low level banks, and a wide expanse of flat country, swelling only here and there into small sand-hills, whose pervading hue, however, is often broken by patches of rich green corn and rice land, and tinted in the distance, at all times of the day, from sunrise to twilight, with ever-varying gleams of glowing brightness and colour. The water, though never clear, is very sweet and fresh to the taste, and runs, during the months between the falling of the inundation in August and its recurrence in June, at the rate of never less than four miles an hour. But the rapidity of the stream very much increases, and the water becomes more turbid and clayey as the season of high flood draws near.

The shores are covered with cranes and pelicans, and its bosom with fleets of ducks, wild geese, and other water-fowl; and troops of falcon-kites sail and hover in the air above your boat, keeping company with it, and becoming more numerous as you approach Cairo. At intervals, the creeking of the water-wheels (Sakhias) gives note of the industry with which the work of irrigation is going on upon the fields on both sides of the river.

Early in the morning of the second day, while our little steamer was aground on one of the vast number of shoals that are always rising up and changing places and delaying the navigation of the Nile, we saw a proceeding very characteristic of this country. A large troop of bullocks, under the guidance of one swarthy driver, came down to the left bank—brought there, as we supposed, only to drink before their morning's feed. But no. They had crossed the Delta, and were on their way to the opposite side, and from thence probably towards Alexandria. They seemed aware of what was required of them. They entered the river, sliding down the muddy bank without reluctance; and no sooner were they all fairly in the water than the driver stripped off his clothes. He then tied them in a bundle on his head, and, addressing a shout to the beasts, which they seemed to understand as encouraging them to cross, he followed them; and the whole party began their swim together; the man often seizing one of the bullocks by the horn or by the tail, to enable him to keep pace with the troop. They reached in about ten minutes the opposite side, having crossed this rapid current to a point very little below that from which they started, and then pursued their journey with every appearance of considering the feat they had just performed as an incident of travel which they had been prepared for, and which had taken none unawares.

Egypt is not yet, it seems, exempt from the plagues brought by the children of Israel. Still is it subjected to

THE PLAGUE OF FLIES.

The swarms of flies, which collect upon the open sores of the beggars in the streets, leave them for the eyes of the children, and from thence carry infection from one to another of a people who, from habit, if not from religion, inure themselves to the attacks of these filthy insects, and appear to have no sense either of torment or disgust to induce them to brush away an annoyance which to any but Egyptians would be absolutely intolerable. The mosquito is bad enough, in all conscience; but, at all events, he sets to work with an appetite that to a certain degree must be admitted in extenuation of the outrage. Your blood is his banquet, and he helps himself; and, having satisfied nature's craving, he leaves you. But the unceasing, endless, and objectless importunity of a fly, running across you in one direction, for no purpose, as it appears, unless it be to gain space to run across you in the opposite the moment after, leaving the filth and corruption, which is his natural pasture, to rush, full buzz, to your eye, your nose, your mouth, your food; and then to see your fellow-creature, the Egyptian, offering his whole body patiently as a refuge and college for the encouragement of these creatures.

The people of Cairo are passionately fond of buffoonery. The amusements reserved by our countryfolk for fairs and revels are here enjoyed every day in the public streets. Lord NUGENT's account of the great ruler of Egypt is the most precise we have seen, and contrasts advantageously with that we have taken from the conceited pages of Prince PUCKLER.

MEHEMET ALI.

The manners of Mohammed Ali, his mode of receiving, addressing, and conversing with strangers, are full of dignity, courteousness, and well-bred ease. He converses with Europeans always through an interpreter, who speaks in the French language, and translates what is said to him into the Turkish, the only one which the Pasha professes to understand. Yet the expression of his quick eye and whole countenance, while the person with whom he converses is addressing the interpreter in French, gives often the impression that he understands more of that language than he owns to, and prefers, as many official persons in the East do, to communicate through a third person, in order to give himself more time in this double process to consider his replies. His style of conversation is agreeable. He speaks in short terse sentences, often almost epigrammatic—never without a meaning, even when they are phrases of mere ceremony. Like all men, he is fond of a little flattery, and invites it; but, like all men of sense, he requires that that little shall be administered with judgment, and is earnest and skilful in searching for subjects on which others are able to answer his inquiries with information; and on such topics he delights in shewing you by no disagreeable interruptions how quickly he has apprehended their full meaning, and how well he could enlarge upon it. Like all persons of high station in the East, he begins the conversation with a phrase or two of compliment and welcome, and answers the first compliment paid to him in return by a sentence which he uses, I believe, to everybody, whatever his age may be, or to whatever European country he may belong, with very little variety: "You are a young man from an old country; you find me an old man in a young country." Then he generally goes on thus: "I have worked hard to improve this country, and have done something. But all my youth was spent in war. The works of peace take more time than those of war; and, when I began to govern, my time was too short to do as much as I wished. I had every thing to begin. I had weeds to pluck out, as well as seed to sow. In your country the ground is prepared for you; you

require only a very light plough. I had to begin with the hand; then I took to the spade, spade, spade, spade! I have hardly got to the plough yet." Then he asks his visitor what he thinks of Egypt, as far as he has seen of it; of the country, and of its government: a tolerably compendious question. He desires him to speak up and criticize freely; and then from his answer he judges of what are the topics on which he is most competent to carry on the conversation. I received a hint, before my first interview with the Pasha, that it would gratify him to be asked his age, and, after he had told it, to be *reminded* that he was born in the *memorable* year 1769, which produced also Napoleon and the Duke of Wellington. But these are weaknesses in which he is a sharer with all other men. It is when the phrases of mere ceremony are past, and conversation has begun, that he shews that he is no ordinary man. He shews that when he challenged a free criticism of the institutions and government of Egypt, he did it sincerely, and takes in good part a frank compliance with the challenge. Not that, when hard pressed upon what he knows to be wrong in the system, he will not dissemble a little, and endeavour to make you doubt the truth of the view you have taken on the information you have received; but when he finds you strong in your facts, and that they do not admit of a colourable denial or justification, "in sese redit senex." He taps you on the knee, and with a good-humoured smile makes the best defence he can on the rights of the question.

A curious specimen of the Pasha's mode of dealing was witnessed accidentally:—

PAYMENT OF WAGES IN EGYPT.

I saw, one Thursday afternoon, the day before the Musulman Sabbath, the Pasha's labourers receiving their week's wages, as I was going out from the garden gate of the palace of Schoubra with a party of English gentlemen. The gardeners and their workmen were leaving the garden at the same time, some forty or fifty of them, and thronged the gateway. I waited to see the process. A clerk was sitting in a little lodge at the gate, writing these assignats in very neat Arabic characters, and sealing each of them with a signet ring dipped in ink—some for eight, some ten, some twelve piastres. Each was a longish instrument, and took up some time in writing and sealing. Arabs and Turks do nothing quickly, and the Arabic character cannot be very quickly written. Each paper was then folded with great deliberation, and given to each separate claimant, who was to carry it (but not on the next day, the Sabbath) to some merchant's house to be discounted. The only explanation I could obtain upon inquiry as to why the men were not hired at once at a rate minus the discount, and paid that amount in cash, seemed to be that ready money ran short; that it was therefore more convenient to pay in paper, and that it would be deemed unbefitting his Highness's dignity to borrow a sum from a merchant on a large bill at a discount to pay them.

Lord NUGENT visited the Pyramids, of course, and he relates an amusing anecdote, which is worth extracting. Among other inscriptions in the Great Pyramid is the name of CHATEAUBRIAND. It seems, however, that the Viscomte never visited the place in person; he only *intended* to go there. Here is the history of this

VICARIOUS VISIT.

He informs us in his *Itineraire*, that, having been obliged to leave Cairo, on his return to France, without seeing the Pyramids, he delegated to M. Caffe, the French consul there, the following commission: "Je chargeai M. Caffe d'écrire mon nom sur ces grands tombeaux, selon l'usage, à la première occasion; l'on doit remplir tous les petits devoirs d'un pieux voyageur!" (Vol. ii. p. 213.) M. Caffe, it appears, very naturally declined the vicarious performance of this little duty of a pious traveller; to wit, the inscribing the Viscomte's name, in testimony of his having been where he had not been. Some years afterwards, however, an English traveller thought it a little duty of his own to fulfil, uncommissioned, those intentions of the Viscomte's which M. Caffe seems to have thought were best left unfulfilled. Accordingly, there is the name. But a French traveller since has trimmed the balance of truth, by writing in large letters beneath, "Le Viscomte n'était pas ici." And thus the record rests for the amusement of posterity.

Among other marvels the traveller was induced to make trial of the famous magician of Cairo, whose feats, as narrated by Mr. LANE, have perplexed the reading world of Europe. They proved an utter failure, and Mr. LANE, who was present, candidly admitted that he had been imposed upon. It seems that a Scotchman, who had turned Mussulman, and played the part of interpreter, instructed the pretended magician in the answers he was to return. When this said Osman was absent, the oracle was dumb.

After their curiosity had been satiated with Cairo and its neighbourhood, the party undertook a journey across the desert, which produced a few adventures, enough to give zest to the tour. Lord NUGENT's opinion of "the ship of the desert" differs widely from the picture poets have tried to paint.

CHARACTER OF THE CAMEL.

I spoke, awhile ago, of the patient, long-suffering expression of the camel's face; but your opinion of the camel will, I think, change, as mine did, upon further and more intimate acquaintance. The truth is, he is but an ill-conditioned beast after all. What you took for an expression of patience becomes one of obstinate, stupid, profound self-sufficiency. There is a vain wreathing of the neck, a self-willed raising of the chin on high, a drooping of the lack-lustre eye, and sulky hanging of the lower lip, which to any who have faith in the indications of countenance and action betoken his real temper. Then that very peculiar roar of his, discordant beyond the roar of any other beast, which continues during the process of his being loaded, from the moment that the first package is girded on his back to when he clumsily staggers up upon his feet to begin his lazy journey, is a sound betraying more of moral degradation than any I ever heard from any other four-legged animal: a tone of exaggerated complaint and of deep hate, which the shape of his open mouth well assorts with. The dromedary is said to be to the camel what the thorough-bred horse is to the hack. But he who has ridden a dromedary will never again profane the qualities of the thorough-bred horse by using his name in any such company. The dromedary, it is true, is lighter than the camel, and capable of going much faster; but in temper and spirit he differs from him in nothing but in being even more obstinate.

And as a companion portrait, take the

CHARACTER OF THE CAMEL DRIVER.

Every Arab, whether of the town, or the fields, or the river, or the desert, is an indefatigable talker. He is lazy about business; but his real relaxation from labour, and his comfort while labour is going on, is in loud and rapid talk, accompanied with the most painfully restless gesticulation. All day, if travelling, his joy is to double himself up upon the top of the other burthens his camel has to bear, and there, with his pipe in one hand, and his beads in the other, to mutter and crone himself into a comatose state. While he is walking at his camel's tail, he pours forth an endless dreary song, always composed by himself for the occasion, always to the same air, if air it can be called, and relating to the number of travellers and place of destination. For the first day or two we thought it was some sacred canticle, or prayer. It had a tone of psalmody. But all our respect for it was at an end when our dragoman thus translated it: "We are twelve—four are Hawadjis—go on, camels, to Gaza—why should we not go on to Gaza?—we are twelve—four are Hawadjis." κ.τ.λ. This, set to never more than three bars of very sad music, the singer repeats, over and over again, to the selfsame tune and words, in which his companions alternately relieve him throughout the day.

But when the season of natural repose arrives, and every thing invites to it, when the bread has been baked, and the rice boiled, and the evening repast concluded, and more fuel collected, and the fires made up for the night, and the groups of men and camels are well and snugly established round them, and the Hawadji, or travelling gentleman within the tent, is wrapped up in that chrysalis state in which every man who feels he has a hammock or a blanket, hopes after a long day's ride that he may remain undisturbed, at least from midnight till sunrise—'tis then, sad man! that his Arabs who surround him have fairly entered upon active life. They shout, they sing, at the highest pitch their voices can attain. If there is a pause, it is that one of them may tell a long story about nothing at all a dozen times over; beginning, continuing, and ending, each time, to the same effect, and in the same words; how certain travellers, or how a certain sheik or pasha, or how a certain camel—but no matter what—the whole troop applauding as vociferously as if the story was a new one, which it never is, or had a point in it, which it never has. And thus they go on, sometimes breaking off for a firing of pistols and muskets and a general howl, to inform the desert that they have arms. Then comes morning, and then the preparations to renew the journey. Then, after the violent debate, which every morning recurs, about how the camel loads are to be re-adjusted (an operation on which daily discussion and practice have been expended in vain), those who ride fall asleep, as the day before, and those who walk resume the former chaunt about the number of the party, and where they are going, and the question—why should they not go there?

The second volume comprises the exploration of the Holy Land, and the return. Every nook of this region has been so thoroughly ransacked, that really we can find nothing suffi-

ciently new to interest our readers, and Lord NUGENT, though a sensible, and, doubtless, an accurate describer, has not the faculty which, in the author of *Eöthen*, and in STEPHENS, and a few others, enabled them to give an air of originality even to the most familiar objects by their manner of sketching them. They take no colour by passing through Lord NUGENT's mind, but are given to the world just as they were daguerreotyped on his note-book. Hence has his Palestine something of the wearisomeness of a twice-told tale, save where mere description is varied by an incident of personal adventure. Two or three of these must suffice :—

POLICE AT JERUSALEM.

Whilst I was at Jerusalem, one of our party was sketching on the Mount of Olives. Some of the Arnaout police were on the opposite wall of the city, one of whom sent a musket-shot at him, that whistled over his head; which, when he complained of it, he was told, for consolation, had in all probability not been fired in anger, or from any motive of personal ill-will, but in consequence only of his having offered to the Arnaout a temptation too strong for an ambitious marksman to resist; and that his best mode in future was to be provided always on such occasions with a good double gun, which might prevent any like experiment from being made, or return it with two shots for one.

Not much above three years ago, one of the first-fruits of the restoration of what was called the lawful authority of the Porte in the East was this.—A gentleman officially connected with one of the Christian governments of Europe was walking, with his niece, in the open street. They were met by a band of these drunken Arnaouts, one of whom having offered some outrage to the girl, and being struck by the uncle, drew a loaded pistol and instantly shot—not him who had stepped in to protect the girl from brutal insult, but the poor girl against whom the insult had been directed. The uncle bore his dying niece to his house. He applied to the Turkish authorities to prevent, by punishing the murderer, a like calamity being inflicted on other victims. He was told, with many expressions of regret, that his testimony to the fact could not be judicially taken; that the religion of Mahomet was the law of the Mohammedan courts, and that, conformably with it, no oath of a Christian or Jew could be taken against a true believer. In vain was other evidence sought. Mohammedans had seen the murder, but not one of them could be brought to give true evidence in the case, and the crime has to this day been followed by no legal consequences. Only this was done: the Arnaout was removed by the arbitrary order of the Governor, who was convinced in his own private judgment that the accusation was true.

The party were invited to an

ARAB ENTERTAINMENT.

Carpets were spread, and coffee and pipes duly presented, accepted, and consumed, in fellowship with our host. The whole force of the tribe then assembled round us. Mrs. J.,—I mean the lady of our friend Jusuf,—I speak of her familiarly, she was very kind to us,—Mrs. J., I say, sat among us. She smoked with us, she asked us where our wives were, seemed perfectly satisfied with our answers, and then asked us again the same questions for conversation's sake. She did all that hospitality could suggest, except take off the towel which covered the whole of her face but the eyes, eyebrows, and as little of her mouth as she could conveniently smoke from. And the glimpses we had of these features, and of her hands and arms, left nothing further to be wished for. The supply of kohl, I suppose, had run short in the wilderness, and lamp-black, fixed with grease, had fully supplied its place upon her eyelashes and eyebrows. And there was undoubted evidence left upon her hands, that thay, and no other, had done this. After many messages, to and fro, between her and the adjoining apartment of the ladies, her daughter-in-law also joined us,—the wife of one of her sons,—clad and adorned like her mother-in-law, not only with the advantages of paint, but also like her with rich strings of silver Turkish coins, hung wherever necklaces and bracelets could conveniently be made to reach. Then the children of all the principal persons of the tribe were brought in and set round us; and then dinner was brought in and set before us.

The noble lord and his party enjoyed the pleasure of being in some peril once. But, perhaps, after all there was more of fear than danger in this

ENCOUNTER AT JACOB'S WELL.

We had an encounter at Jacob's Well,—not a conflict, for it ended instantly, and very whimsically, in our merely shewing that we were armed. It was near sunset when we reached the well; and we had sent our moukris with the horses and our servants, to make ready our tents for the night under the protection of the town walls. We were four together, and, by good hap, each of us had a double-barrelled pistol in his pocket. Whilst we were occupied in sketching, two or three persons came round the foot of the mountain to us, and very civilly offered to hold our sketch-books and pencils; a kind of enthusiasm for the fine arts it appeared to be. We observed, however, that each had a long gun across his shoulders. And, after they had remained with us for some time, seeing that others had joined them, and that their number had become five, and that more amateurs might be expected, we thought it prudent to bring our occupations there to a conclusion before our company of visitors should further increase; and we accordingly rose to walk towards the town.

One of them now shouted out the important word "Bakshcish," which we, of course, affected not to understand, and did not reply to. After repeating it several times, the spokesman unslung his musket, and was proceeding to level it at the hindmost of us, one of the Mr. Pollens, who instantly grappled with him for it. Our four other visitors now ran up, and were in the act of unslinging their muskets too. No time was to be lost on our parts; and the next moment presented a perfect parody on that stage incident which Sir Fretful in the play calls the "Dead Lock." The five assailants, each with a single barrelled gun, looked round, and beheld eight barrels opposed to them. A pause and a difficulty ensued. All extremity of war and all menace of it was now manifestly at an end. Nobody wished for fight; but it was an important question which party should first break ground, assailants or defendants. For, as it was, each kept the adverse party in check. "Rhua ma Saleem el Allah" (Go, with the peace of God")), kindly suggested our first assailant; an invitation which required to be well considered. For, decisive as our advantage then was at close quarters, the circumstances would be much changed upon our retiring to a distance convenient for a long shot, which we could but ill have answered with pocket pistols. After a short parley, the question was solved. With the best Arabic we had at hand accompanied by appropriate action, we stipulated that oneof the, attacking force should depart round the foot of the mountain whence he had come; then, after he should be well out of sight, a second; then a third; and so on, until, having thus marched them off successively, when the last was fairly gone we ourselves marched to the town, "thanking heaven we were rid of scurvy company."

Lord NUGENT notices the singular fidelity of Mr. ROBERTS's Sketches of the East. He concludes with a remark upon the cheapness of Eastern travel. Nothing, he says, is costly, but the steam-boats. "From Corfu, which I left on the 20th of Dec. to leaving Beyrout on the 10th of April, all the expenses of travelling and living, inclusive of steam-packets, for myself and my servant, stood me in just 140*l*."

We trust that this is not the last tour with which we shall be favoured from the same pen.

Egypt under Mehemet Ali. By Prince PUCKLER MUSKAU. London, 1845. Colburn.

PRINCE PUCKLER MUSKAU is a literary dandy. He is full of conceits and affectations, for ever talking humility and acting the extravagance of vanity. So greedy is he of applause, that, flatter him, and there is no limit to his laudation; wound his pride, and he can find in the offender, whether an individual or a nation, nothing praiseworthy. This weakness exposes him to incessant blunders. He sees every thing through the false medium of the atmosphere with which he encircles himself, and very little reliance indeed can be placed upon his observations, and still less upon his opinions.

Having, in his estimation, exhausted Europe of its sights, the Prince some years since proceeded to Egypt, and on his return he published, in Germany, the results of his tour; but why it was not translated before, or why translated now, we cannot tell, for assuredly it is not a work worthy the pains and cost of being done into English and printed at Mr. COLBURN's prices. Amusing it is in parts, for the Prince has a lively manner of story-telling, which imposes itself upon the unpractised for genius. He is a pleasant gossip, and, when there is nothing better to be had, his volume may well enough amuse an idle hour; and, if not wearied of his egotism and his continual discourses about eating, the reader may return to him again to cull the scenes wherein, as a shrewd note-taker, he may be deemed a satisfactory authority.

Amid the many claims upon our columns at this season, we must be brief with a work that can scarcely be called a new one, and limit our extracts to three or four passages that have

some novelty, and will sufficiently exhibit the style of the author. It is not, however, a book we could advise any cautious librarian to order.

The Prince was cordially received by the extraordinary old man who has regenerated Egypt. Thus he describes his

INTERVIEW WITH MEHEMET ALI.

His highness received me in one of the lower apartments of the palace, which was filled with a respectful crowd of his courtiers and officers of state. When I had made my way through the midst of them, I saw the viceroy standing on the platform, before his ottoman, with only Artim Bey, his dragoman, at his side. My surprise was great, for, judging by the bust which I had seen at Alexandria, and some portraits which are considered as likenesses, I had pictured to myself an austere, nay, harsh-looking man, in a splendid oriental dress, with features very closely resembling those of Oliver Cromwell. Instead of this there stood before me a friendly little old man, whose vigorous, well-proportioned frame was set off by nothing but a freshness of complexion, and a cleanliness, which might almost be called coquettish, but whose features were equally expressive of calm dignity and benevolent good-nature, and who, though his sparkling eagle eyes seemed to penetrate my inmost thoughts, yet the grace of his smile and the affability of his manner inspired me with involuntary partiality, without the slightest tincture of timidity. He was dressed in a plain brown pelisse, with the white trimming of which his venerable beard of the same colour was singularly blended; on his head he wore a simple red tarbush, without any shawl or jewels to ornament it; he had no rings on his fingers, nor, what is so usual in the East, did he hold a valuable rosary in his hand, which, by the bye, is in general so beautifully shaped, that a lady might envy it.

I afterwards found that my first impression of this great man was perfectly in unison with the behaviour of his courtiers, who, though full of respect, are very familiar and easy in their intercourse with him; and, while he treats individuals with a nicety of distinction, he always manifests urbanity to all around him. Nothing is more easy than to obtain an audience of the viceroy; it is impossible for any governor to be more accessible, or to adopt fewer measures for his personal security than Mehemet Ali, who fearlessly exposes himself every day to the attacks of any fanatic who might aim at his life.

Very lively is this sketch of

DROMEDARY RIDING.

It was the first time in my life that I had mounted a dromedary. I must observe, by the way (for what is quite common and well-known here, is not always so among us), that what is here called a dromedary, is not a different animal from the camel, but identically the same beast with one hunch: and the difference between a dromedary and a camel is like that between an elegant saddle-horse and a clumsy cart-horse. It is not by any means difficult to mount them, because the animals are accustomed to kneel down when they are saddled, while one of the forelegs is bound fast with the long bridle, and the leather holds it by the head to prevent its rising too rapidly, by which the rider might easily be thrown upon the sand. These singular animals have three joints in their hind legs, and require three movements to rise as well as to lie down; this action always appears very violent to the unpractised rider, who must be exceedingly careful to bend forwards and backwards with precision, or he will inevitably lose his balance, of which we had more than one diverting instance among our party.

The pace of the dromedary in walking is very inconvenient, jerking, jolting backwards and forwards; but he is generally made to go at a pretty quick pace, which gives the rider much the same sensation as what we call the short jog trot of a very hard-trotting horse. Hence riding in this manner six or seven miles, and often longer, without intermission, is very fatiguing, but for a short distance it is not by any means disagreeable, and the uniform continued shaking is certainly advantageous both to the health and appetite. The seat itself on the wooden frame of the saddle, round the high pummel of which the rider must lay his legs crossways, is likewise not a little inconvenient to a European till he has become accustomed to it. It is therefore advisable for every one coming hither in his boat, so to arrange matters that the first stages of his journey may be very short, in order to wean himself after the long repose which makes a voyage, on the Nile at least, on account of this want of exercise, a truly indolent life.

The dromedary, when going as slowly as possible, travels nearly five miles an hour; in its quick trot, twice or thrice as much, and continues at this rate for ten or twelve hours without resting. Mehemet Ali once accomplished the journey from Suez to Cairo, a distance of one hundred and fifteen miles, on his dromedary, in twelve hours, in order to prevent a conspiracy of the Mamelukes; and his sais, holding on by the tail of the animal and running on foot, reached Cairo at the same time. Sonnini affirms that the Nedshi dromedary can travel a hundred leagues in twenty-four hours; but it strikes me that this must certainly be an exaggeration.

Both dromedaries and camels are ill-tempered and disagreeable animals: I never mounted mine but it testified its displeasure by a snarling noise, and sometimes even by an attempt to bite me. Yet when once set a-going, I found it, like its leader, to be always docile and tractable; and a slight touch with a kurbatsh on its long neck was sufficient to excite it to the most rapid trot. The bit of the bridle is not in the animal's mouth, but it is drawn through one nostril, and there fastened by a wooden peg. When the rider wishes to dismount, he must make a kind of hoarse groan, which it is extremely difficult to imitate, on hearing which the dromedary immediately lies down. No sign is necessary to make it rise again, for it invariably does so of its own accord as soon as ever the rider is mounted and has taken the bridle into his hand.

The prince throws some light upon a topic on which we are wont to hear very contradictory opinions—

THE CONDITION OF THE FELLAHS.

Having still a little spare time, we proceeded to the railway, which had been lately constructed for the purpose of conveying stones to the buildings which were in the course of erection along the shore. Here we found a great number of Fellahs, men, women, and children, at work. The viceroy had just increased the wages of all employed on the public works half a piastre per diem.

As most of the accounts of Egypt which have fallen into my hands are filled with the most dismal lamentations of the misery of this unhappy class, I was not a little surprised at finding, for the most part, vigorous, healthy, and cheerful-looking men, who performed their work amid song and jest, were most indulgently treated by their overseers, and seemed only in joke when they solicited us to give them a bakshish, an odious habit, which prevails in other countries as well as here. They were ragged enough, to be sure, and barely clad; but where do we find it otherwise in the East, nay, even in Greece? The climate requires so little, and order and cleanliness are certainly not indigenous in these parts. I have since paid much attention to this subject, and am fully persuaded that the Fellahs of Egypt are infinitely better off than many of their class in Europe. Take, for instance, the Irish peasants, who are subjects of the most enlightened government in the civilized world, or take the poor weavers in Vogtland, of whom I read only this very day, in the newspapers, in the year 1843, that the utmost which they can earn is twopence a day; and that when potatoes, their only staple article of food, fails, they are ready to perish with famine; hence I maintain that these Fellahs, though unquestionably exposed to much harsh and arbitrary treatment, are nevertheless in a situation which might excite the envy of many of our country-people.

He falls in with one of the wise men of Egypt, and they discourse about eclipses of the moon. The learned pundit disclaims vulgar prejudices; he forsooth knows better than to accept the absurdities of the common people. He has a more rational theory of his own. Hear him:—

"Only the ignorant people," said he, "believe that it is a dragon which endeavours to swallow the moon. The moon is a living being as well as we, but a very exalted potentate in the kingdom of heaven, which is governed by God exactly in the same manner as the earth is by the Sultan. When, therefore, one of the governors there does not do his duty, the Lord of Heaven, like the Sultan here, has his head cut off, or sends him the bow-string. Now, it is evident that the moon had incurred such a punishment, and therefore when his countenance began to be darkened, we fired lustily and uttered tones of lamentation, to testify our desire to help him, and our compassion for his situation, for he might still obtain pardon; but as we soon observed there was no more grace for him, and that he at length totally vanished, we set up a louder noise, mingled with demonstrations of joy, in order to recommend ourselves as much as possible to the new moon, whch, accordingly, scarcely two hours after the execution of the last, appeared in more splendour than its predecessor had ever done." We see that the people of rank here understand as well as ourselves what is beseeming a good courtier—"*Le roi est mort! Vive le roi!*"

Has not this anecdote a parallel in more civilized lands?

FICTION.

Ann Hathaway; or, Shakspere in Love. By EMMA SEVERN. In 3 vols. London, 1845. Bentley.

THERE is danger as well as daring in the attempt to take as the hero of a fiction a personage whom fame has made so

familiar that every reader has in his own mind an image of the genius he adores—an image idealized out of all the elements of greatness of which the character was compounded, and exempt from the human frailties with which the man appeared to those who knew him in the flesh. The novelist must paint the ideal genius, and so destroy the *vraisemblance* of his fiction, or sketch the real man, frailties and all, and so offend the prejudices of his readers that they pronounce the portrait a libel, and turn from it with anger and disgust.

This is precisely the dilemma into which Miss SEVERN has fallen in her attempt to make a hero of SHAKSPERE, and she has sought to evade it by a contrivance that only serves to destroy any remnant of interest the name may have excited. She is entirely unequal to the task of portraying SHAKSPERE the poet; she wants the skill to describe SHAKSPERE the man, and so she introduces him as SHAKSPERE, a shadow, a contemptible nobody, without individuality of character, without soul, and with very little sense. Nor has she done much better with the other names and abstractions she has introduced merely for their names' sake,—Sir THOMAS GRESHAM, SPENSER, Lord BROOKE, and Queen ELIZABETH. Sir THOMAS LUCY figures in the tale as a rival of the dramatist for the love of ANN HATHAWAY, who is somewhat more life-like than the rest. But as a romance of real life, a quasi-historical romance, the work is an utter failure, and we cannot, with good conscience, recommend any one of the five hundred and seventy-eight circulating libraries that have at this present writing adopted THE CRITIC as their guide in the selection of the books for their shelves, to pay a guinea-and-a-half for it. When they can procure it at eighteen-pence a volume, they may add it to their stores for the occasional service of very hungry readers; but it is not worth present purchase.

Lost Happiness; or the Effects of a Lie. A Tale, By Lady CHATTERTON. London, 1845. J. Burns.

A LITTLE volume for children, which proposes, under the guise of an interesting story, to inculcate a detestation of falsehood. Lady CHATTERTON has been completely successful in her endeavours to engage the attention of the child by a narrative ingeniously constructed, and told with that air of truthfulness which constitutes the charm of fiction. We cordially recommend this volume, which is exquisitely got up, with the well-known good taste of Mr. BURNS, to all papas and mammas purposing a present or a reward.

The Blacksmith's Daughter. An Historical Novel. By the Author of "Walter Clayton." In 3 vols. 1845. Newby.

ALTHOUGH there is a wondrous similarity of structure and style in all historical novels since SCOTT made them popular, they seldom fail to please. If the epoch be an interesting one; if the plot be contrived with moderate skill; if the characters be not quite unnatural, the dialogues reasonably lively, and the language void of offence against grammar, an historical romance may count upon a goodly share of patronage from the subscribers to the circulating library.

Therefore the *Blacksmith's Daughter* would be entitled to the notice of the libraries whose range is pretty extensive, even were its merits less than in truth they are. An imitation of SCOTT it is indeed; but so are the popular fictions of COOPER and JAMES; only this is so good an imitation that it may take rank with the best of the productions of these latter prolific writers. The period at which the scene is laid is at the middle of the sixteenth century; the place, partly in Flanders, partly in France. The principal historical incidents are the revolt of the burgesses of Ghent against the taxes imposed by CHARLES the Fifth; their endeavours to transfer their allegiance to FRANCIS the First; the failure of the negotiation, and its fearful consequences. With these are interwoven the adventures of the Blacksmith, a brave leader of the revolted men of Ghent, and his daughter, the heroine of the romance. Her beauty brings many lovers to her feet, and their rivalries and jealousies produce the usual and necessary variety of difficulties and dangers, and changes of scene from camps to courts, from Ghent to Paris, from "high life to low life," from the palace to the artisan's dwelling. These are managed with ease and skill, so that nothing appears too strained or unnatural, and the manner of the telling is lively and graphic, and keeps the attention on the stretch from the first page to the last. It is one of the few readable novels of the season.

The Martyr of Carthage. A Tale. By EDWARD WILSON, B.A. Rector of Topcroft. London, 1845. Burns.

MR. WILSON having found in the history of the decline of the Roman empire much which he imagined to be paralleled by some of the social evils that mark the condition of society in this country at this time, has sought to embody his views in a fiction, hoping that warnings, which would probably be unheeded if uttered avowedly by a preacher, might penetrate many a deep heart when conveyed under the alluring guise of a narrative. His design is indicated in his Preface. He conceives the distinguishing feature of the days of that mighty empire's decline to have been the decay in the popular mind of all vital interest in faith of any kind; religion, in its proper sense, being in truth dead within. Hence, while the pagan superstitions were cherished as forms, they were not believed; they were forms only; even as symbols they had lost their charm. The easy and indolent people, senseless to faith themselves, were careless of it in others, provided only they thrust it not obtrusively upon their slumbering consciences. Toleration was extended to every creed, save one. Christianity alone was persecuted, proscribed, oppressed. Why? Because Christianity alone disturbed the placidity of the pleasure-seeking generation; denounced their self-indulgences; pricked their consciences; was earnest when they were careless; and condemned their uninquiring conformity to a superstition they did not believe. Therefore they endeavoured to extirpate Christianity, not so much because it was another faith, as because it was to them a perpetual source of mental discomfort.

Mr. WILSON does not directly avow the similarity between this state of society and that which we now witness about us, nor does he distinctly state how he would amend the evil. But we cannot avoid seeing the end at which he is aiming, and what it is that he intends to teach. If we rightly opine, Mr. WILSON is of that section of the church which has received the name of Puseyite. They, he assumes, are the faithful among the faithless, the earnest among the indolent, just as were the early Christians among the voluptuous pagans, who clung to forms long after the spirit that once animated them had vanished. The rest of the world, of our British world, is in Mr. WILSON's view, like the Roman world at the period he treats of, tolerant of all creeds, because having no faith of its own, and combined to persecute the only earnest and zealous band possessing a faith, a religion, to wit, the said Puseyite section of the English Church, to which the author belongs.

Such, if we do not grievously misunderstand what we have read, is the design, indicated rather than avowed, in this tale of the *Martyr of Carthage;* and without offering any opinion by way either of assent to or dissent from his religious or social views, we must say of the manner in which he has embodied them, that, as a literary work, the *Martyr of Carthage* is a production of very considerable merit. It displays great historical knowledge; the characters that figure in it are well conceived and sustained. The composition is plain, but vigorous; the style pictorial; the interest of the story ingeniously supported, even in spite of controversial dialogues, more frequent than good taste will approve.

We have often before expressed our aversion to theological novels; however excellent their purpose, or able their execution, they always appear to us a desecration of a theme which should be addressed entirely to the reason, without seeking to enlist prejudice and passion. But reason is only to be approached by calm argument, which the very nature of fiction forbids, while the temptation it offers for appeals to prejudice and passion is so strong that he who could resist it must be more than mortal.

Self. By the Author of "Cecil." In 3 vols. London: Colburn.

MRS. GORE has grievously disappointed expectation in this supplement to *Cecil*, whose faults are reproduced with exaggerations, and of whose excellencies many are wanting. The philosophical novel is now proved to be beyond her powers. *Cecil* gave some promise that the writer might possibly, by

dint of practice in thinking, achieve something like the metaphysical fiction; it displayed glimpses of genius, shadows of thought, which time might have fostered into plain, palpable, unmistakeable realities. If such hope was entertained, it has been destroyed by the appearance of her third essay in this class of fiction. *Self* is a flashy, but flimsy production; its sparkle is that of paste diamonds, its glitter of tinsel. Throughout there is manifest a painful effort to be wise or witty, as the case required; and even where it sounds well in the ear, upon closer examination the wisdom is found to be shallow, and the wit small. Mrs. Gore is given to moralizing in these pages; but there is a want of genuineness that detracts from its worth; there is no heart in it: when she affects the good, she is prudish, and when she descends from the stilts, she is lax. Consistency is wanting throughout, and it is evident to us that she has not any decided principles of philosophy, but having caught some phrases, has mistaken them for a system.

Nor in the construction of the novel, as such, has she exhibited her wonted skill. The plot is improbable, beyond the permitted improbability of novels, and the characters are unnatural, because inconsistent with themselves and with circumstances. The time chosen is the commencement of the present century, when the Regency ruled the manners of the world of fashion. These the novelist has succeeded in representing in the lively manner that recommended so many of her former fictions to the popularity they have enjoyed. Here and there too we discover traces of her better moments. We are surprised by scenes true to nature that suddenly come upon us even amid the most unpleasing incongruities, and fairly make captive our feelings. Such are those between Evelyn and Selina, when the hand of death is upon the mother; few, indeed, could read these powerful touches of genuine nature without being melted into tears. The title is embodied in Philip Askham, whose selfishness and its consequences are the groundwork of the tale. But he is not a consistent creation; actions attributed to self-love are, in fact, the result of other influences; and certainly he is not the same person in the first volume and in the last, and the change is not accounted for by any circumstances revealed to the reader. Evelyn, the widow of an old fellow for whom she pretends to be inconsolable at the very moment she is listening, well pleased, to the proffered love of a young suitor, is any thing but a pleasing specimen of stern virtue. Lord Askham is a well-drawn portrait of a proud, bigoted, tyrannical peer. But though this novel is not quite worthy of Mrs. Gore's reputation, and inferior to most of its predecessors, the name of the authoress will insure for it a pretty general perusal. Our duty is done when we candidly inform our readers what is our own opinion of it, and tell those who are obliged by their restricted leisure to limit their novel reading to the very best productions, that this is not one we could recommend to *their* perusal. They whose time will permit a wider range will yet find *Self* to be better than three-fourths of the novels of the season.

The Cock and the Anchor; a Tale of Old Dublin City. In 3 vols. London: Longman and Co.; Dublin: Curry and Co. 1845.

We are sorry to say that this novel has a glaring fault, which so entirely eclipses its merits that we are compelled reluctantly, but in the discharge of a solemn duty imposed upon us as the adopted guide of so many hundreds of readers who rely upon our recommendation, to pronounce of it that it is unfitted for admission into the family. We are not prudish; we do not affect to denounce as vulgar scenes in low life, merely as such. But there is a manner of painting them upon which their character will depend. It is not necessary to put into the mouths of the people who figure in them the very language of their class, however coarse and brutal. That is not wanting to verisimilitude. Not so seems to think the author of *The Cock and the Anchor*. He literally revels in the language and dialogue of the pothouse. He takes us from den to den of villany in the Irish metropolis, and sups us full of their profligacy, their coarseness, their profanity.

We much regret this, for the author is not wanting in power either for the framing of a plot or the sketching of character. Many of the scenes thus marred are marked by broad, life-like touches and genuine humour. The materials of a clever book are here, and, without the alloy we have indicated, *The Cock and the Anchor* would not unlikely have made a *sensation*. As it is, it cannot be sanctioned, nor, we fear, could it be amended in another edition. If the author would direct his undoubted abilities to a theme which might afford less temptation to indulgence in coarse talk, he might hope to take a high position among the novelists of our time; but his best friends will tell him that *The Cock and the Anchor* must be offensive to English *taste*, at least, even if it be acquitted of the charge of sinning against decency and morals.

POETRY.

Lays of the Heart. By W. J. Brock. London: Biggs. Mr. Brock is a smooth and careful versifier. He does not cripple through his stanzas, now a hobble and now a halt in rhythm, but he keeps the "even tenor of his way," and proves thereby that his ear has been attuned to the melody of sound. For an author to be classed above mediocrity is a mark of praise, but only *comparative* praise. The mediocrity of one age may be the superiority or the inferiority of another age. Every poem has two characters, individual and comparative. The individual cannot be judged by analogy. It must stand by its own strength, without the fictitious aid of what is, or what has been, written. But very different from this is the comparative character of a poem. *That* must be rated by the value of other poems of the time; they must all be estimated, measured, and weighed together. But the comparative value of poetry never gains for it universal reading. Poets who were lights in their day, would find, could they peep from their graves, that their volumes are the mere lumber of our libraries, hid in a dusty and a dusky corner. The reason is, that their verses had no intrinsic greatness, but were valued—and properly so—as being the choicest fruit of the age. We are naturally inclined to judge literature by comparison, as we do the forms of creation; so the common dandelion is valued when it is surrounded by less beautiful flowers, but the odds are against it when the violet is by. It is but justice to judge Mr. Brock after this fashion; and therefore we affirm that he is not the *least* among his living brethren who attempt to ride the fiery Pegasus, but who find him as unmanageable as Phaeton did his father's chargers. Here, however, the comparison ends. For the very merit our author possesses we will not measure him by a thousand men who have laid down their lives at the shrine of poetry. Mr. Brock is a moral writer, we may say a religious one; but he does not pervert the high purpose of poetry by making it the advocate of any sectarianism. He writes with a Christian spirit, and his "Lays of the Heart" are a simple history of his Christian emotions. "The Young Pilgrim" has a warmth and freshness, characteristic of poetry and devotion:—

"Young pilgrim in life's early years,
Bright golden dreams are thine,
No cloud across thy path appears
To check thy joy divine;
The voice of Hope with pleasing sound
Is heard, and round thy young heart bound
Affection's tendrils twine.

Warm is thy heart and bright thine eye,
Piercing through future scenes;
All, all seems tinged with brilliancy,
Nor teardrop intervenes
To check the blissful dreams which cheer
Thy heart, like waters bright and clear
Wandering o'er meadowed greens.

Yet think not it will always be
As bright as it is now;
Rising from life's uncertain sea
Some cloud may mark thy brow,
The fairest flower may yield a thorn,
And thy unwary bosom torn,
May mourn a broken vow.

The Tempter with a syren's voice
And thousand honeyed charms,
May offer pleasures, promise joys
Within his treacherous arms;
But heed him not, death lingers there
In ambush, thy young soul to tear,
Mid danger's vain alarms.

Let not false pleasure's painted flowers
Allure thee from the road
Which leads to Canaan's fadeless bowers,
The Christian's blest abode;
With faith's keen eye uplifted there,
With heart engaged in ceaseless prayer,
Seek, seek thy father's God.

O 'tis a noble pilgrimage
To seek that better land,
And when those locks are grey, and age
Thy blooming brow shall brand
With furrows deep, e'en then thy guide
Will lead thee o'er life's ebbing tide
With an unerring hand.

Mr. Brock has little imagination; he is a teacher of the useful, and never wanders after the speculative. He has measured his strength, and not, like "little wanton boys who swim on bladders," ventured beyond his depth. In not attempting much, he has accomplished the more, because in the endeavour to grasp too large a substance he probably would have caught only a shadow. With another creditable extract we leave this little volume.

THE POET'S BRIDE.

O wouldst thou be a poet's bride,
Think not his eyes are always bright;
Think not that joy's all rapturous tide
For ever laves his soul with light;
The sweetest strains to music given
In lowest breathings oft are played,
The bird that nearest soars to heaven
Reposes in the silent shade.

So he who sometimes blithely soars
Far in the bright and sunny clime,
Whose harp its sweeping numbers pours,
And present brings the bygone time;
Whose mounting spirit loves to roam
In thought-built worlds where none may rest,
Wearied with soaring seeks a home
Upon affection's peaceful breast.

A poet is a human shrine,
Lit up at times by heavenly fire,
And, wouldst thou call the poet thine,
In silence oft may hang his lyre;
His wounded spirit oft may need
Love's hand to stanch the bleeding tide;
Say, wilt thou make that tide recede?
Then mayst thou be a poet's bride.

EDUCATION.

A Course of English Reading adapted to every taste and Capacity, with Anecdotes of Men of Genius. By the Rev. James Pycroft, B.A. Author of "The Student's Guide," &c. London: Longman and Co.

In reply to a request from a young lady, Mr. Pycroft presented her with a course of reading. It was found efficacious, and he was induced to enlarge this sketch and publish it in its present form.

And a very sensible work it is. The course of reading recommended is sufficiently comprehensive, without being too large for persons engaged in the business of life. There are few indeed who might not master it within a reasonable period by the simple process of doing a certain quantity every day. The course comprises History, Philosophy, the Fine Arts, the Scriptures, Poetry, and Natural Philosophy. They who have ever tried it will acknowledge the vast advantage systematic has over desultory reading, and the arrangement proposed by Mr. Pycroft is in accordance with the natural evolution of the mind, saving only that he puts physical science *last* when it should be *first*. The chapters are devoted to naming the best books and parts of books under each division which the reader should peruse and the order in which they should be taken up, and these instructions are rendered exceedingly amusing by scraps of anecdote and information with which the author relieves his catalogue as he goes along. We heartily recommend this very sensible and useful volume to the regards of all who desire to pursue a rational and systematic course of reading.

School Catechisms. By the Rev. T. Wilson. London: Darton and Clark.

In our school-time, Pinnock's *Catechisms* reigned supreme. They were our first instructors in science, and pleasant teachers they were. But science does not stand still. Mighty changes have been wrought, and the books that were authorities then would be misleaders now. Besides, some progress has been made in the art of conveying knowledge. Pinnock was far from perfect in this respect. He was not quite master of the art of putting abstruse ideas in a familiar shape. He fell into the fault of taking too much for granted, assuming that the child knows a great deal more than he does know, and forgetting that terms intelligible enough to him were mysteries to the learner.

Mr. Wilson's *Catechisms*, which have superseded those of Pinnock, appear to have avoided the defects of the ancient pedagogue. They are written by a variety of hands, each subject having been wisely intrusted to a person peculiarly conversant with it; but all have worked together in harmony with the common design, and the result is a series of catechisms for schools and families which not only bring down the information to the present state of knowledge in every branch, but convey it in a form adapted to the comprehension of those who have to perform the double task of learning both the meanings of words and the things those words are intended to describe. With such recommendations, Wilson's *Catechisms* have deservedly taken the place of Pinnock's, and we can confidently recommend them wherever they may be yet unknown.

A Letter to the Right Hon. Sir R. Peel, Bart. on the Education of the Middle Classes, &c. London, 1845. Hatchard.

The purpose of this pamphlet, whose title is too long to be copied entire, is to urge upon the Government the necessity for legislative interference to remedy evils of no trifling magnitude, resulting from the notorious incompetency of schoolmasters and tutors. The author argues his point with considerable ability, and with the earnestness of profound conviction. His suggestions for curing the evil complained of are as follow:—

1. That no person be allowed to act in the capacity of a teacher, whether as schoolmaster or tutor, so as in any way to instruct children for fee or reward (except in cases of masters instructing pupils or apprentices, in any trade or profession), until he have first obtained a certificate, giving him due authority to act as a teacher.

2. That a board of examiners be formed, consisting of gentlemen of erudition, who (either as a committee appointed by Government, or as a corporate body, duly chartered, like our Universities, or some of our public societies) should devote much of their time to the general improvement of education among the middle classes, and particularly to the examination of candidates for the office of teachers.

3. That, in future, all schoolmasters be required, previously to their performing any of the functions of public teachers, to undergo a strict examination before such committee, or board of education, in those branches of learning respectively, of which they should severally propose to become teachers. And that each candidate, who should be found qualified, be furnished with a *certificate*, specifying the particular branches of education in which he should be deemed competent to teach.

4. That no schoolmaster, having such certificate, should be allowed to teach in any other branch of education than that for which his certificate should declare him qualified, unless he should first duly qualify himself by passing a further examination, and so become furnished with the additional certificate. And,

5. That these examinations be conducted upon similar principles to those pursued at our Universities and public schools; whilst, in order to afford every facility to candidates offering themselves for examination, a list of standard authors might be published, comprehending those books which might be judged to contain the best information on the various subjects respectively, and out of which the several candidates would have to be examined.

We submit this scheme to the consideration of our readers. We have neither space nor leisure to review the merits and defects that are apparent upon the face of it.

Speech of Thomas Wyse, Esq. M.P. on the Extension and Improvement of Academical, Collegiate, and University Education in Ireland. With Notes. London, 1845. Simpkin and Co.

The unwearied zeal with which Mr. Wyse has devoted himself to the cause of education entitles his opinions to the most respectful consideration. His singleness of purpose lifts him above all party and sectarian influence, and in whatever he says touching upon education, we have the sincere expression of a judgment based upon observation, reading, and reflection, systematically conducted for a long series of years,—in fact, the fruits of the undivided labours of a life.

The speech of such a man upon such a theme, at this moment of excitement, deserves a more substantial record than the columns of a newspaper. In the pamphlet form, with the notes appended, it will doubtless be attentively perused by all who take an interest in the great question of our generation—How shall the people be educated?

The Formation of Words of the German Language, &c. By H. Apel. London: Simpkin and Co.

All who have made a study of the language of Germany will have experienced great difficulty from the absence of a knowledge of the formation of words. The purpose of the volume on our table is to help the student over this obstacle; it teaches, in fact, the etymology of the language; the plan is, first, to shew the radical words, but so that the pupil may be able to repeat together with the Infinitive also the Imperfect Tense, and the Past Participle, thus resting his knowledge in the Verb, the most significant word the language contains. From the Radicals he proceeds to the Derivatives, both primary and secondary, repeating the article with the substantives, so that the gender may be learned with the word; and thus the composition of words is readily acquired, and indelibly imprinted upon the memory. Some questions for examination are appended, whereby the student may test his own attainments. We can recommend this little book as a valuable guide to a knowledge of German.

An Elementary Grammar of the German Language. By Heinrich Apel. London: Simpkin and Co.

This grammar appears to be written after a simple and rational plan, and to be well adapted for self-tuition. It is founded on the system of Dr. Becker, but Mr. Apel has adapted it to English needs.

PERIODICALS.

But few periodicals have come to hand since our last, and they contain nothing peculiarly deserving of notice.

The *seventh* number of *The Classical Museum*, published by Taylor and Walton and edited by a society of noblemen and gentlemen, contains seven articles, all very learned, and to profound classics doubtless very interesting, although to us, who confess to a greater regard for the world *as it is*, than the world *as it was*, most of them are dull enough. Mr. Yates discourses elaborately on the use of the terms Acanthus, &c. The Rev. W. Linwood reviews a new edition of *Æschyli Supplices*. Dr. Smith's new mythological dictionary is noticed and approved by Mr. T. Dyer, and Professor Long renews his examination of the passage in *Appian's Civil Wars* which relates to the Licinian law. Other brief notices of new classical works make up the number.

George Cruikshank's Table Book, for April, is as excellent in its pictorial, and as wretched in its literary, department as its predecessors. How full of genius is the *Young Ladies' Vision of the London Season*, twenty pictures in one, and each a gem. This alone is worth more than the price of the number, and for this alone can it be recommended to the reader's notice; for nothing can be more vile than the productions of the pen with which the few pages of type are disgraced.

A new periodical, entitled *The Illustrated Family Journal*, has been forwarded. In size it is a fac-simile of *Chambers's Journal*, in price a halfpenny more; but then it is abundantly illustrated with woodcuts of considerable merit. The literary contents are various in their style, mingling essays, tales, poetry, science, and gossip. Some of the articles are original, but the greater portion of them are extracted from modern works. We cannot say much for the original papers; they are the productions of inexperienced writers, and we would recommend the editor to confine himself wholly to extract, unless he can obtain the contributions of the *best* pens. A great deal of taste is displayed in the selections, especially of poetry, and if the illustrations continue to be as well executed as hitherto, we have no doubt that this new periodical will prove a successful attempt to establish a cheap journal in which literature and art combine their efforts towards the same end. But the conductors must be satisfied with nothing short of the *best* of both that money can procure. Thus, and thus only, amid so much competition, can success be assured; but with that and perseverance, it is certain nothing really good fails in the end to reap its reward.

Sealey's Western Miscellany is a small monthly magazine, published at Bristol. Its contents are prudently localized as much as possible, and the graver has aided the topographer in describing some of the most curious and interesting objects in the surrounding country. Tales, poetry, and essays are mingled with the topography, and help to vary the reader's enjoyment. But from experience we say to the Editor, give as much of the latter, and as little of the former as possibly you can. Local periodicals can subsist only by catering local matters which cannot be procured elsewhere.

RELIGION.

A Summary View of the Evidences of Christianity. In a letter from the Right Hon. Charles Kendal Bushe, late Chief Justice of the King's Bench. *With a Preface and Notes*, by the Rev. James Wills, A.M. Dublin, 1845. Curry and Co.

As a relic of so excellent a man and so sound a lawyer as the late Chief Justice Bushe, this volume will interest his friends, and may attract some attention from the busy public. Its merits, as a literary composition, are not, however, of a very high order. The great subject the learned author had undertaken to treat was not one, perhaps, calculated to call forth much congeniality of thought, even had the writer possessed any. In fact, it is a furbishing up of old arguments; a sort of abstract or brief of what his predecessors have said, and it will serve the purpose at least of recalling their reasonings and presenting at a glance the collected evidences that prove the truth of Christianity. In doing this the Chief Justice availed himself of his experience as a lawyer, and the hand of the practised analyst of proofs is apparent throughout. It might be advantageously given to youth as a useful assistant in theological study, or as a preparatory step to more elaborate writers.

Mores Catholici; or, Ages of Faith. Parts IV. and V. London: Dolman.

We have already noticed the characteristics of this publication, and especially its eloquence of language, simplicity of thought, and poetry of sentiment. These new numbers exhibit the same earnestness of purpose and the same extensive learning, the copious quotations with which they are studded being gathered from the entire range of literature, ancient and modern, home and foreign. It cannot fail to interest even those who dissent from its doctrines.

MISCELLANEOUS.

American Facts, Notes, and Statistics, relative to the Government, &c. of the United States of America. By George Palmer Putnam. London, 1845. Wiley and Putnam.

In the present relationship of the two countries, a collection of *facts* relating to the Government, resources, engagements, manufactures, &c. of America will be acceptable in England. But where are *facts* to be found? Brother Jonathan has a natural tendency to exaggeration, especially on all matters affecting the repute of "the smartest nation in all creation." An American writing for America must employ the language of praise, swell the schedule of advantages, and dwindle the category of evils to the smallest span, or he will be exposed to the vengeance of the insulted majesty of the sovereign people. If, on the other hand, he writes for the information of stranger countries, forthwith his personal vanity counsels to make out the best case he can for the society of which he is an unit. Hence the difficulty always experienced by the inquirer in ascertaining the exact truth relating to the power and resources of the United States.

Mr. Putnam's volume is, perhaps, as fair a compilation of American statistics as could have been expected from a citizen of New York. They were, as the editor admits in his preface,

hurriedly thrown together amid the pressure of business; but still preserving something like a methodical arrangement, which serves materially to assist research, and helps, by association, to bring the more important facts readily back into the memory.

Mr. PUTNAM's professed object is to enlighten Englishmen as to the real greatness of the Union, of which he declares we have very imperfect notions. For this purpose he treats successively of its extent and resources, of its constitution and government, of its religion and philanthropy, of its education, its literary and scientific institutions, its literature, fine arts, society, and manners.

The second part consists of documents, notes, and statistics, being mere reprints of state papers, and articles in magazines and reviews.

In an Introduction, the author ridicules very fairly that ignorance of the true condition of America and of the character of its people which undoubtedly prevails in England, even in circles otherwise well informed. He remarks that he has seen surprise expressed that a Yankee could talk good English, although the truth is that the purest English is more generally spoken in America than in England. The most vague conceptions exist as to the *extent* of the country. An inhabitant of one state is expected to know all about those of another, in utter forgetfulness that they are further separated than is England from Italy. But while he protests against the absurdities of English notions, he rebukes the opposite folly into which his own countrymen have fallen, of talking so big about "our glorious republic." "This," he says frankly, "is getting to be a nuisance to sensible men of all countries, and especially when it is the mere vapouring of a braggadocio."

He expresses his abhorrence of slavery, but he reminds the English who are so fond of making it the subject of their sneers, that it is to England after all that America is indebted for her plague-spot; moreover, it is quite forgotten that a part of the United States, equal in extent to all Great Britain, Ireland, and half of Europe, *has no slavery at all;* and in many of these states slavery was abolished long before emancipation could command a decent minority in the English Parliament.

Repudiation is another theme for prejudice to sport withal. But the dishonesty of one state should not be saddled upon all. The Union pays its state debts; and with as much reason might the English Government be charged with dishonesty because some turnpike trusts, become insolvent through bad management, are unable to meet the interests on their bonds.

Mr. PUTNAM reminds his English readers that the matter is not so very bad, when it is considered that in twenty years the United States have paid to Great Britain for merchandise no less a sum than *two hundred millions sterling!*

The area of the United States is 2,300,000 square miles, or 650,000 miles more than the whole of Europe, excepting Russia. The single state of Virginia is one-third larger than England. The population of the Union was, in 1840, 17,062,666, nearly doubling itself every twenty years.

Slavery exists in thirteen out of the twenty-six states; but even in the slave-holding states it is admitted to be an unmitigated evil, which the inhabitants would gladly abolish if they could be shewn how it might be done with safety to the white population.

The revenue is derived chiefly from duties on imports and the sale of public lands. The income exceeds the expenditure by seven millions of dollars:—

In 1837, the Government, after paying off the whole, principal and interest, of the national debt, contracted during two long wars, was enabled to distribute among the different States no less than 37,468,859 dollars of surplus revenue. The subsequent decrease in customs, owing to the commercial revulsions, compelled the Government again to incur a small debt. The loan, however, was promptly taken at home, and the stock, by the last quotations, was sold at a premium of fourteen per cent.; *i. e.* 114 dollars in money were given for 100 dollars of stock.

The modest scale of salaries to officials will astonish an Englishman:—

The salary of the President is 25,000 dollars (5,000*l.*), with an official residence; of the Vice-President, 5,000 dollars (1,000*l.*); of the Cabinet (except Attorney-General), 6,000 dollars (1,200*l.*) each.

Congress consists of the Senate and House of Representatives, resembling the two Houses of Parliament.

The Senate consists of fifty-two members, two from each state, chosen, not by the people, but by the legislature, for a term of six years; and, to prevent sudden changes of policy, one-third are elected every year.

The representatives are chosen for two years, by districts in each state. The present number is 225.

The following is a sketch of

THE JUDICIAL INSTITUTIONS OF THE UNITED STATES.

The judicial power of the United States is vested in a Supreme Court, consisting of a chief justice and nine associate justices; nine district courts, consisting of a judge of the Supreme Court, and a district judge; and thirty-four district courts, held by a district judge alone; from whose decisions there is, in certain cases, an appeal to the Circuit Court, and from this to the Supreme Court. All these judges are appointed by the President, subject to the approval of the Senate. They hold their offices "during good behaviour;"—in other words, for life, unless impeached for misconduct,—a case which has happened but once with a judge of the Supreme Court, and rarely, if ever, with a district judge.

These "United States' District Courts" have only jurisdiction in cases affecting the general government—such as those connected with the customs and revenue, offences on the high seas, &c.

The Supreme Court meets annually at Washington. It is a tribunal eminently calculated to command respect. The judges have always been those of the highest legal ability, and of unimpeachable character. Appointed as they are for life, not by the people, but by the President and Senate, and holding office usually during many successive administrations, they are far removed from corrupting influences and popular control. Their decisions are, of course, final. They have the power of cancelling any act of Congress, even though signed by the President, if they decide it to be at variance with the principles of the constitution. To them also lies an appeal upon all judicial questions arising between the citizens or governments of the different States. "In the nations of Europe," says De Tocqueville, "the courts of justice are only called upon to try the controversies of private individuals; but the Supreme Court of the United States summons Sovereign Powers to its bar. When the clerk of the court advances on the steps of the tribunal, and simply says—'The State of Ohio *versus* the State of New-York,' it is impossible not to feel that the court he addresses is no ordinary body; and when it is recollected that one of these parties represents one million, and the other two millions of men, one is struck by the responsibility of the seven judges, whose decision is about to satisfy or disappoint so large a number of their fellow-citizens."

At this moment the reader may like to learn something of the warlike resources of the Union.

The regular army amounts only to 9,012 men; but the States are provided with a militia, which numbered, in 1841, 1,587,722 men, of whom 300,000 are regularly armed and trained several times a year.

THE NAVY OF THE UNITED STATES.

The navy of the United States, though comparatively small, is said to be unexcelled in the completeness and efficiency of its appointments. It consisted in 1841 of eleven ships of the line; thirteen frigates of the first class; two frigates of the second class; twenty-three sloops of war; four brigs; eight schooners; two steam-frigates, and several smaller steam-vessels. There are six commodores, commanding squadrons; seven commanders of navy yards; three post-captains; two commanders of naval stations; a governor of the naval asylum; and sixty-seven captains.

England might take example from the state of

EDUCATION IN THE UNITED STATES.

The provision for public schools and elementary education in most of the States, and more particularly in New England and in New York, is liberal and ample. The general statistics are thus given by the census of 1840:—3,248 academies and grammar schools, with 164,270 scholars; 47,207 primary schools, with 1,845,113 scholars: scholars at the public charge, 468,323; white persons above twenty years of age who cannot read or write, 549,905. Of this number it is estimated that two-thirds are foreigners.

In Cincinnati, a place which was a wilderness only sixty years since, a single publisher has printed in six years 650,000 school books.

The condition of literature in America will especially interest our readers:—

SALE OF AMERICAN BOOKS.

Reference has already been made to the American historical publications and collections of materials for history. As illustrative of the demand in the United States for original works of this character, it may be repeated, that of Mr. Prescott's *Ferdinand and Isabella*, in three expensive octavos, nine editions were called for in four years; and of his *Conquest of Mexico* 5,000 copies were printed as the first edition from the stereotype plates. Each of these works is elegantly printed, and costs about a guinea and a half per copy.

The first volume of Bancroft's *History of the United States* was published in 1834; and the last edition was the tenth. The three volumes cost the same as Prescott's.

The writings of Washington, collected by Mr. Sparks, form twelve illustrated octavos,—an expensive set; those of Franklin fill ten large volumes; yet no less than 6,500 sets of the former, and 4,500 of the latter, have actually been printed, and purchased by the not ungrateful countrymen of those two great men.

A similar taste and demand exist for good books of travels.

The first two works of Stephens, although published anonymously, and the subject not very novel, had an immediate and extensive sale worthy of their subsequent reputation; and no less than 12,000 copies of his expensive work on Central America were called for in less than three years.

Of Dr. Robinson's *Biblical Researches in Palestine*, in three octavos, which even the *Quarterly* was ready to praise, the first edition consisted of 2,500.

In poetry about 120 original works, and in fiction about the same number, were published between 1830 and 1842.

America is ahead of us in its patronage of

ETHICAL AND POLITICAL PHILOSOPHY.

Ethical and political philosophy receive some little attention in the United States, as would appear by booksellers' lists. The works of President Edwards (whose name as a metaphysician has been heard of abroad), and those of recent writers, such as Upham, Tappan, Schmucker, Rauch, Wayland, Marsh, Day, Bowen, Adams, and Emerson, may afford some proofs that Americans occasionally indulge in 'speculation' of another sort, than that for mere money-getting. Added to these *original* treatises, are original translations of the works of Cousin, Jouffroy, De Wette, Gall, Spurzheim, and others: and it is a rather curious fact, that Americans have *first* collected and *first* printed complete editions of the works of such English writers as Cudworth, Bolingbroke, Burke, Paley, and Dugald Stewart; and first printed in a book from the essays and reviews of Carlyle, Macaulay,* Jeffrey, Talfourd, Stephens, and Professor Wilson. They have also reprinted the works of Bacon, Dr. Brown, Reid, Coleridge, Bentham, Abercrombie, Dymond, Adam Smith, Chalmers, Isaac Taylor; and yet a learned historian, already quoted, says that in America "works on the higher branches of speculation and philosophy are *unknown*."

The general results are thus stated:—

AMERICAN PUBLICATIONS.

A list for about twelve years, ending 1842, gives the following particulars, viz.:—

	Number of Works. Original American.	Reprints.
Biography	106	122
American History and Geography	118	20
Foreign History and Geography	91	195
Literary History	—	12
Ethics	19	31
Poetry (in separate volumes)	103	76
Novels and Tales	115	—
Greek and Latin Classics, with notes	36	none
translated	—	36
Greek, Latin, and Hebrew Text Books	35	none

Medical, law, and miscellaneous—not ascertained.

Nor is literature a barren pursuit in the States:—

PROFITS OF AMERICAN AUTHORSHIP.

American authors are not always deprived of just remuneration for their writings. The Harpers, of New York, are said to have paid Mr. Prescott 7,500 dollars (1,500*l.*) for the *first* edition of his *Conquest of Mexico*, and to have offered double that sum (which was declined) for the entire copyright. In two years the sale of *Barnes' Notes* yielded the author alone more than 5,000 dollars. President Day has received more than 25,000 dollars (5,000*l.*) for an Algebra; and Dr. Webster had about the same sum for a spelling-book (!); and all these yet retained their copyright in future editions. A Philadelphia publisher paid to authors 135,000 dollars in five years.

* The whole of Macaulay's Essays, in two volumes, are sold in New York for 50 cents (2*s.* sterling). This is giving *literature* "to the million." 5,000 copies, at least, have been circulated.

There are in all 227 periodicals, 138 daily newspapers, and 1,266 weekly or semi-weekly papers. Some of the magazines enjoy a circulation of from 20,000 to 30,000 copies.

Mr. PUTNAM asserts that American publishers never suppress the names of the authors of the English works they reprint, or change or disguise the titles to pass them for originals. Not so the English publishers. He prefers great and just complaints against the piracies of English publishers:—

THE TABLES TURNED.

Two or three articles from the *North American Review*, at different times, have been appropriated entire, as *original*, in the pages of a London Review, whose age and respectability should have discountenanced such an act. The transplanting of American magazine articles into English periodicals, frequently in so disguised a shape that the exotic loses its identity, has become an ordinary occurrence. Some works of fiction, in their new names and English dress, would scarcely be recognised by their own fathers. The transformations of *Burton* into *Quebec and New York*; of *The Infidel* into *The Fall of Mexico*; of *Probus* into *The Last Days of Aurelian*; and *Letters from Palmyra* into *Zenobia* herself; of *Young Maiden* into *English Maiden*; and *American Traveller* into *African Traveller*, are as sudden and ingenious as the changes of a pantomime.

Charcoal Sketches jump into the *middle* of London orthodox 'three volumes,' and leave their own name and their father's on the other side of the ocean. The Londoners take a Natural History from Dr. Harris, a translation of Heeren from Mr. Bancroft, a Greek Grammar from Mr. Everett, and a Law of Bailments from Judge Story, not only with no "by your leave," but with a false assumption of paternal honours. And more recently a bulky Greek Lexicon of high standing, by an Edinburgh professor, has copied page after page from the American work of Mr. Pickering, without so much as alluding to the existence of such a work in its list of authorities.

It appears from a catalogue that in ten years no less than 382 American works have been reprinted in England: many of them have found an immense sale. Of DANA'S *Two Years before the Mast*, there were *four* rival editions, and of one of them no less than 15,000 copies were sold.

The statistics of the Fine Arts in America are curious, but too long for investigation in the columns of THE CRITIC.

The chapters on the state of Society and Manners are interesting, but we must pass them over, and conclude by recommending this volume to those who seek the best collection of American *Facts* that has yet been made, and which forms a basis upon which in future editions a work of high value and authority may ultimately be constructed.

A detailed Report of the Proceedings in the Trial of the Eighteen Parsee Prisoners for Murder, before the Supreme Court, Bombay, on Wednesday, July 17, 1844. London, 1845. Clarke.

IT is our duty as Journalists of Literature to record the publication of this trial. But it has so little interest for the bulk of our readers that we should not be justified in doing more than announcing its appearance.

The Modern Orator. Parts I. to IV. Aylott and Jones.

THESE parts complete the speeches of Lord CHATHAM, which are to be followed by those of SHERIDAN. We have already observed, that the design of this publication is a very promising one; but, considering that copyright costs nothing, the price is much too great. A sheet of sixteen pages might well be afforded at twopence, and the printing might be a little closer. We are satisfied that a consequent increase of circulation would soon repay the added cost, and thus within a reasonable time might there be a collection of British oratory; but at the present rate of publication, it will be a work of years to gather it together. We make these remarks in the most friendly spirit, and simply because we are anxious for the success of an enterprise that is really wanting to our libraries.

The Spirit of the Polka; being an Historical and Analytical Disquisition on the prevailing Epidemic, its Origin and Mission. By Captain KNOX, Author of "Hardness," &c. London, 1845. Ollivier.

A *jeu d'esprit*, suggested by the polka-mania, now rapidly on the decline. We cannot compliment Captain KNOX on

his performance; it was not written in one of his happiest moods. The humour is too often coarse, and the wit far-fetched. It does not flash upon you on the instant: you have to ponder upon the page to find out the point, and often when found it is not worth the search. This *brochure* might have served well enough for the pages of a magazine, but it scarcely deserved the honour of separate publication.

ART.

THE PANORAMA OF NANKING.

In the magnificent and greatly admired panorama of Hong-Kong, we thought Messrs. Burford and Selous had attained to a pitch of excellence, beyond which, in this kind of painting, it was impossible to reach. We were, however, deceived; for in the unique and splendid picture now under notice, they have surpassed all previous efforts, and produced a work which, for fidelity, character, colour, and general artistic management, stands unrivalled by any ever produced in this country. This indeed is saying much, but not too much; it is high praise no doubt, but not extravagant.

This view of Nanking occupies the large circle, where was last exhibited the panorama of Hong-Kong. It is taken from a height overlooking the city and the extensive plain in which it stands. In the immediate foreground to the south is a meeting between Sir Henry Pottinger, Sir Hugh Gough, and other British officers, and the three Chinese Imperial Commissioners, the Tartar General, and other natives of distinction. Near these are groups of Tartar cavalry, Chinese gamblers, peace-keepers, and idlers. To the north stands the famous and beautiful Porcelain Pagoda—a structure which, though foreign in style, when compared with European architecture, cannot be viewed without eliciting admiration, so exquisite is its form, and such the harmony of its parts. Beyond this, surrounded by wide and lofty walls, embracing an extent of several miles, stands the city of Nanking, with its narrow streets, its canals, and public buildings. Between the walls and the spectator lies the grand canal, enlivened by shipping and crossed by curious bridges; leading out to the west it joins the noble river Yang-tse-Keang, on whose broad surface rides the British fleet securely at anchor. On three sides the vast plain stretches away into the distance, and is bounded by lofty mountains, whose abrupt lines and pinnacle-shaped peaks indicate their substance to be granite, or some similar hard material. The roads are enlivened with natives of divers costumes and following different pursuits; the canals, with boats and craft characteristic of the country. The fields, bountifully irrigated, present a charming verdure, though beneath a scorching sun, and waving with crops of rice and grain, convey a notion of the perfection to which, stimulated by the necessities of a redundant population, the industrious Chinese have pushed the art of agriculture. An abundance of trees of tropical and many other shapes lend their valuable assistance to complete the picture.

Fidelity of detail, without which works of this nature are nothing worth, has been carefully attended to throughout every part of this panorama. The broad outline of the city, its suburbs and surrounding country, has been truthfully preserved; nor is there a single accessory introduced which has not its original in that curious and interesting country. To the accuracy of the first we have the testimony of a gentleman who was present with the British forces, and for the latter the assurance and respectability of the artists. The local colour is everywhere good, in some places—such, for instance, as the flat plain extending to the river on the left—it is exquisite; there is a passage of sunlight from the east, which startles by its vividness; the atmosphere is clear, warm, and (akin with the subject) suggestive of a fragrant foreign odour; the trees stand out prominently and with actual substance; the effects are skilfully thrown in, and for the extreme care bestowed on the finish throughout this vast picture the artists deserve especial commendation.

We have spoken in flattering but most certainly in well-deserved terms of this noble panorama. So striking are its merits and so few its defects, that we cannot find it in our heart to suggest a fault. A more picturesque view we have often seen in this place, but one more interesting or novel by its nature, or one more *magically real*, we have never had the gratification of inspecting. After this, it were a work of supererogation to recommend to our readers a visit to this Panorama; the attractions it offers are of a nature to force their way with the public; and it will next be our office, no doubt, to congratulate the artists on the golden harvest they will reap, and which most undoubtedly they deserve.

Encouragement of the Fine Arts in France.—The *Moniteur* publishes an account of the number of pictures, &c. executed by order of the Minister of the Interior in 1843, and distributed in the churches and other public buildings throughout the country. From this statement it appears that, in 1843, 224 pictures and 12 busts and statues were placed in different public buildings. The expense of sculptures and bronzes amounted to 103,000 francs, of pictures 215,000 francs, and of medals 8,000 francs. Besides this, large sums were given by the government towards the expense of erecting monuments to public men; as, for instance, to Joachim Murat at Cahors, to Kleberger at Lyons, and to Deasix at Clermont. And immense sums were laid out in the restoration of the cathedrals of Velazy, &c. and of the celebrated Roman theatre at Arles. All this is independent of the pictures and sculptures painted by order of his Majesty for Versailles and the palaces, and of the improvements made under the directions of the Prefect of the Seine. We should be glad to see the liberality of the French Government, in all that regards the arts, imitated nearer home.

MUSIC.

The Musical Treasury, Vocal and Instrumental, &c. Parts XXII. and XXIII. London, Davison.

This is a collection of really *good* music, published at a surprisingly low price. It contains a variety of subjects—dance, song, glee, vocal and instrumental, sacred and secular, English, German, French, Italian—the best compositions of the best masters of all ages and nations—with sometimes original productions of living composers. Part XXII. for instance, is devoted entirely to sacred music, and contains Handel's *I know that my Redeemer liveth*; two Easter hymns; *Seek ye the Lord*; an air from *The Creation*, with new words; and an air from a MS. oratorio by Mr. H. West. Part XXIII. contains the *Norma Quadrilles*; a comic song, by Mr. W. L. Rede; Schubert's *La Poste Quadrille*; and the celebrated old Irish song, *The Green Bushes*; and all these for a shilling! We can heartily recommend this publication to families desirous of possessing a collection of good, useful, practical music, at a very trifling cost. To them it will indeed be a *treasure*.

Fede, Speranza, Carità; cosi a tre voci. Poesia di Manfredo Mazzioni; Musica di G. Rossini. Cramer and Co. Regent-street.

The eager anticipations of delight with which we first seized upon these compositions have lost none of their freshness upon a close and frequent intimacy. It is something to have to acknowledge a new obligation to this great master; and it is to find that obligation increased immeasurably when the occasion is so intrinsically valuable as the present. As we observed lately, the sacred music of our country is either too profound or too meagre to find its way into the use of general society. It comes upon us in the furred gown (and not very becoming cap) of the Mus. Doc. or in the gorgeous apparel of the Italian hierarchy, or else denuded at once of the dignity and splendour of both these, and cast into the world in the most humble guise of puritanical simplicity. To retain, therefore, the graces of the *lay* school of composition with so much of *sacred* feeling as should keep before the mind the character of the subject treated of, would appear to be no less a novel than a most acceptable service. How it has been achieved by Rossini a single hearing of these beautiful trios (for they are as effective with three single voices as well as with a choir) will serve to shew. There is a difference in the style of the two first and of the last, which is referable to the date of the compositions. *La Carità* has all the breadth of the style which broke upon us in the "gran maestro's" *Guillaume Tell*. The others are of an earlier period and of greater simplicity.

As these delightful creations of Rossini's genius are the discovery of some friend to whom the composer permitted an

inspection of his portfolio, we hope before long to find new treasures from the same source bursting upon us.

We must not omit to congratulate Signor MAZZIONI on his admirable adaptation of the Italian words to the music, which was, we believe, originally composed for the French verses which are given in this edition, the inspiration of which we should hardly have considered potent enough to kindle the musician to that fervour of expression which pervades these compositions.

MELODIST PRIZES.—The adjudication of the prize offered by the Duke of Cambridge, patron of the Melodist Club, for a convivial duet, took place on Thursday after dinner, at which his Royal Highness presided. Four compositions from candidates were very well sung by Mr. Manvers and Mr. Machin; and the prize, an elegantly chased silver salver, was awarded and presented to the respected Mr. Parry, honorary secretary to the club, by the royal chairman. A premium of five guineas, for the second-best duet, was awarded to Mr. C. E. Horn. Solos on the horn and violin, by Puzzi and Vieuxtemps, were most excellently performed; and several vocal pieces were sung in the course of the evening. Lord Saltoun, Sir A. Barnard, and a very numerous assemblage of amateurs and professors of music, passed a most harmonious and sociable evening at the Freemasons' Tavern.

THE DRAMA AND PUBLIC AMUSEMENTS.

IT is with feelings of disgust and shame that we commence a record of the dramatic doings in the metropolis of England. One of the national theatres degraded to the purposes of a bazaar, a lottery, and meetings of Christians to vilify their fellow Christians; from the other the legitimate tragedy, comedy, and farce proscribed utterly, and opera dancers disgracing the boards once trodden by a KEMBLE, a SIDDONS, and a KEAN. The Haymarket and Sadler's Wells alone preserve a shadow of the British drama. Comedy reigns in the former, but it is not the true comedy, holding the mirror up to nature; but a sort of elaborate farce, caricaturing nature to excite a momentary laugh, and leaving no lasting impression upon the mind of the spectator. At the suburban theatre it is somewhat better. The legitimate drama has there found a refuge, and is received with honour, proving that the love of it is not quite extinct in the public heart, and that even yet it might be revived, were the attempt made with due reference to the peculiar circumstances of the time.

In such a condition of the genuine drama, which only is the proper theme for a critic, our duties in relation to it will be very light. We will not insult the taste of our readers by dwelling at any length on the performances of the theatres, until something shall arise more worthy the notice of criticism. In the matter of the vile ballets, and spectacles, and farces, borrowed from the French, of which nine-tenths of the playbills of the week are composed, we shall prefer simply to record as intelligence the fact of their various doings, with short accounts of the plots or most striking features of the new pieces brought out from time to time, that our readers may be informed what is doing in the theatrical world. When, however, any thing shall chance to appear bearing sufficient relationship to the true drama to deserve formal criticism, it shall be given to the best of our ability—at least with an honest expression of opinion as to the literary merits of the work, and the skill with which it is embodied by the actors. Nor shall we omit *any* opportunity of urging upon the English public the propriety of making some effort to restore the national drama to its proper place, by means which we have already indicated, which we shall repeat again and again, and of the success of which we feel more assured the more we reflect upon them.

We believe that by the course above described we shall more please the readers of THE CRITIC than if we were to adopt the fashion of our contemporaries, and fill with tedious notices of bad plays columns which may be more usefully occupied with instructive and interesting material, that will exhibit the progress and proceedings of the real *mind* of the age we live in.

It will be as well to begin with a brief statement of what is doing at the principal theatres, and thenceforth to record the new pieces that make their appearance in the course of each week.

At DRURY LANE the opera and the ballet reign without a rival. *William Tell* and *The Bride of Lammermoor* take their turns. Her Majesty visited the theatre in state on Thursday se'nnight, and was right loyally received. *William Tell* and *Clari* were the pieces commanded. DUPREZ exerted himself to the utmost, and the Queen and the Prince expressed themselves much delighted with his fine voice.

At the HAYMARKET a new comedy, by DOUGLAS JERROLD, has been produced successfully, entitled, *Time works Wonders*. The *Times* thus describes the plot. But as we must go to press this week some days earlier than usual, that the applications for the 1st of the month by persons ignorant of the change may not be disappointed, we must reserve formal criticism and more details for another week. "There are two plots, which may be told in very few lines:—*Clarence Norman* has eloped with *Florentine* from a boarding-school, accompanied by *Bessy Tulip*, and stops to change horses at a road-side inn; but the marriage is broken off by the arrival of *Miss Tucker*, the schoolmistress, and the young man is sent by his uncle to the continent to be cured of his passion. Five years afterwards, *Sir Gibert*, meeting *Florentine*, the death of whose father has placed her in a state of independence, falls in love with her, and offers her his hand, which she accepts in a momentary fit of indignation at what she conceives the coldness and fickleness of *Clarence*, who has just returned from Italy. A reconciliation, however, takes place between the lovers, and the baronet perceiving that even he, with all his prejudices in favour of rank, is not proof against the attractions of *Florentine*, consents to the marriage of his nephew, after—not without a struggle—withdrawing his own claim. The *Goldthumbs* are the heroes of the other plot. *Felix*, on his father obtaining a large fortune, runs into all sorts of dissipation, and is sent to Java to get out of mischief and make his fortune. However, at the Cape of Good Hope he meets *Bessy Tulip* on her way to Trincomalee, marries her, and brings her back. The great point is to obtain the forgiveness of old *Goldthumb*, who is perpetually tormented for his cruelty by his wife (Mrs. W. CLIFFORD). He is a strange mixture of a wish to emulate the stern virtue of the Romans, of whom he has read in his trunks, and of an extravagant admiration for the genius of his son. A dream which terrifies him, and an accidental meeting with his son, whom he takes for a ghost (this is the weakest point in the piece), at last induce him to give his pardon. The circumstances of the elopement are all contained in the first act, which might with propriety be called an 'introduction,' and the 'wonders' which 'Time works' are the changes which take place in the four other acts, which are separated from the first by an interval of five years."

Mr. and Mrs. KEELEY are proceeding flourishingly with the LYCEUM. The great attraction is the very clever, sparkling, and admirably got up extravaganza entitled *Whittington and his Cat*. Mrs. KEELEY is inimitable as *Dick Whittington*. Everybody should see this lively, laughing burlesque. Last week a new one-act farce was produced under the title of *A Good Name*. The plot was slight, the situations were good, and it was played with much spirit by Mr. FRANK MATHEWS.

At the PRINCESS'S THEATRE, Miss CUSHMAN, the American actress, alternates in tragedy and comedy with translations of light French operas. There has been no novelty during the last week. But the lady has power and expression, and with many obvious faults mingles undoubted genius.

At the ADELPHI, the play, entitled *Green Bushes*, continues to draw crowds of delighted spectators. Some new pieces are in preparation, which will be noticed in due course on their appearance.

At SADLER'S WELLS, Mr. PHELPS and Mrs. WARNER continue their career with undiminished prosperity, presenting the best of our English dramas, and Shakespeare frequently, with so much ability, that the audience never departs unsatisfied; and the remembrance is a higher source of pleasure even than was the moment of enjoyment. This is the test of true excellence, and hence the undiminished interest of the public in the performances at this theatre, whose remoteness does not deter the real lovers of the drama from resorting thither from all parts of the metropolis.

The theatres on the other side of the water, and those which are so scattered about the far districts of London, as almost to be *provincial* in their character, are not of sufficient importance to claim a formal record, save on occasions when they produce something peculiarly novel or attractive.

With such a preface, we shall be enabled to preserve a sort of continuous catalogue of the dramatic doings from this day for the future. But, as we said before, unless there be real merit to entitle new works to formal criticism, our notices will be brief, and rather by way of *narrative* than disquisition.

ACTRESSES AND MANAGERS.—We have given an account of the pleadings before the Tribunal of Commerce in the suit of

Mademoiselle Grisi against M. Vatel, the manager of the Italian Theatre, for a month's salary (10,000f.), which M. Vatel had kept back as a part of a sum of 11,000f. claimed by him as the estimated receipts for the performance of the *Matrimonio Segreto*, which was prevented by the refusal of Mademoiselle Grisi to take what she regarded as a secondary part in the opera, and which is so regarded by some of the most eminent composers of the day, as was shewn by the certificates produced at the trial. The Tribunal yesterday gave its judgment in this case. The plaintiff's claim is rejected, and M. Vatel declared to have been justified in refusing to pay her the month's salary; but, as regards the remaining 1,500f. claimed by him, the tribunal estimates that the expenses of the performance in question, if it had taken place, would have amounted to that sum, and therefore the 10,000f. kept back from Mademoiselle Grisi by M. Vatel must be taken as the set-off against her claim of 10,000f. for a month's salary. The Tribunal, in its judgment, admits as a general principle, that a prima donna can only be called upon to play first-rate characters, but that there may be exceptions to this rule, and that the public are not to be deprived of the *chef-d'œuvres* of great composers by the refusal of any actor or actress to take a particular part, if it be not beneath the talent of the person to whom it is assigned by the manager. The judgment adds that, in the case of Mademoiselle Grisi, her having performed frequently, in London and Paris the part which she refused to fill for M. Vatel, was to be taken as a circumstance favourable to the decision of the defendant.—*Globe.*

THE COSMORAMA.

We have pleasure in welcoming the re-opening of this interesting and favourite exhibition. The views it comprises are—*Mount Libanus; Ancient Temple at Palmyra; Ostrogk, Kamtchatka; Quebec; Interior of St. Germain; Devil's Bridge; Pass of St. Gothard; Lake of Thun;* and *Passage of the Quindici.* Of these, perhaps the best are *Palmyra*, the *Church Interior*, and the *Swiss Lake;* all, however, are interesting. There is a chilliness of colour—produced very probably by the lenses, for we have always witnessed it in exhibitions of this kind—which is a slight drawback from the merit of these pictures; this, however, is more than compensated by an ingenious contrivance which gives the effect of motion to certain parts of the view. In the Kamtchatdale scene the volcano Klootchefsky is seen belching forth volumes of flame and smoke, and the effects of reflection and shadow pass and shift on the neighbouring mountain with a reality quite illusive. The waters, too, of the Reuss, in the pass of Mount St. Gothard, are seen to rush down with amazing velocity, throwing up clouds of spray in their passage through the rocks. A very agreeable hour may be spent at the Cosmorama.

POLYTECHNIC INSTITUTION.

Dr. Ryan has commenced a series of very interesting lectures on domestic chemistry, in which he expatiates on the importance of ventilation, the doctrines of heat and light as applicable to the common concerns of life, and in a more recent lecture he treated of the chemistry of the table. His lecture on Thursday week was exceedingly well conceived; its topic the chemistry of the breakfast-table, Dr. Ryan commenced by citing Dean Swift's remark, "that so great was the extent of modern epicurism, that the world had to be encompassed before a washerwoman could sit down to breakfast;" and the learned lecturer said he would shew that this was not exaggerated; for to provide this most simple meal requires more than ordinary labour and skill. To use his own words, "Upon a table formed of the rare woods of Honduras is spread the snow-white damask of our own land. Before us is placed the beautiful ware of China or of Staffordshire, and the lustrous silver dug from the bowels of some distant land. To gratify our palates we have the fragrant tea-leaf from the Celestial Empire, and the aromatic coffee-berry from Mocha, Ceylon, Berbice, and St. Domingo. Nor must the luscious produce of the sugar-cane of the West India colonies be forgotten. Thus to supply the breakfast-table art and ingenuity must be taxed, and dangers by sea and land encountered." On each of these topics the doctor dwelt with much effect, from the bleaching the damask table-cloth to the laws of heat developed during the maceration of a cup of tea. The learned doctor was greatly and most deservedly applauded for the very able manner in which he treated his subject, so agreeably blending science and amusement.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of The Critic is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

PROCEEDINGS OF THE SOCIETY FOR THE INVESTIGATION OF MESMERISM.

As the present number of The Critic will introduce it to so many new readers, it may be desirable to repeat in few words what is the constitution and purpose of the Society whose proceedings are recorded in its columns.

It is composed of gentlemen associated for the express purpose of investigating the alleged phenomena of Mesmerism. There are two classes of members; town members and country members. The meetings of the Society are held at the residences of the town members in succession, the eatertainment being strictly limited to tea and coffee. Country members are exempt from this duty, and in lieu of it pay a subscription of half-a-guinea annually. Visitors are admitted on the introduction of members. The meetings are held on each alternate Saturday at eight o'clock.

By an express rule persons practising Mesmerism professionally are inadmissible as members, although their presence as visitors is always welcome.

At present the Society comprises sixteen town members and nine country members. All are gentlemen following various pursuits, but curious to ascertain by actual experiment, and by the application of every test the united ingenuity of the physician, the lawyer, and the man of science can suggest, the reality of the singular phenomena said to be exhibited in that peculiar condition of existence to which the name of Mesmerism has been given. They meet expressly to detect falsehold if it exist, as well as to give the sanction ofu nprejudiced inquirers to whatever they may ascertain to be true.

The competency of the Society to form a judgment upon the matter, and the value of their testimony, may be in some measure gathered from this fact, that its members comprise the following classes, namely—Six Barristers, one Physician, two Clergymen, eight Solicitors, three Officers of the Army, and six private Gentlemen.

The many new readers of The Critic who have been introduced to it for the first time on the occasion of this its new volume and weekly publication, are now in a position to estimate aright the interest and value that may attach to the proceedings of the Society, as from time to time they will be submitted to them in these pages.

The sixth meeting was held on Saturday, the 12th ult. Two new members were elected. The secretary related a very singular case which had accidentally fallen under his observation on the previous evening; as a full report of this is preparing, and will be duly published, it is not desirable to state it here.

Among the visitors was Mr. Spencer Hall, to whom the Society was indebted for the most novel and interesting experiments of the evening.

Mr. Spencer Hall first introduced a boy, named Robert Marsden, and the very remarkable features of his case were for the first time witnessed by the Society.

The experiments were conducted with him in the waking state; that is to say, without previously inducing the mesmeric coma. At will his extended arm was made rigid; against his most resolute efforts he was compelled to obey the will of the Mesmeriser. A stick was put into his hand, and involuntarily the arm was thrown into rapid motion, which continued until subdued by the command of the operator. But the strangest phenomenon was the entire subjection of the senses of the *waking* patient to the silent will of the Mesmeriser. Sight and hearing were destroyed and restored instantaneously. A handkerchief presented to the eyes assumed a variety of colours in succession, appearing to the patient to be white, and blue, and green, and yellow by turns. The same stick in his hands imparted a sensation as of burning, so that he was obliged to let it fall. Many other experiments of a like nature were made, but the description of which would be tedious.

Another boy, named Henry Wigston, was then introduced by Mr. Hall. He was thrown into the sleep in about three minutes. In this state he exhibited the following interesting and beautiful phenomena:—

His state was evidently that of dreaming, the dream being either suggested or modified by the Mesmeriser. But Mr.

HALL followed the directions silently given by the members of the Society as to the dream that should be excited, and the modification of it that should be introduced, thus rendering any thing like collusion impossible.

He was told to fancy himself a locomotive. Forthwith he imitated with singular correctness the noise of the engine working up the steam; his arm waved slowly, and presently the sound and motion simultaneously grew more speedy, until the arm was whirled round with a rapidity which, in the ordinary state, could not have been accomplished. On touching *cautiousness*, he imitated the railway whistle, as if to give notice for a look out, and so forth.

It was next proposed by one of the members that it should be suggested to him to dream himself a town crier. The suggestion was made by touching *imitation*, and telling him the character he was to assume. The change was complete and instantaneous. He rung an imaginary bell, took from his pocket an imaginary paper, and made proclamation in due form, inventing the subject as he went on. But the most curious and interesting portion of this experiment was the following:

The object was to influence the character of the dream by exciting various of the mental faculties, and to mark the effect of these complications upon the language and manner of the dreamer. To prevent the possibility of pre-arrangement, the organ to be excited was suggested to Mr. HALL by the members present, and communicated either in writing or by a whisper.

All the particulars of this singular experiment in mental physiology could not be detailed within any reasonable compass. Only a few can be narrated by way of example. For instance—when *veneration* was excited, he made proclamation of a sermon to be preached at some church; changing to *philoprogenitiveness*, and his cry was for a lost child; before he had completed the sentence, *mirth* was excited, and he added with a most comic expression of feature, "the said child being of the early age of fifteen years, and unable to take care of himself, and whoever shall restore him to his parents shall receive the large reward of one shilling, being sixpence more than the property is worth." *Combativeness* produced a cry touching some fight that was to come off, and *cautiousness*, a notice relating to a dangerous road that was to be avoided. And these inventions were not slowly pondered, but instantaneously produced as fast as the finger could be applied to the organ which the Society directed Mr. HALL to excite.

The effect of music was next shewn. The effect was to throw the boy into an ecstasy, in which he displayed the most intense emotion. He fell upon his knees, wore an expression, and took the attitudes, of devotion and hope, such as the best actor the stage has ever produced could not have approached in perfection. An eminent artist, who was among the visitors, declared that the finest of Raphael's conceptions fell short of the emotions displayed in this entrancing ecstasy.

Suddenly, at a signal given, the music was changed to a lively air. The expression of the face and the whole manner of the boy changed with it, and he danced and acted the sentiment of the music with perfect precision.

At whatever point the music was suspended, even when he was in a posture the most inconvenient, the whole body was instantaneously as rigid as if it had been suddenly changed to stone, and he could be lifted by the leg or the arm without changing the position of a muscle, or without the face losing the least of its ecstatic expression; and when replaced on the floor, the posture was precisely the same as before, nor were motion and sensation restored till the music began again.

In like manner, when poetry was recited, the boy acted its sentiments as fast as the speaker uttered them, even though it was perfectly new to him.

He was afterwards awakened without much difficulty, and was entirely without consciousness of what had passed during the evening.

Some of the above experiments were then tried by Mr. HALL upon one of the members of the Society, whose case has been already reported, and very nearly the same effects were produced on him, both when in a waking state, as in ROBERT MARSDEN, and in the sleep, as in HENRY WIGSTON.

At the close of the evening the thanks of the Society were unanimously voted to Mr. SPENCER HALL, for the very interesting and satisfactory phenomena he had been the means of introducing to their notice for the first time, as also for the readiness with which he had communicated some of the results of his great experience in the practice of Mesmerism.

The Society then separated.

EDINBURGH.—REMARKABLE CURES OF BLINDNESS.—The authoress of *Geraldine of Desmond* (to whom we owe an apology for having on the last occasion mis-stated her sex), has transmitted to the *Polytechnic Review* the following account of two remarkable cures of blindness by means of Mesmerism:—

Having heard that Dr. Montgomery Arnott, of this city, has been for five or six years an advocate of Mesmerism—which *he* calls Vital Magnetism—and understanding that, having performed several remarkable cures, he was (under Providence) giving and restoring sight to the blind, I desired to investigate the subject. For that purpose I was introduced to Dr. Arnott on the 25th of this month. The facts I then witnessed appear so interesting, and seem to establish so unquestionably the truth and power of Mesmerism as a therapeutic agent, that with Dr. A.'s permission, I send a plain statement for your perusal and subsequent publication in the *Polytechnic Review*. The two cases which came under my observation are only in progress of cure, and briefly are as follows:—

Miss Thew, a young lady between sixteen and seventeen years of age, is a native of Alnwick, in Northumberland, and was born all but actually blind. At seven years old she could barely distinguish night from day, but since that period she could not perceive the brightest sunshine differ from the darkest night, until the 11th of October last. Dr. Arnott commenced to vitally magnetise her by manipulations on the 4th of that month. This was continued morning and evening for an hour and a half each sitting, *no other remedy being applied*. She subsequently perceived the light of a candle with the right eye only, which occurred after the sitting of the 11th. The same treatment alone was continued until the 16th, when she got sight in the left eye also, the right having made surprising progress during the interval. After this period, in addition to vital magnetism, Dr. Arnott experimented with electricity, mineral magnetism, and the fumes of hydrocianic acid, each of which, he has reason to believe, accelerated the cure so far as it has gone. Miss Thew is now able to see her own features in a looking-glass, can distinguish the head-line of *Chambers's Edinburgh Journal*, and can trace with her finger the scroll heading of the *Scotsman* newspaper. She can see people walking in the street from sixteen to twenty feet from her; and on the 12th instant, during a drive to Newhaven, on passing along George's-street, she observed from the carriage-window people walking on the pavement, and was able plainly to distinguish ladies from gentlemen; she also pointed out two dogs running along in an opposite direction to that which she was taking. In passing Inverleith-row she saw the evergreens before the doors, being the first trees she had beheld. At Newhaven stone pier she observed a fishing-boat between her and the sun when still at the distance of eighty yards at least, and asked what was the long dark object upright in it; she was told that one of the men was standing on the seat of the boat. When it came within a few feet of the pier, upon looking down, she distinctly saw the three men who constituted the crew. The dip and drip of the oar seemed to please her much. Her delight upon beholding the sea, the waves, and the light reflected from the water, was intense; she frequently exclaimed, "This is, indeed, a day in my life which I can never, *never* forget! there is nothing I longed so much to see as the great ocean; when I used to hear it while at sea-bathing quarters, from time to time, rippling and murmuring, dashing and roaring, how little did I think then that my wishes were so soon or ever to be gratified! Oh, what a difference I feel now, when compared with my former existence! Every day I get new ideas, that remain food for afterthought, and which I never could have had but for the blessing of sight." Miss Thew is an exceedingly interesting, apparently thoughtful, and accomplished girl. A lady who has heard her play on the piano and sing, and who is herself a proficient in music, informed me that her talent and acquirements in that charming science are far beyond what could be expected in one so young and labouring under the same bereavement. Her almost *total* want of sight at birth was said to have been from amaurosis. When Dr. Arnott undertook her cure she had a large cataract in both eyes, with opacity of the cornea, especially in the left. This eye was much sunk; the coloured part of each organ of vision, as far as could be seen in consequence of cataract, looked like a transparent sack half filled with muddy water, receding, and quite soft to the touch. Her eyes are now firm and full, the one nearly as much so as the other. The cataract in both has disappeared, excepting a very minute portion close to the upper and inner edge of the iris. The right eye is a pretty, clear hazel, and the left, although not yet so translucid, will evidently soon be of the same colour and brightness.

The other patient of Dr. Arnott is a servant girl named Ellen Skelley, aged eighteen, who was introduced to his notice on the second of November last, by the Rev. H. Carr, curate of Alnwick. Since childhood her sight was defective from chronic purulent inflammation of the eyes, and latterly her vision had all but gone, from amaurosis and opacity of the cornea. The pupil is now of the natural size, the opacity has left one eye, and has almost entirely disappeared from the other. She has for several weeks been able to read a book at the usual distance from the organs of sight, and also to write, and to sew. Her treatment has been the same as that of Miss Thew.

As Dr. Arnott intends to publish the full details of both cases when their cure is completed, I shall offer no comment on the subject, and merely send the above rough notes, exactly as they

were taken down—*currente calamo*—in his presence, in the hope that the facts which they communicate may be of service in establishing mesmeric truth.—Jan. 26, 1845.

MR. SPENCER HALL.—This gentleman, unquestionably the most experienced of the practitioners of Mesmerism, as will be seen by his advertisement, has returned to London, where he purposes to pursue the curative practice of Mesmerism, in which he has achieved such wonders in the provinces.

As we receive continual applications from persons desirous of making trial of mesmeric treatment for diseases which have baffled the skill of the physician for information where they may look for aid, we take this opportunity of commending to such Mr. SPENCER HALL as a gentleman in every way qualified for the task. Not only has he enjoyed a large experience, but he is a man of no ordinary intellect, accustomed to reflect as well as to act; and, above all, is he a person of high moral and earnest religious character; and they who are acquainted with the process of Mesmerism will at once recognise the value of such a recommendation. The report of the Society will probably contain some account of two of his cases. But no description can approach the reality. They must be seen to be appreciated. We perceive that an opportunity for personal inspection and examination is afforded by him to those who desire to make acquaintance with some of the most curious and beautiful, if not the most wonderful, of the phenomena of Mesmerism; and we can with the utmost confidence recommend them to visit Mr. SPENCER HALL, assured that they will be equally pleased with him, and delighted by his novel and instructive experiments.

ADOLPHE THE CLAIRVOYANT. (*From a Correspondent.*)—Some phenomena were elicited at an exhibition of the faculty of clairvoyance on the part of Adolphe, at the British and Foreign School-rooms, Pentonville, on Monday, the 21st ult. which are worthy of notice. A gentleman, who had never seen either Adolphe or his Mesmeriser, Mr. Vernon, before, and who had not even witnessed any experiment in Mesmerism, was placed *en rapport*. Adolphe, being in a state of somnambulism, was asked if he would accompany him to his house. The mind of the inquirer being strongly fixed on the route to be taken, Adolphe was asked which way they should turn on going out? He said to the right. He then said they went along the New-road, which he described as a wide road, not by name, again turning to the right. When they came to King's-cross, where the gentleman resides, the latter had that architectural abortion, the statue of George IV. now removed, strongly on his mind. Adolphe was asked, did he see any thing particular. He replied "Yes." "What?" "A building with a figure on its top." "Now, how do we go into my house?" "Across a garden, up some steps." "Right." "What sort of a room do you see?" "It has two windows." "Right." "Between the door and the windows there is a piece of furniture standing on another piece of furniture." "Right." "It ascends to the ceiling." "Right." "It has windows." "Right." "And doors to open." "Right." "It is full of things, but I cannot say what. Those at the lower part are about the length of this" (from the wrist to the tip of the fore-finger). "Right." "Above those are others, so long" (about eight or nine inches longer, marking on his arm). "Right." The article was a bookcase, and the smaller or 18mo volumes are at the bottom, while octavos and quartos are above. So far was evidently a case of mental transfer. He then said, that at the side of the large piece of furniture was a machine of copper, about eighteen inches high, and on it was something round, like a globe. Now this had entirely escaped his questioner's recollection, and, consequently, it was not at all present to his mind. However, it was quite correct, for beside the bookcase stood a table-lamp, with a globular shade. I do not stop to detail the previous experiments, in which he succeeded, viz. playing at écarté, and reading through an envelope, as well as the words "Timber Yard," and "Manufactory," on a card, having his eyes bandaged over cotton wool; conceiving that the fact of his describing an object which he never could have seen, and which was not even present to the mind of the stranger *en rapport*, is of so extraordinary a character as to call for especial observation. I should, however, add, that there were about 150 persons present, to some of whom the questioner was well known, and who all expressed their approbation and surprise in the most unequivocal manner.

BIRTHS, MARRIAGES, AND DEATHS.

[The charge for the insertion of Births, Marriages, and Deaths is 5s. each.]

DEATHS.

PHILLIPS, Thomas, esq. R.A. F.R.S. on the 20th ult. at his house, in George-street, Hanover-square, aged 75.

SAUSSURE, M. de, the distinguished naturalist, a few days ago, at Geneva, aged 77.

ORIGINAL CONTRIBUTIONS.

POETIC FEELINGS.

I can yoke rich words together,
Using fancy as their tether;
Utter syllables in rhyme
As if they were bells in chime.
Though for thee 'twere easier far
To unloose a silver star,
And to quench it in the seas,
Than to do such things as these.
Never fret and never pine
That thy skill is less than mine.
Though I have a magic rod,
Thou and I are of one clod;
Therefore libel not thy God,
With the false belief that He
Heeds thee not, but favours me.
Hast thou sunlight watched and shower,
Sea, and shell, and field, and flower,
Living insect, beast, and bird?
Hast thou for one moment heard
Children on their mother's knee
Prattle with untrammelled glee?
Or the wind sing in the tree?
Hadst thou so, and only cried,
"*Oh! how beautiful!*" and died,
That last hour had come to thee
With a flash of poetry.
Canst thou kiss a beggar's child,
And thyself think undefiled?
With no proud unchristian qualm,
Canst thou shake the horny palm
Of the meanest in the land
Freely as a jewelled hand?
Canst thou smile when others smile?
When they sorrow, weep the while?
Holding love a holy thing,
Would'st thou blush to stain his wing?
Canst thou search on history's page
For the men of every age
Who have dared the tyrant's ban,
And upheld the weaker man,
And while sounding fame records them,
Feel thy heart-strings stretch towards them?
If thy soul be formed for this,
Sigh not for the Muse's kiss,
Since the bird that sings the best
Feels no deeper than the rest.
Though thou hast no words to preach
Beauty unto all and each,
Never fret and never pine
That thy skill is less than mine;
Give thy Maker praise, and bow;
Shakspere felt no more than thou.

E. H. BURRINGTON.

BOOKSELLERS' CIRCULAR.

THIS number commences the weekly issue at the reduced price.

We repeat that no change will be made in the privilege allowed to Booksellers and Keepers of Circulating Libraries, who will be supplied with a stamped copy regularly, direct from the office, on prepayment in postage stamps of a *quarter's* supply (at the least), at the cost of the stamp and paper only, viz., *twopence* per number, or 2s. 2d. for the quarter.

Again we ask the Booksellers who feel an interest in the success of THE CRITIC, to aid it by circulating its prospectuses, as well as by their personal introduction of it to their customers. For this purpose, any quantity they may name shall be transmitted to them through any medium they may be kind enough to suggest; or, if they prefer it, a parcel shall be sent to them through some inexpensive conveyance, at our cost. But as all have agents who forward parcels regularly, perhaps they would inform us how some prospectuses may be inclosed, by stating where they may be sent.

The weekly numbers will go to press regularly on *Thursday* night, so that all Advertisements must reach the office by Thursday's day post at the latest. The

numbers may be had on Friday, so as to be inclosed in the parcels of that day, and received in the country on Saturday, the day of publication.

We beg to suggest to Booksellers throughout the country that THE CRITIC, as the now most widely circulated organ of the trade, is the best medium they could find for all Advertisements relating to the Book Trade; such as the sale of businesses, assistants wanted, second-hand book lists, and so forth.

We further hope that the Booksellers will make it the medium for their correspondence on matters relating to their interests.

To the Keepers of Circulating Libraries we have a request to prefer.

We want accurate information as to the class of books most sought after by the reading public, for the purpose of making it the basis of some articles that will have much both of interest and utility. By none could it be so well supplied as by the Keeper of a Circulating Library.

We ask, therefore, of any such who may be willing to aid us, to forward a sort of statistical return of the number of each of the following classes of books lent by them during any period of time they could conveniently make the basis of a calculation, namely—

Voyages and Travels, History, Poetry, Historical Novels, Fashionable Novels, National Novels, Domestic Novels, Humorous Novels; also, what number of volumes of each of the principal novelists have within the same period of time been borrowed.

The value of such a body of information will be obvious at a glance. We want only the total numbers, not the details. It is scarcely necessary to add that the names of the persons supplying such information will be held in strict confidence, and no use made of them.

The weekly issue will enable us to bring up by degrees a heavy arrear which has been accumulating upon our table for a long time.

It will be observed that the present number of THE CRITIC contains 32 pages. Its usual size will be, like the *Athenæum*, 24 pages; but whenever there is a press of matter or of advertisements, it will be enlarged to 32 pages, without any additional charge. Thus it will be the *cheapest* respectable periodical of the time. Its other claims to support must be judged by its readers.

REGISTER OF NEW PUBLICATIONS,

From April 16 to May 2.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Arnold's School Sermons, new ed. 12mo. 5s. cl.
Adventures and Excursions in Georgia, Circassia, and Russia, by Lieut.-Col. Cameron, C.B. employed on a special service in Persia, 2 vols. post 8vo. 1*l.* 1s. cl.
Bechstein's (J. M., M.D.) Natural History of Cage Birds, 12mo. 7s. cl.
Bloxam's Gothic Architecture, 7th ed. improved, 12mo. 6s. cl.
Boys's (Rev. E. G.) Sermons, Short, Plain and Practical, 1 vol. 12mo. 7s. cl.
Castle's (H. J.) Treatise on Land Surveying and Levelling, with Tables of Logarithms, &c. 8vo. 12s. cl.
Christian Class-Book, 1 vol. 18mo. 2s. 6d. cl.
Coghlan's Hand-Book for Italy, 12mo. 10s. cl.
Connoisseur, The, a Journal of Music and the Fine Arts, 4to. 1s. sd.—No. I.
Dissenter's Plea for his Nonconformity, exhibited in a Course of Lectures by the Rev. W. Jones, M.A. 1 vol. 8vo. 10s. 6d. cl.
Distinction; a Tale, by the author of "The Baroness," 2 vols. royal 12mo. 16s. cl.
Ecclesiastical Architecture of Ireland; comprising an Essay on the Round Towers of Ireland, by G. Petrie, R. H. A. Vol. I. 4to. 52s. 6d. cl.
Geijer's History of the Swedes, trans. by J. H. Turner, M.A. Part II. (Whittaker's Popular Library), royal 8vo. 2s. 6d. sd.
Gibert on Diseases of the Skin, translated by Edgar Shepherd, 12mo. 7s. 6d. cl.
Glossary of Architecture, 4th ed. enlarged, 2 vols. 8vo. 1*l.* 12s. cl.
Grammar of the Latin Language, by C. G. Zumpt, Ph. D., translated from the 9th German ed. by L. Schmitz, 8vo. 14s. cl.
Greek and English Lexicon to the New Testament, by J. Parkhurst, M.A. with the more valuable parts of the works of some later writers, added by the late H. J. Rose, B.D., new ed. carefully revised by J. R. Major, D.D. royal 8vo. 1*l.* 4s. cl. let.
Hubert; or, the Orphans of St. Madelaine, a Legend of the Persecuted Vaudois, by a Clergyman's Daughter, 12mo. 2s. 6d. cl.
Illustrations to Adventure in New Zealand, by Edward Jerningham Wakefield, esq. imp. fol. 63s. plain, bds. col. 92s. 6d. bds.
Johnson's, Mrs. L.—Every Lady her own Flower Gardener, 18mo. 2s. cl.
———Principles of Gardening, fcp. 8vo. 6s. cl.
Jonah's Portrait, by the Rev. T. Jones, 9th ed. post 8vo. 3s. 6d. cl.
Jonathan Sharp; or, the Adventures of a Kentuckian, written by himself, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.
Lands Classical and Sacred, by Lord Nugent, 2 vols, cn. 8vo. 18s. cl.
Mary Aston; or, the Events of a Year, 1 vol. cn. 8vo. 6s. bds.
Memoir of Power Le Poer Trench, last Archbishop of Tuam, by the Rev. Josh. d'Arcy Sirr, 8vo. 1*l.* 1s. cl.
Modern Cookery in all its Branches, by Eliza Acton, 2nd ed. illustrated, 12mo. 17s. 6d. cl.
New British-French Gender Guide, by T. Pullan, 4to. 2s. 6d. swd.
Penrose's Lectures on the Pentateuch, 12mo. 5s. cl.
Physiology of the Human Voice, by Francis Romer, fc. 8vo. 3s. 6d. cl.
Plain Lectures on St. Matthew, by the Hon. and Rev. C. G. Percival, Vol. II. 5s. 6d. cl.
Practical Companion to the Work Table, containing Directions for Knitting, Netting, and Crochet Work, by E. Jackson, 18mo. 1s. 9d. cl.
Practical Guide to the Study of German, by C. A. Feiling, 12mo. 5s. rn.
Recent Improvements in Arts, Manufactures, and Mines, being the 2nd edition of a Supplement to the 3rd edition of his Dictionary, by Andrew Ure, M.D. 8vo. 14s. cl.

BOOKS RECEIVED

From April 13 to April 30.

NEW BOOKS.

American Factories and their Female Operatives. By the Rev. W. SCORESBY.
On the Origin and Ramifications of the English Language. By HENRY WELSFORD, Esq.
Lands Classical and Sacred. By Lord NUGENT. In 2 vols.
School Catechisms. By the Rev. T. WILSON.
Summary View of the Evidences of Christianity, in a Letter from the Right Hon. C. K. Bushe L. C. J.; with Preface and Notes. By Rev. J. WILLS, A.M.
The Cock and Anchor. In 3 vols.
Course of English Reading. By Rev. J. PYCROFT.
The Bokhara Victims. By Captain GROVER.
Lives of Men of Letters and Science in the time of George III. By Lord BROUGHAM.
Letters from the Orient. By IDA, Countess HAHN HAHN.
An Exposition of Common and Vulgar Errors adapted to the Year of Grace 1845. By THOS. BROWN REDIVIVUS.
Diary of Travels in France and Spain. By the Rev. T. FRENCH. 2 vols.
Love's Legends. By A. GURNEY.

NEW EDITION.

Mortimer's Observations on Children's Teeth. 2nd edit.

SERIALS.

The Dutch in the Medway—History of the Dog. By W. C. L. MARTIN. (Knight's Weekly Volumes.)

PERIODICALS.

Sealy's Western Miscellany. Parts I. to III.
Illustrated Family Journal for April.

PAMPHLETS.

Report of the Trial of Eighteen Parsee Prisoners for Murder.
Essay on the Necessity of Revelation.
Manual of the Cure of Nature, as applied to Relief of Diseases.
Spirit of the Polka. By Captain KNOX.

TO SUBSCRIBERS.

The Title-page and Index to the First Volume of the New Series of THE CRITIC *are given with this Number.*

The volume, thus completed, will be handsomely and strongly bound for 5s. if the numbers be sent to the Office with directions how, when bound, it shall be returned. The binder has so arranged that all the subsequent volumes will be bound uniformly with the first, without the inconvenience of transmitting a pattern.

A Portfolio, for preserving the current numbers of THE CRITIC *for reading and reference, on a new and convenient plan, may now be had at the Office, or by order of any bookseller in the country, price 4s. 6d.*

The subscription for the half-year, if paid in advance, for a stamped copy, to be sent regularly by post, is 8s. 6d. only, which may be transmitted in penny postage stamps.

THE CRITIC,
And Journal of Literature.

SATURDAY, MAY 10, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

ADVERTISING.

MANY of the subscribers to THE CRITIC, especially the country Booksellers, have repeatedly requested information as to the best papers in which to advertise, and their various charges and circulations. The subject is one of considerable interest and importance, upon which very erroneous notions prevail, and therefore we propose, in a series of articles, to convey to readers the result of our own experience upon this subject, together with the principles which should guide the advertiser in the selection of journals for his purpose.

The advertiser, or his agent, should first consider the purpose of the advertisement. Is it addressed to a class? It should be sent to a periodical devoted to that class. Is it for the eye of the general public? Then another question arises,—is it addressed exclusively to the higher or to the lower classes, or indiscriminately to both? for a very different set of journals would be required in either case.

Suppose the advertiser to require a *class* circulation, his choice will not be difficult. Every profession has now its own periodicals, and can be readily addressed.

If he desire to communicate with the clergy, three good clerical journals present themselves. The *Ecclesiastical Gazette* has the largest circulation of all of them, a copy being *given* to every clergyman in England and Wales. Its charges, however, are very high,—at least threefold that of the daily papers; still, as its circulation is thus necessarily great and respectable, it is perhaps, upon the whole, the best medium for an advertisement addressed specially to the clergy. The *Church and State Gazette* is perhaps the next best medium, and its charges are moderate; but it is not so exclusively clerical in its circulation as the other. It is also a prevalent opinion in London that the *John Bull* is a good organ through which to find access to the eyes of the clergy; but for our own part we much doubt the correctness of this popular notion, which, we suspect, was once more justly founded than now. The journal in question enjoys a sort of posthumous reputation in this particular; but it may be as well to inform those who may share the impressions produced by the reminiscences of a former generation, that its charges are by no means extravagant, and if not so much into clerical, it certainly passes for the most part into respectable hands.

Does the advertiser desire to attract the special attention of the Medical Practitioners? He has a choice of three, to wit, the *Lancet*, the *Medical Times*, and the *Medical Gazette*. The prudent course would be to advertise in all of these, for between them it is probable that nine-tenths of the Profession would see the advertisement. If, however, a choice must be exercised, the *Lancet*, as having the largest and most influential circulation, should be first preferred; then the *Medical Times*, and lastly the *Medical Gazette*. The charges of the two former are moderate; those of the latter we have never tried; and in these commentaries we purpose only to state the results of personal experience.

It should be observed, that we reserve the Magazines and Quarterly Reviews for a distinct notice. In this and some subsequent articles we limit our remarks to the daily and weekly journals.

There are *three* media also for procuring access to the Lawyers: they are, the *Law Times*, the *Jurist*, and the *Legal Observer*. Of these, the *Law Times* has the largest circulation, and is the most resorted to by advertisers; and it usually contains four or five fold the number of advertisements found in either of its contemporaries. It is the only journal in England directly employed as the medium for advertising sales of estates, money, and legal notices; for which purpose it is largely resorted to by the principal Auctioneers and Solicitors in the metropolis and throughout the country. It shares with the *Jurist* advertisements of legal publications, and with the *Legal Observer* advertisements of clerks wanting places, insurance offices, and professions wanted or for sale. The charges of these three legal periodicals are very nearly on the same scale; but the *Law Times* receives sales of estates at a charge considerably below its regular scale, in consequence of their unavoidable length and frequent repetition. All these journals, of course, pass into the very best hands; and it is surprising that more use is not made of them by the general advertisers, and especially by Booksellers, seeing that they are read by the most wealthy and book-buying class in the kingdom.

Besides the learned Professions, various other classes have their journals.

The *Builder* is devoted to architecture and subjects associated with its title. Its circulation is great, and it is extensively employed as a medium for advertisements relating to building and the arts and trades connected with it. Its charges are likewise moderate.

The special value of an advertisement in a *class* periodical consists in this, that it is sure to be seen and read, a result which cannot be secured anywhere beside. And for this reason: the professional man takes a professional journal as a matter of business, because he finds there collected all the information needful for him in his practice. Not the least interesting to him are the announcements in the advertisements, the greater portion of which are professional, and consequently require to be examined as a part of the regular intelligence of the journal. Hence every subscriber cons every advertisement, to be assured that nothing of special importance to him shall escape his notice. With a general newspaper it is very different. Advertisements there are seen only by chance; they are rarely looked for; and not one reader in fifty even glances his eye over the advertisement columns, which are held by him as so much waste paper. Some striking proofs of this have occurred within our own experience. A harp for sale was advertised five times in the *Times*, and twice in the *Chronicle* without an application. A single advertisement in the *Law Times* brought six applicants, and a purchaser was found in two days. Some books were advertised in the daily papers frequently without an offer. A single insertion in the *Lancet* procured a buyer by the next post.

A friend advertised a picture in each of the four morning papers, but no reply. He inserted it in the *Law Times*, and it was sold in two days. Not long since a Governess, who had advertised in the *Times* and *Post* for a month in vain, obtained a situation from a single advertisement in the *Law Times*. A Profession, repeatedly announced for sale in the daily papers, was immediately disposed of when advertised in the *Jurist*. These are a few of many striking instances of the value of class periodicals for advertisements, which have occurred within our own experience, proving how erroneous is the prevalent idea that they are good only for purely *professional* announcements.

But we must pause for awhile. The subject is a large one, and shall be resumed from time to time, should it prove as interesting and useful to our readers as we anticipate.

LITERATURE.

PHILOSOPHY.

An Exposition of the Vulgar and Common Errors, adapted to the Year of Grace 1845. By THOMAS BROWN REDIVIVUS. London, 1845. Pickering.

THIS is the eighth volume of the very valuable series of *Small Books on Great Subjects*, portions of which have been already introduced to the readers of THE CRITIC. A world of wisdom has indeed been condensed into this little book. The author has adopted the quaint style of BROWN in his *Vulgar Errors*; but though the phraseology is antique, the thoughts are modern, the teachings, not so much of the study as of experience in active life; not merely the echoes of dead authors, but mingling with them the harsher but truer tones of living men.

The *idea* of this work is a happy one. Some two centuries since good THOMAS BROWN wrote a book on the *Vulgar Errors* prevailing in his day. If Mr. BROWN could step from the grave and write another edition of his famous book, how much of it would he expunge as exploded? how much would he have occasion to add? Some man of kindred mind has taken upon himself this task. He supposes himself for the nonce to be the veritable THOMAS BROWN, "a man of another age stepping onward into this," and noting the changes time hath wrought. And what is the result?

Within the last two hundred years the very face of the world is changed; and he who should rise at once from his grave, passing through no intermediate stage, and look on the nineteenth century with the eyes of the seventeenth, would go near to expire again with amazement at what he saw; and would despair of ever, in the short span of one life, attaining to the knowledge of all the discoveries which have graced these later times. But let the same man go into society, and he will find things far less changed there, than, with such a change in all else, there would be good cause to expect. True it is, that there is more of refinement in expression and manners: but the unthinking many have gained, on the whole, far less from the deep-thinking few, than,—taking a theoretic view of the case,—might in fair reason have been looked for.

* * * * * *

Neither do I find that the great advance of science hath done much in the rendering pædagogy more facile and pleasant, either unto the teacher or the learner: for I perceive youth to be instructed much in the same guise as was the practice of two centuries back; by the influence of fear rather than love. Neither, though somewhat hath been done towards the affording to the poor a slight taste of letters, hath such advance been made towards elevating them to that state of mental enlightenment which is the birthright of every human being, as becometh a great and wealthy state, such as England doth now boast itself to be. Neither do I see that the state of woman-kind is such as becometh a period wherein the empire of mind over matter is so loudly proclaimed. For those disabilities and obstructions of law which were laid upon women in semi-barbarous times, by reason of their lack of physical strength for martial exercises, remain unaltered; and their education is for the most part conducted in such sort, as to debar them from that instruction in liberal science, which shall best fit them for the performance of their many and great duties: nay, it is not rare to hear such as have freed themselves from the shackles of idle prejudice so far as to acquire a competent knowledge of science, ancient and modern, rather flouted at, as if they had done some evil thing, than marked as an ensample for others. And in these things I judge that this age hath not made the advance which it claimeth to have done, in the policies of civil life, and consequently that it walketh lamely as it were, seeing that on the one leg it standeth high, while the other is curtailed of its just proportions.

The first essay is, "Of Vulgar Errors in the Way of Common Sayings." The fallacy of the popular expressions, "A young man must sow his wild oats;" "A good fellow nobody's enemy but his own;" "We must do as others do;" "He that spareth the rod spoileth the child;" "Children should not ask questions;" "A boy should be manly;" "A man is not responsible for his belief;" "Women have no concern with politics;" "Marriage is a lottery;" "A little learning is a dangerous thing;" "I will retire from business, and prepare for another world;" "It is only a white lie;" &c. is happily exposed. For instance, thus does our author discourse on

MARRIAGE IS A LOTTERY,

To them that choose to make it so; for if a farmer going to a market where samples of corn or beeves are exposed for sale, shall determinately shut his eyes, and purchase the one upon which some chance shall cause him to lay his hand, I know no law to prevent it; save that, if it were often done, his next of kin might perchance sue for a writ *de lunatico inquirendo:* but since marriage is, for the most part, done once for all, the individual can, if he will, make this kind of lottery of it: for however great the folly, it would want that succession of proof which would enable the chancellor to allow relations to interfere in the way of restraint. How the saying arose, I am at a loss to tell, unless it were in those times when parents selected husbands for their daughters, and wives for their sons, in their nonage: it might then be held a lottery what the infant thus betrothed might prove to be when grown to maturity: and perchance, as sayings last long after the circumstances which gave rise to them, this, which was a true condemnation of a bad practice in its first use, hath now grown into a proverbial justification of a practice equally bad: for to take him or her who is to be the companion of our future life, by mere chance, and without inquiry, bringeth us back to those times whereof this saying was the reproach. Yet we do not see that a servant who may at any time be discharged at a month's notice, and trouble us no farther, is received into our houses without a strict inquiry into former conduct, ability, and disposition: a strange instance of prudence in the lesser matter, coupled with carelessness in the greater. And though something might be said in excuse on the part of the man, inasmuch as the law of this realm of England, as I have before noted, giveth him a kind of mastership over his wife which savoureth of that law of the strongest which barbarous times do affect, and thus he may think her temper and conduct of the less import,—what is the woman thinking of when she taketh to herself a master whose character she hath not sought to ascertain! Is she ignorant that, by the sanction of this same law of England, he can imprison her in any room in his house, so long as he himself is an inhabitant thereof;—that he may strike her, so long as he inflicteth no severe bodily injury; that he may leave her and live in adultery with another, but if, when thus abandoned she can earn money to support herself, or come into an inheritance from her family, he can claim and take it from her, for the use of himself and his paramour? Knoweth she not this? and if she do, what term shall we find for the folly of her who maketh it a lottery whether all this may not be her lot?—I speak not here of the law, which surely hath strange and ugly features for an age that boasteth itself as a polished one; but I do say that whilst the law is such as to make marriage a legal slavery for the woman, lightened only of its burthensomeness by the temper and just feelings of a good man, who would abhor to use the wicked privileges thus allowed him; it behoveth her, ere she so bind herself, to know thoroughly the habits and principles of him whom she trusteth with such large authority over her. A Christian in principle would not avail himself of such a law; as indeed he blusheth now to see it recorded among those of his country: but the world's code of honour affordeth no security against it, as daily experience too sadly sheweth. Let every woman then beware, and take heed that her future peace be not thrown away in this "lottery:" and let every man beware also, lest with all these privileges of law, he should find that a bad woman can make them all of none avail, and bring him to confess that he had better have looked ere he made that headlong leap, led thereto by a fair face hiding an evil heart.

In treating "Of Genius," he shews the folly of the vulgar opinion that it is an especial gift from heaven whereby men become accomplished in science or art, without any sweat of their own brows. Much learning is displayed in the essay on "Some Errors respecting the Nature of Evil Spirits." The reader is next tempted to "An Inquiry if Ignorance be requisite to Innocence," on which it is justly observed—

Plausible errors be like wild roses: they bear indeed here and there a pleasant blossom, but it soon falleth; and their thick offsets do choke the growth of better things. Among these well sounding errors, I reckon the notion held by some, that innocence is only to be preserved by ignorance of evil. Truly it were a pleasant thing to him who is weary of contemplating the vices and miseries of mankind, to think that there were means of closing eyes, and ears, and understanding, so as never to have cognizance of these ills: but it is childish to sigh after what is clearly impossible; and even were this possible, I doubt much if our happiness, either present or future, would be so great as now it may be, if we do only avail ourselves of the real use of knowing the evil, by choosing of our own free will the good, and persevering in the pursuit thereof. For to *know* evil, and to *do* it, are two widely different things.

The author is averse to the system of keeping a child from all knowledge of the evil which must inevitably assail him in

riper years. He argues justly and forcibly that it would be better that the knowledge should be communicated to youth by a judicious parent or teacher, who could accompany the exhibition of the bane with an antidote, than that he should first discover it when tempted by his passions, and ignorant of the dangers that attend indulgence. "We are wont," he says, "to keep the knowledge of ill from our children as long as possible, so as for the most part to leave it to be instilled into them by those who have a design to corrupt, and therefore paint it in fair colours."

I do most assuredly think that more make shipwreck of their virtue out of a childish and natural curiosity, and inquisitiveness after new things, than out of any inherent love of evil, and that were the constitution of animal nature early set forth to the child by parents or teachers, with that gravity which becometh them; and none of those allurements of sensual pleasure held out, which are the great weapons of the tempter; the child, knowing all that he wisheth to know, at a time when as yet the passions are not awakened, would turn his thoughts to other objects of more import, and greater nobleness; and feel disgusted rather than allured by the conversation of the impure and vicious in after-life: and this I say from experience and conviction, no less regarding youth of one sex, than the other.

"Errors in Grammar" are the theme of another essay. The prevalent confusion of the pronouns, the misuse of adverbs, &c. are exhibited, and thus does the author complain of an affectation which has done much to destroy the force of our language.

Then again we find all writers and teachers eschewing with especial care, the placing of a preposition at the end of a sentence: yet in the *Hoch Teutsch*, or German, which is the younger sister of English Saxon, it is a rule that under certain circumstances it shall be so placed; and in the racy, idiomatic language of our elder writers, it is frequently found to be so; though perhaps few discover why this style to our ears soundeth better and more forcible. *Inclined to,—hoped for*, and the like, are phrases of this nature, and as happily this old Saxon form retaineth its hold in the spoken, though it be losing it in the written language, we may peradventure hope that writers will at last find out that when addressing English ears, they should use the English tongue.

"Errors in regard to Disease and Medicine" are handled in a similar strain of strong good sense, and the volume concludes with an essay on "The Condition of Society as Touching the Female Sex," in which the author contends that the position of woman is a false one; that she is debarred from employments she might profitably pursue by a foolish prejudice and defective teaching; that by custom she is brought to believe herself incapable of independence, incompetent for self-support, and that law, as well as opinion, scarcely deems her a rational and individual agent.

But herein, nevertheless, prejudice holdeth its own, maugre God's will: for law and custom having debarred females from profitable employment, a father looketh only to the fitting his daughters for the market, seeing he can no otherwise rid himself of the charge of their maintenance than by shifting the onus from his own shoulders to those of a husband: and for this cause he holdeth that a form which may captivate some roving fancy in the dance, is of more value than those qualities which may make the possessor useful, and consequently happy: therefore female children are right early taught that the care of the *out*side is of more consequence than that of the *in*; and that if the surface of the cranium be daintily ornamented, it matters not what may be the state of the brain beneath it. If such teaching bear its natural fruit, what is the wonder? One who hath for fifteen years been taught that the catching of a husband is the great business of life, and who hath to set before her eyes what is to please man rather than God,—when she hath succeeded in her chace, affordeth small comfort to the prisoner she hath taken; who may be ruined by her extravagance, deprived of his peace by her ill humour, or disgraced by her misconduct.

We have dwelt at more length upon this little volume than its size would appear to justify. But in books, worth is not always to be measured by bulk, and indeed condensed wisdom like this is a welcome relief from the words—words—words—unfreighted by a grain of thought, which make up most of the massive tomes that lumber THE CRITIC's table. The reader will have gathered enough to be assured that this is a worthy addition to the series of "Small Books on Great Subjects."

SCIENCE.

A Treatise on Corns, Bunions, the Diseases of the Nails, and the General Management of the Feet. By LEWIS DURLACHER, Surgeon Chiropodist to the Queen. London, Simpkin and Co. 1845.

How few are exempt from the plague of corns; yet how few have the slightest knowledge of their physiology. Aided by Mr. DURLACHER's useful treatise, we proceed to convey to our readers some information upon a subject that interests everybody, and of which nobody seems to know any thing.

The skin is an extended tissue, composed of tendinous fibres, felted together like the texture of a hat. It is densely supplied with pores. "The cuticle, or outside skin, is composed of round scales, so minute," says LEUWENHOEK, "that one grain of sand would cover from 200 to 250." He considers that the perspiration does not penetrate the scales, but oozes between them. These scales are not permanent, but come away in clusters.

The friction and pressure to which all prominent parts of the extremities are exposed, cause, by the local irritation they produce, the effusion or secretion of a larger quantity of epidermis than can be got rid of by the ordinary processes of nature. The scales consequently accumulate, and lie layer upon layer, forming indurated masses of larger or smaller size, constituting corns, callosities, or other diseases of the part, according to their situation, and the severity of the pressure or friction.

The predisposing causes of corns are *pressure* and *friction*, and this is

THE NATURAL HISTORY OF CORNS.

Improperly made shoes invariably produce pressure upon the integuments of the toes and prominent parts of the feet, to which is opposed a corresponding resistance from the bone immediately beneath; in consequence of which, the vessels of the dermis are compressed between them, become injured, congested, and, after a time, hypertrophied; a larger quantity of lymph is thrown out than is required for the formation of the normal cuticle, so that layers are generated considerably sooner than the outer lamina is worn off, thus forming layer upon layer, which become interwoven, and adhere together.

If the cause be removed, the inflammatory action ceases, and the result is simply an external induration of superficial irregular scales or laminæ; if continued, the irritation keeps up the increased action of the papillæ, more epidermic secretion is poured out upon the under surface of the already thickened cuticle, where it coagulates, producing bulbs or projections, generally of conical shape, descending into corresponding cells or follicles of irregular depths, according to the injury caused upon the immediate parts, where the external pressure is most severe. In this manner the process continues to the full development; the surrounding congestion ceases, lymph is thrown out, which becomes organized, and forms a protective sheath or sac round each bulb to its apex, and thus the formation of the corn is completed.

These bulbs are composed of layers, decreasing more and more in size as they approach the secreting point in the dermis, where they become condensed and opaque by compression, visible as white or yellowish specks, according to the colouring matter of the skin, when the outer portion of the induration has been removed.

These irregularities, or projections, are what have been incorrectly called stems, or roots.

Corns produced by friction alone, are generally superficial, and seldom painful.

After dealing skilfully with malformation of the toe-nails, bunions, and other diseases of the foot, Mr. DURLACHER proceeds to the hands, and his tenth chapter is devoted to

THE MANAGEMENT OF THE FINGER-NAILS.

According to European fashion, they should be of an oval figure, transparent, without specks or ridges of any kind; the semilunar fold, or white half-circle, should be fully developed, and the pellicle, or cuticle which forms the configuration around the root of the nail, thin and well defined, and, when properly arranged, should represent, as nearly as possible, the shape of a half-filbert.

The proper arrangement of the nails is to cut them of an oval shape, corresponding with the form of the fingers; they should not be allowed to grow too long, as it is difficult to keep them clean; nor too short, as it allows the end of the fingers to become flattend and enlarged, by being pressed upwards against the nails, and gives them a clumsy appearance. The epidermis which forms the semicircle around, and adheres to the nail, requires particular attention, as it is frequently dragged on

with its growth, drawing the skin below the nail so tense, as to cause it to crack and separate into what are called ag-nails. This is easily remedied by carefully separating the skin from the nail by a blunt, half-round instrument. Many persons are in the habit of continually cutting this pellicle, in consequence of which it becomes exceedingly irregular, and often injurious to the growth of the nail. They also frequently pick under the nails with a pin, pen-knife, or the point of sharp scissors, with the intention of keeping them clean, by doing which they often loosen them and occasion considerable injury.

The nails should be cleansed with a brush not too hard, and the semicircular skin should not be cut away, but only loosened, without touching the quick, the fingers being afterwards dipped in tepid water, and the skin pushed back with a towel. This method, which should be practised daily, will keep the nails of a proper shape, prevent ag-nails, and the pellicle from thickening or becoming ragged.

When the nails are naturally rugged, or ill-formed, the longitudinal ridges or fibres should be slightly scraped and rubbed with lemon, afterwards rinsed in water, and well dried with the towel; but if the nails are very thin, no benefit will be derived by scraping; on the contrary, it might cause them to split. If the nails grow more to one side than the other, they should be cut in such a manner as to make the point come as near as possible in the centre of the end of the finger.

Warts are sometimes troublesome companions, and always unsightly. They are hard, indolent tumours, or tubercles, differing in structure from corns, as they arise from the true skin, and are composed of an elongated bundle of its papillæ, inclosed in sheaths of cuticle; whereas corns are a disorder of the epidermis alone.

The reader is aware of the many superstitious cures for warts. "ETMULLER seriously mentions as a remedy the green moss gathered from the skulls of persons who have died a violent death; this is to be exposed to the air, and made into a paste; and JUNCKER states that a thread drawn from the shirt of a dying criminal from near the armpit, is equally valuable. As many knots are to be tied in the thread as there are warts to be destroyed, and each knot is to be rubbed on the corresponding wart, after which the thread is directed to be buried in a moist place. As the knots rot away, so says JUNCKER, will the warts consume and disappear. He adds, he has never known it to fail." But quitting these amusing absurdities, let us see what our author prescribes for

CURE OF WARTS.

The general methodic treatment consists in the application of caustic alkalies, acids, and escharotics, or else their removal by the ligature or the knife.

The pendulous or sessile wart, which is connected with the integuments by a small foot-stalk, is readily removeable by the application of a ligature of horse-hair or waxed silk thrown around and drawn tight, and secured with a surgeon's knot. When deprived of the access of blood, by which its vitality is sustained, the wart will gradually shrivel up and separate. If there should afterwards appear any remains of a root, it must be touched with nitrate of silver until destroyed, for if any portion remain, the wart is certain to be reproduced.

The caustic alkalies may be frequently applied for the removal of the round and flat warts, but they will not always be successful. The best treatment is to cut the wart as close as possible without giving pain, and, while yet bleeding, freely to rub the lunar caustic on it. This operation is to be repeated until the whole is entirely destroyed. In some cases nitric acid may be used instead of the nitrate of silver, but great care is requisite in using either of these escharotics, when the wart is seated near or upon a joint, where the skin is thin, as considerable mischief may follow their indiscriminate application.

A concluding chapter on the management of the feet abounds in useful suggestions. Mr. DURLACHER recommends that care be taken to have the stockings of proper length; he thinks if they could be made like gloves, with a separate place for each toe, corns might be entirely prevented. Shoes should always be a size larger than the foot. The feet should be washed every day. Here are some

HINTS TO SPORTSMEN.

Sportsmen, during the shooting season, ought to wear woollen stockings, and change them daily; the shoes should be made right and left, and to fit firmly over the instep and round the ankle, so as to prevent the foot from slipping about in them; the soles ought to be considerably thicker than are usually made, with a full tread, and the waist narrow: the outside should not be too much twisted, but be made straight until above the little toe, and then shaped to the foot; the upper leather should be very pliable and soft, lined throughout (instead of the usual narrow pieces pressing on the toes), and properly fitted, so as not to have any ridges or uneven surface. If the shoes can be depended on as waterproof, it would be preferable.

The foot of the stocking, as far up as the ancle, should be well rubbed over with common yellow soap, to prevent the feet from being chafed or galled. Stockings thus prepared ought to be worn constantly during the season. Half-a-dozen pairs may be prepared at once, so as to have them always in readiness. When the stockings are changed in the evening, of course the clean ones should be worn without soap.

After the day's fatigue, the feet should be kept for ten or fifteen minutes in hot water, in which two large handsful of salt have been previously dissolved, then wiped thoroughly dry, and well rubbed with Eau de Cologne, brandy, or other spirit.

We now close Mr. DURLACHER'S volume, which we can commend to all who have a painful interest in any of the topics it treats so sensibly.

Observations on the Growth and Irregularities of Children's Teeth, &c. By W. H. MORTIMER. Second edit. London, 1845. Highley.

THE teeth are much more manageable than is generally supposed. During the period of their growth they may be moulded into shape and order, however great their natural tendency to deformity; hence the importance of closely watching the teeth of children. A little attention then might save them years of pain and disease in after-life. Mr. MORTIMER has taken especial note of this branch of his art, and he has in these volumes given to the world the results of his long experience. If his advice be read, remembered, and followed by parents, England will be less famous for her bad teeth than hitherto she has been. It is a sensible and useful treatise.

Practical Observations on the Diseases most fatal to Children, &c. By P. HOOD, General Practitioner, &c. London, 1845. Churchill.

IN this volume Mr. HOOD has sought to treat, in a popular form, of a class of diseases of which everybody sees a great deal, and nobody knows any thing. If he can but prevail upon parents and nurses to read his pages, he will work a reformation in the nursery. But we fear they will not be terrified into so unaccustomed an employment of their brains, even by the formidable tables of infant mortality contained in his preface.

The mode of treatment developed in this work is founded on the principle "that the diseases of children, and of adults also, proceed from irritation, and, considered in a general sense, as distinct from inflammation, and indicating an opposite course of treatment."

It is not our province to follow him in his application of this theory to the various ailments that afflict the nursery. We have only to introduce the subject to our readers, and if it interest them, they will certainly find it more intelligibly and sensibly treated by Mr. HOOD than in any book we ever chanced to light upon.

VOYAGES AND TRAVELS.

A Hot-water Cure, sought out in Germany, in the Summer of 1844. The Journal of a Patient. London, 1845. Saunders and Otley.

OUR patient is a gentleman of happier temper than is usually found in travelling Englishmen, especially such of them as are troubled with dyspepsia. In other respects he is a true Briton, "upright and downright," as himself tells us; and, we believe, few who have visited the Continent will hesitate to pronounce an English gentleman superior, in all that becomes the man, to the best specimens of French finikin *politesse* or German formality and selfishness.

Doctors at home differing as to his ailments and their cure, our patient resolved to seek health at foreign spas. Forthwith he took his carpet bag, and departed for Aix.

The steam voyage to Antwerp, the aspect of that old city, the visit to Brussels and Waterloo, the slow passage by railway to Aix, are too well known to permit of extract. Established there, we must, however, permit him, in his lively manner, to sketch

A GERMAN TABLE D'HÔTE.

The carving department was admirably and promptly performed by the landlord, who rose from table when the joints or fowls came in. A thick wooden tray, a yard long, by half a yard broad, is placed upon the side-table; and upon this the joints, chickens, ducks, &c. are taken from the dishes by shanks, legs, or other convenient handles. Here they were sliced, chopped up most dexterously, shovelled into dishes, and sent round with surprising despatch, while all the time another current of dishes was passing from hand to hand amongst the guests themselves. Although the taking of meat from the dishes and putting it upon a board to be cut up, appears at first unseemly, it is, in point of fact, cleanly enough, for the tray is beautifully white, and frequently changed. But the landlord's dexterity is a thing to see. Angelo himself could not slice an imaginary antagonist to pieces quicker than he does a fowl. "Left cheek—right cheek—wrist—leg—chop, chop, chop"—and the fowl is in six parts, with both feet amputated. It is done at the rate of a chicken in five seconds, or twelve a minute.

I wish I could speak as favourably of the manners of the guests as of the excellence of the dinner. A gentlemanly-looking man seated next to me, and having a lady on the other side, committed the first solecism. Wheeling suddenly half round, he hawked most audibly, and then sent a shot diagonally along the backs of the line towards the door. This signal was promptly taken up, and a smart fusillade passed round the table. The firing, however, was heaviest towards the close of the dinner. But this was not nearly so disgusting to me as the silent expectorations of an elderly gentleman opposite, with a narrow green ribbon in his button-hole. Raising the fluid to be discharged by a most unpleasant hydraulic process, he proceeded quietly to eject it between his knees upon the floor, holding up a hand which was far from an effectual screen. There was a long contest between the force of gravity and the cohesive nature of the fluid; and though the former did eventually prevail, it was not until a line had been spun reaching nearly to the table-cloth. When I say that this gentleman took snuff—but I forbear—I never in all my life saw people, both male and female, eat more enormously; and there was an anxiety and excitement to obtain a favourite dish that they did not attempt to hide. Such a shovelling up of buttered beans upon the blades of knives; such a pitching of trusses of salad into mouths, "and talking through it;" and such a mopping up of gravy, and polishing of plates with great sponges of bread, I never did see. Soon after the ice had passed round, and before a single lady had left the room, a gentleman drew forth his cigar-case, another did the same—candles came in—and a pretty general "blowing of clouds" took place round the table. The ladies, I suppose from habit, seemed quite reconciled to this custom; indeed, the smell of the fullest flavoured Cuba—the most pestilent rat-tail—is a delicious perfume to the odour of the cold dirty pipe which most Germans carry in their pockets, and which they inhale all their lives.

He dedicates the intervals between bathing and drinking fetid water to a close inspection of the various *sights* of Aix, the notes of which offer no novelty. We prefer his graphic pictures of men and manners. The perpetual bow of the Germans sadly perplexes him. "It is impossible," he says, "to pass a day in this country without being called upon to execute some dozen of bows somehow." He was compelled to take lessons in the art. The bow simple was easy enough; but a much more difficult affair was

THE COMPOUND BOW.

The compound bow is more difficult; like skating, it must be learned young. For instance, a gentleman meets two parties—and ladies should be amongst them—at ten or fifteen yards apart; then it is that you see the triumph of the adept. If the two parties are more than fifteen yards from each other, there is time to resume the hat, and merely repeat the same bow to the second party. If, on the contrary, they are at less than ten yards, the same bow might be made to serve for both. But in the critical interval of the five yards, what does the German do? He warms up his first bow, and throws in a little more spice; raising the hat as if to put it on after passing his first friends, he gives it a slight lift higher than the head with a second motion, and then, diving forward lower than at first, he sweeps the hat round to the rear, so that the crown may just clear the ground.

Our patient amused himself with imagining moot points in bowing. Here is

A PERPLEXITY SOLVED.

I have sometimes wondered what a German gentleman would do if he were to receive a bow, and not be able to take off his hat in return. This I had an unexpected opportunity of putting to the proof. Residing at this hotel, and dining with us, there is a little elderly gentleman of rank (either a count or a baron), and I have understood a diplomatist. He is, at this moment, the great man of the company, and treated accordingly. At table he looks well; wears his ribbon with an air, as if conscious that he deserved no less; comports himself with cheerful dignity to his neighbours, and now and then unbends into a rosy state of enjoyment, when he has a waggish twinkle of the eye, as if he felt that he could turn the flank of old Metternich himself. But in the morning, the case is sadly different. He seems to lay aside his spirit with the ensigns of his order, and a more wretched object at the well I never saw. Seedy, pale, tottering, slow, he toddles helplessly about between his tumblers, a pitiable example of dyspepsia. * * * * But it is his bow that I have to do with. Returning, this morning, along one of the passages which connect the hotel with the bath-house, I saw the baron coming towards me with his hat on, a tumbler full of water in one hand, and something like a dressing-case in the other. I had never before met him, face to face, in a passage, or, indeed, been within good bowing range of him anywhere; and this was an opportunity not to be neglected. I gathered myself together for the effort; thought for one second of George the Fourth (I was getting above the landlord), and at precisely four paces and a half commenced the execution of No. 1 in my best style. The baron was startled, but not taken aback; bending forward gracefully, he raised the dressing-case to shew the impossibility of doing as he wished, and then with a second, a lower, and, if possible, a more graceful dive, he slided past, half-turning towards me as he did so, and at the same time raising the tumbler to his breast.

In the fields near Aix he stumbles upon

A BLACK BROOK.

Walking through a meadow near the railway viaduct, I came upon the hot brook, flowing from Borcette towards the millpond; it had a singular appearance, smoking amongst the haycocks, and is a most repulsive-looking stream. The water deposits a black slimy substance, which completely covers the bottom and sides of the brook, and which, hanging in flaps, is called "Jew's ears." Though the water itself is clear, it looks like a river of ink. Half way up the field, is a small spring, of a still more repulsive appearance, more fetid smell, and a nastier taste. If the ancients had called such a stream as this a river of Hell, there had been something appropriate in it. I disturbed some large rats, who took to the hot water gallantly. The Germans have some strange mystical notions about the composition of these mineral waters; they imagine them full of living animalculæ, which die at a temperature lower than 28° of Reaumur, and refer the undoubted fact of the animal matter they contain, to countless millions of insects. In this case, we are drinking a curious kind of living broth.

There is true Young Englandism in his comments on

SERVANTS IN GERMANY.

The courtesy towards people of different ranks in this country is pleasing to see; servants are not bullied or spoken harshly to as with us; but the hotel waiters are of a higher caste, and are put in that situation as a kind of apprentice, to learn the science of innkeeping; they have their quiet jokes with the company, as they hand the dishes, and press upon your notice what they have observed you like: "*Mais c'est bon ça, Monsieur, goutez-en c'est ce que vous aimez.*" Sometimes, when a good workman's plate is over-loaded with his chips, they add a little quiet satire, in offering him the same again. This is better than the vulgar self-sufficiency of an English waiter. One day, at the table d'hôte, a lady handed a glass of wine to one of the young waiters, who drank it reverentially behind her chair; it was her son; and she kept a respectable hotel in Cologne.

A broader philosophy than the immediate subject teaches is suggested by this lively and truthful sketch of

DINNER-TABLE CONVENTIONALITIES.

It is amusing to watch the conventionalities of different people at our dinner-table. One day a Frenchman picking his teeth with his fork, gently reproved a young German for noisily and offensively collecting his saliva, and dropping it on the floor. "J'en conviens," said the other, good humouredly, "but I really was obliged; it was either that or swallow it." A Belgian who regards with disgust the conveying of peas to the mouth on the point of a knife, has no scruple in combing his head at table, completing his toilet with a small mirror, with which he examines the state of his back teeth. An Italian, who affects the fine gentleman, and looks contemptuously upon the holiday clothiers of Verviers, who come to spend their Sunday here, will not only spit and do worse, but help himself to strawberries with his well-worn toothpick. A German sits at breakfast with his wife with his hat on, though out of doors he can hardly keep it on his head for bowing. Yesterday, a gentleman helping a lady to cham-

pagne, saw something in the wine, and dipped his finger into the glass to remove it; then filled up the glass, and politely presented it. On all sides you see the old principle of "fingers before forks," amply carried out in these days. Some of the ladies pick their bones with relish, and forgetting that napkins are liberally supplied, scrupulously lick their fingers afterwards. Even the pretty young lady will persist in dragging her cullets off the dish by the bone. I believe I am the only person who gets the knife and fork changed at every change of plate; but this affectation I mean to discontinue. The practice is, after carefully wiping and polishing the plate with a piece of bread, and swallowing it, to take another piece and wipe the knife and fork: this, at any rate, is better than having them polished up by a common towel, which must happen if every one sent them away with their plates. I am sorry to observe that our guests of all countries lose all sense of restraint or decorum when there is a chance of a favourite dish escaping them. Waiters are then vehemently called to, seized if possible, but wearing no coat-tails, this is not easy; and quietly but deeply cursed if they miss an expectant. After a man has well-heaped his own plate, I have known him turn to a neighbour with an "En voulez-vous, Monsieur?" I was much amused one day with a fat plethoric fellow who came in late and sat next to me. The bouillie was going round, but had passed him while eating his soup. However, as soon as he could get his plate changed, he helped himself to cauliflower, and looked out sharp for the meat, which came not, and was rapidly vanishing, my neighbour on the other side having just cleared one dish at his second helping. Unluckily, two waiters in succession, not noticing that he was already provided, handed him vegetables again, when he started up, and in a state of great excitement shouted, "Fleish, fleish!" continuing the sentence with what I should consider, from the tone and manner, to be the heartiest curses I ever heard in my life. I have generally been unlucky in my neighbours. Hardly had I ceased to congratulate myself upon the departure of the gentleman opposite, noticed before for his habit of letting fall perpendicular fluid, when his place was occupied by a lady of rank, whose powers of mastication were but indifferent. She could get through no meat that was not very tender. But she was persevering: she gave it a fair trial on both sides of her mouth, and brought every grinder into play; then, if she found her efforts unavailing, she was wont to take the mouthful of half-masticated matter in her hand, and shy it with an impatient gesture under the table. As I have the weakness to pride myself upon the polish of my boots, I was at first greatly disconcerted at this under-hand attack, but discovering from experience the usual course of the invisible shells, I managed to slew myself round, and let them ricochet past to my neighbour. Without any affectation of gallantry, I mentally repeat the compliment that Frederick II. paid to one of his distinguished opponents:—"Placez vous ici (Madame), j'aime mieux vous avoir de mon côté que vis à vis."

A Dutchman, I observe, is disgusted with one who, rinsing his mouth after his coffee, spits the contents into the cup.

They may call our countrymen rude and bearish—and there are some curious specimens go abroad—but I am satisfied no person from Wapping, or St. Benet Sherehog, would do these things. Nay, I am equally sure that, for genuine, real politeness, that does the civil thing without any flourishing, they are not to be matched abroad. It is much to be wished that they could get rid of their cold and apparently sulky manner: these I dislike, because we hate our own faults in others.

Our patient notices that the Germans never talk politics with each other, though they are pleased to do so with strangers. He has evidently a military taste, and every thing in the shape of soldiery attracts his special observation. Of the Prussian troops he remarks that if he had not seen the Belgians, he should have pronounced them the most slovenly he ever encountered, that is, not so much in dress as in movements.

Perhaps the reader may be curious to learn something of the ordeal to which the frequenters of the spas are subjected. Behold then

THE DOUCHE BATHS.

The douche baths are excellent and well arranged here, at the Emperor's bath-house. The water is pumped up to a reservoir very much higher than the baths, and is guided down upon you with very considerable force, in a stream as large as your arm. Leaning down upon the steps upon your hands as low as possible, you receive the hot stream like a shower of lead upon your neck and shoulders, from whence it is slowly guided down each arm and leg, and even upon the soles of the feet, while the man vigorously rubs where the spout is playing. When one side is done, you are turned, and the same process gone through on the other. I cannot say that it is agreeable, but the sensation afterwards is highly so; and good spirits invariably follow. The douches in the other bath-houses are very feeble in comparison with this; but even this one sinks into insignificance when compared with the douches at some of the cold water establishments in this country. There the cold mountain stream comes upon you from a height of thirty-five feet in a stream the size of a cable.

However uncomplimentary, there is strict truth in his description of

DRESS IN GERMANY.

No people are so entirely unaristocratic in their appearance. The air *distingué* is not to be found here. The young are overdressed; the old slovens. The reverse of Brummell's maxim is their aim, and the more people turn to look after them, the better dressed would they fancy themselves. Their dress is without "keeping" or consistency—long hair, exaggerated whiskers, ferocious moustaches, heaps of bad trinkets, and a flaming stock with a dirty shirt; a bad hat with a new coat; ill-cleaned boots with well-made trousers, and either no gloves at all, or the brightest primrose. No people more servilely follow the fashion without regard to its suiting them. Because, just now, high-crowned, sugar-loaf hats with broad brims are the mode; everybody has them; and a more unbecoming head-dress, especially combined with a peaked beard and hair over the ears, it would be difficult to invent. I fear, too, that they sadly neglect Brummell's fundamental law—"Fine linen, plenty of it, and country washing."

From Aix he wanders to Wiesbaden, where the springs are still more various in taste and quality.

THE WATERS OF WIESBADEN.

In front is the "Wein Brunnen," a circular basin, in which nature sends up a light white wine of a peculiar vintage, considerably charged with gas. It is cold and deliciously refreshing, better than selter water, and a little less "fruity" than the weaker kinds of Rhenish. It is a spring to tempt a man into a vow of total abstinence from all liquors but those of nature's providing. I have tasted the wine spring of St. Galmier, in France, which I think inferior to this, though sweeter. After a couple of bumpers, I hastened to the bath-house, anxious for a plunge into the Mulligatawny soup we have heard so much of.

Strange tricks we play with the stomach and person in this country. I began the day with four tumblers of natural chicken broth, and a bath of the same, at Wiesbaden. This was followed by a couple of glasses of mineral wine, and a plunge into Mulligatawny soup at Schwalbach: more natural wine after dinner, for finding the "ordinaire" very ordinary indeed at the hotel, I adjourned to the well to conclude my potations, and I proposed to finish the evening with a good wash in snake broth at Schlangenbad.

A shrewd observer of men, he notices this

TRAIT OF NATIONAL CHARACTER.

No guide is so easily understood as a Frenchman: the German, even if his language be intelligible, confines himself to a dry detail of your course, which is forgotten in the next street; but the Frenchman catches you by the elbow, and thrusting out an arm before you, indicates with his fingers bent to an angle, or his thumb thrown back, or by easy curves of the wrist, the way you have to go. If, after all, he detects a doubt upon your features, he is as likely as not to finish with "Tenais, je vais vous montrer!"

Like all his country folk, our tourist is disgusted at the treatment of

GERMAN WOMEN.

In my way from Spa, I saw a woman threshing in a barn with a man; she beat her time well, and laid it on as hard as her partner. This, I think, nearly makes up the list of female accomplishments. Brick-making, stone-breaking, wheat-sowing, reaping, mowing, threshing, and carrying heavy loads, are pretty little additions to the burdens that nature lays upon the sex. I have not yet seen any female postilions, or top-sawyers, but I live in hopes. In the evening band at the Brunnen at Aix, a woman plays the violoncello.

And however primitive they may be, he makes complaints, as being veritable nuisances to those who cannot sleep so profoundly as the dense natives, of

GERMAN WATCHMEN.

There is one great nuisance in these German towns—the watchman. His habitat here is in the old tower of Granus, opposite my window, where it is his duty to look out for fires and ring the alarm bell; and to prove that he is awake, at least once an hour, he takes up the time of night from the clocks, and blows it upon his cowhorn; and again, a second time, to prevent mistakes, hooting out the notes like an old owl, as he is, longer

and longer in the repetition, as if he took a wicked pleasure in having as many companions in his watchfulness as possible. The small hours are a bore to this fellow: but he dwells upon midnight with a depraved enjoyment. I observe that he does not wait for the old cathedral clock, which, indeed, is in a helpless state of dotage, and proclaims the time in a churchyard cough.

He takes farewell of the country with this pithy

SUMMARY.

The Germans are cried up as an honest people. I should be the more inclined to accord this character to them, if their shopkeepers had not two prices; one for their own countrymen, and another, from 25 to 50 per cent. higher, for their English visitors. It may be said that this is common in all countries; perhaps it may, but it is not honest. The highest and lowest classes are much the same everywhere; it is to the middle, the shopocracy, therefore, that we are to look for the national character, and I do not think that this class can take a higher ground than their neighbours. I have been robbed in London, more robbed in France, and most robbed in Germany. The English robbery is plausible, cringing, pliant; you are "*shaved*," and you suspect it. The French robbery is a pleasant process, and perpetrated, as it usually is, by a pretty woman, we are ready to undergo it again. The German is a hard, civil, unyielding "do." You are half imposed upon by their heavy frankness, and you yield the other half rather than try the same thing in another shop. They are a heavy people. Heavy in their manners and their amusements—in their persons and their pipes—in their dinners and their jollifications. Drinking alone makes them gay, and then there is a coarseness in their cups. To see a German dancing is ridiculous; you are reminded of the old story, of one being discovered furiously jigging upon a table by himself, and being questioned, answered, "he was learning to be lively." You are convinced that the lesson must have been thrown away. A German never talks politics with another German. They are absolutely without political liberty, and this perhaps, makes them ashamed to broach the subject; but with foreigners they are not quite so reserved. I very much suspect that ten years will see a mighty change. I trust that the "New generation," amongst other changes, will change their shirts and wash their heads, curtail their pipes, and eschew public expectoration. It is a delightful country; and I know not which most to praise, the wines or the water; gratitude whispers the latter; for I AM CURED; but I took both freely, and of all kinds that came in my way. Nature has been indeed bountiful to this favoured people; she has given them the finest wines and the noblest river in Europe; and above all, provided them with baths, which are the attraction of the world, as if

> "To shew by one satiric touch,
> No nation wanted them so much."

And here we part company with our cheerful valetudinarian, whose recovered health will, we hope, be dedicated to more extensive travel, that he may bring back to us observations of men and things equally shrewd and amusing with those which he has here presented to his countrymen, and illustrated with very clever sketches, by the pencil, which he wields with quite as much ability as the pen.

Diary of Travels in France and Spain, chiefly in the Year 1845. By the Rev. FRANCIS TRENCH. In 2 vols. London, 1845. Bentley.

DESIROUS of acquainting himself, by personal investigation, with the state of religion in France, and chiefly on two points, viz. on the hold which the Romish faith and ceremonies have on the population of the country at large, and on the degree in which the doctrines of the Protestant Church prevail at present in the land, the Rev. FRANCIS TRENCH purchased a phaeton and a pair of ponies, and in this pleasant and unprecedented equipage set forth upon his travels through the South of France.

Slow as necessarily was his progress upon the road, and frequent as were the rests at towns and villages, abundant opportunities for observation were enjoyed by our tourist, who not only took notes of all that he beheld as he went along, but carried away with him a portfolio of sketches drawn with artistic skill, and which the engraver and lithographer have transferred for the adornment of the volumes wherein those notes are given to the world.

The route selected was one very little traversed by English tourists; some portions of it are indeed altogether new to us. The pony-carriage gently bears our traveller and his wife and servant from post to post, as weather permitted, or inclination prompted, and wherever he rested for a day or two he made it a rule to seek out the English residents, and affording them the ministrations of his sacred office. Scarcely a Sunday passed in which he was not thus enabled to perform the sublime services of his Church to a company of his countrymen, delighted thus to renew the memories of home and youth. Thus, with an object in view, his narrative assumes a character, and notes, that otherwise would have been dull and uninteresting, excite our sympathies, and trivial incidents assume a meaning that excuses their introduction.

The form of the Tour is that of a Diary, a shape more convenient to the author than agreeable to the reader. It compels repetitions, breaks up the narrative into isolated sentences, and prevents its being held in memory as a whole. Besides, it tempts to a chronicling of small matters, which, at the moment of their occurrence seemed important, but which afterwards, recalled in connection with the whole tour, often become relatively uninteresting. On the other hand, we gain somewhat in accuracy of detail, the impression of the moment being seized and committed to paper while it was yet fresh, and the description could be compared with the object,—whereas, in writing from memory, the imagination is apt to colour the reflected image and to supply defective observation.

Still here we have Mr. TRENCH'S note-book little changed from its original form; with no other corrections, indeed, than were needful to shape it for the public eye; and a pleasant, readable book it is, because it is written by a sincere man, who has an eye for nature and a heart for humanity.

As we read, we had scored some thirty or forty passages, as peculiarly worthy of extract, for some novelty of place or person, or some incident of interest; but since these are more than other claims upon our columns will admit, we must be content to cull from them a few specimens for the entertainment of the reader, and that he may learn something of our tourist's manner.

He opens his note-book at Dieppe, where they started with this

EQUIPAGE.

Our little equipage, when brought to the door in the morning, caused the greatest curiosity and admiration, from being of a kind quite unknown in France. It was merely a light, low cane-bodied little phaeton, with a seat behind. Thirty or forty spectators formed a circle round it to-day, when brought to the door of the hotel. The ponies, also, from their small size and breed, received their full share of attention. Various were the favourable and endearing epithets bestowed upon them, and many were the discussions between their respective admirers as to the comparative merits of "*la petite grise*," and "*la petite rouge*," one being grey, and the other bay.

After a short stay at Paris, they proceed to Orleans, and thence to Tours; at this latter place he sketches a trait of

PHILOPROGENITIVENESS IN FRANCE.

The French, in all classes, seem to have the greatest delight in dressing up their children to the highest possible degree. Some of those belonging to the wealthier classes are clad most expensively; and the fit of the little frock coats, in which boys of six or seven years are seen parading about, is sometimes perfect. We saw here the same fancy exemplified in a humbler station. As Mrs. T. and I were walking along the street we could not help stopping to observe a little fellow of about four or five years old, who was pacing up and down by himself in the middle of the highway. Every thing he had upon him was new, from his broad-brimmed glossy white hat to his jet-black wooden shoes, which he was displaying well forward at each step with manifest self-approbation. Presently we heard a loud laugh of complacency, and turning round saw the mamma standing on some stone steps nigh at hand. Half addressing the little fellow, and half addressing us as his admirers, she exclaimed, "C'est le premier jour de ses culottes, le petit! Il marche comme un roi, le petit bonhomme." We were much amused by the little domestic scene.

Angers was their next halt, and he notices here the brilliancy of the flowers. A visit to the Hospital informs them of a peculiarity, which will interest our lady friends, in

FRENCH LAUNDRY.

In the laundry were four enormous cauldrons, full of the linen at wash, under the process adopted in this country, but so unlike our own. The linen is first put into these boilers. Then a layer of wood ashes is placed over it, but separated by a strong cloth. Hot water is then poured in from above, which filters through the linen, and passes out through holes in the bottom. The water is then repeatedly pumped up again, heated, and passed through

as before. The linen is then taken to the river side, which is here close at hand, and washed very slightly with soap and cold water. I was told by a lady of our party that the general mode of washing in the country was very similar, and that the idea of making linen white by soap and water only is reckoned quite chimerical. However, an Englishwoman is rather in alarm for her wardrobe when she sees the washers at the river side battering the clothes with small instruments like wooden spades, perhaps one on each side, repeating blow after blow with immense noise and rapidity.

From Angers they proceeded to Nantes, and among other reminiscences of this place, we are presented with an anecdote, related to him by the English consul, touching the then prevalent

ANGLOPHOBIA.

I was amused by the account which he gave me of a visit which he had received during one of the temporary excitements and ebullitions against England. A party of 1,200 men came to his house one night, and sung the Marseillais hymn under his windows. He is personally popular in the town, and they accordingly made a very accurate distinction between the official station of the individual and the individual himself, crying out, "*A bas le Consul Anglais*," and in the next breath, "*Vive Monsieur N*——." By way of giving more solemnity to their chant, they had gone down on their knees at some other station where they had sung their song; they were going to do the same at the English consulate, and were just in the attitude of dropping down, when some one exclaimed, "What, go on your knees to the English consul!" At the thought thus suggested they all sprang up *en masse*.

He notices also a unique

FEMALE COSTUME AT SABLES.

There are two portions of female costume in this place of a most singular character, indeed I believe unexampled elsewhere. One is a kind of small and very graceful lace cap, ending in a point above, and widening downward, in the form of a small cone. The other article of dress was really quite extraordinary; nothing less than an enormous cape of coarse worsted fringe, at least a foot thick, and so worn on the shoulder that the head appeared emerging from a great blue bee-hive. Two or three old women were sitting in the church thus apparelled, and presenting of course a strange spectacle to a traveller. I believe that this enormous hood was first used by the fish-women who were much exposed to cold and wet.

Passing a very fine country, they reach Bourdeaux, to which some days were devoted. In the neighbourhood they witness the process of

COLLECTING RESIN.

Above our heads, and far as the eye could reach, were pines, not growing up bare and straight, but wide and free, so as to form with the copse below a variety of picturesque foregrounds. One side of these trees was generally laid bare by the axe for about twelve feet from the ground, and out of this bare white gash the resin was plentifully exuding, and dropping down into an oblong cavity cut in the bottom of the tree. When the trees bent much, boards were added in the proper direction to catch the fluid. This resin is collected every week. Each proprietor has his *resinnier*, as this functionary is called. A first-rate tree will produce fifteen pounds weight per year, worth three or four francs. The price varies from sixty to eighty pounds the *barrique*.

Here also he takes an opportunity to visit the courts of law, and witnesses

A FRENCH CRIMINAL TRIAL.

The assizes were going on during our stay. The doors of the court stood wide open, two soldiers keeping order within. In the most conspicuous place was a crucifix. Below in large letters was the just and excellent inscription, "Tous les Francais sont égaux devant la loi." The President, in scarlet robes, sat with two or three other judges in black. When I visited the court, so far as I could ascertain, a man was under a charge either of fraudulent bankruptcy, or of removing goods for his own benefit which ought to have belonged to his creditors. He sat in the middle of four *gens d'armes*. Shortly after I entered, the President beckoned the prisoner to approach. He obeyed, and had to mount a little wooden platform raised about two steps from the ground immediately in front of the judge. Then began that scene so strange to our notions of criminal jurisprudence, so natural to those of the French. I mean the examination and cross-examination of the prisoner himself. The President asked him several questions, sometimes taking him up and saying, "You stated just now," &c. Some of the jury then questioned him; then one of the judges, then the President again, and to my great surprise, none of these personages waited till another was done, but spoke out abruptly, and even eagerly, before the unhappy prisoner was out of the hands of his previous examiner. None of those officiating seemed surprised at this part of the proceeding, though I must say it seemed to me not only most unfair to the prisoner, even in the principles of the system, but also most irreconcilable with the order and dignity of a court of justice.

At Tulle, and indeed wherever they went, the ponies were special objects of admiration.

I must say also that the ostlers were very gentle towards the ponies, and indeed they were so small and harmless, notwithstanding their unwearied spirit and endurance, that they were quite treated as pets by all who came near them. Not only did gentlemen pay them visits, but mammas came and put their children on their backs! One lady, who was an invalid, had the little grey absolutely led into her room, and another handsome and sprightly young landlady was so charmed with them on our arrival at her door, that she called out, patting them and summoning the household to see them, "Les amours!—Les amours!"

They reached Toulouse in time to witness the famous Floral Games, established by an illustrious lady named CLEMENCE ISAURE in 1502. They commenced with an animated panegyric on the benefactress. The address concluded, a deputation from the academy quitted the hall and proceeded to the church of La Daurade for the prizes—gold and silver flowers of considerable value. The secretary then rose and delivered the report for the year.

Before I speak of it farther, I must mention that the prizes are offered for compositions in verse and prose. And not only those which gain the prize are printed, but also those which are thought to deserve commendation. This year three poems received prizes. Twenty-four pieces were printed in the Annual Report. The Academy exercises the right of free comment and public criticism on all the compositions sent in; and in the exercise of this right, the literary judges present their able, searching, and instructive Report.

Twenty-five poems were sent in, thirty-seven epistles, and elegies without number. The remainder of the proceedings of the day we give in the tourist's words.

JEUX FLORAUX.

While the Report mentioned above was being read, martial music was heard in the court below. This was the band which attended the deputation, sent for the purpose of bringing the prize-flowers from the church, La Daurade. The music accompanied them into the room where we were all sitting, and a file of soldiers, as a guard of honour, following the deputation, marched up the middle of the room. The flowers, thus carried in state, were large gold and silver ornaments of considerable value.

The sensation caused by this arrival being over, the Report was finished. Then the three successful poems were read with much spirit and taste; not by their authors, but by persons deputed to act for them. Neither were the prizes given to the three successful candidates personally, though they were called on to receive them, if present. No answer being given to this summons, it was publicly asked whether any individuals present were appointed to appear for them. In each case a young boy came forward with much grace in their behalf. One was the son of the successful competitor, and of course was cordially welcomed. Music concluded the proceedings of the day.

Soon after quitting Bourdeaux, they found themselves on the frontiers of Spain, the scenery growing more and more magnificent and the people more Spanish in manners and costume. They had scarcely crossed the frontier when they were reminded of the change by the passing of

A SPANISH CART.

I heard to-day, for the first time, that most extraordinary discord so well known to travellers in Spain; I mean the creaking of a Spanish cart. As we were proceeding along the high road we heard all at once a distant sound, perfectly new to our ears. My first impression was that it proceeded from a saw-mill, or other similar machinery, among the trees of the neighbouring valley. One of the ladies had, however, heard it before, and said that it was only a cart! The noise approached nearer and nearer—izz, izz, izz; then a deep groan, then a loud, hollow rumble, then the shrillest of all shrill screams prolonged to an indescribable length, then—but it is really quite in vain to represent the other accompaniments, and I give up the endeavour. "Rough music," indeed! All the marrow-bones, cat-calls, and cleavers of a town—all the noises used at a "skimiting" or "charivari" for bad husbands in a Hampshire village, would

prove almost harmonious when brought into comparison with the tones of a Spanish cart.

The remainder of their time was among the sublime scenery of the Pyrenees, and we shall not trace them through the mountains, but conclude with a few of the most attractive passages of the note-book. Here is a lively sketch of the mode of

HORSE-CLIPPING IN THE PYRENEES.

All the horse's legs were tied together with strong cords, and besides this, four men were holding him, one pushing at one side, a second at the other, a third twitching his ear, and a fourth pulling at his tail. Four or five others, sometimes mounting on chairs, were clinging about him like bees, and clipping away with the greatest celerity and most alarming noise. I never saw a poor animal, and a very quiet one too, more cruelly treated and apparently on system. No less than three times he threw himself down on the stones during the few minutes that my curiosity induced me to look on. When he did this, all the operators formed a circle, looked on the struggling creature till, tired with exertion, he got up again; and the moment he was up, they closed in again with their shears, and proceeded as fast and as noisily as before, till the horse again struggled and fell, when exactly the same scene was repeated. One very handsome and gaily-dressed youth, a thorough gipsy in every respect, was as active as he was inhuman in his proceedings. When any very cruel measure was to be adopted, he immediately put it into execution; *e. g.* in order to get the head down for clipping about the ears, he jumped up, seized one ear, and hung from it with his whole weight, till the poor horse yielded from pain, dropped his head down, when a rope immediately fastened it to the fore-legs. What cruelty to accomplish a work done in our country without alarm or pain by one man alone, with a small comb and scissors!

At Pampeluna they were much amused by the following specimen of the

CURIOSITY OF THE COUNTRY-FOLK.

On my pointing out the scene, our two friends immediately resolved to draw it; and in the cool of the evening took their position under some trees near the public walk, and began, without the least notion of the stir, curiosity, and excitement which was soon to follow their proceedings. Having obtained for them chairs out of a neighbouring house, and seen their few first strokes, I strolled down the garden, and was away perhaps for half an hour before I again came in sight of them. To my great surprise I saw a large crowd gathered around them, and hastened on in apprehension that something unpleasant might have happened. However, as I drew near I saw that the by-standers were all quiet, and was quite gratified by the cool and undisturbed ease with which my countrywomen went on with their engagement, looking up to their subject and down to their paper with as much equanimity as if they had been in the most complete retirement. The fact was, that sketches being unknown here, not only had a few children gathered around them—common in such circumstances everywhere—but grown-up men, half of them soldiers, and women had assembled in such numbers, that at one time there were not less than eighty or ninety in the circle; all behaving with perfect civility and quiet, and with no other annoyance except that of their extreme curiosity to see what was going on. During the scene the Baron —, who is mayor of the town, either passed by accidentally or was told of the circumstance. However, he came forward, and evidently anxious that the ladies should not be annoyed, begged the people to disperse. A great many acted according to his direction; but their places were soon filled up again; and on this, the mayor seeing that it was impossible to do more, absolutely sent two policemen, who walked about and kept the people in such a semicircle as not to interfere with the view in front, the mayor himself walking about within reach to see that his orders were executed, and the convenience of the ladies, so far as was in his power, secured. The crowd remained, and the police also, until they had finished their intended sketch.

Quack doctors at home might take a lesson from the ingenuity of

SPANISH QUACKS.

A curious scene took place opposite our window this evening. A small covered van had been standing in the road during the afternoon, but was not made use of till night-fall. A few candles were then lit up on a small stage at one end, and a well-dressed man began beating a drum to collect an audience. This was easily accomplished, and a large crowd soon assembled in front. A sharp and humorous youth then came forward, and a kind of scenic representation took place, which reminded me of Horace's account of the early waggon theatricals. The youth recited to the man of the drum a love adventure in Paris, he of the drum occasionally putting in his remarks. Songs were interspersed, and the people around seemed much amused with many parts of the narrative. This went on for nearly an hour, when all at once we discovered that all this was a dentist's advertisement. The drummer announced himself as a dentist, descanted on his own professional merits, and offered to operate at once and *in publico* on any one present who needed his art. Two lads immediately took advantage of the offer, and mounted on the stage. The mouth of the first was opened, and something done—what I cannot say: "Encore une autre opération," said the performer, and the same was repeated with the second youth. Then Eau de Cologne was announced for sale at six sous a bottle, for which there were thirty or forty candidates. I suppose that the results of the performance were satisfactory, for a "feu de joie" was then given in the shape of a handsome fire-work. The candles were then extinguished, and the crowd dispersed.

At Clermont they visit a remarkable natural curiosity—

A PETRIFYING FOUNTAIN.

It is so efficacious in operation, that articles subjected to its dropping and spray become completely encrusted with stone in the course of forty days. A kind of saloon is filled with such objects as small baskets containing fruit, flowers, and leaves of every description, birds' nests, and various small animals. On a grass-plat outside stand a real horse and a cow, both thus encrusted with stone. The stream is conducted into a wooden building, and scatters the waters about on the articles subjected to the process. Medallions, too, succeed extremely well. A cast of any design, taken in fit material, is put under the spray. The deposit of the water forms an exact resemblance in stone. This is removed when sufficiently thick, and is perfectly smooth and delicate. The colour varies a little, but is generally a light buff or cream colour.

Two formations of rock have resulted from this spring, not far distant from each other. One is a complete bridge over a lower and a larger stream—the other half a bridge. They are both absolutely made by the water itself dripping over the edge of the stream, and casting out by degrees a mass of stone at right angles to the current. The half bridge exemplifies the process most clearly. I was told that its advance was about two inches in each year. These bridges are parts of a large ridge similarly formed.

We have been tempted beyond our intention by these agreeable volumes, which we can commend to the regards of the library and book-club.

FICTION.

Clarence de Manfrédo. Traduit de l'Anglais de Lord Normanby, par Emily Newton. Paris, 1845, Lacrampe. London, Dulau.

The authoress informs us in her preface that during a visit paid to her by a French lady, the latter, in turning over her books, found one which attracted her attention. She placed it in the hands of her English friend, and asked information as to its contents. Mrs. (or Miss) Newton promised a translation. But she was tempted to do more than transcribe. "The indulgence," she says, "with which she treated my first essay induced me to attempt the development of the ideas of the original. I did more; I appropriated them in such manner that the little work is neither a copy nor a translation, but almost a new edifice erected on the old foundations."

Unacquainted with the original, we cannot form a judgment of the design thus indicated, nor how far it has been successful; but of the tale, as it now presents itself to us for the first time in its French dress, we may observe, that it is interesting in its incidents, is written with remarkable ease and elegance, and, but for the name upon the title-page, would have passed as the production of an accomplished native of France. It is more beautifully printed and got up than Parisian publications are wont to be, and altogether it is a curiosity in its way.

POETRY AND THE DRAMA.

Edwin the Fair, and Isaac Comnenus. Historical Dramas. By Henry Taylor. Second Edition. London: Moxon.

The drama is the history of man expressed in the refined language of a poet. While it shews the manners of a particular time and the mental features of a particular people, it exhibits the manners of all times and the mental features of all people. This arises from the unity of mind, and thus the

drama, displaying man the individual, displays the universal MAN. EURIPIDES, SCHILLER, and SHAKESPEARE are three dramatists, but only *one* historian. Each coloured his characters with a national philosophy, but this colour, like *rouge* on the cheek, affected not the vitality beneath, for the feelings of man have been always alike, entirely distinct from geography. Love is ever shewn as made up of the same faith and the same faithlessness, the same exquisite sensibility, and the same fretful jealousy, though exhibited by the poet of Greece, Germany, or England. So the despot of one kingdom is a type of the tyrant of another kingdom; and so it is with the courtier, the hero, the beggar, and the fool. If this be true—and we believe it to be so—the drama is necessary to a highly moral and intellectual education, because in the solitude of the closet it shews a miniature world where the actions of men are as perfect and as true to humanity as they are in the actual universe without. One advantage in the drama is its speedy mode of teaching. It ushers us at once into the sanctuary of the human heart; it lays bare to our vision the whole machinery of action, by exposing to us the naked motive to that action, since its principal aim is to make visible the hidden springs of thought and feeling.

This second edition of *Edwin the Fair* and *Isaac Comnenus* has our cordial greeting, and we welcome it in this age of dramatic indistinctness of purpose and performance as we do a new edition of the sun every morning. The fame these dramas have gained is not greater than their merits deserve. It is a luxury to lavish praise on Mr. TAYLOR, for of late our mind has grown somewhat out of tune, as we have been called upon often, and much, to blame a host of illegitimate poets who have wilfully and incessantly struck the

> Creaking lyre,
> That sandstone of the teeth, monotony in wire.

Mr. TAYLOR has a quick perception of the distinctive marks that individualize the objects of nature. He has equal genius to preserve in his writings the individuality of inanimate as of animate things. This very variety is the grand arch on which poetry is built. It is the keystone of light and shadow. Objective character is not antagonistic to the general affinity of objects. A man, a stream, or a flower is only a portion of all other men, streams, and flowers, and in proportion as a poet preserves the distinctness of each, and the unity of all objects, so in proportion does he give us the genuine history of Nature. To illustrate our arguments, we take Mr. TAYLOR'S beautiful description of

THE WIND.

> The tale was this:
> The wind, when first he rose and went abroad
> Through the waste region, felt himself at fault,
> Wanting a voice; and suddenly to earth
> Descended with a wafture and a swoop,
> Where, wandering volatile from kind to kind,
> He wooed the several trees to give him one.
> First he besought the ash; the voice she lent
> Fitfully with a free and lashing change
> Flung here and there its sad uncertainties.
> The aspen next; a fluttered frivolous twitter
> Was her sole tribute. From the willow came,
> So long as dainty summer dressed her out,
> A whispering sweetness; but her winter note
> Was hissing, dry, and reedy. Lastly the pine
> Did he solicit, and from her he drew
> A voice so constant, soft, and lowly deep,
> That there he rested, welcoming in her
> A mild memorial of the ocean cave
> Where he was born.

It was the ear of the musician that detected such sounds in the trees when the wind was among them, but it was the hand of a true poet that could alone transfer such notes to paper. The "lashing change" of the ash, the "fluttered twitter" of the aspen, the "hissing dry and reedy" tones of the winter willow, and the "constant soft" voice of the pine, agreeably to the poet's fine description, have four modulations, but only one melody. This proves the same of sound as of forms, and shews Mr. TAYLOR'S intimate knowledge of the isolated and universal marks of creation.

Our readers will be more delighted by a few choice extracts from *Edwin the Fair* and *Isaac Comnenus* than by the longest review we could pen on the excellencies of Mr. TAYLOR.

THE POWER OF TIME.

> You find me here discoursing to the sea
> Of ebbs and flows; explaining to the rocks
> How from the excavating tide they win
> A voice poetic, solacing though sad,
> Which, when the passionate winds revisit them,
> Gives utterance to the injuries of time.
> Poets, I told them, are thus made.

PHILOSOPHY PECULIAR TO THE AGE.

> For philosophy itself
> Smacks of the age it lives in, nor is true
> Save by the apposition of the present.
> And truths of olden time, though truths they be,
> And living through all time eternal truths,
> Yet want the seasoning and applying hand
> Which Nature sends successive. Else the need
> Of wisdom should wear out and wisdom cease,
> Since needless wisdom were not to be wise.

GRACE OF ACTION.

> Ah! she is peerless! Happy were that man
> That should enthral her though she were a peasant!
> What in another might have seemed amiss
> In her was but a freshness and new charm
> Loosed from the graceful nakedness of Nature.
> She ate but half a pigeon, and did you mark
> How with her tiny fingers and her teeth
> She gnawed and tore the bones, talking 'twixt whiles,
> With such a lively and a pretty action,
> That appetite itself and all its ways
> Seemed mainly spiritual.

THE FALL OF EVE.

> The original snare;
> Perdition came of woman, and alway since,
> When Time was big with mischief and mischance,
> He felt his forelock in a soft white hand.

LOVE UNFORTUNATE.

> I loved you once; dearest Elgiva, yes,
> Even now my heart doth feed upon that love
> As in its flower and freshness, ere the grace
> And beauty of the fashion of it perished.
> It was too anxious to be fortunate,
> And it must now be buried, self-embalmed
> Within my breast, or living there recluse,
> Talk to itself and traffic with itself;
> And like a miser that puts nothing out,
> And asks for no return, must I tell o'er
> The treasures of the past.

CAUSE OF INSURRECTIONS UNKNOWN.

> No, not altogether.
> When things of evil aspect are to do,
> The first cause is not named; but commonly
> Some slight, remote, co-operative cause,
> Whereto the people knit them soul and body,
> Unknowing that which stirs them up to act,
> Which is the mover's cause and not the multitude's.
> The mover finds them reasons, they him hands.

AMBITION IN WOMAN.

> *Athulf.*—Beware, my sister, that ambition's weeds
> Choke not the garden where thy love should grow.
> In Man of questionable quality
> Ambition has been holden; but in Woman—
> Oh! 'tis the veriest beggary of the heart
> That winter ever witnessed!
> *Elgiva.* Athulf, no;
> A weaker to a stronger love may yield;
> But not in me will love or weak or strong
> Yield to ambition ever.
> *Athulf.* Oh, this head!
> So shapely and by nature so adorned!
> Far rather would I see the glossy braid
> Of its own golden tresses circle it
> Than England's jewelled crown.

CHANGE.

> *Alexius.*—But for that hair that's twisted in the grain,
> I had not known thee.
> *Comnenus.* Youth, Alexius,
> Knows nought of changes; age hath traced them oft,
> Expects, and can interpret them. Thou too
> Art somewhat alter'd, but the few years more
> Of time which I have travell'd through have taught
> The art to know what has been from what is,
> What's like to be from both. Change is youth's wonder:
> Such transmutations have I seen in men
> That fortune seemed a slow and stedfast power
> Compared with nature.
> *Alexius.* There is nought thou 'st seen
> More altered than art thou.
> I speak not of thy change of outward favour,
> But thou art changed in heart.
> *Comnenus.* Ay, hearts change too:
> Mine has grown sprightly, has it not, and hard?
> I ride it now with spurs; else, else, Alexius ....
> Well is it said the best of life is childhood;
> Life is a banquet where the best 's first served,
> And when the guest is cloyed comes oil and garlick.
> *Alexius.*—Hast thou forgotten how it was thy wont
> To muse the hours away along this shore—
> These very rippled sands?
> *Comnenus.* The sands are here,
> But not the foot-prints. Wouldst thou trace them now?
> A thousand tides and storms have dash'd them out;
> Winds brushed them, and waves worn them; and o'er all

The heavy foot of Time, who plods the shore
Replenishing his sand-glass, trodden down
Their vestiges and mine. Look, here 's a rock—
His seat or ere he push'd it from the cliff,
And which shall now be ours; a goodly seat.
He 's worn it smooth—smooth as a woman's cheek
Whilst yet untaught to dimple into lies.

RUIN OF MIND.

My good Macrinus,
There 's more mortality about this frame
Than known to those who tell its term of years.
The worm within may make the building weak
Ere Time has leant his weight upon the walls.

AGE.

'Tis true
The sharpness of our pangs is less in age,
As sounds are muffled by the falling snow;
But true no less, that what age faintly feels
It flings not off. I'll pray for your success.

To be a successful dramatist, a poet must walk beyond the door of his closet. He must wander abroad with a keen eye and a quick ear. His world is a world of life. Face to face he must confront all passions—fears, pride, jealousy, hate, love, pity. It is by beholding the evidences of each or all of those feelings, that an author is enabled to shew us the same, though modified by time, place, and circumstance, in the Roman or Saxon of the Past.

We believe Mr. TAYLOR has accomplished this to a superlative degree. The extracts we have given are taken from a number of others equally good, and we hope by presenting our readers with a few of such pearls they may be induced to purchase a string of them which they are sure to have in Mr. MOXON'S cheap reprint of *Edwin the Fair* and *Isaac Comnenus*.

The Druid's Talisman, and other Poems. By the Rev. J. MARSHALL, A.B. London: Painter.

DID we pledge ourselves to notice books according to their bulk, we should be compelled to give the *Druid's Talisman* a review of many columns. But for the public benefit, and for the advancement of sterling literature, such is not our plan. Did genius conceive but a single poem, that could be written and hidden in a nut-shell, it would receive at our hands a longer notice than a thousand penned by the mere versifier. Genius is not known by how much it performs, but by what it performs.

Had Mr. MARSHALL asked himself the question, What is poetry? and been able to answer it aright, we should not now have had the unpleasing task of condemning his work. We believe there is an uncharitable notion abroad, that critics love to find fault; that, being armed with a sword, they are ever ready to use it at an advantage, like a contemptible warrior, for the injury of others. This we deny; and, in answering for ourselves, we hope we answer for our contemporaries when we say, that a reviewer worthy the name finds all his pleasure in praising, and never in blaming, an author.

Mr. MARSHALL is a learned man, but poetry has a life distinct from learning. Learning is often a drag-chain on the chariot-wheel of poetry. It is so in *The Druid's Talisman*, and while we acknowledge Mr. MARSHALL'S research into history, and the information he has given in the notes to his poems, we are compelled to say that he is of no kin to the family of the poets. *The Druid's Talisman* is founded on the obscure history of PENDA, a Saxon king, who governed the least kingdom in the Heptarchy, and is designed to shew the beauties of religion. The design is undeniably good, but Mr. MARSHALL has failed to work out the great truths he intended. Religion, to be universally taught, must be taught in a simple and unmistakeable manner. But in *The Druid's Talisman* it is made so indistinct, by being mingled with poetry more indistinct, that the desired end is frustrated and poetry and religion suffer alike together. Mr. MARSHALL has a relish for chivalric poetry, as we judge from his ballads. So far as facts are concerned, he is acquainted with the savage habits and modes of fight which our forefathers adopted, but he lacks the genius that could describe them so truly to the life that imagination can start upon the wing, and the reader hear the rattle of weapons and the shouts of victory. But it matters little that Mr. MARSHALL has failed in *this* portion of his undertaking. SCOTT is still with us in spirit, and he can more than fill the gap which is made by the literary deaths of a thousand such writers as Mr. MARSHALL.

EDUCATION.

The Teacher's Companion; designed to exhibit the Principles of Sunday School Instruction and Discipline. By R. N. COLLINS. *With an Introductory Essay*, by the Rev. D. MOORE. London, 1844. Houlston and Stoneman.

THIS is by far the most complete and elaborate manual for Sunday-school education that has yet been published. A glance at the course of study recommended will shew that Sunday teaching embraces a far wider field of instruction than is commonly supposed. This treatise minutely describes the best methods of teaching—an *art* only to be acquired by study and practice; sets forth the class exercises, the engagements of the teacher, the discipline that should be observed, rewards and punishments, and the order to be maintained. All this invaluable information is imparted by Mr. COLLINS in a plain, intelligible style, and with an earnestness that indicates his own solemn convictions, the result of long practical experience as the superintendent of St. Bride's Schools. We can with entire confidence recommend this work as an invaluable companion to the Sunday-school teacher, and as interesting to all who concern themselves in the support, as patrons, of those excellent institutions.

PERIODICALS.

ONE new periodical only invites notice, and certainly the design is unique. It is entitled *The Historical Record*, and is intended to collect papers on history, science, inventions, travels, discoveries, &c. But though this variety of topics is to be admissible, history will be the principal field of its exertions, and it will endeavour to preserve in a collected form the researches of eminent writers upon isolated questions which could scarcely be made the themes of distinct publications. The first number exhibits a fair specimen of the scheme. It treats of the "Policy of European Nations towards the Jews;" "Guillemand's Adventures during the French Revolution;" "The Ancients and Moderns compared," and so forth. These are handled with considerable learning and ability. Whether a periodical of so grave a cast will find a sufficiently extensive sympathy to secure success, we have some doubt; but certainly it will deserve support if conducted in the same spirit as it has commenced withal.

The Dublin University Magazine has been well named "the Irish Blackwood." It is like in price, uniform in politics, and little, if at all, inferior in talent. Often, indeed, are the contents more various and readable, and such is the case in this May number. It excels in foreign literature, and continually presents its readers with masterly translations from the continental poets. Here we have the first of a series of specimens of Spanish romances and songs, and an article on TASSO. The poetical remains of the late Mrs. JAMES GRAY will be welcome to the admirers of genius. Some personal recollections of CAMPBELL the poet, and another of the "Tales of the Trains," are also extremely interesting. Two or three of the reminiscences of CAMPBELL will doubtless be acceptable to our readers.

THOMAS CAMPBELL—A PORTRAIT.

I had not been many minutes in the room, when there suddenly came up to the spot in which I and my friend stood, a small thin man, with a remarkably cunning and withered face, eyes cold and glassy, like those of a dead haddock, a brown wig neatly fitted on, a blue coat, not of the newest, with brass or gilt buttons, and a buff waistcoat. He had no gloves, and his hands were coarse and wrinkled. His eyebrows were thick and slightly grey, and though the lines of the face denoted an inner man of much sagacity and shrewdness, their outward expression was the most vacant and unmeaning in the world; and it was painful to look and *think* how heartbroken must be the spirit that animated so cold and cynical a countenance. The wan light of the features was to the purple fire of youth and heartiness what the dull and misty exhalations of the fens are to the enchanting lustre of the stars. There was something remarkably mean and vulgar in his face; the lips were thin, and the reverse of juicy or joyous; but the brow was good, though not high, or indicative of great mental power; and he came into the room with more of a smirk than became a person of his years, and with an evident

contempt for the company which he was about to join. He singled out my friend immediately, apparently glad to find a gentleman present, approached and accosted him; and when the first greetings were over, the former electrified me by introducing me as "a distinguished friend of Poland," to Mr. THOMAS CAMPBELL.

CAMPBELL ON SHERIDAN.

I asked him whether he had seen much of Sheridan. "Yes," said he, "and drank much with him. It was glorious. His intoxication was like the madness of the Sibyl, something wonderful and grand and splendid. He was the only man I ever saw who was truly great in his cups. Byron was the most wishy-washy, disgusting creature in the world when he had swallowed a couple of bottles of claret: but Sheridan—oh, he was superb! The *School for Scandal* is but a faint reflection of what he spoke. In fact, Sheridan spoke a comedy every night. His sarcasms were awful. I have seen the rich Whig lords tremble before this magnificent animal like an infant in the presence of a giant. Sheridan knew his power over them, and never, unless highly provoked, abused it. Poor Lord Holland shrank to a mere pigmy in his presence. I once dined with Sheridan, Madame de Staël, and Curran. The first of the three was indubitably the *first* in every thing. He did not perhaps speak as much poetry as Curran, but in every other quality of conversation and mind he out-topped him. Curran was a jester, like Foote and Quin—his gestures were highly arch and dramatic, and his humour owed not a little of its success to his queer monkey face, which was capable of the strangest transformations, and was never at rest. It shifted perpetually, like the scenes in a pantomime. He was as great a jester as Scarron, and indulged much in quaint, fantastic humour; like the clown in the show, he cared not *how* he made you laugh. But Sheridan was *always* a gentleman and finished courtier, and never forgot the elegant refinement which he had learned at the prince's parties. I once got a letter from Madame de Staël, telling me she was very ill, and confined to her bed, and begging me to call to her and talk to her. I went, wrapped up in one of my old plain coats, expecting a philosophic *tête-à-tête* with the author of *Corinne*. When I went up stairs, I was shewn into a drawing-room magnificently lighted up, and beheld the Staël resplendently dressed, lounging on a crimson sofa. Two or three people of fashion were present. I started back with horror and affright (like the man in the Æneid who had trodden on a serpent), conscious of my old coat and uncurled wig; but the baroness beckoned to me, seated me by herself, and made me the lion of the party. I was never so confused in my life. In about an hour, who should walk into the room, fully attired in a magnificent court suit, breeches, buckles, sword, and cocked hat, &c. &c. but Sheridan, who afterwards told me that he had got a note precisely similar to mine. I was thunderstruck, and the Staël was nearly as surprised at the apparition as I was sixty minutes before to find *myself* in the middle of the party. We left Madame de Staël's together, and supped at a tavern in Covent-garden, where we remained until four o'clock in the morning. It was in the middle of June, and Sheridan walked home to his residence, with his long sword clattering on the pavement, and his cocked hat rather awry on his head, followed by a large mob of admirers, and pelted with cabbage stumps, and the offal of the streets.

CAMPBELL ON PETRARCH.

"You are right," he replied, "quite right; Petrarch was a detestable donkey, and though I have edited his memoirs, I say it. The fellow must have been mad, or a fool, or a liar. The latter is the most probable. There really *was* no such person as Laura. She is throughout a type of the *laurel* for which he panted, and all the romance about his hopeless passion is rank falsehood from the beginning to the end. It is more charitable to him to suppose him a liar than the puling ass we must believe him to be, if we credit the story of his love for this fat woman with a large family for such a number of years. I don't mean to cast any reflection on Petrarch for this device. Our own Cowley, who was a perfectly virtuous man, adopted a similar deceit, and pretended to all the world that he was dying for love. Nor did he confine his particulars on the subject to lie-creating poetry, but he put them forth in plain matter of fact prose.

Douglas Jerrold's Shilling Magazine proceeds in the spirit of its prospectus to advocate the cause of the poor, but in no puling strain. Its language is manly; its tone wholesome; its philanthropy practical, beginning *at home*. Such are the essay entitled "How will it look?" the graphic paper called "Impressions of a late Trial for Murder;" and the right-principled, sound-thoughted article on the "Temptations of the Poor." Gladly, would our space permit, should we have taken largely from this latter paper; but as the magazine itself is so cheap, the reader had better seek it there, amid so much beside that will interest and improve him.

Wade's London Review appears to flourish; evidently some vigorous pens are enlisted in its service. The articles on "Mercantile Respectability," on "Increase of Crime and Pauperism," and on the "State of Literature and Academical Learning in England," are of present interest, and are treated with vigorous good sense. There are other papers of scarcely inferior merit, and the spirit of the review is altogether liberal and *English*.

Simmonds's Colonial Magazine contains the usual variety of information relating to the colonies, and the new part of the *Modern Orator* continues the speeches of SHERIDAN.

POLITICS.

Past and Present Policy of England towards Ireland. London, 1845. Moxon.

THE purpose of this volume is to "present an intelligible narrative of the policy which England has pursued towards Ireland throughout the whole period of their connection, with its changes, its inconsistencies, and its effects."

The author professes to have exercised the most perfect impartiality in the performance of this task, and he appears to have kept his promise more faithfully than is often found in political treatises.

Our steadfast resolution personally to take no part in religious or political controversy, while we endeavour honestly to present the views of all books on all sides, forbids commentary upon the opinions expressed in this volume. As a literary work it is worthy of very high commendation. It is written in a peculiarly pleasant, lively, readable style. The author evidently enjoys an intimate acquaintance with official movements and cabinet secrets. He has been behind the scenes and knows the petty strings by which the affairs of nations are so often directed. He has studied the history of his country, and reflected profoundly upon the past as well as upon the present, and they have helped him to the keen insight of a philosopher into the future. The volume will amuse as a narrative even those who may dissent from its principles and arguments, and there is scarcely any person of any party who would not rise from the perusal of its pages with enlarged knowledge, and ample food for anxious thought. We propose to trace in outline the order of his argument, and extract such passages as may appear best fitted to exhibit his manner and to interest the reader; to which end we shall prefer those that are the least imbued with party politics, and therefore calculated to be acceptable to all.

The author opens with a succinct view of the history of Ireland, from its invasion by England in the reign of HENRY the Second to the close of the seventeenth century. It was the policy of conquerors seeking the extermination of the rightful owners of the soil for the purpose of territorial aggrandisement; in short, the policy of brigandage. It failed, because it was not pursued with sufficient vigour, and the eighteenth century witnessed the adoption of another system thus described by BURKE:—

"Their declared object (says Mr. Burke, speaking of the penal laws) was to reduce the Catholics of Ireland to a miserable populace, without property, without estimation, without education. The professed object was to deprive the few men who, in spite of those laws, might hold or obtain any property amongst them, of all sort of influence or authority over the rest. They divided the nation into two distinct bodies, without common interest, sympathy, or connection. One of these bodies was to possess all the franchises, all the property, all the education; the other was to be composed of drawers of water and cutters of turf for them."

The system, then, that was avowed and acted upon was this: that Ireland should neither reap the benefits of union, nor the benefits of independence, but should be maintained in a condition of political subordination and inferiority to England; and that the government of this subordinate province should be administered by a Protestant minority, invested with full power to load with incapacities, and keep in a permanent state of degradation, the great majority of the people, without any reference to their behaviour as citizens or as subjects, and for no other cause of disqualification than their profession of the Catholic faith.

The penal laws began in the reign of WILLIAM the Third, against the personal inclination of the king; his influence held the spirit of bigotry in some sort of check, but it burst forth with intolerable fierceness in the reign of his successor, and

that terrible code was enacted which, from its persecuting severity, has no parallel in the history of civilized nations. Throughout the reign of ANNE it was executed with unrelaxing severity. This policy was not Whig or Tory, but national; and the result is thus described by Lord CLARE:—

On one of the debates on the Union, a rival orator objected to the plan of union, that "they were very well as they were:"—"We are very well as we are!" exclaimed Lord Clare. "Look to your statute book; session after session you have been compelled to enact laws of unexampled rigour and novelty, to repress the horrible excesses of the mass of your people; and the fury of murder and pillage and desolation have so outrun all legislative exertion, that you have been drawn to the necessity of putting your country under the ban of military government. . . . . Look to your civil and religious dissensions: look to the fury of political faction, and the torrents of human blood that stain the face of your country! and of what materials must that man be composed who will not listen with patience and good-will to any proposition that can be made for composing the distractions, and healing the wounds, and alleviating the miseries of this devoted nation."

Mr. PITT, whose statesmanship becomes more apparent as time vindicates the propriety of the liberal policy he pursued to the very verge of public endurance, recognized the wrongs of Ireland, and saw clearly the true mode of restoring tranquillity. He proposed to emancipate the Catholics, when an act of justice would have been accepted as an act of kindness.

MR. PITT'S PLAN.

It was part of Mr. Pitt's plan to pay the Catholic clergy, and if this had been done, a connection would have been established between them and the state; the most urgent of practical grievances, affecting both clergy and laity, would have been removed, and a habit of contentment might, by possibility, have been created, affording the best chance of allaying the enmity with which the Protestant establishment was regarded. It is reasonable to speculate upon what might have been the issue of such moderate and healing counsels. History is said to be philosophy teaching by examples, and history furnishes no example of any country, in any age, which has been governed with tolerable justice, and ordinary prudence, and has at the same time exhibited a state of chronic disease, moral and political, like that of Ireland. We have always had the justest perceptions of the bigotry and impolicy of other nations and governments, and an abundance of pity and contempt for the various manifestations of Spanish or French misrule; but we have shut our eyes and our ears, and closed our understandings, against all the frightful consequences of our own. For years, we attributed the miserable state of Ireland to every cause but the true one; and the great majority of Englishmen preferred to believe that the disorders of that country were assignable to some natural propensity in the people to turbulence and crime, rather than to the system of Protestant ascendancy and Catholic exclusion, by which they were alienated from British connection, and all the sources of improvement were obstructed. What might have been the result of a different system, we are left to conjecture, but we have before us, in appalling reality, all the actual consequences of that which was maintained.

PITT quitted office because he could not carry out his liberal designs. When he returned to place, it was under other circumstances; the king was decidedly opposed to his views, and he yielded his private judgment to the royal will.

The history of the Catholic question is narrated at considerable length, and some information is given relating to the cabinet and the king, which will be new to our readers.

On the formation of the regency, the Catholics entertained high hopes that the great obstacle to their liberation, the prejudices of the sovereign, would be removed, and that in the regent they would have a fast friend; but bitterly were they disappointed.

THE PRINCE REGENT.

The fact is, that the prince never had any political convictions, nor was in reality impressed with the truth and justice of the liberal sentiments he had been in the habit of professing. He had allied himself with the Whigs, because they were in opposition to his father; but when he got into his father's place, a very short experience of Tory government was sufficient to extinguish the slight attachment he had ever felt for the Whig party, or for Whig principles, and to give him a decided inclination for the persons and the policy of the existing cabinet. Finding the ministers exceedingly respectful and compliant, he soon got over the resentment which the restrictions had at first excited in his mind. For the chief Whig leaders he had no predilection—he was awed by the austerity of Lord Grenville, by the dignity and independence of Lord Grey, and he disliked them both. The Whig doctrines, which were suitable enough to an heir-apparent, in opposition, had little attraction for a sovereign in possession; and although, like his grandfather and his great grandfather, he had put himself in constant opposition to his father, he was, nevertheless, in a great degree impressed with the same feelings of awe and veneration for the king, which were common to all his family.

In the debates and discussions that followed, Sir R. PEEL appeared among the most energetic opponents of the claims of the Catholics.

When all hope of a successful appeal to the justice of the legislature had passed away, and not till then, the people of Ireland resolved to rely upon themselves; and they commenced that system of agitation and confederacy which has been continued with almost unvarying success to this day. It was in 1823 that Mr. O'CONNELL and Mr. SHEIL met by accident at the country house of a common friend, and laid the foundation of

THE CATHOLIC ASSOCIATION.

The first summons which they issued was treated with scorn or neglect, but the discussions to which it gave rise speedily atttacted public attention and excited public feeling. The association was formed; and though consisting at first of only a few individuals, it rapidly increased, and soon comprehended all classes of Catholics in the list of its members. The nobility, the gentry, and the clergy forgot their former feuds and dissensions, and zealously united in promoting the common cause—the people were appealed to with entire success—the rent was established, and the organization of this mighty power was rapidly completed in all its perfection and extent.

Nothing had ever been seen before like this popular, general, and enthusiastic, but peaceful insurrection—it was the object of the leaders to make a great display of their power, and to exercise it beneficially for the country; at the bidding of the association a tranquillity and abstinence from outrage were produced, such as all the authority of government and all the penal and coercive acts of Parliament had never been able to effect. But while they inculcated peace and good behaviour to the people, the debates in the association itself were to the last degree intemperate and audacious. In England the proceedings of this self-constituted, but formidable body, were regarded with a mixture of astonishment, anger, and fear; the Government, however, resolved to take the matter up with a high hand, and fancied they could quench the new-born spirit by suppressing the association—as soon as Parliament met, a bill was brought in for that purpose, against which the association petitioned to be heard by counsel. This was refused; and after four nights of debate in the House of Commons, the bill was carried by large majorities through both houses.

The association dissolved, and immediately re-formed on a more comprehensive plan, and under another name, completely baffling their opponents, and by their vigour and spirit drawing upon them the eyes of the whole world, who watched the struggle with an interest proportioned to its importance.

The influence of the association was brought to bear upon the elections with a success that surprised themselves and terrified their opponents.

The Parliament met, and the battle was renewed with increased vigour. CANNING was placed at the head of the government, making the Catholic question an open one in his cabinet. Death terminated his short career, and in July 1828 the Duke of WELLINGTON and Mr. PEEL returned to power.

Both had been vehement opponents of the Catholic claims, and their accession appeared to be a death-blow to the hopes which the ministry of CANNING had raised. The Clare election followed; Mr. VESEY FITZGERALD was ousted from his seat by Mr. O'CONNELL, and this event decided the wavering resolutions of the ministry.

This is the author's interesting

SECRET HISTORY OF CATHOLIC EMANCIPATION.

It is certainly impossible to overrate the difficulty of the position in which the Duke of Wellington and Mr. Peel found themselves placed, and it is only just to give them credit for their conduct at this eventful crisis. They were now convinced that only two alternatives remained; either to put down the Catholics by force, or to emancipate them; and they resolved that it was better to do the latter than incur the danger of a civil war. But the king, the Tory party, and a majority of the people of England, were still confirmed in their pertinacious resistance to the Catholics, when the ministers, under the sense of an imperative necessity, were about to advise the adoption of the very measures they had so long inveighed against and opposed. Nor

was any adequate cause apparent to vulgar apprehensions for so great a change; for there seemed no such striking difference between the Waterford and the Clare elections, as to justify the refusal of emancipation after the one and to render the concession of it indispensable after the other. There is not a doubt that, if they had followed their own inclinations and consulted their own merely personal interests, they would have resigned, and left the Whigs to carry out the measure they had so long laboured to promote; but they soon found that the work could only be done by themselves, and that they must either expose the country to enormous danger, or undertake a task full of difficulty and humiliation, which could not fail to expose them to the bitterest obloquy and reproach, to the disruption of old friendships and connections, and every sort of unpopularity. They at once flung aside all personal and selfish considerations. They did not hesitate to sacrifice their own characters for consistency; and what was a still greater sacrifice, they did not scruple to adopt the means and expedients (repulsive as they must have been) by which alone success could be insured. The first thing to be done was to impart their designs to the king, and having obtained his consent, to conceal them from the rest of the world. The king was in the highest degree disgusted at the intimation; but he declared that he would only give his consent upon the condition of their *all* remaining in office, and *themselves* carrying the measure through Parliament; and to this, therefore, they made up their minds to submit. He also required that the matter should be revealed to no human being out of the cabinet, well knowing the personal annoyance to which he should be exposed if it once got wind. The ministers also were aware that it was essential to prevent a no-popery agitation being got up in England, and they were, therefore, fully agreed with his Majesty on this point. But the inevitable mischief of this secrecy was, that they were compelled to conceal from their best friends and most faithful adherents the intended change in their policy, and to allow those friends to commit themselves by language and conduct which afterwards exposed them to much mortification and embarrassment. It was not long, however, before the ministers began to get in trouble with the king. In August, at a public dinner at Derry, Mr. George Dawson (Mr. Peel's brother-in-law) announced his conversion to the Catholic cause. This declaration made a prodigious sensation; and though he declared that the government were as ignorant of his intentions as he was of theirs, all the world inferred from his speech that the reports, already rife, of the Duke of Wellington's favourable intentions to the Catholics, were well founded. The king was outrageous, and refused to believe that the secret had not been divulged; the ministers were extremely annoyed with Mr. Dawson, who was all the time quite unconscious of the embarrassment he had caused; and the necessity of counteracting the effect of this premature declaration compelled them to maintain a greater reserve than ever in all their communications both public and private. In the course of the autumn, Mr. Peel was entertained at several dinners and breakfasts in various great manufacturing towns in Lancashire, but on all these occasions he carefully abstained from uttering a word from which it was possible to draw any inference as to the views or intentions of the government.

But the measure was not yet safe. The King wavered. This was the

VACILLATION OF GEORGE THE FOURTH.

A call of the House had been ordered on the 5th of March, on which day Mr. Peel was to bring the Emancipation Bill before the House of Commons; but in the meantime the Duke of Cumberland, backed by Lord Eldon and the old anti-catholic party, had contrived to work the king's mind into a state of frenzy. He passed his days in railing against the bill and its authors; and he went so far as to desire a person high in his intimacy and confidence to tell all his household, that he wished them to vote against it, a command which the individual to whom it was given was, fortunately, too prudent to obey. If his Majesty's ill humour had been confined within the walls of his palace, and had there evaporated, it would not have much signified, but as the time drew near when the irrevocable step was to be taken of proposing the Relief Bill to Parliament, he exhibited very alarming symptoms of a disposition to waver and draw back.

On the 3rd of March it was generally known that the bill was in the greatest jeopardy; and nothing could exceed the consternation which prevailed among the friends of government and emancipation. On Sunday the king sent for the chancellor, pretended that he had not been aware of all the provisions of the bill, said that the securities did not satisfy him, and he would not consent to it. The chancellor could do nothing with him, so, instead of returning to town, he proceeded to Strathfieldsaye, where the Duke of Wellington was gone to receive the judges—there he arrived at three in the morning, and communicated to the duke what had passed. On Monday the duke went himself to Windsor, and told the king plainly that it was too late now to recede, and if his Majesty made any more difficulties he would instantly resign. The king began whimpering, said he thought the duke would never desert him in any circumstances; but finding him totally deaf to his appeals *ad misericordiam*, told him he would take a day to consider of his final determination, and communicate it to him. The government considered themselves out, and thought every thing was at an end: meanwhile, the king sent to Lord Sidmouth, and proposed to him to come and help him to overthrow the bill, and set the Duke of Wellington and O'Connell at defiance. But Eldon's "young master" did not inspire the confidence which his old master might have done—Lord Sidmouth would not trust him;—he refused, saying to his confidants that he would have done it for the father, but could put no reliance in the son. The king had nothing now left but to surrender at discretion, and he accordingly did so.

The remaining chapters are devoted to a consideration of the lessons to be learned from the history reviewed, and the author proceeds to shew what, in his judgment, should be the future policy of England towards Ireland, founded upon this experience of the past. Into that portion of his volume we will not follow him. At this moment of excitement it would be difficult to obtain credit for neutrality, however scrupulously observed; we therefore close by recommending the work to all who take an interest in the topics that are now agitating the Parliament and the country.

RELIGION.

Sermons chiefly practical, preached in the Chapel Royal at Whitehall during the years 1843, 1844, *and* 1845. By the Rev. JAMES HILDYARD, M.A. &c. London, 1845. Parker.

THE design of these sermons was "to set forth the paramount importance of religion, not only as an individual, but as a national concern, more especially in an age like the present, of great national enterprise and unprecedented accumulation of wealth." They are twenty-five in number, and treat of such topics as "Worldliness incompatible with Religion," "Christian Love," "The Law of Christ and the Law of Liberty," "Moral Courage the result of Faith," "Gratitude to God for national Greatness," "The Mission to China," "Believing without seeing," and so forth. The characteristic of the preacher's style is richness of thought and of expression. His command of language is extraordinary, and in vigorous bursts of eloquence he often reminds us of the great divines of a former age. He does not much indulge in poetical imagery, and he shuns sedulously the vice, so conspicuous in many pulpit orators of our day, of over-indulgence in exclamation and interjections, often employed to supply vacuity of thought or poverty of tongue. His tone is always temperate and tolerant; he delights to inculcate the philanthropy of Christianity. His hand is open to all good men of all sects; charity is his motto; the religion of love speaks to us in every page. Seldom have we read more *wholesome* compositions, and so little tinged are they with sectarianism, that there are few who call themselves Christians, whatever their forms of worship, who might not peruse this volume with pleasure and profit.

MISCELLANEOUS.

A Dictionary of Dates, and Universal Reference, relating to all ages and nations. By JOSEPH HAYDON. 2nd edition. London: Moxon, 1844.

No little skill was requisite to cast a work of this nature into alphabetical form. If the date of an event be required, are we to look to the name by which it was best known, or to that of the country in which it occurred? The editor has adopted both plans; under the names of countries setting forth their respective chronologies, and also placing events of extraordinary magnitude under distinct headings, thus avoiding some, though not all, of the difficulties that meet any attempt to frame a dictionary of dates. For instance, in the article "England" are given the dates of the principal incidents of its history; but if more particular information be required upon minor points, it will be found in some of the subdivisions, under such headings as "Battles," "Navy," "Commerce,"

&c. Nevertheless, though the dictionary contains upwards of 15,000 articles, the editor might do much to its improvement by further facilitating reference. We extract a few passages, which will shew the manner of the work, and convey some useful information to our readers.

Railroads.—There were short roads called tramways in and about Newcastle so early as the middle of the 17th century; but they were made of wood, and were used for transporting coals a moderate distance from the pits to the place of shipping. They are thus mentioned in 1676:—

"The manner of the carriage is by laying rails of timber from the colliery to the river, exactly straight and parallel; and bulky carts are made with four rollers fitting those rails, whereby the carriage is so easy that one horse will draw down four or five chaldron of coals, and is an immense benefit to the coal merchants."—*Life of Lord-Keeper North.*

They were made of iron, at Whitehaven, in 1738. The first considerable iron railroad was laid down at Colebrook Dale, in 1786. The first iron railroad sanctioned by Parliament (with the exception of a few undertaken by canal companies as small branches to mines) was the Surrey Iron Railway (by horses), from the Thames at Wandsworth to Croydon, for which the act was obtained in 1801. The first great and extensive enterprise of this kind is the Liverpool and Manchester Railway (by engines), commenced in October, 1826, and opened September 15, 1830.

NAVY OF ENGLAND.—The first fleet of galleys, like those of the Danes, was built by Alfred, A.D. 897. The number of galleys had increased under Edgar to 350, about A.D. 965. A formidable fleet was equipped by the public contribution of every town in England, in the reign of Ethelred II. 1007, *et seq.* when it rendezvoused at Sandwich, to be ready to oppose the Danes. From this period fleets were occasionally furnished by the maritime towns and the cinque ports, and were usually commanded by the King, or an Admiral under him. Such was the fleet of Edward III. at the siege of Calais, in 1347; it consisted of 40 ships, badly equipped, under no public fixed regulations. The date of the commencement of the Royal or British navy may therefore be placed 4 Henry VIII. (1512), when the first navy office was appointed, with commissioners to manage naval affairs, and a number of stout ships of war began to be permanently kept on foot by the Crown.—*Gibson's Camden.*

In the time of Henry VIII. the navy consisted of one ship of 1,200 tons burden, two of 800 tons, and six or seven smaller. The largest was called the *Great Harry.* Elizabeth's fleet, at the time of the Spanish Armada, in 1588, consisted of only 28 vessels, none larger than frigates. James I. added 10 ships, of 1,400 tons each, and 64 guns, the largest then ever built.—*Gibson's Continuation of Camden.*

ACCOUNT OF THE PROGRESSIVE INCREASE OF THE ROYAL NAVY OF ENGLAND, FROM HENRY VIII.'S REIGN TO THE CLOSE OF THE LAST WAR, 1814.

Year.	Ships.	Tons.	Men voted.	Navy Estimates.
1521	16	7,260	—	no account.
1578	24	10,506	6,700	no account.
1603	42	17,055	8,346	no account.
1658	157	57,000	21,910	no account.
1688	173	101,892	42,000	no account.
1702	272	159,020	40,000	£1,056,915
1760	412	321,134	70,000	3,227,143
1793	498	433,226	45,000	5,525,331
1800	767	668,744	135,000	12,422,837
1808	869	892,800	143,800	17,496,047
1814	901	966,000	146,000	18,786,509

In 1814, Great Britain had 901 ships, of which 177 were of the line; and in 1830 she had 621 ships, some of 140 guns each, and down to surveying vessels of two guns only. Of these, 148 sail were employed on foreign and home service. On Jan. 1, 1841, the total number of ships of all sizes in commission was 183.

It thus appears that in the two last wars, extending over a period of 21 years, our navy had taken or destroyed 1,110 ships of the navies of our enemies.

On the Origin and Ramifications of the English Language. Preceded by an Inquiry into the primitive Sects, early Migrations, and final Settlements of the principal European Nations. By HENRY WELSFORD, Esq. London, 1845. Longman and Co.

MR. WELSFORD asserts that all modern philologists have been misled by two theories founded in error: 1st, that the barbarians who overthrew the Roman empire came from Scandinavia, and that Scandinavia was situate in the north of Europe, and limited to the modern kingdoms of Sweden, Norway, and Denmark; 2nd, that the people called the Celtæ and Cynetæ were a distinct race, speaking a distinct language from those called Scythians or Thracians, who are still regarded as the sole progenitors of the Gothic or Teutonic race.

The object of the very learned work before us is to expose these errors, and then to shew, from a view of the real circumstances, the true history of the origin of the European languages, and especially of the British tongue.

An analysis of such an essay, however important and interesting, would be impracticable within the limits a weekly journal could assign to any single volume; and, indeed, from the nature of the subject, consisting as it does so much of reference to authorities and close reasoning, no mere abstract of it would be intelligible. The reader who desires to master the learning so diligently collected by Mr. WELSFORD should seek it in the work itself, which will be an invaluable addition to the historical and philological library. It will be enough for us briefly to indicate an outline of the author's large views upon the important topic to which he has devoted so much zeal, research, and reflection.

Having treated of the genealogical origin of the names of the tribes and nations in the ancient world, and the causes that gave rise to them, which he considers as proceeding from climate, locality, abode, food, religion, and habits, he proceeds to illustrate the operation of the principle of population, the primary and still active cause of the dispersion of mankind. In this he adopts the views of MALTHUS, contending that the fundamental law of the principle of population establishes a moral necessity that the world shall be fully peopled in a long succession of ages.

The fourth chapter is devoted to the Celtæ and the Celtic language, who, he says, are identical with the Scythæ; the Gauls and Germans are essentially the same people, both being Celtæ. The Sarmatians and the Slavonic language are next treated of; then the Massa-Getæ, Getæ, Mysians, Mæso-Goths, or Goths; then the earliest inhabitants of Greece, the Pelasgi, the earliest inhabitants of Italy and Sicily; then those of Great Britain and Ireland.

The tenth chapter discourses of etymology in general, whence he passes to a consideration of the sources of the English language, its genius, its close analogy with the Persic, the structure of its sentences—and he shews that this is very similar to the Mæso-Gothic, of which he considers our language to be the eldest daughter.

Mr. WELSFORD concludes with a review of the genius of the languages of Asia as compared with those of Europe. This is illustrated by a comparison of passages from an oriental historian, from SMOLLETT and from Lord BOLINGBROKE. He expresses an opinion that ultimately all the inferior races will be annihilated by or absorbed in the Caucasian, and that the English language will become that of one-third of the human race, opening an unbounded career for the genius of England, whose influence, through the medium of the press, will surpass

any thing that imagination, in its wildest dreams, has yet ventured to suggest.

We have reserved extract for the conclusion of our short notice of this singularly learned essay, and we select a few passages from the concluding chapter, as best adapted for the general reader, such being the invariable practice of THE CRITIC, which aims to adapt all its contents for universal, not for class, information.

ORIENTAL MAGNIFICENCE.

The English reader can form no conception of the extent to which the most gaudy ornaments of poetry are introduced into historical works by Oriental writers, and I shall therefore adduce two or three more short illustrations. The two first are from the History of the Life of Nadir Shah, a work written in Persic, and translated into French by Sir William Jones, for the use of the King of Denmark. The following passage describes the commencement of the year of the Hegira, 1139, and of the Christian era 1726:—"On the 26th of the month Regeb the Sultan of the Celestial Luminaries (the Sun) transported himself into the city of the Ram (the sign Aries). The half-blown buds of the roses, resembling beautiful youths, and clothed in the mantle of spring, sported in the recesses of the gardens, and on the banks of the streams. The tulip, the bride of the smiling season, and the odoriferous shrubs, opened and vied with each other in the abode of the groves. The skilful hands of nature painted with the most splendid colours the cheeks of the wild roses and the jessamine. The nightingale, enamoured of the rose, sharped the sword of his tongue to vanquish his rivals. The dove, amorous of the cypress, sighed tenderly on the branches of that beloved tree, whose leaves appeared to assume the sharpness of daggers, to serve as so many guards to her pleasures." (Jones, vol. xi. p. 97.) Here we have a poetical account of the opening of the following year:—"The Sun, that monarch crowned with gold, after having displayed his magnificence in the house of Pisces, passed into that of Aries on the 7th of the month Chaaban. The spring, followed by the floating clouds, and armed with the lances and javelins of the rays of the Star of Day, marched against the troops of Winter, and wrote on the plains the decree of the expulsion of Dei (January). The verdant plain again put forth her branches in the garden of roses, and the feast of the new year was celebrated with pomp and splendour." (Jones, vol. xi. p. 111.)

PROSPECTS OF THE ENGLISH LANGUAGE.

The English language appears to be rapidly extending itself over every part of the vast continent of North America, as civilization pursues its march from the Atlantic towards the Pacific Ocean; in another century hardly a vestige will remain of the aboriginal Indian race, to whom an encroachment on their hunting-grounds is as much a virtual sentence of annihilation as if they were doomed to be shot through the head with rifles; and in two centuries from the present time, supposing the population of America continues to increase at its present rate, the English language will probably be spoken by one-third of the human race. We can picture to ourselves the western coast of that vast continent, with its cities rivalling the New Yorks, Bostons, Philadelphias, and New Orleans' of the eastern, and a new and unbounded career opened to the master minds of whom England is now so justly proud. The *Wealth of Nations* of Smith—a man born less for his particular country than for the world at large—may teach them that commerce does not, like war, enrich by fraud or force, but by equal and legitimate exchange, and that in the utmost advance of other countries in population, industry, art, and refinement, we ought only to regard them as so many new customers, who will not merely demand the production of our manufactures and foreign commerce, but, what is of equal importance, have a valuable equivalent to give in exchange for what they desire; as fellow-labourers, who will add to, instead of jealous rivals, who seek to deprive us of our wealth; the *Essay on the Principle of Population*, by Malthus, incomparably the ablest of Smith's successors, may demonstrate to them the necessary and eternal connection between individual morality and national happiness, and how little even the best government can do for any people compared with what the people must do for itself; the beautiful discourses of the amiable and elegant-minded Reynolds may inspire them with a taste for those fine arts which soften manners and embellish life, to which he was devoted with so ardent an enthusiasm, and in which he became so distinguished a proficient; the speeches of Fox, which contain so much that is vigorous in intellect, sound in feeling, and practical in wisdom, may teach generations yet unborn, and states yet unformed, to steer their course in troubled times, should such arise, by the steady beacon lights of liberty, justice, and humanity; and, finally—"the greatest is behind"—what shall be the fate of our darling Shakspeare, the poet of mankind, the instructor of nations and of ages? I cannot answer better than by quoting a passage which indignantly and eloquently repels some of the charges of Voltaire: "The Apalachian mountains, and the banks of the Ohio, and the plains of Sciota, shall resound with the accents of this *barbarian*: in his native tongue he shall roll the genuine passions of nature; nor shall the griefs of *Lear* be alleviated, or the charms and wit of *Rosalind* be abated, by time." (*An Essay on the Dramatic Character of Sir John Falstaff*, by Maurice Morgan. London, 1820, p. 69.)

ART.

GUIDE TO THE GALLERIES.

IN pursuance of a plan commenced last year, and much approved by the public, THE CRITIC proposes to comprise in two numbers a complete guide to the three galleries now open; so that for *eightpence* the reader will obtain the information of three catalogues.

The design is as follows:—

All who have visited a picture-gallery must have felt how valuable would be a companion who, with some taste for and knowledge of art, would walk round and point out the pictures most worth looking at, without the waste of time and attention upon such as have no merit. An intelligent friend would not merely criticize, but describe, directing the eye to beauties that might otherwise have escaped unnoticed amid the crowd; and more real knowledge would be thus gained in one hour than might be gathered in three by the unaided visitor.

It is the purpose of THE CRITIC in these notices in a great measure to accomplish for the visitor the objects of such a guide: with this in his hand, he may traverse the galleries and see all that is worth seeing, with vastly less expenditure of time, and infinitely more pleasure, than if he has to choose unaided amid acres of canvas.

This week we take

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

The Exhibition of this year is, as a whole, inferior to those of many previous years. There are few pictures of first-class merit, although perhaps there are fewer mere daubs. Nor does it introduce to us any rising genius. Old names and familiar styles meet us everywhere. COPLEY FIELDING, and BENTLEY, and GASTINEAU, and FREDERICK TAYLER, and COX, and WRIGHT, and HUNT, occupy between them well nigh half of the walls, and none of them surpass their former doings, even if they can be said to equal them. Altogether it is a disappointing exhibition to those who desire to see progress in art; and although there are a great number of pictures that will please the visitor, when viewed with a consideration of their individual merits, the remembrance of the entire show, as compared with the recollection of preceding exhibitions, does not inspire that confidence in British genius as promising a future of greatness to which the present is but a step. Rather does it give rise to the apprehension that already the limits of excellence have been gained, for none here have made even an endeavour to pass beyond the old boundaries.

It will be impossible to pass a separate criticism on each of the pictures that deserve attention, because for the most part they proceed from few hands, and present no variety of style or subject. BENTLEY has a host of sea-pieces, and TAYLER crowds of horses, and HUNT lots of boys and girls and candles, and FIELDING a multitude of downs, with sheep in the foreground, and a storm in the distance, and PROUT a sketch-book of quaint houses and market-places, and so forth. We propose to comment on such as possess some novelty only, and to name as noteworthy those which resemble the other works of the same master. And here also we will review them in the order of the catalogue, beginning at the entrance with the left wall.

No. 2 is *Tremadoc, North Wales*, a BENTLEY, not quite after BENTLEY. There is water, indeed, but it is a secondary object, and really he appears to master land with as much ease as sea.

A bit of genuine nature is P. DE WINT'S *Stacking Hay* (3); the composition and colouring are good alike, and there is a fine specimen of delicacy of hue in its neighbour, No. 4, a *View near Ryde—Autumn*, by TURNER.

HARDING has brought home a romantic scene from *Beilstein, on the Moselle* (9), which he has preserved with truth; and next to it is a HUNT, in a new character, *Romish Devotion* (10), a kneeling peasant with the prayer upon his face.

No. 13 is shewy, but substantially good. It is the *Eagle's Nest, Glengariff*, a wild mountain glen, only spoiled by the deformity of the stag, whose figure is wofully distorted. NESFIELD is the artist, and he has here proved himself a man of imagination as well as an artist. Just beyond it is a view by CALLOW, of *Gochem on the Moselle* (16), a happy subject, ably handled.

Exquisitely natural is No. 18, an *Interior of a Cowhouse*, by F. TAYLER. He is certainly the LANDSEER of this gallery. There is *affection* in that face. And the visitor must not pass in haste its neighbour, No. 19, a *Collier on a Sand-bank*, by BENTLEY. He is indeed the prince of marine painters. His sea is the most veritable salt-water we have ever seen, save in the gallery at Frankfort, where a Belgian artist has two pictures with waves almost as real as his. One expects to hear them dash, and they dance before the eye as we gaze.

Just beyond is a PROUT, a *Street View in Nuremberg* (22), a spot we remember well, and for the accuracy of which we can vouch. PROUT preserves his full vigour, and long may he live to bring home to us the quaintnesses of continental architecture —for no man can do it like himself.

No. 23 is a life-like group, *Plough Boy and Horses*, by F. TAYLER.

From this let us turn to by far the finest picture we have yet seen. It is a view of *Berne*, No. 26, by HARDING, and represents an effect of morning as it sometimes wakens among the Alps. The artist's pencil has succeeded in catching the gorgeous hues that are lighted up by the rising sun upon the long range of Alpine peaks, and the result is a glorious picture, upon which the eye must ever dwell with delight, and in which new beauties will be developed with every inspection. It is decidedly a work of genius.

No. 30 will claim a look, because it is a PROUT,—*Café de la Place, in Rouen;* and 33, *Rievaulx Abbey*, is remarkable for being a COPLEY FIELDING without a storm.

H. RICHTER presents us, in No. 41, with a *Peasant Girl*, well drawn, but red as a brick. Did he ever see such flesh?

No. 46 will be admired, because it is another dash of BENTLEY's waves; and No. 47, the *Oratory, Naworth*, by RAYNER, is a bit of drawing after nature, which has the merit of being nothing more.

No. 50, *Distant View of Christ-Church*, is one of DE WINT's happiest efforts. His bold dashing brush has succeeded in producing here its most striking effects,—a fine picture is the result.

Some more may now be passed over; but there must be a pause before 60, the subject of which is *Market People crossing the Lancaster Sands*, by D. COX, an interesting composition, wonderfully truthful; the tone of sky and sand, the attitudes of the groups coming and going, and a certain crispy look of the atmosphere, all telling the tale of a keen March wind, where it would be felt most keenly.

No. 67 is another PROUT, the *Hôtel de Ville, St. Quentin;* and 69, another of D. COX's transcripts of nature, a *Distant View of Brough Castle*. Nor must BENTLEY's *Quillebœuf, on the Seine* (74), be passed by.

No. 75 must attract a longer gaze. It is a fine morning view of *Dansenau*, by T. M. RICHARDSON, jun. Water and air are perfect, and the composition is artistic. It is one of the most *promising* pictures in the room.

At No. 80 also, there should be a rest, and it would not be amiss to take a chair and look at it steadily for awhile, as it will certainly grow upon the spectator. It is *The Groves of Yew Trees, a part of the Downs near Chichester*, by W. TURNER, in which a vast range of country is depicted with wondrous accuracy, and the trees and heath in the foreground seem to rise from the paper. It is one of the few first-class pictures in the exhibition.

No. 85 is a clear, well-drawn, and truthfully-coloured *View on the Canal of Ghent*, by CALLOW.

No. 86 is a busy group by WRIGHT, called the *Afternoon Nap*, a slumbrous schoolmaster surrounded by mischievous urchins, availing themselves of his closed eyes. But though attitudes and occupations are various, there is a disagreeable monotony of feature, as if they were all of one family. This is a fault Mr. WRIGHT should shun.

Near it is No. 87, a *Boy fetching Water*, by OAKLEY, of whom it must be said, that he is one of the most advancing contributors to the gallery. His various works exhibit an originality and a truth to nature that stamp him a man of genius, and give proof that he must become yet a much greater man if he labours assiduously, and stoops to learn of the only safe guide—nature. What a true boy is this, even to the minutest parts of his dress; nothing is stiff or affected.

One of COPLEY FIELDING's *Downs*, is No. 92, with all his mannerism; and 95 is a BENTLEY, again—a true BENTLEY, and therefore noteworthy.

No. 97 is another product of RICHARDSON's pencil—*Derwentwater*, exhibiting an effect after a shower, exquisitely transferred to paper. Nor must the visitor fail to look at 101, D. COX's *Knaresborough Castle*, or at 106, FIELDING's *Greenwich from Blackwall*, a variation from his wonted subjects, but yet very beautiful and masterly.

A singular specimen of what may be done by a heavy brush, flung about seemingly with careless hand, and quite blotchy when seen close, is D. COX's *Cloudy Day* (112), which will more please the artist than the public.

A pretty composition is No. 119, *Sir Roger de Coverley with the Gipsies*, by HARRISON. It is rustic in its accessories, but some parts are not sufficiently finished. The gipsy group is capital. And next to it do OAKLEY's *Italian Boys at a Cottage* (120) demand attention. What fire in those eyes, what ease in those attitudes! And its companion is one of FIELDING's best works, a view of *Snowden* (121), with less of his mannerism than usual, and therefore more of nature.

No. 123 is a BENTLEY again—*Granville*, more waves—and No. 127 is OAKLEY's *Guernsey Fishing Boy*, a sketch from life and of life—a living picture. J. NASH has, in No. 130, given us a bit of country seat *At Bingham's Melcombe, Dorset*. No. 133 is another BENTLEY, and one of the best, *An Indiaman in Distress;* and No. 137, a PROUT again, presenting us with some *Ancient Tombs at Verona*.

Once more must the visitor halt to enjoy *A Gleaner*, by OAKLEY (139), drawn in his happiest mood, and then move on for some steps, passing a crowd of less interesting works, the greater portion of which are mere repetitions by the artists of themselves, nor need he pause until he arrives at 151, a fine expansive *View of the South Downs, near Lewes*, a COPLEY FIELDING in theme and handling, but yet one of the best specimens of his manner, and a very fine picture in design and drawing. No. 160 is a sketch of *Bolton Abbey*, by P. DE WINT, effective for the freedom of its handling.

No. 167 is OAKLEY's ablest work—*Vagabond Intruders*, a pack of idle, black-eyed, ragged Italian boys chased by a servant from the steps of some grandee's house. In every part of it this picture is worthy of the warmest commendation, and must secure for the artist higher honours than he has yet attained.

G. FRIPP's *Mill at Taplow* (168) is a nice bit of colouring—a nook of nature's greenery, and very truthful. It might rival some of CRESWICK's cool shades.

No. 172, *Isola de San Guilio*, by H. GASTINEAU, is an exquisite scene, selected with good taste, and drawn with the hand of a master. The water is real, and the island has a dreamy look of an object seen in the midst of a transparent lake.

F. NASH has presented to us, in No. 177, *A Cottage near Worthing*, very perfect in its details; and, in No. 183, we have another sea-piece by the indefatigable BENTLEY. *Cardigan Bay*, (188) is a clever *View from Bolton Abbey*, by TRIPP.

In No. 195, S. RAYNER has elaborately sketched an interior of the *Retainer's Gallery, Knowle*. The minuteness of the drawing is worth looking at.

No. 200 is an extraordinary picture by STEPHANOFF. The subject *An Assemblage of Works of Art in Sculpture and Painting, from the earliest ages to the time of Phidias*, in which they are grouped as if on a tomb. It is more curious than beautiful.

No. 203 is *The Parting of Romeo and Juliet*, by RICHTER. Romeo, a nut-brown youth; Juliet, more fair than pretty. What is the artist's warrant for representing her in her night-gown, we know not. Just beyond it is a more pleasing picture, some *Ruins and an old Elm Tree*, by F. NASH—a delightful transcript of nature; and 211 is a *Stable-boy*, by HUNT, the very *beau ideal* of that functionary.

In No. 221, P. DE WINT has pictured most truthfully a *Corn Field;* and 222 is an equally genuine table of *Fruit*, by BARTHOLOMEW. To look at those ripe grapes and melting melon is to long for them.

No. 226 is HUNT's best, because most characteristic contribution—*A Mishap*—a boy upsetting his plate in his lap. The dismay and disappointment depicted upon his face are admirable. Next to it is another delicious picture, by TURNER, a *View near Gillingham;* and with PROUT's *La Grosse Horologe, Rouen* (231), the visitor will turn from the walls to the screens.

Here are the drawings of smaller size, of which we shall notice only the most remarkable among the crowd.

No. 233 is a bit of *St. Mark's Place, Venice*, by PROUT, and therefore to be looked at. Adjoining is HUNT's *Writing* (234), a boy working away at his pen for very life, and sorely troubled to get on—either he can't spell, or is not sure of the form of the letters, or has a bad pen, for perplexity and trouble are painted upon his face. By the same hand we have *An Interior* (246), and *Birds' Nests* (256), the perfection of copy.

No. 266 again is HUNT's also. Its title a *Paper Lantern*, and its design to exhibit the effect of that homely shade upon the features. F. TAYLER's *Gipsey Girl* (268) is excellent; the face has the spirit of the tribe upon it. Another of his contributions (274) will deserve close inspection; *Counting the Game Bag* displays many of the features in which he excels.

J. CORSTALL's *Market Day* (277) bears marks of promise, and is interesting and able in itself. HUNT's *Drawing by Candlelight* (279) is one of his effects, cleverly produced. And in 283 we have an extremely beautiful *Landscape*, a composition by FINCH, that reflects great credit upon him.

WRIGHT's *Ill Omens* (293) is a lovely female face, which has been selected for the first number of *Finden's Beauties of the Poets*. No. 298, the *First of September*, by F. TAYLER, would do no discredit to LANDSEER. There is astonishing life and

meaning in that earnest painter, whose fine action is caught with singular accuracy.

HUNT'S *Hollyhocks* (301) are real flowers. WRIGHT'S *Morning Occupations* (303), a sweet domestic picture, introducing three charming girls. Again, in 312 and 319, that indefatigable painter, HUNT, exhibits two more sketches of *Candle-light Studies*.

No. 331 introduces BENTLEY on land, and though not so great as upon his own element, where he is certainly without a rival, he is yet worthy of very high commendation. His *Traeth Mawr* is a grand and truthful sketch of a mountain range full of colour.

Lastly, STONE'S *Evening Walk* well deserves a passing glance for its careful finish and fine drawing, although his subject is by no means an attractive lady.

THE NEW SOCIETY OF PAINTERS IN WATER COLOURS.

The exhibition-room of this society indicates progression. There are finer works of art than we ever saw there before; finer compositions, if not more artistic in colouring. For convenience of criticism, we should notice the works of each artist in groups; but for the purposes of a guide this usual plan of reviewers will not do. We must notice the pictures in the order of their numbers.

The first on which the eye should rest is (3) CALLOW'S *Fishing-boat off Lowestoff—Sunset*, full of atmosphere, and exhibiting a fine effect. Further on is (12) *Cabin Fare in Connemara*, a clever sketch of Irish life, by TOPHAM. It is very real. Next to it hangs (13) OLIVER'S *Louvie val d'Ossau Pyrenées*, one of a series of delightful views which the artist has brought with him from his tour, and in which he has successfully caught the peculiar aspect of mountain scenery. Just beyond is YOUNGMAN'S *Brook*, which would not disgrace CRESWICK. This rising artist promises well. All his pictures here have great merit. The next that attracts the eye is DAVID COX'S *Distant View of Hever Castle*, like all his drawings, exquisitely true to nature; every touch tells with him. Another sketch from Ireland, *The Cabin Door* (25), instantly betrays the congenial hand of TOPHAM, and will deserve a passing gaze. And so will ABSOLON'S *Judgment of Midas* (27), if it be only for the beauty of the girl, and the miniature-like finish: but it has the fault of too great monotony of colour; the brick-dust hue is always disagreeable. Still it is a picture of great merit, and full of promise. The next that claims notice is PENSON'S *Fishing-Boats on the Beach—Hastings* (35); so full of atmosphere and so truthful; and so is D'EGVILLE'S *View outside the Walls of Pola, Istria*. DUNCAN almost rivals BENTLEY in depicting the waves. His *Gale off the Skerries* is remarkable for its reality of sea.

But now there must be a pause—you cannot help pausing, attracted by No. 40, *A very Particular Confidence*, by Miss FANNY CORBAUX, a charming picture. Two beautiful girls, one fair, the other dark, one sweet-tempered, the other intellectual, are perfect models of female loveliness; and the expression which the artist has thrown into their faces as one confides to the other her secret is portrayed with masterly skill.

Another great picture immediately attracts the eye, when it can be removed from the fascination of the last. H. WARREN'S *Crusader's First Sight of Jerusalem* (55), the foremost work in the Exhibition, and undoubtedly a triumph of water-colour. No. 61 is worth inspection. It is *The Prisoner of Gisirs*, by WEHNERT; the countenance of the prisoner is powerfully expressive of despair. No. 67 is another by the same accomplished hand; its title *An Unexpected Visitor*. It abounds in truthfulness, and tells its story distinctly.

No. 77, *A Dish of Grapes*, by Mrs. MARGETTS, makes the mouth water; there is a richness of ripeness rarely seen out of nature, because so difficult to be copied by art.

No. 79 is *Cottages at Streatham*, by DAVID COX, Jun., standing out sharply against the background, and coloured to perfection.

No. 81 is *Ferdinand visiting Rubens at Antwerp*, by LOUIS HUGHE. The grouping is good, and the colouring magnificent. Such brilliant hues are rare, even in water-colour, and they are so well contrasted that they do not offend the eye by glare or unnatural prominence.

H. LAPORTE'S *Pointers* (88), may arrest the step for a moment. They are very life-like, and there is pleasing freedom in the drawing, which reminds us of LANDSEER.

A beautiful picture is *The Compliment* (96), by ALFRED TAYLOR; and RIVIERE'S embodiment of the legend related of Pope Gregory on seeing some Saxon youths exposed for sale, that they ought to be *angels*, not *Angles*, &c. (112), is a clever production both of head and hand.

No. 119 is another of OLIVER'S charming pictures of Pyrenean scenery, and 120 is *A Trout Stream*, by JUTSUM, a delicious bit of greenery, that would do honour to CRESWICK: the water is so crisp, one expects to hear it gurgle in those hollows.

No. 124 is a sketch of Irish life, *Tipperary Market Folks*, by CAMPION, full of life, redolent of jollity, and overflowing with Irish humour.

There is a solemn grandeur and a truth to nature to which all acquainted with mountains can testify, in the dark abysses of RENLEY'S *Lochin-y-gair* (129), and by way of contrast, the visitor should turn from it immediately to MAPLESTONE'S *Water-mill near Streatly* (136), so bright and quiet, so cheerful, and so clear in atmosphere.

We scarcely know in what terms to speak of 138, a large picture by CAMPION—subject, *The Battle of Waterloo:* composition, a mighty maze of figures in red and blue coats. It must have been a work of vast labour, beyond its worth.

No. 142 is another fine picture by WARREN,—*Christ and the Woman of Samaria*. It is a remarkable production, though we have certainly seen both figures before, if we rightly remember, in some of HERBERT'S paintings. The expression is masterly, and the colouring worthy of the artist.

Although LAPORTE'S *Resting from Ploughing* is marked *sold*, we must own that the newly-turned earth is not at all like clods, nor are the ploughboys like clod-hoppers.

No. 146, PENLEY'S *Maude Castle—Sunset*, is a magnificent *effect*. Seldom has the glow of evening amid mountains been more happily caught than here.

HARDWICK'S *Market-place at Frankfort* (149) rivals PROUT, with more regard to accuracy. OLIVER'S scene *From the Black Dwarf*, representing the bleak and barren moor, and the rude, self-erected hut, is a highly-poetical composition, admirably coloured.

The visitor may pass over several intermediate frames without notice, pausing at 164, *An Outward-bound Indiaman shortening sail*, by ROBINS, a bit of veritable sea and shipping, pleasing to look upon, because so rare; and from that proceed straightway to 170, *The Ring*, by ALFRED TAYLOR, a story well told, faces and forms exquisitely painted.

Few works in this exhibition have so much pleased us as 180, *A Canal Scene near Tring*, by MAPLESTONE. It is a misty morning, and never did we see the *effect* of mist so perfectly portrayed. The tone is subdued to the subject, and it is one of those pictures which make an impression; once seen, they are never forgotten.

No. 183 is entitled *Le Tombeau du Pêcheur*, by JENKINS. The weeping widow is a figure full of grief, expressed in attitude and face.

No. 187 is another of DAVID COX'S transcripts of nature, *Hever Castle*, and just beyond it, No. 192, *Tonbridge*, by the same hand, is one of the best, if not the best, of the landscapes in the gallery. There is atmosphere and space into which we look, ever finding some new object growing upon our vision as we gaze.

The next that really deserves inspection is 202, *Stonehenge by Sunset*, painted by PENLEY, and preserving a singularly fine effect witnessed by the artist in June last. The glowing sky, as seen betwixt the arches of the huge pile, itself slightly coloured by the warmth that irradiates the whole heaven, is quite a triumph of art.

No 207, *Merchant Ship in a Strong Breeze*, by CALLOW, is another very creditable sea-piece, proving the great progress which has recently been made by many of our artists in this favourite class of subject. The water is water, and herein CALLOW may almost claim companionship with BENTLEY.

There is a bold but effective handling of the brush in 208, *Washing in the Rocks on the French Coast*, by BENTLEY; and DUNCAN'S *Sheep-washing* (212) is a delicious bit of English landscape, so green and cool, and the light so subdued.

No. 215 again introduces CALLOW in his finest production of the year, a *Frigate—Sunrise*. The light, as it falls upon the sails, illumines the waves, and gilds the air, is caught by the artist, and reflected with astonishing skill. It is a work of great skill, a marvel of the art.

No. 220 might be mistaken for a PROUT, did he exhibit here. It is, in fact, by OLIVER,—a view of the *Cathedral and Market-place at Nismes*, accurate as a daguerreotype, with perfect truth of colouring.

HICKS'S *Youth assisting Age* (224) shews some good drawing, and JENKINS'S *Sunny Moment* (232) is clever; but for freedom of touch, and many of the qualities that give promise of future eminence, the *Village Watercourse* (239), by YOUNGMAN, is one of the most pleasing pictures in the Gallery. There is no affectation of effect about it. The artist has been content to give us nature, and not his own theory of what she ought to be.

A scene from the opening of "The Wandering Jew," which he has entitled *The Travellers* (244), has been embodied by E. CORBOULD, with good effect. It presents Rose and Blanche, and the old Guardsman; and the artist has caught the spirit of the novelist and summoned his creations bodily before us.

PENLEY'S *Scene on the Wye* (246) ; *Liege* (248), by BENSON; *Haddon Hall* (249), by CHASE, will each reward examination.

No. 253, a *Study of Trees near Cheltenham*, by PENLEY; a clever drawing, truthfully coloured. Redolent of frolic and the spirit of the dance is CAMPION'S *Irish Dance*, a ragged group in the mountains, Glengariff, tripping it with exuberance of glee, and every limb and feature inspired by the music and the mirth. There is a great deal of talent in this picture, which ought to have sold long ago. The man who could draw that has genius in him, and should be encouraged.

We pass over some ten or twelve of inferior merit, as not worthy to detain the visitor, and request him to pause next before 269, *Setters*, by LAPORTE, and worthy companion to the *Pointers*, noticed before, and from this the eye may be, nay, must be, turned to Mrs. MARGETTS' *Japonicas* (273), which are veritable flowers; and Mr. YOUNGMAN'S *Landscape—Evening* (276), which will make the gazer feel cool and composed as he looks upon it.

Turning now to the screens, upon that nearest the door there are two notable pictures, to wit, *A Cottage at Upton* (291), by ARCHER; and a *French Diligence* (298), by CAMPION, the latter full of life and motion, a spirited energetic sketch.

On the other screen are DAVID COX'S *Cæsar Tower at Kenilworth* (301), worthy of himself; *The idle Page* (306), by DODGSON, a summer scene sweetly painted; "*A distant View of St. Malo* (308), by PENSON, in his best manner; and *The Garden Walk* (318), by JENKINS.

Of course there are many having some merits, of which no notice has been taken, because the object of this guide is rather to aid the visitor than the student or the connoisseur, and therefore we introduce him only to the best, and such as are really worth the devotion of a portion of his valuable time to inspect.

New Publications.

Finden's Beauties of the Poets. Moore. Part I. London, 1845. Chapman and Hall.

IT has been ever the artist's delight to embody the creations of the poet's fancy, as if the attempt were not one of extraordinary difficulty and danger. The reader frames out of the suggestions of the verse, in his own warm imagination, an image whose loveliness is so purely ideal, that the finest painter the world has ever seen would be unable to transfer it to canvas. Hence it is that works professing to put into shape the visions of poetry have ever been eagerly sought, and as invariably produced disappointment when seen. Never has artist done justice to the poet, or rather, never has he succeeded in equalling the imaginations of the poet's readers.

We fear lest something of this kind of feeling should attend upon the bold project of the Messrs. FINDEN for embodying the beauties of the poets. Charming as are the creatures here presented to the eye, they are yet veritable women, and may not endure comparison with the ethereal beings existing in the fancy. So we would recommend to those who desire to enjoy thoroughly this magnificent work of art, to forget MOORE altogether—to put out of mind that it is in any way associated with his verses, and view it with an eye to its intrinsic merits as a collection of exquisite engravings of so many pretty women. The first is entitled "Black Eyes and Blue Eyes," after FORTH—a pair admirably contrasted in character and countenance, each with a charm of her own, and perplexing the gazer which to prefer. "St. Jerome's Love" is from a sketch by O'NEIL—an engraving of singular excellence by E. FINDEN. The sad face is expressive of the couplet it embodies:—

> Wan and sunk with midnight prayer
> Are the pale looks of her I love.

"Young Kitty" is a charming creature, taken from a drawing by WRIGHT, now in the Water-colour Exhibition; the face pale, thoughtful and full of intellect, but most beautiful. "Laughing Eyes" is not so happily chosen. The lady is *not* a beauty, though with tale-telling glances. The engraving, however, is a very gem of art.

Besides these, there is a frontispiece containing a portrait of MOORE, set in a fanciful frame, the extreme elegance of which cannot be conveyed by words. It is unique, and must be seen to be appreciated. Nothing like it has hitherto appeared in English art. Indeed, all the subjects are set in borders of the most various and beautiful designs, in themselves a curiosity; and altogether this is certainly one of the most beautiful as well as one of the cheapest publications of the time.

Report of Proceedings and Observations by Henry James Townsend, Esq., during a visit to Paris in September, 1844.

THIS very full and interesting report has been presented to the Government School of Design by Mr. TOWNSEND, an artist of great reputation, one of the second-prize men at the Cartoon exhibition, and recently appointed to the high and responsible post of Professor in the Government schools. In the autumn of last year Mr. TOWNSEND was commissioned by the council to visit Paris, for the purpose of reporting upon—first, *The system of Education adopted in the pursuit of Art*; secondly, *The Works and Methods of the Modellers in Paris.*

His report is now before us, and we propose to present to our readers some of the more interesting parts of it.

ORDER OF STUDY.

Admitted at any age, and without previous examination or preparatory study of art, the student is at once made to draw from "the round,"—from busts, portions of the face and figure, or statues, according to circumstances. Drawings or prints are placed, as copies, before those only whose dulness is supposed to require such an exemption from the usual mode of initiation. The sole material at first permitted to the draughtsman is *charcoal*, the use of the chalk being reserved for more advanced stages. This employment of charcoal alone may be supposed to check the self-love that would place value on "first attempts," while the ready erasure of markings offers every facility for the attainment of true drawing. It is said, moreover, that from this early period and practice the designer may date the free handling of so useful an instrument in after years. Be this as it may, drawing after drawing is made in charcoal, the most earnest attention being directed to the main indications of surface, and especially to the "*mouvement*," as it is termed,—that is, the balance of the body, and of parts among themselves. Thus tutored, the pupil enters early on that which constitutes the most prominent characteristic of a French artist's education —namely, *the continuous application to studies from the Life.* For this purpose, models attend *four hours each day*—the same model, in the same attitude, during that period, for a week together! The care with which these drawings are executed, the anxiety with which the play of surface is imitated, and the use of the chalk and the charcoal with so much patience over an extended time, may be regarded as the true source of that power of "*modelling*," as the painter terms it, which the French students pre-eminently display. This power is, indeed, an object of so much solicitude, that clever figures often remain incomplete at the end of the week. Both in painting and in drawing from the life, the *à peu près* system is thoroughly discouraged by the masters, their constant demand being a pure outline and most careful filling up. Anatomy, as a study, is not said to be much insisted on; Houdon's figure of the muscles and the traditionary science of the atelier being the principal stock in this department of an artist's inquiry. On commencing to *paint*, studies are made of heads and portions of the figure, both small and colossal; and it is then that the professor enters more generally upon the known rules of art, enlarging his communications according to the progress of the pupil, until he at length gives him a hint that he should commence a picture, and pursue an independent path. It is just preceding this stage, however, that the class is engaged often in the principles of composition, "subjects" being proposed which are treated by all, and the results of which undergo a critical commentary. The duration of these studies is various.

THE PRIX DE ROME.

The "*Prix de Rome*" is the grand mainspring of the ambition of the *élèves*, and offers to the successful competitors the most substantial advantages. The conditions are—age under thirty, and French birth; but it is not necessary that previous studies should have been pursued at the Ecole des Beaux Arts. In this institution the competitors assemble, generally to the amount of one hundred and fifty. On their meeting, a subject is proposed, from which a sketch in oil colours, 18 inches by 6, is to be made at once. Twenty are selected, who are considered worthy of undergoing further trials. The figure, in three-quarter size, from life, is painted by these chosen ones, and a reduction is then effected to ten. To these ten the field is left for the ultimate contest, and each receives, as an equivalent for his expenses, a sum of one hundred and fifty francs. A subject is then proposed, and the same day a sketch is made, and "stamped;" and from the general tenor of this design the subsequent painting must exhibit no departure. Models are allowed, but neither engravings nor unstamped sketches are permitted, and the process of the picture now advances during seventy-two days. The prizes, which consist of a "*Grand Prix*" and two secondary ones, confer exemption from the "Conscription." The winner of the

chief prize in the present year was said to be freed from the ranks by his successful effort made under leave of absence? To the two second prizes also is given a reward of five hundred francs. The chief prize, however, brings with it the honour of a *Laurel Crown*, bestowed either by the Institute, or in the "*Hemicycle*" Theatre at the Ecole des Beaux Arts. The victor is then sent to Rome on his studies, where he is lodged and maintained at the French Academy, under an eminent Director, and with a further allowance of 60*l.* per annum.

Competition is the prevailing system at Paris. Mr. TOWNSEND is naturally led to inquire what are its effects. Upon the whole, he approves it; but he submits that the prize should be followed up by after encouragement.

Such is the case in France. The *Grand Prix de Rome* carries with it, for the time, unbounded public estimation. Thousands flock to see such works; and the painter or sculptor, if left to wander about as an undirected travelling student, might rest contented with the dream of his past renown. At Rome, however, he is provided with a residence,—a home, where his instructor and guide is always one of the foremost of his distinguished countrymen, who exercises a well-rewarded duty in stimulating young ambition among the inspiring relics of former ages. Thus, year after year, talented men are fostered under a nation's care, and when high genius springs forth, it repays this valuable nurture by the grateful tribute of a lofty work. The production of the "fifth year," if merely respectable, is generally purchased by the French Government, at about 200*l.* The work of M. Papety, thirty feet long, was rewarded with 1,000*l.* It was called "*Un Rêve de Bonheur*," in which the artist gave way to imaginations, the high poetry of which was equalled by the skill with which they were presented.

Mr. TOWNSEND devotes a considerable portion of his report to works of sculpture, models in clay and wax, collections of casts in plaster and in *carton pierre*, and to working in metals. He attributes the good workmanship, knowledge, and taste exhibited by the moulding of French works, to the fact that what is done in England by *workmen*, is done in France by *artists*. The hint should not be lost upon our manufacturers. Surely the mighty commerce and enormous wealth of England might worthily rival France in the

EMPLOYMENT FOR ARTISTS.

It is astonishing how many are the outlets, in Paris, for a superfluity of artistic talent of a certain order. Occupations very puerile in themselves, influence, nevertheless, the studies and destination of youths with an artistic turn of mind, by the certainty of employment they offer. The following is one specimen of the demands supplied by such a class as the "*Modelleurs en cire*," taken from an advertisement:—"Bustes pour coiffeurs, figures, enfans Jésus, avec bras et mains mouvans, saints et saintes, bustes pour poupées, fleurs et fruits montées, corbeilles, vases, assiettes, &c." The application of decoration to the exteriors of houses is also much greater than in London, —ironwork in railings, &c. seldom appearing, even in the poorer streets, except in a beautiful form. Among the employments which engage the talents of the working class, sent out from the Schools of Design, there is one to which London as yet offers no parallel, either in the quantity or quality of the works achieved, or in the number of establishments in which the occupation is pursued. I allude to the fabrication of bronzes.

Mr. TOWNSEND was informed that at such establishments artists are remunerated at high prices for original designs, while the artificers are selected from nurseries of real art.

The report concludes with the following summary of the results of the reporter's investigations.

What, then, are the hints to be derived from the system pursued in the development of art in the French metropolis? They appear to be suggested, most peculiarly, from these sources:—

The earnest studies *after nature* in the ateliers;
The system of *competition*, and the consecutive patronage of the higher prizeholders;
The *extensive range of acquirements* contemplated in the schemes of education in Schools of Design; and, finally,
The exquisite care and finish of the *modelling*, as preliminary to the operation of *casting*.

We trust that the admirable hints conveyed in this pamphlet will not be unheeded by the noblemen and gentlemen to whom they are addressed, and that they may have the effect of helping the advancement of our countrymen in that in which alone they are surpassed by their rivals—the arts of design.

CHIT-CHAT ON ART.

SALE OF SIR G. HAYTER'S COLLECTION OF PICTURES.—On Saturday the valuable collection of works by the old masters, formed during a long series of years spent on the Continent, and selected from different celebrated galleries by Sir George Hayter, principal painter in ordinary to her Majesty, were disposed of by auction at Messrs. Christie and Manson's rooms, King-street, St. James's. The number of pictures for disposal was 83, but the prices they fetched formed a striking contrast to the sums realized on the previous Saturday, at the disposal of some works by modern artists. On the former day 950 guineas was given for a landscape by Sir A. Calcott, whilst on Saturday a Corregio, valued by Sir George Hayter at 3,000 guineas, was knocked down for 150 guineas. In order to shew the great depreciation of the value of Italian paintings, the following are noticed for example, being those upon which Sir George set a large price. Lot 59, "The Dead Christ, and Magdalen weeping," by Agostino Caracci, sold only for 68 guineas. The auctioneer stated that the Rev. Howell Carr, to whom the National Gallery was so greatly indebted, offered a considerable sum for this picture; but Sir George Hayter considered it such a beautiful specimen of the master, that he refused to part with it. Lot 65, "St. John the Evangelist," a fine specimen by Parmegiano, sold for 36 guineas. The auctioneer stated that this picture was brought to this country by Mr. Day, and sold for 800 guineas. It was sold twice afterwards for the same price, and was bought in 1824 by Sir George Hayter, and was greatly admired by Sir Thomas Lawrence. Lot 75, "The Woman taken in Adultery," by Guercino, brought from Florence, sold for 140*l.* 14s. There is a duplicate of this picture in the Dulwich Gallery. "St. Simon," by Rembrandt, sold for only 102 guineas, the value put upon it by the late possessor was 500 guineas. Lot 81, "St. Christopher," a large painting by Annibale Caracci, sold for only 52 guineas. This picture was brought from a convent at Seville by Count Sebastiani, during the war in Spain under Napoleon, from whose collection it passed to that of Cardinal Fesch. Lot 82. Portrait of "Cornelius Von Schrevellier (Schrebillius, translator of Homer)." This picture was formerly in the possession of Sir Edward Hume, and was bought at that gentleman's sale by Count Carlo Marescalchi for 600 guineas. On Saturday it only fetched 250 guineas. Lot 83, "L'Homme Sensual," the finished picture from the Guazzo in the Louvre, and companion to that unfinished in the Palazzo Pamfili at Rome, by Corregio, sold for only 150 guineas. Both subjects were engraved in 1676 by Picart, and the paintings are mentioned in the life of Corregio by Georgio Vasari. The auctioneer stated that this was one of the pictures mutilated by the Regent Duke of Orleans, during the minority of Louis XV. The part taken away by him being the head of the fawn at the bottom, and one of the eight heads painted by Corregio, which he swore he would have. Sir George Hayter valued it at 3,000 guineas, and put a protecting price of 150 guineas upon it. That was the only sum offered, at which it was knocked down. The other lots fetched equally low prices.—*Herald.*

SIR AUGUSTUS CALCOTT'S PICTURES.—The pictures of this artist, whose lamented death was announced a short time back in our columns, have been exhibited during the week at his house in the Mall, Kensington Gravel-pits. The collection comprehends 80 pictures by himself, and consists of paintings and sketches in oil-colours. To speak of the merits of this artist would now be unnecessary, and perhaps invidious; the public have long since formed their opinion of his talents, and their judgment must decide upon them. The pictures are offered for view or exhibition as a means of their being sold by private contract. Many of them have been already sold, and there is little doubt that the whole will soon be disposed of. The subjects of these 80 pictures are very various; they are landscapes, both foreign and domestic; views on Dutch and Flemish rivers, and in England, and views in Italy. There are also copies or pictures after several of the old masters, viz. Rembrandt, &c. exceedingly clever, and some sketches very full of spirit. On the staircase of the house of the deceased Academician is an unfinished painting, full of character and expression, of the Witches in *Macbeth*. This painting represents on canvas the wild, yet powerful imaginings of Shakespeare, with great accuracy and great vigour. The collection—with the exception of this picture, which is a gallery one—consists of cabinet pictures; just such paintings as would form a suitable collection for the owner of a moderately-sized house and tolerably liberal fortune.

DRAWINGS BY THE LATE SIR A. CALCOTT, R.A.—The auction-rooms of Messrs. Christie and Manson, in King-street, St. James's-square, have been crowded by the nobility and gentry, to view the collection of original drawings and sketches of the late Sir A. W. Calcott, R.A., which are about to be sold by auction. Some of the drawings are most beautiful little specimens of the deceased gentleman's talent, and are expected to fetch large sums. Among those which attracted the greatest

notice were "The Castle of Chillon," a very pretty little drawing in colours; "The Light-house at Leghorn;" and an English landscape, with a village in the distance, and cows watering in the foreground. The number of lots for disposal is near 600, comprising upwards of 1,000 drawings, sketchings, &c. The sale will last four days.

THE FESCH GALLERY.—Extract of a letter from Rome, April 19:—"Presuming that a brief account of the pictures, and the prices they sold for at the sale of Cardinal Fesch, might be of some interest, I beg to forward the following. The manner in which the sale is conducted gives universal dissatisfaction. Notwithstanding the positive assurance that the sale was to continue without interruption, every week there are two or three days' interruption; in fact, we do not know when it will end. Yesterday we reached the sixteenth day's sale. Hobbima, a very grand landscape, 44,520f., bought by the Marquis of Hertford; Berghem, a winter scene, 6,399f., Harrington; N. Poussin, the Dance of the Seasons, 33,223f., Marquis of Hertford; N. Poussin, the Riposo, 9,460f., George; Cuyp, a river scene, 9,460f., George; J. Weeninx, a game piece, fine, 10,295f., George; a pair by Snyders, hunts, 7,067f., Williams; B. Luini, the Holy Family, very fine, 22,371f., Claret; J. Steen, the Siesta, a little gem, 11,185f., Claret; Backhuysen, a Squall, 5,898f., Tarral; A. Vandyk, Virgin and Child, very elegant, 7,791f., Artaria; Giulio Romano, Holy Family, 6,789f., Prince of Canino; Greuse, le Miror Casse, 18,693f., Marquis of Hertford; Backhuysen, a Grand Marine, ships of war, 10,517f., Walsh; Albano, a pair of Landscapes, with Holy Family, 12,298f., George; Rembrandt, a pair of fine portraits, Lipsius and his wife, 24,792f., Blaine and Harrington; Ruysdale, a pair of Waterfalls, excellent pictures, 11,630f., Harrington; Metsu, Crucifixion, 5,843f., Duke of Bracciano; Andrea Mantegna, Christ's Agony, fine, 6,844f., Artaria; Leseur, Martha and Mary, 15,395f., Passavant; Beato Angelico, of Fiesole, Last Judgment, 17,808f., Prince of Canino; G. Zerburgh, a Conversational Scene, fine, 15,888f., Detuit; K. Dujardin, le Charletan, fine, 16,165f., Zami; Giorgione, the Adoration of the Shepherds, 9,794f., Tarral; P. Wouvermans, the Return from the Chase, very elegant, 68,727f., Kolb, Wurtemburg Consul; Claude, Seaport, with sunrise, a gem, 28,103f., Artaria, for England. These prices include the 5 per cent. for expenses of sale. I have only enumerated the pictuures sold above 1,000 scudi (5,300f.); the others sold for sums averaging from 200 to 800, but the greater part at very insignificant prices; in fact, only the star pictures obtain high prices."—*Galignani's Messenger.*

THE LATE MR. KNOTT'S PICTURES.—Sir Augustus Calcott's English Landscape, which formed a portion of Mr. Knott's celebrated collection, was sold on Saturday se'nnight by Messrs. Christie and Manson at the advanced price of 950 guineas, the original price having been 400 guineas.

THE ART UNION.—We are requested to state that we were misinformed as to the connection of Mr. S. C. Hall with this periodical. That gentleman has been from its commencement and still is its editor. We hasten to contradict the rumour that he had abandoned its management.

MUSIC.

MRS. SALMON.—A subscription has been opened for this celebrated vocalist, who is now in the most indigent circumstances. Her Majesty, and several persons of distinction, have come forward on the occasion, and Mr. John Oxenford has been appointed treasurer of the fund.

M. LEOPOLD DE MEYER.—This distinguished pianist arrived in London on Saturday morning from Paris.

Herr Staudigl, Mdlle. Schloss, Madame Meyer, and Mr. Card, are at present on a professional tour in the provinces. They visit Manchester, Liverpool, Leeds, Sheffield, Bolton, and Birmingham.

Duprez is engaged at Liverpool and Manchester, with a French company, for a limited number of performances of French operas, commencing about the 9th of May. Duprez is also engaged by Mr. Calcraft for a few nights in Dublin.—*Musical World.*

Signor Sivori arrived in London on Monday evening from Hamburg, to fulfil the various engagements he has entered into for the musical season here, among which the most novel and interesting is that of performing at the remaining meetings of the Beethoven Quartet Society, as it will exhibit this accomplished artist in a new line of excellence, which is said not to be inferior in any respect to his solo playing. Mr. and Madame Balfe, with Madame Thillon, are expected in the course of the week; also M. Leopold de Meyer, the celebrated pianist, who proved so attractive last year.

THE DRAMA AND PUBLIC AMUSEMENTS.

The LYCEUM alone has produced a novelty since last we reported of the drama. As we are not favoured with the usual press privilege at this theatre, and do not feel inclined to *pay* for a ticket for the pleasure of writing a criticism, we take the best notice of it we have seen from one of the morning papers.

A new comedy, in two acts, under the title of *Our New Governess*, was produced at this theatre last night; and a lively, sparkling little "*piece du théâtre*" it was; but to the dignified title of a comedy it had no pretension; for if the object of a comedy be to "paint a moral or adorn a tale," it fell far short of it, lacking both the one and the other; tale, we could discover none, and as to moral, it pointed not at it. It was, however, full of "*plaisanteries*," with attacks at the Premier for the desertion of his party and effecting his "rise" by the machinery of his tools; with a slight glance at the effect of a mesmeric influence in a system of school education, which *Our Governess*, under the able impersonation of Mrs. KEELEY, most effectively brought into full light. KEELEY, as the dupe of a man about town (impersonated by Mr. WIGAN), was, as he always is, irresistibly droll and provocative of "laughter holding both its sides." With its cognomen alone we quarrel; in every other respect it was good, and will doubtless bring many a full house at full price to sustain the coffers of the exchequer. It was received with general applause, and Mrs. KEELEY, with her better half and Mr. WIGAN, appeared before the curtain to receive the plaudits of the audience.

THE COLOSSEUM.

AFTER being long closed against the public, this magnificent edifice has been reopened with multiplied attractions, its whole interior renewed, and the resources of art and science lavishly employed to render it again one of the wonders of the metropolis.

And it has reopened under the happiest auspices. On Saturday last it was visited by the QUEEN and Prince ALBERT, who expressed themselves as greatly pleased with all that they beheld. On Tuesday the Duke of CAMBRIDGE was there. On Thursday was a private view, at which the greater portion of the nobility were present. Everywhere we heard only expressions of surprise and pleasure; and it was evident that, in this instance at least, anticipation had fallen far short of the reality.

A brief description of the most striking features of this unique exhibition will shew the changes and improvements which have been wrought in it under the auspices of the present tasteful and spirited proprietor.

The visitor is first introduced to the museum of sculpture, which has been entirely furnished with new decorations; indeed we may say altogether transformed. A dome of richly-cut glass has been placed in the centre; beyond the circle of columns is placed another of as many pilasters, dividing and supporting arched recesses, in which are placed a multitude of works by British and foreign sculptors, many of them of great beauty, and which must form the subject of future notices.

Ascending, as of old, by the moveable chamber, the Panorama of London is seen as renovated by Mr. PARRIS, the laborious artist by whom it was painted. The sky and distance have been much improved, and the vast scene is depicted in a clearer atmosphere. An upper gallery exhibits it from a still loftier elevation.

Descending by means of the same convenient machinery, the visitor will next proceed to the conservatories, which have been elaborately embellished in the arabesque style, and supplied with fine tropical plants and flowers. A very elegant fountain in the midst gives an air of coolness and cheerfulness to the scene, which adds greatly to the charm. Here we come suddenly upon the Gothic Aviary, an octangular room, richly decorated with Arabesque painting, filled with fountains and gold fish, and beautiful and rare birds, and surrounded with mirrors that produce the illusion of endless vistas of equal beauty wherever we gaze, together complete a work which is more like a vision of the Arabian tales than any thing ever before realized to the waking sight. Thence a few steps conduct to an excellent representation of Grecian and Roman ruins, and we descend to another fountain singularly tasteful. Returning we proceed to a chalet or Swiss cottage. Before us rises a rugged mountain; far in the distance is Mont Blanc; at

least, so perfect is the allusion that it is difficult to assure ourselves that it *is* an illusion. Finally we enter the stalactite cavern, an exact copy of that of Adelsberg, in Austria; a work, of which we can only say, that it is astonishing as an effect of human ingenuity and skill—a masterpiece of art; the stalactites are imitated with such accuracy that they would certainly deceive even a practised mineralogist; and so admirably is the cave contrived, that as we wander about, long vistas of glistening spar appear to open upon the view and make a scene that seems more like the creation of an enchanter's wand than the slow production of labour directed by consummate taste.

We would recommend no reader coming to town to omit a visit to the Colosseum; and sure we are there is not one who will not afterwards thank us for having directed his attention to this most interesting of the sights of London.

PARISIAN THEATRICALS.—The tragedy of *Virginie*, in which Rachel plays the principal character, makes the fortune of the "Comédie Française." At the Opera Comique a new work by the *Arcades ambo*, Scribe and Auber, has been eminently successful. The extraordinary tragedy of *Les Pharaons* has been succeeded at the Odeon by *L'Eunuque* (from Terence). Madame Doche has reappeared with good effect at the Gymnase.

NECROLOGY.

PROFESSOR DANIELL.

The late John Frederick Daniell, professor of chemistry in King's College, London, Lecturer on Chemistry and Geology at the Hon. East-India Company's seminary at Addiscombe, one of the examiners in the University of London, foreign secretary of the Royal Society, D.C.L. (Oxon.), &c. was born in Essex-street, Strand, March 12, 1790. At an early age he became a pupil of Professor Brande, in whose society he made several tours, and of whom he spoke as one endeared to him by kindred pursuits and early recollections the day before his death. In 1816, associated with this gentleman, he started the *Journal of the Royal Institution*, the first twenty volumes of which were published under their joint superintendence. He married in the following year (September 4), Charlotte, youngest daughter of the late Sir W. Rule, surveyor of the navy, and subsequently became managing director of the Continental Gas Company, to forward the interests of which he visited the principal cities of France and Germany with Sir W. Congreve and Colonel Landmann, making those arrangements by which many of them have since been lighted. On the formation of King's College, in 1831, he was appointed professor of chemistry, and found himself at length in the position he was so well suited to occupy. His inaugural lecture, eminently characteristic of the Christian philosopher, gave a good earnest of the spirit in which his instructions would be conveyed. Of the extent of Professor Daniell's scientific labours some idea may be formed from the fact that, independently of his *Meteorological Essays*, and *Introduction to the Study of Chemical Philosophy*, he communicated to various scientific periodicals upwards of forty original papers; of these thirteen relate to meteorological subjects, nine to electricity, and the remainder to chemistry and other branches of physical science. Of their intrinsic importance some notion may be obtained from the circumstance that he received all three of the medals in the gift of the Royal Society. In 1820 he published an account of his new hygrometer—an instrument which, for the first time, rendered regular and accurate observations on the dryness and moisture of the air practicable. It has since been extensively employed in all climates, and has enabled hygrometry to take an exact and definite form. It still remains the only accurate instrument for making such observations. In 1823 appeared the first edition of his *Meteorological Essays*, of which he was engaged in revising proofs of the third edition at the time of his death. This work was the first synthetic attempt to account for meteorological phenomena as a whole, the known laws of which regulate the constitution of gases and vapours. In the following year (1824) appeared his essay on artificial climate in the *Horticultural Transactions*, the practical bearing of which on culture in general, and particularly of plants grown under shelter, is daily becoming better appreciated, and which, according to Dr. Lindley, has done more for the improvement of this art than any single circumstance besides. He received the society's silver medal for this paper. In 1830 and 1831 he published his new pyrometer, an instrument still the best for measuring high temperatures, such as those of fusing metals, and furnaces in general. The Royal Society deemed this an invention of such utility and importance, that they, in 1832, conferred on him the Romford medal for the most important discovery relating to heat that had been made throughout the civilized world during the three preceding years. In 1836 appeared a paper of his in the *Philosophical Transactions*, describing his valuable improvement in the voltaic battery, by which he shewed the means of obtaining a constant and unlimited supply of electricity. The importance of this discovery was recognised immediately throughout the whole scientific world. In appreciation of its merit the Royal Society, in 1837, honoured him with the Copley medal, for the most important scientific discovery of any description made in any part of the world during the previous year. Several other valuable papers appeared in the *Philosophical Transactions* for the following years, and for two of these he, in 1842, received one of the Royal medals.

THE LATE THOMAS DUNCAN, R.S.A. AND A.R.A.

Last week it was our melancholy duty to announce the departure from this world of that very distinguished artist, Thomas Phillips, esq. R.A. We have now to record, and certainly with no less feelings of regret, the unexpected decease of that highly-gifted painter, T. Duncan, of Gloucester-place, Edinburgh, at an unripe age, for he was only in his 39th year; and a few months since he appeared to possess a constitution, a frame of body, and a stock of health, mental and physical, sufficient for at least forty years to come; in fact, nothing in his appearance indicated the most distant appearance of an inferior constitution, yet an insidious disorder must then have set in. This, it appears, was an internal tumour, which fixed its action near the optic nerves, and, gradually affecting them, nearly reduced the sufferer to a state of blindness. This affliction was, however, by skilful treatment, nearly removed, when it appears the original malady attacked the head, and finally the brain itself, producing all the usual symptoms of brain fever, under which he gradually sunk, in defiance of all the efforts that his talented medical friends could devise to save his valuable life. And what adds to the bitterness of this affliction is, that he has left a widow and six helpless orphans wholly unprovided for. But for this state of things he is blameless. He was industrious, sober, and frugal, and had only for a few years received the reward of his talented productions. He was, in fact, twenty years of age before he commenced the elementary studies of art, and the strides he made towards excellence in painting were surprising, as his later works shew unequivocally, as, for instance, his Sir John Falstaff, Sweet Anne Page, &c.; the Entrance of Prince Charles Stuart into Edinburgh (engraved); the Cave Scene (of Prince Charles) in Glen Morison (which is now engraving by Ryall), &c. These display the powers of a mind highly endowed with pictorial powers of a very high order. The natural arrangement of groups in composition, correctness of drawing, truth of expression, a fine distribution of the masses in *chiaro 'scuro*, with an exquisitely sweet and masterly finish in working out the details, and a fine eye for harmony in colouring. Duncan came originally from the vicinity of Perth, and had but lately received an order from the Marquis of Breadalbane for a picture, for which the artist was to be paid 1,000*l*.—*Herald*.

MRS. GILBERT.

It is our painful duty to announce the death of Mrs. Gilbert, relict of Davies Gilbert, esq. M.P., F.R.S. and for many years president of that society. Mrs. Gilbert expired at the family residence in this place, on the evening of Saturday last, at an advanced age. The deceased lady, actuated by an earnest desire to improve the condition of the labouring classes, has for several years devoted her energies to agricultural affairs, and was a zealous supporter of the allotment system, which she carried into practical operation to a large extent on her estate in this parish and the neighbourhood. The benefits resulting from her benevolent proceedings we believe have fully realized the expectations which the supporters of this system anticipated. Self-supporting industrial schools have also been instituted by her, and the plan appears worthy of imitation. We fear her loss will be severely felt in this place.—*Sussex Express*.

GLEANINGS,

ORIGINAL AND SELECT.

MAGNIFICENT PRESENT TO HER MAJESTY.—The operative jewellers of Birmingham intend to present her Majesty and Prince Albert a valuable and unique specimen of their handiwork. The present for the Queen consists of an armlet, a brooch, a pair of ear-drops, and a buckle; and that for Prince Albert of a seal, key, and chain, after the substantial fashion of the "fine old English gentleman." The centre piece of the armlet is a diamond sprig on blue enamel, with a border of nine pearls, set in blue enamel, and surrounded with a wreath of acorns and oak leaves. The band is composed of solid gold, delicately elastic, and ornamented with the emblems of peace and plenty,

gracefully interwoven with the rose, the thistle, the shamrock, and the leek. The fastening-buckle is a ruby hand, similarly ornamented and studded with diamonds. The brooch has a centre similar to that of the armlet, with the addition of an outer border, with the rose, the thistle, and the shamrock most gracefully blended. The back is engraved, shewing the Warwick vase, surrounded with scroll ornaments and the national emblems. The ear-drops are made to match, and are massive, without being either heavy or laboured. The buckle is a blue enamel and gold, to match the armlet. Notwithstanding the variety of design and the multiplicity of incident which characterize the productions, they are yet simple and expressive in idea, and full of the most pleasing and profitable sentiment. The workmanship is elegant beyond description, and can only be appreciated by those who are initiated in all the intricate ramifications of the jeweller's craft. Accompanying the present there is an address to her Majesty, setting forth the grounds on which it is respectfully offered, and honestly anticipating that it may, in use, be made subservient to the revival of the trade. The address commences by stating the fact that the goldsmith trade is at present in a very distressed condition; then it shews that, from its nature, it depends much on royal patronage; next it gratefully acknowledges the Queen's considerate regard for all classes of her operative subjects—reminds Prince Albert of his patronage of the fine arts, and prays that her Majesty would wear the articles, that others may thereby be induced to copy her example. The remarkable fact comes out in this address, that no fewer than twenty-two trades or callings were engaged in the execution of these presents, while the operatives represent five thousand families, or twenty thousand persons!—*Birmingham Pilot.*

Zoological Gardens, Regent's-park.—It will be interesting to the lovers of natural history to learn that an American sea eagle (*Halicetus leucocephalus*) is now engaged in the process of incubation, the male occasionally taking his place on the nest, and shewing the utmost attention to his mate. A specimen of that extraordinary animal, the Australian ant-eater (*Echidna histrix*), the first that has been seen alive in Europe, has just been added to the collection.

An astrologer sent a letter to the *Bradford Observer*. The editor said he would believe that "there was something in astrology, if the writer could tell him whether he would ever insert the letter; and if so, when." The cunning astrologer replied that he had consulted the stars, and found that the letter would never be inserted. The editor, by way of undermining astrology, published the communication immediately; and the "wise man," having carried his point, "laughed in his sleeve."

Statistics of Suicide.—There were 901 ascertained suicides registered in England in 1840—viz. 618 males and 283 females; 28 of the male and 35 of the female suicides were less than twenty years of age. The proportion of the male suicides to 1,000,000 persons was 80, and of the female suicides 35.

The Eclipse of the Sun.—The annular eclipse of the sun on Tuesday morning, in consequence of the very cloudy state of the atmosphere, was but imperfectly seen. The only time that any portion of the obscuration of the sun was visible, was from 20 minutes past eight o'clock (about half an hour after the commencement of the eclipse) to half-past nine o'clock.

Monster Chinese Mortar.—The present age is considered by many as far advanced in the arts and sciences compared with former ages; but occasionally discoveries are made which place modern inventions in the shade when compared with the gigantic specimens known to have been in existence centuries ago. In the Royal Military Repository at Woolwich is a model of an Oriental piece of ordnance, the original at Beejapoor, in the East Indies, weighing 42 tons, and of another at Agra, weighing 23 tons, and capable of discharging a ball of 1,500 pounds weight. During the past week the Somerset ordnance sloop brought round from Devonport to the Royal Arsenal at Woolwich a Chinese brass mortar brought home in the *Cornwallis*, and weighing 8 tons 17 cwt. having a diameter of bore of two feet three inches, and a chamber of twenty inches, the depth of the whole being about five feet. The mortar was found in the bush in China, and partly concealed underground. It is composed of apparently very fine metal, and the trunnions being corroded to a considerable extent afford evidence of the mortar being of great age. It appears also as if the part where the vent is, which is very perfect and little worn, had been cast again and inserted in its present position. There is also an appearance of a nut and screw in the centre of the breach of the chamber; but if they are really what they appear to be, a large quantity of fused metal must have been poured into the chamber, as the top of the nut is even with the metal, and could not have been screwed into its present position. Some idea may be formed of the magnitude of the mortar, and the size and weight of shot or shells which it would require to be used in it, when it is known that the large guns cast about two years ago for Mehemet Ali, were only fifteen inches in diameter, and yet they required shot weighing upwards of 400 lbs.

Cheap Trip round the World.—There will soon be no such thing as an unexplored country. The rage for travelling, with more or less speed, has seized "each man and mither's son," and ere long the world will own no such thing as a novelty, unless it be an untravelled Englishman. All classes may now move to all quarters of the globe, and the grand tour already confers no distinction, when it may be made by the humble denizens of fortune in thousands. We have cheap trips of all sorts; and those to London, Birmingham, Bristol, and Hull are common and "plenty as blackberries." Similar projects in the direction of Portugal, Spain, Italy, and Greece will now become equally so, a jaunt to Paris having already opened the way in this direction. But why do we speak of such small affairs as these, when, as we have heretofore announced, an enterprising individual of Hamburg has arranged for a cheap trip round the world? This, no doubt, is but the beginning of a series of circumnavigations which will carry hordes of curious, eager, and inquiring Europeans into every corner and nook of the globe, civilized and uncivilized. If the nations will but have the sense to keep from war, the vast and wonderful changes in manners, modes, and customs effected in the past twenty-five years will probably be greatly exceeded by the advances of a quarter of a century now before us. The Hamburg expedition, we may observe, leaves that city on the 15th of August. The route has been so arranged as to secure a continual summer to the voyagers.—*Liverpool Albion.*

CRITIC OF INVENTIONS, ETC.

[Ingenious inventors of articles of use or ornament are as deserving of critical notice as is an ingenious author, and a knowledge of the true merits of inventions is equally interesting to the public. We purpose to supply an existing defect in critical journalism by devoting a division of The Critic to a fair description of, and honest judgment upon, any article seeking public patronage that may be submitted for notice.]

Polytechnic Institution.—Life Preserver.—We see every day new inventions added to the already numerous and valuable scientific models, works of art, &c., and among one of the most recent we with pleasure mention an excellent appendage to a coat, which makes it an admirable life-preserver. This coat is certainly a very happy idea, as a man runs no risk of being drowned by the upsetting of a boat, or having the misfortune of falling through the ice while skating, which so frequently happens, and for this it proves an immense advantage, for he would not only preserve his own life, but keep afloat several others till help could be obtained. The coat is not injured in appearance, as the air-bags are in the body of it, and are inflated by small blow-pipes, which the wearer can do in an instant, should he find himself suddenly immersed, and calmly and philosophically brave the impending danger in all the air-tight consciousness of security. We have seen very many inventions for security from drowning, and more particularly a belt, which, though very smart in its appearance, does not meet our approval, and reminds us of an anecdote related a few days since by a most distinguished and facetious Admiral, of an old tar who always provided himself with two pocket handkerchiefs, one good and the other bad, which he called blow and show; the belt, like the latter, looks very pretty displayed in a shop-window, but when, like the former, it comes to *blow*, there is nothing like Mr. Wilson's pilot-coat or jacket. All persons who may wish to see the experiment tried may have their curiosity gratified by visiting the Royal Polytechnic Institution, and may daily see the diver swimming breast high in the tank of the Great Hall. Numbers of gentlemen of the various yacht clubs have provided themselves with this most safe and useful garment.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of The Critic is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

Gloucester.—(*From a Correspondent.*)—Defeat of Mr. Rumball.—A short time since Mr. E. T. Hickes, a lecturer on Mesmerism, delivered a lecture on, and exhibited experiments in, Mesmerism at the Tolsey, Gloucester, on which occasion, at the close of the lecture, one of Mr. Rumball's adherents

handed a challenge to Mr. Hickes from Mr. Rumball to discuss the subject, and to test his cases before him. Accordingly, on last Thursday evening the discussion took place at the theatre, all the medical practitioners being invited to attend. A surgeon (Mr. J. P. Heane) was called to the chair; and four other gentlemen were appointed a committee (viz. Messrs. Clutterbuck, Hickes, Higgs, and Kendall, the two former of whom are surgeons, all residents of this city); two of whom were nominated by Mr. Rumball, and two by Mr. Hickes. They, together with Mr. Rumball, and many other medical gentlemen and students, were on the stage during the proceedings, Mr. Rumball being allowed to test any experiments he pleased.

The first person mesmerised was Mr. White, minister of the Countess of Huntingdon's chapel, a gentleman on whose veracity the strictest reliance could be placed. He sat down, and in five minutes his eyes closed, and his vain efforts to open them, when asked, were obvious to the audience. His limbs were catalepsed with equal success. On being questioned as to his sensations, he said that he first felt a weight over his eyes and forehead, and a stiffness in the limbs, insomuch that he could not rise from the chair when he attempted to do so. Mr. Rumball being satisfied as to the truth of this statement, two or three other citizens were asked to come forward, but refused, as they were apprehensive of danger. One of the committee then introduced Reuben Doyle, a lad who travels with Mr. Hickes. He sat down and within a few moments was fast asleep; two handkerchiefs were folded up as pads to cover each eye, and another handkerchief was tied over them by the committee. Mr. Hickes, surgeon, a member of the committee, held one arm, and Mr. Clutterbuck, surgeon, another of the committee, held the other, to test the raising and lowering the pulse by mesmeric influence alone. The statement of each gentleman being committed to paper, and then handed to the other members of the committee, the result was that their corresponding calculation, prior to Mr. Hickes making any passes, was a pulse of eighty. Several attempts were then made to mislead the patient by saying aloud, that the pulse was to be raised, and so forth; still it kept at eighty. One of the committee then held up a paper behind the boy, and of which he could not possibly be cognizant, with the words "raise the pulse." Mr. Hickes then made some passes over the region of the heart of the patient, and the corresponding testimony of the two surgeons holding the pulse was that it was accelerated to ninety-three. This the medical gentlemen described as a most important phenomenon. The boy being in a state of rigidity, Mr. Rumball, mistaking it for catalepsy, tested it as such by fastening a string about a foot in length, with a weight of some eight or ten pounds, suspended upon the wrist of one of the extended arms. The result was, that the arm continued in the same position for about a minute, and then gradually fell till the weight was within about three inches of the ground, the arm from the shoulder-joint retaining its rigidity, when Mr. Rumball advanced, and suddenly cutting the string which suspended the weight, the arm instantaneously took the position in which it was previously to the weight being suspended from it. The organ of self-esteem was then excited, the Mesmerist (who stood behind the boy) placing his finger over, but not touching the organ, and instantly the boy rose from his seat, and strutted with much assurance about the stage. The organ of firmness was then excited, and the patient was asked, "What are you doing?" (which, to prevent any collusion with the Mesmeriser, was the question agreed to be asked invariably when any of the organs were excited). His reply was, "What is that to you?" Several other organs were also excited with the same satisfactory result, Mr. Rumball, who held a phrenological bust, pointing to the respective organs on it to shew Mr. Hickes which he was to excite, so that the patient could not possibly be aware of their proceedings, and the audience were not informed what organs had been excited, till the results, respectively, were known. The experimentalist then extinguished the mesmeric influence in the usual manner.

The next patient called upon was James Meek, a little boy introduced by one of the committee, about ten years of age, a native of this city. The Mesmerist had never seen him before He took his seat, and in the course of half a minute was in a sound sleep. The Mesmerist then made a few passes, and called out, "James, where are you?" but he was speechless. Mr. H. then made a few reverse passes, and on the question being again asked, "James, where are you?" the boy replied, "I don't know, Sir." Other questions were put, which he readily answered. Mr. Hickes then wakened him, and the chairman, to satisfy the audience, inquired of the boy "if it was his wish or if he pretended to go to sleep?" He said "No." One of the committee then requested him to walk across the stage. Mr. H. then made a few passes down the legs, and the boy was desired to move, but though he strove hard to do so, he could not stir. Mr. R. then requested Mr. Hickes's permission to lift the boy, which Mr. H. consented to. Mr. R. endeavoured to raise him, but was unable, although the boy was of very slender make; he then actually took hold of the body of the boy, and tried, by endeavouring to twist it, to force his legs from the floor, but this attempt was equally vain; and such was the agony it caused, that the boy burst into tears and his nose bled profusely. At this part of the proceedings Mr. R. was loudly hissed for his rough usage. Mr. H. and Mr. R. then respectively deduced arguments on either side, at the conclusion of which one of the committee proposed a motion to the effect that the meeting was satisfied that Mr. Hickes's experiments had been successful, and that the doubt as to his veracity had been entirely removed. On a show of hands, the majority was declared to be in favour of the motion, there being but two or three dissentients, although the theatre was densely crowded; and the majority of the audience left the theatre in the full conviction of the truth of Mesmerism.

The following graphic description of some of Mr. SPENCER HALL's experiments is, we believe, from the pen of WILLIAM HOWITT, and was published in the *Atlas*:—

MR. SPENCER HALL, THE MESMERIST, IN LONDON.—Mr. Spencer T. Hall, who, we hear, intends to deliver some lectures on Mesmerism in London and the vicinity, on Monday evening, at a large party at the house of Mr. and Mrs. William Howitt, Clapton, showed several striking experiments in that science, to the high interest and satisfaction of the company assembled, amongst whom were a good many persons of literary and scientific distinction. The first was upon Henry Wigston, a boy of about fifteen years of age. This boy, who has been from an early age suffering from an affection of the head, which, besides the constant pain induced, had stunted his growth, destroyed his appetite, and threatened to terminate seriously, had been for some time under Mr. Hall's care on that account. By the regular application of the mesmeric influence, all these alarming symptoms have vanished. He has continued entirely free from pain, he has recovered his appetite and health, his countenance has in a great measure resumed its liveliness and intelligence of expression, and, in a word, all those who know him regard him as completely recovered by mesmeric aid. But in the course of this process he has become thoroughly subjected to Mr. Hall's mesmeric influence. He is thrown in a few seconds, by a mere pressure of the hand, into the mesmeric sleep, and in this responds to many phrenologic touches in the most beautiful and extraordinary manner. The effects produced on him by music are in particular striking. They throw him into attitudes corresponding to the sentiment of the piece played, which could only be acquired by a first-rate actor, after long and arduous practice, if they could be reached at all, and which would form the finest models for the sculptor or painter. His countenance undergoes equal changes, and at times acquires a pathos, a tenderness, a sublimity, or an expression of fun, that are singularly beautiful. Several pieces were played by a German gentleman present, which he could not possibly have heard before, but to the spirit of which he responded in the most inimitable manner, being sunk into sadness, raised into holy adoration, and kindled in an energy of martial or patriotic ardour, accompanied by the finest correspondent attitudes and action. His organ of imitation being tested, he threw back any sound issuing from the company as the most perfect echo would do, as a rock or a wall having the power to fling back sound would do. He was addressed in various languages, and threw back every sentence with the most perfect pronunciation, and generally without the omission of a single syllable. While the company were occupied in conversation on this matter, and he was left standing unobserved by the majority, those who had kept their attention upon him saw, to their astonishment, that he continued to reflect all mixed and multiform sounds that arose from their conversation. It was now a strange murmur, now a clear utterance of a sentence, as some one spoke out louder and more distinctly than the rest. Coughs, laughs, and even a low whistle, introduced by a silent watcher of him, all had their place. After the manifestations made by this interesting boy, a servant girl, introduced by her master, a medical man, at her own request, as she had not been very well, and thought mesmerising, from what she had caught from conversation in her master's house, would do her good, was in a short time thrown into the Mesmeric sleep, and on the playing of a lively air began to beat time with her feet, and attempted to dance. This young woman appeared naturally agitated on being placed in the midst of so large a company; her pulse being felt by a medical man, was 120, but when in the mesmeric state it was found to have sunk to its natural beat of 75. The most decisive case, however, was the third and last. It was that of a gentleman of the party, whose character and position in society place him far beyond any suspicion of feigning or acting. He had never been mesmerised before, or attempted to be. He was in about ten minutes thrown completely into the mesmeric trance. His arms rendered rigid as two poles, and extended at length, so that it required the utmost force to bend them down in any degree, and so that the operator, by forcibly using one of them as a lever, swung his

whole body round in a perfect gyration. The gentleman was internally conscious, and gave perfectly clear answers to any questions, but though entreated by Mr. Hall to open his eyes, could not in the least do it. His arms were then released from their rigidity, and one of them, on his grasping a walking cane by the middle, was rendered again so rigid, that he could not let it fall, though requested earnestly to use all his energy to do so. On being recalled to full possession of his limbs and waking consciousness, he expressed himself highly delighted with the sensations it had occasioned him, and appeared rather refreshed and enlivened by it than otherwise. This case gave universal gratification even to the most sceptical, and the whole of Mr. Hall's demonstrations were, even by the members of the medical profession, of whom several were present, pronounced to be highly satisfactory. Mr. Hall gave moreover a sketch of the causes which had led him to practise Mesmerism, which added greatly to the pleasure of the spectators.

LEICESTER.—(From a correspondent.)—Seeing in your journal an account from a correspondent, of some mesmeric experiments with metals, I beg to send you a brief account of a few experiments I have made on the same subject, the results of which, however, *do not agree* with those of your correspondent, and it is for that reason I send them, as I think that it is only by the accumulation of a variety of facts that an explanation will be found. The patient is a boy of about fourteen, of a sanguine temperament, and displays all the usual phrenological and cataleptic phenomena in great perfection. No single metal appears to have any effect upon him, not even gold. *Any two* metals in contact have a most decided and powerful effect. I have tried with gold, silver, copper, zinc, and iron. If any one of these is in the patient's hand, on being touched with any other he immediately drops it, complaining that it hurts and burns him. He can hold any two in different hands, or in the same hand if they are not allowed to come in contact with each other. Wood or stone with a metal produces no effect. From these facts I think it appears a fair conclusion, that the effect is produced by galvanic action to which, in the mesmeric state, the body appears extremely susceptible.

Any two metals in contact with each other and held in the hand do undoubtedly, by means of the moisture of the hand, form a galvanic circuit, and a galvanic circuit cannot be formed without two metals, or two different fluids.

The effects of gold alone, or any single metal, which I have not witnessed, must be owing to a different cause.

The patient who exhibits the phenomena shews the sympathy of feeling very distinctly. If three or four persons take hold of hands, and are connected with him through me, on the last person being pinched he instantly complains and exhibits most unequivocal signs of feeling.—ALFRED R. WALLACE.

BOOKSELLERS' CIRCULAR.

No incident of interest calls for special notice this week.

It is pleasant to be enabled to announce that the change in the mode of publication of THE CRITIC has given general satisfaction. Very few indeed (only eighteen) of our old subscribers have withdrawn in consequence, and there has been a large and gratifying influx of new ones.

It will be observed that the present number also exceeds the standard size. Whenever advertisements or press of interesting matter require it, the additional pages will be given as now, the object of the conductors of THE CRITIC being influence rather than profit.

LITERARY INTELLIGENCE.

THE LATE SYDNEY SMITH.

TO THE EDITOR OF THE MORNING CHRONICLE.

SIR,—As publishers for the late Rev. Sydney Smith, we have been authorized to state that the "Memoirs" of that distinguished person, with selections from his works, announced in your paper of (this day) the 26th instant, as about to be published by Mr. Bentley, will, if they appear, be wholly without the sanction of his family; and we have further to add, that measures will be taken to prevent the copyright of his works from being encroached upon. We hope to be able speedily to announce the publication of a memoir of Mr. Sydney Smith, written with the full concurrence and assistance of his family and friends. We are, sir, your obedient servants,

LONGMAN, BROWN, and Co.

THE QUARTERLY REVIEW, No. 150.—We do not notice this number of the best-circulated review with the view of enumerating its nine articles, the selection of which we must confess is not entirely to our taste, but in order to draw the attention of our readers to an article on the poems of Mrs. Butler (late Fanny Kemble), which, if the style do not deceive us, is from the pen of Miss Rigby, the talented authoress of the *Letters from the Baltic*, which delightful publication, by the way, now forming one of the "Home and Colonial Library," we strongly recommend to such as have not yet perused it. We must confess that we felt flattered, on referring to our review of the same work, to find such a similarity of sentiment between Miss Rigby and ourselves, and to see the poems, which we *first* of any periodical in England introduced to the favourable notice of our readers and selected for their beauty, again adorning the pages of the *Quarterly*. Of the love verses selected and praised so highly by us, "I would I knew the lady of thy heart;" "O turn those eyes away from me!" &c. &c. the reviewer says—"It is a long time since we have met with any love verses equal to these. We pity the oldest who does not feel young again as he reads—who does not also feel the warm blood mantle?" Such community of ideas and views between *us* and the *first literary periodical* of the day must be gratifying to our many kind friends, while to the public it must afford a striking proof of the manner in which we are fulfilling our pledge, so often given and again repeated, to *seek* out merit and sound its praise, regardless whether it blaze on in the magnificent tomes of Messrs. Longman or Murray, or in the more humble though not less praiseworthy publications of a Clarke or a Chambers.

BIBLIOTHECA SUSSEXIANA.—Lately, Messrs. Evans, of Pall-mall, commenced the sale of the fifth part of the library of his late Royal Highness the Duke of Sussex. This part consists of the collection of books made by the late Duke in the several departments of poetry, drama, polygraphy, Latin classics, belles lettres, biography, law, and bibliography. There are a number of rare and curious copies of books, not only in English, but likewise in foreign literature; such as a first edition of Shakspere's Plays (printed in 1623); a first edition of "Cicero de Officiis, et Paradoxa" (Mogunt. Fust et Schoyffer, 1465), &c. Yesterday's sale included some of these rarities, and several of the lots realized high prices, and were objects of a good deal of animated competition. Among these the following may be mentioned:—(115.) "Ciceronis Opera Omnia," 9 vols. most beautiful copy, ruled, in old blue morocco, gilt leaves, from Renouard's collection, said to have been formerly Maioli's copy. Par R. Steph. 1543-44, 6*l*. 2s. 6d. (136.) "Auctores Classici in Usum Delphini," in all 63 vols. in calf, with joints and gilt leaves. The Rev. Dr. Douglas's copy, 22*l*. 10s. (182.) "Apulei Opera," first edition, very rare, in blue morocco, with morocco lining, joints, and gilt leaves, Romæ in Domo Petro de Maximo (per Sweynheim et Pannartz), MCCCCLXIX. "The curious," says Dr. Dibdin, "are sufficiently aware of the great value and rarity of this first impression. This is the only ancient edition which presents us with the legitimate text of the author uncastrated by inquisitional authority," 16*l*. (242.) "Cicero de Officiis, et Paradoxa," first edition, very rare, in old red morocco, with morocco linings, gilt leaves, Mogunt. Fust et Schoyffer, MCCCCLXV. This edition derives an additional interest from being the first classical work ever printed. At the end is a leaf containing the ode of Horace, "Diffugere nives," 16*l*. 16s. (243.) "Cicero de Officiis, et Paradoxa," first edition, printed upon vellum, extremely rare; at the end is the Ode of Horace; the last eight leaves are discoloured. Moguntiæ, MCCCCLXV. 31*l*.

Monday concluded the sale of the fifth part of the library of the late Duke of Sussex. This section of that curious collection consisted of works in poetry, the drama, polygraphy, Latin classics, belles lettres, biography, law, and bibliography. The sale, which commenced on the 22nd ult. has lasted twelve days. The following are a few of the more curious and interesting lots of the last days:—(2,744) Catalogue of the library of Miss Currer, by Stewart, privately printed, 1833—5*l*. 5s. 6d. (2,760) Dibdin's Bibliomania, illustrated with a series of portraits, and a portrait of Dr. Dibdin, drawing by Behnes, bound in five volumes, blue morocco, with joint and gilt leaves, 181.—9*l*. 15s. (2,763) Dibdin's Bibliographical Decameron, 3 vols. large paper, proof plates, uncut, 1817—17*l*. 5s. (2,889) O'Conor's descriptive Catalogue of the MSS. in the Stowe Library (the Duke of Buckingham's), 2 volumes, and appendix. Privately printed, 1818-19—11*l*. 15s. (2,893) Pettigrew's Sussexiana, a Descriptive Catalogue of the Bibles and Theological MSS. in the Library of the Duke of Sussex, 2 vols. in 3, large paper, with three sets of plates, plain India paper and coloured, vols. 1 and 2 sumptuously bound in blue morocco by Clarke, vol. 3 in boards (1827-39). This copy is unique, being the only one which has the plates coloured—15*l*. 10s. (2,910) Assemanni Bibliotheca Orientalis, 4 volumes, Romæ, 1719—8*l*. 5s. (2,928) George III. Bibliothecæ Regiæ Catalogus, 5 vols. London, 1820; catalogue of maps, prints, drawings, &c. in the library of George III.

1829, together 6 vols. red morocco, with joints, and gilt leaves —20*l.* (2,929) Gray (Lord), Catalogue of the Gray Library at Kinfauns Castle, by D. Morrison, with lithographic borders, privately printed at the Kinfauns Press. Presentation copy, with an autograph inscription, blue morocco, gilt leaves, 1828—5*l.* 15s. 6d. (2,954) Todd's Catalogue of the Archiepiscopal MSS. in the Library at Lambeth Palace. Privately printed, large paper, very scarce, bound in blue morocco, with joints, gilt leaves 1812—8*l.* 10s. (2,956) Walpole's Catalogue of Royal and Noble Authors, 2 vols. 12mo. inlaid in folio, and illustrated with 140 portraits, prints, and drawings, in Russia, gilt leaves, 1759—5*l.* 10s. The produce of the 12 days' sale was altogether 2,557*l.*

Shaksperian Documents in Worcester.—An erroneous statement has been published by some of our contemporaries, to the effect that the writ issued against William Shakspeare, by Sir Thomas Lucy, the original *Justice Shallow*, for deer-stealing, is in the possession of the present Bishop of Worcester. From inquiries made, we cannot ascertain that any such document exists, but suppose the statement originated in the fact that the direct evidence of Shakspeare's marriage with Ann Hathaway is in a bond discovered in the registry, in this city, and which seems to have been given for the security of the bishop if he granted a license for the marriage, the banns being only once proclaimed. An antiquary of some celebrity has suggested to us that it is not Sir Thomas Lucy's *writ*, but his *writing*, which is in the Worcester registry, and states that some time ago, when searching some documents there, of about the date of September, 1583, he discovered the autograph, of which he made a *fac-simile*. We observe that at a recent meeting of the Cheltenham Archæological Association, a highly curious contemporary manuscript of Shakspeare's play of *Henry IV.* was exhibited by the Rev. L. Larking, by whom it had been discovered in the muniment chest of Sir Edward Dering, Bart. of Surrenden-Dering, in Kent, one of whose ancestors had interlined and altered the original copy in many places. This manuscript is, we believe, shortly about to be published by the Shakspeare Society of London.—*Worcester Journal.*

The Shakspeare Society.—The fourth annual meeting of this society was held on Saturday, the 26th ult. in the council-room of the Royal Society of Literature, St. Martin's-place. Mr. J. P. Collier presided, in the absence of the president, the Marquis of Conyngham. The report of the Council was read by the secretary. It congratulated the members on the continued prosperity of the society, and then went on to enumerate the various works which had been published during the past year, and to point out others which were in preparation for the present year. The report of the auditors was next read, from which it appeared that the receipts during the last year amounted to 787*l.* 13s. 8d. including 270*l.* 8s. for subscriptions for the current year, and 278*l.* arrears of subscriptions; whilst the expenditure had been 486*l.* 10s. 7d.; thus leaving a balance in hand of 301*l.* 3s. 1d. The report was unanimously adopted, and a vote of thanks passed to the council and officers of the society. Sir Andrew Barnard, Mr. B. Botfield, M.P. Mr. J. Forrester, Mr. Macready, and Mr. S. Naylor were elected on the Council for the ensuing year, in the room of Mr. J. Bruce, Mr. B. Field, Mr. J. Heywood, Mr. J. Oxenford, and Mr. T. Wright, who retire. Thanks having been given to the chairman, the meeting separated.—*Globe.*

Percy Society.—The anniversary meeting was held last week in the rooms of the Royal Society of Literature, Lord Braybrooke, president, in the chair. The report announced a very favourable improvement in the operations of the society. The receipts of the past year were 379*l.* 10s. 6d. and there remained a balance in hand of 23*l.* 17s. 4d. Twelve publications had been issued during the past year, and several others were in preparation. The thanks of the society were awarded to the University of Cambridge for the kindness with which the manuscript of the "Seven Stages" was placed at the disposal of the editor, and for the permission to print from it.

Zoological Society.—On Tuesday, the 29th ult. the annual meeting of the members of this society was held at Willis's-rooms, King-street, St. James's; the Earl of Derby, the president, in the chair. The receipts amounted to 11,997*l.* and the expenditure to 10,999*l.* Amongst the donors of preserved specimens to the museum were Lord Saye and Sele, Colonel Owen, the Norwegian consul, and the Countess of Mansfield. Her Majesty had presented to the menagerie a beautiful Albanian deer, and many valuable animals had been received from Colonel Warrington (Consul-General at Tripoli), Professor Schomberg, Captain Chalmers, the Hon. Miss Hardy, the Hon. Miss Singleton, Captain Richardson, the Hon. William Ashley, &c. The plan recently adopted of exposing the carnivora to the open air, instead of keeping them in dens warmed by artificial heat, had been attended with the best results, there having been a diminution in the number of deaths, and a great improvement in the health of the animals. The report was adopted, after which the officers for the ensuing year were appointed, and the meeting separated.

London University.—Distribution of Prizes.—On the 30th ult. the annual meeting for the distribution of prizes in the medical department took place, at the Medical College, Gower-street, Dr. Paris, President of the Royal College of Physicians, in the chair. There were also present Lord Auckland; Sir Isaac Lyon Goldsmid, bart.; Mr. Christie, M.P.; and other gentlemen. Dr. Williams, the Dean of the Faculty, read the report, from which it appeared that 306 pupils were now attending the medical classes, 94 of whom commenced their studies this session at the college. Several had distinguished themselves at the examinations for honours in the University of London. Prizes were then distributed for proficiency in medicine, anatomy, physiology, chemistry, midwifery, and surgery, the successful candidates for the first prizes being Messrs. Littleton, Ransom, Wilks, Henry, Park, Wood, Cadge, and Jackson. As the candidates for the clinical medals had not finished the requisite papers, no prizes were awarded. Dr. Paris congratulated the successful competitors on their proficiency, and complimented the professors on the subjects taught, and the manner in which information was communicated. On the motion of Lord Auckland, seconded by Mr. Christie, M.P. a vote of thanks was unanimously passed to the chairman, who briefly acknowledged the compliment.

Horticultural Society.—The 36th anniversary was held last week, at the rooms of the society, in Regent-street, Mr. R. H. Solly, F.R.S. in the chair. There was a good attendance of members, among whom was Mr. Maher, the father of the society. The report of the auditors announced a very great improvement in the finances of the society, the outstanding debt having been reduced to the amount of 1,579*l.* 5s. 9d. and the income improving in a very satisfactory state. The property belonging to the society in Regent-street and Chiswick much exceeded the liabilities. The total receipts of the past year were 7,352*l.* 13s. 4d. and there remained a balance in hand of 250*l.* 9s. 3d. The amount of debt standing due was stated as 9,557*l.* 19s. The receipts of the garden exhibitions for the past year were 5,621*l.* 8s. 6d.; the expense of the medals, 902*l.* and the profits resulting therefrom were 2,518*l.* 14s. The Duke of Devonshire was re-elected president; Mr. Thomas Edgar, treasurer; and Mr. J. R. Gowen was appointed secretary, in the room of Dr. Henderson. The other vacancies having been filled up in the council, the meeting adjourned.

Rights of Authorship.—The *Presse* states that during his residence at Paris, Marshal Bugeaud received a visit from the deputies chosen by the dramatic authors, who demanded that the contribution levied on the French theatres for the benefit of dramatic writers should be paid also by the theatres of Algeria. Marshal Bugeaud replied that on his return to Algiers he would occupy himself with their demand, and that a favourable answer might be expected.

The Scotch papers announce an addition to the periodical literature of that country, remarkable as being the first of the family in which the lunacy of editor or contributor is frankly avowed. The Governor of the Royal Lunatic Asylum of the town of Crighton has conceived—as a means of appealing to the early sympathies and intellectual memories of the more highly educated among his patients—the design of a publication to be edited and printed entirely by themselves; and under the significant title of *The New Moon*, the first number has just appeared, containing a variety of fugitive poetry, short prose articles, and a treatise of some length on the influence exercised by parents over their children. The pecuniary proceeds are to be applied for the comfort of the sick poor of the same establishment; and the director declares that some of his patients have already experienced the beneficial effects of this diversion to their brooding thoughts.

A valuable collection of books, presented by the French Chamber of Deputies to the Congress at Washington, has just been sold by auction, at the Custom House of New York, to defray the duties, which no party had taken the trouble to satisfy. It will, probably, create no great soreness, happening where it has, —the Senate having taken the necessary steps to disavow all participation in the insult on the part of the Americans or their representatives, and the press being unanimous in its indignation. The directing committee of the Congressional Library has been ordered to investigate the causes and authors of this singular mistake, to reclaim the books, and to offer thanks and explanations to the French government. Speaking of the interchanges of national literature, we may mention a fact, stated by the Brussels *Globe* in proof of the extraordinary activity of the Belgian literary pirates. The house of A. Wahlen and Co. although unable, it is said, to procure a copy of the *History of the Consulate and the Empire* until the 15th ult. published the first numbers of that work, in four different editions in the course of the 16th.

VISITORS TO THE ROYAL EXCHANGE.—Mr. Wordsworth and Mr. Rogers, the celebrated poets, visited the Royal Exchange yesterday, and went over the extensive establishment of Lloyd's. Although the author of the "Pleasures of Memory" is well known in the city from his connection with the bank of Rogers, Olding, and Co. still the visit of "Sam Rogers," as he is familiarly, but with respectful deference, called in business, with his cotemporary, Wordsworth, could not fail to attract attention, whilst to those who have perused the works of both, an introduction to, or the mere opportunity of being a silent observer of such well known and esteemed authors must have been highly gratifying.

FOREIGN LITERARY INTELLIGENCE.

Professor WOLF, from Jena, has spent some time lately in Vienna, much to the delight of the literary circles there. The authoress and poet, KAROLINE LEONHARD-LYSER, now PIERSON, has, we hear, taken up her abode in the Austrian capital. Readings have lately become, we may say, the fashion in Vienna. Dr. BEER reads in public his treatises on medical jurisprudence, and with no want of an audience; SELIGMAN his on the history of medicine (some valuable notices). Dr. ETTINGSHAUSEN also read, before a small, but select audience, his writings on practical physics and electricity. One of the most interesting works which the Vienna press has lately published is Dr. VON WURTH'S *Comparison and Examination of the Prisons of France, Belgium, Switzerland, England, and Scotland*. The author has devoted much time lately to travelling, and investigating the prison system of these countries. A sign of the times is to be observed in the numerous compilations upon various branches of the state administration, political legislation, and the military system, which have appeared of late. It is an evidence that people are endeavouring to throw light upon darkness, to reduce confusion to order. One step forward compels several more, and can hardly fail to produce some good results. One work of this kind is that of Count VON BARTENSTEIN, on *The Political Administration*. The second edition of C. DULLER'S historical work, *The Archduke Charles*, has also been published; the remaining parts are expected with much anxiety. DULLER'S *Maria Theresia* has found a rival in another work of the same name, from the pen of SCHIMMER, the editor of a history of Vienna, which is said to be written with great industry, and to be an excellent book of reference. SCHUSELKA'S popular romance, *Karl Gutherz*, a story of Viennese life, has reached another edition. It is rare to meet with a book written with so much comprehension of local character, so much sound understanding and poetical feeling, and withal so wholly unpretending. Other Viennese writers should take example from it. The *Austria* of Professor SALOMON and the historian KALTENBANK, edited by both conjointly, is worthy of mention. A part of this work particularly interesting, is that referring to national distinctions and peculiarities. KALTENBANK has likewise published *Mariensagen der österreichischen Monarchie*. They contain much poetical matter. J. N. VOGL is one of Austria's most fruitful poets; he has lately published a collection of legends, entitled the *Karthausernelken. Little Memoirs, &c. of Vienna*, is a clever and amusing book by Fr. GRAFFER. GRAFFER is, as an antiquarian and historian, equalled by few. In this work he has preserved the reminiscences of an interesting life, a life, too, rich in experience of many kinds, in acquaintance with many celebrated persons; all this he has worked up, in his peculiar and brilliant style, into a volume of no small attraction. He is the editor of the *Austrian National Encyclopædia*, and of an excellent literary journal. Another work worthy of being referred to consists of two volumes of tales, &c. under the title of *Studien*, by ADALBERT STIFTER, a man of well-known talent. In Leipsic, similar readings to those above described to have taken place during the past winter, by various professors, &c. WACHSMUTH, on history, C. VOGEL, and others; Dr. JAHN, on astronomy; and BERNHARDI, a nephew of LUDVIG TIECK, long a resident in Leipsic, and a supporter of the theatre and drama, has commenced a series of dramatic readings *à la* TIECK and HOLTEI. In Leipsic this seems a hazardous experiment, considering how few persons here have time and inclination to carry out designs of this nature; those who admire tragedy and comedy would prefer seeing to mere hearing; and even if BERNHARDI produces only dramas now past acting, the plan hardly seems to have attraction enough to secure a large audience. The number of literary characters here has much increased within the last few months. The appearance of a political journal, *The Herold*, called also for the appearance of *Lüders*. A young poet from Austria, MORITZ HARTMANN, was likewise here, whose poems are at present in the press. HERR VON ROSEN also seems to be settling down from his adventurous life into a peaceable citizen of Leipsic.

REGISTER OF NEW PUBLICATIONS,

From April 16 to May 2.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Arnold's, Dr. Life, by Stanley, 5th ed. 2 vols. 8vo. 1*l.* 4*s.* cl.
——— Fragment on the Church, 2nd ed. with Appendices, 8vo. 6*s.* 6*d.* cl.
Barnes on Job, 2nd ed. improved, 2 vols. 12mo. 12*s.* cl.
Breach of Promise, a Novel, in 3 vols. post 8vo. 1*l.* 11*s.* 6*d.* bds.
Catena Aurea, Vol. IV. Part II. 'St. John,' 8vo. 7*s.* cl.
Christian Philosophy, by the author of 'Sketches of Sermons,' post 8vo. 4*s.* 6*d.* cl.
Crescent and the Cross, The, by E. B. G. Warburton, 2nd ed. 2 vols. post 8vo. 1*l.* 1*s.* cl.
Cruchley's New Picture of London, with Six Views, for 1845, 18mo. 5*s.* cl.
Evidences of Christianity, by Professor Smyth, 12mo. 5*s.* cl.
Exposition of Vulgar and Common Errors, adapted to the year 1845 (Small Books on Great Subjects, No. VIII.), fc. 8vo. 3*s.* 6*d.* cl.
Feasts and Fasts, by Edward V. Neale, fc. 8vo. 9*s.* 6*d.* cl.
Finden's Beauties of the Poets, prints, imperial 4to. 5*s.* sd. proofs, atlas folio, 8*s.* sd.
Fortunes of Roger de Flor, or the Almugavars, 3 vols. post 8vo. 1*l.* 11*s.* 6*d.* bds.
Gouraud's Art of Memory, royal 8vo. 14*s.* cl.
Hansard's Pocket Peerage for 1845, fc. 8vo. 5*s.* cl.
Highlands, The, and other Poems, by the Rev. J. G. Small, imperial 32mo. 2*s.* swd. (Clarke's Cabinet Series.)
History of Margaret Catchpole, a Suffolk Girl, new ed. 2 vols. fc. 8vo. 12*s.* cl.
Illuminated Prayer Book, Part I. royal 8vo. 5*s.* 6*d.* swd. to be completed in eight Parts.

TO SUBSCRIBERS.

A Portfolio, for preserving the current numbers of THE CRITIC *for reading and reference, on a new and convenient plan, may now be had at the Office, or by order of any bookseller in the country, price 4s. 6d.*

The subscription for the half-year, if paid in advance, for a stamped copy, to be sent regularly by post, is 8s. 6d. only, which may be transmitted in penny postage stamps.

NOTICE.

The first volume of THE CRITIC *will be neatly and strongly bound for 4s. if transmitted to the office. The price was last week stated at 5s. by an error of the press. Arrangements are made for preserving perfect uniformity in the binding of all the subsequent volumes. The stamped copies may be transmitted by post in a parcel open at the ends, with a mark of identification of which the publisher should be advised in a letter, with directions how he shall return the volume when bound.*

ADVERTISEMENTS.

COMPOSITIONS FOR WRITING WITH STEEL PENS.

STEPHENS'S WRITING FLUIDS.—These Compositions, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary ink. In warm climates they become essential. They consist of—

A BLUE FLUID, changing to an intense black colour.

PATENT UNCHANGEABLE BLUE FLUID, retaining a deep blue colour.

A SUPERIOR BLACK INK, of the common character, but more fluid.

A SUPERIOR CARMINE RED, for contrast writing, adapted for Artists, and those who use water-colours.

A CARBONACEOUS RECORD INK, unchangeable by any chemical agent.

A MECHANICAL RULING and PAPER ARCHITECTURAL DRAWING INK. Superior to the best Indian Ink for the above purposes, and has the advantage of being ready for immediate use. It rules without breaking, and follows the brush or ruling-pen with the greatest facility.

Bottles at 3d. each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense.

Also, a new kind of MARKING-INK for Linen, and INKHOLDERS adapted for preserving Ink from evaporation and dust.

Prepared by HENRY STEPHENS, the inventor, 54, Stamford-street, Blackfriars-road, London, and sold wholesale and retail by booksellers and stationers, in bottles at 3d., 6d., 1s., and 3s. each.

CAUTION.—These unchangeable BLUE FLUIDS are Patent Articles. The public are, therefore, cautioned against imitations, which are infringements, to sell or use which is illegal.

A verdict of 2,000 dollars, liable to be increased to 6,000 dollars, having been obtained against parties who have been convicted of selling imitations of this article, in violation of the patent right of the inventor, in the United States of America, and several notices having been repeatedly issued to caution persons against infringing those rights in this country, by making or selling this Article, the Proprietor issues this as a final notice, which, if disregarded, he will be compelled to institute proceedings at law against all who may be committing these illegal acts.

HENRY STEPHENS, 54, Stamford-street, Blackfriars-road, London.

STEPHENS'S SELECT STEEL PENS.

The utmost possible care having been bestowed upon the manufacture of these articles, so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

Schoolmasters and the Trade supplied on liberal terms.

THE CHEAPEST PERIODICAL IN THE WORLD!—THE WELCOME GUEST OF EVERY HOME!

THE FAMILY HERALD is not only the cheapest but the most amusing and instructive Literary Miscellany ever published. It consists of interesting Tales, extraordinary Adventures, wonderful Narratives, remarkable Events, moral, familiar, and historical Essays, select Poetry, instructive Biographies, comic Sketches, amusing Allegories, the wisest Sayings of the wisest Men, important Facts; useful Advice for self-improvement, salutary Cautions, scientific Discoveries, new Inventions, hints to Housekeepers, practical Recipes, diverting Sports and Pastimes, ingenious Puzzles and Riddles, facetious Sayings, humorous Jokes, &c. &c. affording agreeable and harmless recreation for all the members of a family. Wisdom and cheerfulness, mirth and propriety, are here pleasingly blended together, in a manner never hitherto attempted; and while morality is inculcated with the attractive ease of familiar conversation with an old friend, useful lessons are taught without the aid either of austerity or a stern countenance.

This wonderfully cheap Supplement to every newspaper is adapted for all classes, tastes, and ages, grave or gay, rich or poor. It contains something of everything; facts and philosophy for gentlemen, hints and entertainment for ladies, questions and problems for youth. A Publication combining knowledge with gladness has long been wanted; and as a proof of the high popularity of the *Family Herald*, it has in a very few months become a general favourite, and the most extensively circulated of the English Periodicals, having met with a hearty welcome in every nook and corner of the Empire—being equally encouraged in the Mansion and the Cottage, the play-ground and the workshop.

No politics—no party spirit—no controversy—no personalities—no ribaldry.

Sold in Weekly Numbers at one Penny, and in Monthly Parts at Sixpence; and may be had, by order, of every bookseller and dealer in Periodicals throughout the British dominions. A single trial is earnestly solicited.

London: published by G. Biggs, 421, Strand.

The FAMILY HERALD is the only English periodical which contains all that has yet appeared in Paris of Eugene Sue's highly interesting tale of "The Wandering Jew." Order Parts 15 to 22, price 4s. neatly bound; or Nos. 63 to 99, price 3s. 6d. unbound.

THE GREAT GUN—No. XX.—This day—Thirty-six Columns of Satire, Caricature, Fiction, Literature, Science, Wit, Music, the Drama, Fun, Frolic, &c. Price 3d. stamped 4d. No. XX. contains an unrivalled combination of Artistical and Literary talent—The French Hogarth—The Yankee Illustrator—The Colonial Contributor—and British Caricaturists—Removal of Jewish Disabilities, Illustrated—The Siege of the old Punch-office by the GREAT GUN—The Easter Spectacles and Burlesques—The Lawyer Settled by Law—The Jew and the Premier—The Railroad Bubbles—The Experiences of a Commercial Gent—Autobiography of One who belongs to no Party—The Great Agitator's Letter to the GREAT GUN—The Life of Choddlings Bobble, by Trotty Veck; and Music, Drama, Poetry, &c. &c.

Office, 63, Fleet-street. Volume the First will be ready in May. The Weekly Numbers in Monthly Parts, Price One Shilling Parts I. II. III. IV. and V. now ready.

THE PERFECT SUBSTITUTE FOR SILVER.—The high estimate formed by the public during the ten years RIPPON and BURTON'S chemically purified material has been before it (made into every useful and ornamental article usually made in silver, possessing, as it does, the characteristic purity and durability of silver), has called into existence the deleterious compounds of "Albata Plate," "Berlin Silver," and other so-called substitutes; they are at best but bad imitations of the genuine articles manufactured, with the view of satisfying the purchaser, by RIPPON and BURTON, and sold only by them.

	Fiddle Pattern.	Threaded Pattern.	Victoria Pattern.
Table Spoons and Forks, full size, per dozen	12s.	28s.	30s.
Dessert ditto and ditto, ditto	10s.	21s.	25s.
Tea ditto and ditto, ditto	5s.	11s.	12s.
Gravy ditto	3s.	6s.	7s.

NICKEL ELECTRO-PLATED.—The REAL NICKEL SILVER, introduced and made only by RIPPON and BURTON, when plated by the patent process of Messrs. Elkington and Co. is beyond all comparison the very best article, next to sterling silver, that can be employed as such either usefully or ornamentally. In the lengthened and increased popularity of the material itself, and the high character of the method of plating, the public have a guarantee that the articles sold by RIPPON and BURTON (and by them only) are, as it regards wear, immeasurably superior to what can be supplied at any other house, while by no possible test can they be distinguished from real silver.

Tea and coffee sets, waiters, candlesticks, &c. at proportionate prices. All kinds of re-plating done by the patent process. Detailed catalogues, with engravings, as well as of every ironmongery article, sent (per post) free.—RIPPON and BURTON, 39, Oxford-street, corner of Newman-street (from Wells-street). Established 1820.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY, 14, Waterloo-place, Pall-mall, London.

THE CHISHOLM, Chairman.

WILLIAM MORLEY, Esq. Deputy Chairman.

GREAT ADVANTAGES OFFERED TO POLICY HOLDERS BY THIS INSTITUTION.

A large and immediate accession of Assurances by the transfer of the Policies of the "Achilles British and Foreign Life Assurance Society."

PROFITS.—The whole of the profits divided annually among the members, after the payment of five annual premiums.

An ample guaranteed capital, in addition to the fund continually accumulating from premiums, fully sufficient to afford complete security.

CREDIT.—Credit given to members for half the amount of the first five annual premiums, without security.

Credit allowed to members for the whole of the first five annual premiums, on satisfactory security being given for their payment.

Transfers of Policies effected and registered (without charge).

LOANS.—Loans granted upon approved security.

Claims on Policies not subject to be litigated or disputed, except with the sanction, in each case, of a General Meeting of the Members. Loans granted upon approved security.

An extremely low rate of premium, without participation in the profits, but with the option, at any time within five years, of paying the difference between the reduced rates and the mutual assurance rates; and thus becoming members of the society, and entitled to a full participation in the profits.

Extract from the Reduced Scale of Rates, for an Assurance of 100*l.* for one year, seven years, and the whole term of Life.

Age.	Annual Premium.		
	One Year.	Seven Years.	Whole Life.

Full particulars are detailed in the prospectus.

A. R. IRVINE, Managing Director.

A Liberal Commission allowed to Solicitors and Agents.

THE CRITIC,
And Journal of Literature.

SATURDAY, MAY 17, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address.* Nov. 1st, 1844.

LITERATURE.

PHILOSOPHY.

Characteristics of the Greek Philosophers. Socrates and Plato. By the Rev. JOHN PHILIPS POTTER, A.M. late of Oriel College, Oxford. London, 1845. Parker.

MR. POTTER proposes to consider the character of SOCRATES under three aspects: as a theologian, as a politician, and as a logician. The essay originally appeared in the *British and Foreign Review*.

The author enters the field avowedly in defence of the character and philosophy of SOCRATES against the doubts insinuated, rather than declared, by the reviewer of BACON in the *Edinburgh Review*, and the editor of BENTHAM. But, being itself a criticism, it would be vain to attempt an analysis of these essays; being reprints, extracts would be stale. We can say of them only that the argument is ably sustained, and should be read by those whose opinions may have been shaken by the papers to which they are an answer.

The larger portion of the volume is occupied with a series of similar articles on the philosophy of PLATO, taken from the same source and composed with equal vigour. Mr. POTTER is an able controversialist, a master of his pen, which he wields with the skill of a practised logician, and the readiness of a quick-thoughted advocate, prompt to perceive and to avail himself of the weak points in his adversary's case, and eloquent in putting forth the strong points of his own. He has done well to gather together these essays from the scattered volumes in which they were first introduced to the world, and doubtless in their present compact shape they will be cordially welcomed by those whom they had pleased before, and by many to whom they were previously unknown.

An Appendix contains a curious and graphic sketch, communicated to Mr. POTTER by his son, of the

PERFORMANCE OF THE STABAT MATER IN ROME.

On Friday evening (the 14th of April, 1843), after attending the grand and solemn performance of the *Tenebræ* at the Sistine Chapel, we went to hear the *Stabat Mater* at one of the largest of the many large and splendid churches of Rome.

The service was a late one, beginning about nine o'clock in the evening; and though much fatigued by a hard day's work of picture-seeing and music-hearing, all such sensations were speedily banished by the singular and exciting scene which we there witnessed. I wish I could give you some idea of it.

On entering the church, about half an hour before the commencement of the service, we found it already crammed to suffocation with persons of all classes, ages, and sexes. Many were quietly engaged in their private devotions, and apparently perfectly abstracted from the bustling scene which was being enacted within a few paces of them; but many also were anxiously looking for a resting-place where they might await the appointed time, and were conversing with one another in subdued whispers. The body of the church was nearly dark, the chandeliers hanging in black lustreless masses; and the general gloom being even increased by the two or three little lamps, in coloured glasses, burning before some of the altars of the side chapels. A dismal monotonous chant was echoing through the church, performed by some dozen priests, who were stationed behind the High Altar.

On this altar, the only object strongly illuminated in the church, was erected a sort of stage, covered in with painted architectural ornaments and silk drapery, bespangled with tinsel and silver stars in truly theatrical style.

In the centre was placed a kneeling figure of the Virgin, represented, in wax or painted wood, as a beautiful young woman splendidly attired, supposed to be mourning over the dead body of Christ,—her breast being pierced with a number of glittering swords. One or two church servants were engaged in lighting a vast number of candles and lamps on and about the altar; and these being covered with coloured paper shades and properly arranged, seemed to throw their concentrated light on the painted figure. The effect of this was remarkable, being not only most distinctly and vividly seen, but being the *only* object that was clearly visible in the whole church—the figure seemed almost to advance into the midst of the darkness and partially to shed its light around; whilst the fainter and fainter lights that tipped projecting columns, gilded cornices, and elaborately carved ceilings, served dimly to mark distances, and tiring the eye with the attempt to make out details, turned back the attention of the spectator to the one object of devotion for the evening.

Presently the chanting ceased, and soon after a young priest made his way with some difficulty, owing to the crowded state of the church, to the pulpit.

After a short prayer he commenced a discourse, or rather a series of short addresses, between which a portion of the *Stabat Mater* was performed. Though varying in words, these addresses all bore the same form, and were stamped with the same character. They consisted of highly-wrought pictures of the goodness and love of God; of the wickedness and ingratitude of man; of the dreadful bodily suffering of Christ; of the agonies of the Virgin Mother. At the commencement of each he spoke with comparative calmness, addressing the congregation. Gradually, however, he became more and more excited as he proceeded. Elevating his voice to a tone of fury, he denounced them all as lost sinners, and upbraided them with inflicting tortures upon the Son of God, inasmuch as it was for their sakes that the suffering was borne.

Then elevating his hands, and suddenly lowering them as if forcibly pressing something to the ground, he would shout, "Down, down on your knees to the Holy Virgin, through whose intercession you may hope for pardon from an angry God!"

In an instant all were kneeling, whilst the priest leaning forward from the pulpit (with flushed and eager face, and arms stretched out towards the illuminated figure, poured forth an address to it in the most glowing terms and with a tremulous sobbing voice; reminding the Virgin of her various trials; drawing a vivid picture of her mental sufferings at being obliged to witness the sacrifice of her only and well-beloved Son, &c. &c.

At last, fairly overcome with his exertions, or at all events appearing to be so, he sank his head on the cushion and remained silent. At this moment, with the feelings of the audience worked up to the highest pitch of excitement, by the verbal description of bodily and mental suffering, a portion of the musical service, the *Stabat Mater*, was performed. Neither instruments nor singers were visible—a circumstance which added to the peculiarity of effect, whilst it still left the figure of the Virgin the only object that could attract the gaze of the listening crowd. The impassioned character of the music, and the rich swelling tones in which the feeling of the composer was given, were most eminently fitted to carry on the work of the preacher, and to prepare the audience for another appeal to their goaded sympathies.

Even to the coldest and most indifferent auditor, well aware the scene was "got up," to use a common phrase, it was like an intoxicating liquid poured in at the ear.

BIOGRAPHY.

Lives of Men of Letters and Science who flourished in the time of George III. By HENRY, Lord BROUGHAM. With Portraits. London, 1845. Knight and Co.

THE versatility of Lord BROUGHAM is amazing. No subject in the entire range of human knowledge seems to be above or beneath the ambition of his grasping intellect. At once orator, author, politician, lawmaker, lawyer, he will discourse with fluency of words, if not with profundity of thought, upon science, art, or literature, or any of their branches. His speeches embrace every conceivable topic of national or individual interest, and are replete with satire, or argument, or pathos, as occasion requires; his writings range from the loftiest metaphysics and mathematics to the leading article of the newspapers of the day. He has invaded in turn philosophy, science, art, history, the classics, biography. He has handled all respectably, some with uncommon ability, and his published works, distributed among his contemporaries, would have made the fortunes of a dozen authors. The region of poetry alone has he not invaded, at least there is no record of such an attempt, if ever the daring thought was conceived. And the reason is obvious. Lord BROUGHAM'S least active faculty is imagination, or it is so over-mastered by the inordinate activity of its fellow faculties, that its voice is but faintly heard amid their never-ceasing noise and stir.

For our own parts, we do not much admire Lord BROUGHAM'S philosophy; it is too metaphysical; of his mathematics we are not competent to judge; his science is sufficiently elementary for popular understandings; his history is coloured by the hues of his own prejudices and passions; his law is more that of a jurist than of a lawyer, and his law-making is a well-intentioned jumble of impracticabilities and oversights. But as a biographer he is excellent, and we suspect this series of *Lives*, of which the portly volume before us is one, will be read when many of the works that have cost him more labour, and which, perhaps, he more values, shall have passed into oblivion.

The characteristics of his biographical composition are his *epic* view of his subjects, and a certain familiar manner of treating them which at once attracts attention, and keeps it to the close of the narrative. His method seems to be after this sort:—He supposes the personage he is about to describe to be one whom he has intimately and personally known, whose face and form he has seen, whose character and capacities he has accurately studied, and having thus formed in his own mind a perfectly distinct idea of him, he proceeds to consider the reader as a friend to whom he is about to introduce a new acquaintance, and for this purpose describes minutely, in such fashion as he would talk to him, the history, the aspect, the mind, the manner, the peculiarities, the sayings and the doings of the stranger, concluding with a summary of the general impression which he has left upon those to whom he had been previously known.

The effect of this is to excite a personal interest in the party described. He lives and moves in our mind's eye; we hear in fancy the tones of his voice; we note his face, his form, the very expression of his features. He is, as it were, an acquaintance whom we have taken by the hand, and in whose doings we are concerned. This is the charm of biography, and makes it, when well done, the most delightful of all reading.

And Lord BROUGHAM has been singularly impartial in the accomplishment of his task. The selection of the men to be so honoured was not, to be sure, the most judicious. Others there were as great, and greater, who are not named among the "illustrious" of the reign of the Third GEORGE. To science, moreover, a disproportioned prominence is given. But the reader has no right to dictate to the author whom he shall be pleased to portray, or to decry the merits of the gallery as it is, because it does not contain something else. Besides, it is more than probable that this volume is only one of a series; that others will follow, as the noble author's leisure or inclinations may permit, adding to the group of portraits already collected, until the gallery shall be complete.

The strength of these biographies lies in their sketches of the characters of the personages whose histories are narrated. This is Lord BROUGHAM'S forte, and he knows it. He always enters upon the work with an evident relish. He loves to dissect the complex mental features that make up the whole man, and to trace to their sources the power and the weakness, the excellence and the error that are mingled in various proportions in the best and the worst of us. He has a good eye also for external expression. He distinctly remembers, and is able, by a sort of Cruikshank capacity for sketching in words, to convey to the fancy of the reader a transcript of the image in his own,—the feature, the form, the peculiarities of look or gesture,—the silent language of the emotions within written upon the face without,—the voice, the gait, the affectations and oddities, so that by a few vigorous touches the dead are made to live, and move, and speak before us. Ample evidence of this power will be found in the following extracts, which we limit almost entirely to those portions of the biographies, insomuch as it would be impossible so to abstract narratives already condensed as to make them interesting, while portraits such as we have described have always a value and an attraction, whether for present reading or as a portion of the collection of the beauties of our current literature, which it is the aim of the conductors of THE CRITIC to make its pages, so that it may become a library book for reading and reference at all times, and not a mere work of temporary use, to be thrown aside when once perused.

Ten biographies are contained in this volume; the first, and by far the most elaborate, being that of VOLTAIRE. Lord BROUGHAM appears to have had access to many original sources of information for the facts, which he intersperses, as is his wont, with commentaries that seek to point the moral of the narrative. And it is with these that we must chiefly concern ourselves in this notice.

His opinion of the lively French philosopher is obviously better than prudence will permit him to avow. The tone of his memoir is apologetic, and the author's apologies for himself in praising VOLTAIRE are at least as long as his apologies for his hero. But all unprejudiced minds will admit that the character of the man and of his writings has been drawn with commendable fairness. Take, for instance, the

APOLOGY FOR VOLTAIRE'S IRRITABILITY.

But another circumstance must be mentioned, as throwing light upon his personal altercations with the friends he at various times esteemed. His nature was open and ardent; he had the irritability which oftentimes accompanies genius, but he had the warm temperament, the generous self-abandonment, the uncalculating effusion of sentiment, which is also its attendant, and which sixty years' living in the world never cured—hardly mitigated—in Voltaire. His expressions were, no doubt, stronger than his feelings; but we know that this strength of expression has a certain re-action, and excites the feelings in its turn; certainly is ever taken into the account when its object makes a bad or a cold requital, and irritates the minds from which it had proceeded, if in no other way, at least by wounding their pride. Nothing can be more extravagant than the technology of Voltaire's affections: "My dearest friend" is too cold to be almost ever used; it is "My dear and adorable friend;" "My guardian angel;" "My adorable friend;" and often to the Argentals, especially the union of both, "My adorable angels." All philosophers were Newtons; all poets Virgils; all historians Sallusts; all marshals Cæsars. The work of the President Henault is not certainly "*son*," but "*votre* charmant, votre immortel ouvrage:" being the most dry and least charming history that ever was penned, and which never would be read but as a convenient chronicle. The expressions of affection, of eternal, warm, even passionate affection, are lavished constantly and indifferently. Nay, to one friend, a Marshal and Duke (Richelieu), he says, addressing him as Monseigneur, "Il y a dans Paris force vieilles et illustres catins, à qui vous avez fait passer de joyeux moments, mais il n'y en a point qui vous aime plus de moi." With all this vehemence of feeling and facility of effusion, as well as of exaggeration, there was joined an irritability that brought on cold fits occasionally, and then the snow, or rather the hail, fell as easily and abundantly as the tepid showers had before descended. Nothing can exceed his affection for his nieces, especially for Madame Denis; but he must have outraged her feelings severely, to draw from her such a letter as she wrote in 1754: "Ne me forcez pas à vous haïr"—"Vous êtes le dernier des hommes par le cœur"—"Je cacherai autant que je pourrais les vices de votre cœur"—are expressions used principally on account not of his heart, which was sound, but his temper, which was uncontrolled, and they were used to him while lying on a sick-bed at Colmar, which he had not quitted for six months. I shall have occasion afterwards to speak more particularly of his quarrels with Maupertuis, Frederick II. and Rousseau; in the first of which, the chief fault lay with the mathematician; in the second, the great king claims the whole blame; and in the third, Voltaire was most censurable. At present I have only entered upon the topics which arise during his residence at Cirey.

The same exaggeration that pervades his expressions towards others, is observable in all that he writes respecting himself, whether upon the sufferings of his mind or those, somewhat more real, of his body. He had, unhappily, a feeble constitution, and having taken little care of it in early life, he was a confirmed invalid for the rest of his days, but especially between forty and sixty. He suffered from both bladder complaints and those of the alimentary canal; and his surgical maladies, beside the pain and irritation which they directly occasioned, gave him all the sufferings and inconveniences of a bad digestion. There was therefore a sufficient foundation for frequent recourse to the state of his health. But he writes as if he was not merely in constant danger: he is generally at the point of death; and it is observable that the more deeply he is engaged in any vexatious dispute, and the more he has, or thinks he has, occasion to complain of maltreatment, the more regularly and the more vehemently does he describe his alarming, nay, his dying condition. In such circumstances it is a figure never wanting to round a period, or to fill up the measure of his own wrongs, and his adversary's oppressions. It is singular that a man of his genius, one especially who had so well studied the human heart, and painted so strikingly the dignity of our nature, should invariably, and even with the least worthy antagonist, prefer being plaintiff to being powerful, and rather delight in being the object of compassion than of terror.

Some novel anecdote is related to contradict a prevalent error as to

VOLTAIRE'S KNOWLEDGE OF THE ENGLISH LANGUAGE.

The notion which some have taken that Voltaire was ignorant of, or at least imperfectly acquainted with the English language, and into which an accomplished though somewhat prejudiced critic has among others been betrayed, is purely fanciful: he had as thorough a knowledge of it as could be acquired by a foreigner; perhaps a greater familiarity and easier use of it than any other ever had. He wrote it with ease, and with perfect correctness, in the earlier part of his life, hardly making any mistakes—certainly none which a little care would not have prevented. I have lately seen a letter of his, thanking an author for the present of his book, probably Sir H. Sloane; and there is but one word, *lectors* for *readers*, wrong; nor is there the very least restraint in the style, which is also quite idiomatic, as when he speaks of his "crazy constitution." *Ills* for *maux*, meaning complaints, has the authority of Shakespeare, if indeed any authority were required to justify this use of the word. The Gallicism or mistake of *lectors* proves that he himself wrote this letter, and sent it without any one revising it. While visiting England, in 1727, he published an essay on the "Civil Wars of France," with remarks on the "Epic Poetry of all Ages,"—a small octavo, or large duodecimo volume, intended to illustrate the *Henriade*, of which, as has been observed, an edition was published at that time by subscription. The English is perfectly correct, and the diction quite easy and natural. There is a copy in the British Museum, with these words on the title-page, in his own hand—"To Sir Hanslone (Hans Sloane), from his obedient servant, Voltaire." In his latter years he spoke English with great difficulty, and seldom attempted it; but that he retained his familiarity with the language, and could easily write it, we have the clearest evidence in two excellent lines which he wrote when in his eightieth year to Dr. Cradock, who had sent him a copy of his drama, *Zobeide*, chiefly borrowed from Voltaire's *Scythes*:—

> "Thanks to your muse, a foreign copper shines,
> Turn'd into gold, and coin'd in sterling lines."

Nor is our admiration of this facility of English diction lessened by the consideration that the idea is in some degree imitated from Roscommon. H. Walpole has indeed said, with a gross exaggeration, respecting his letter to Lord Lyttleton, that not one word of it is tolerable English; but he may late in life have lost the facility of writing in a language not acquired while a child, as we know that both with Lord Loughborough and Lord Erskine the Scottish accent returned in old age, though they had got entirely rid of it during the middle period of life.

We cannot pass over Lord BROUGHAM'S sketch of

VOLTAIRE AT TABLE.

These are on all hands represented as having been admirable. He was of a humour peculiarly gay and lively; he had no impatience of temper in society; his irritability was reserved for the closet, and his gall flowed only through the pen. Then his vast information on all subjects, and his ready wit, never failing, but never tiring, added to his having none of the fastidious taste which prevents many great men from enjoying the humours of society themselves, while it casts a damp and a shade over the cheerful hours of others—all must have conspired to render his company a treat of the highest order. His odd and unexpected turns gave his wit a zest that probably never belonged to any other man's. His writings give us some taste of this; and there are anecdotes on record, or at least preserved by tradition, of jokes of which they who read his works at once recognise him as the author. When the Dijon academicians presented him with the place of an honorary member, observing that their academy was a daughter of the Parisian body—"Eh! oui," said he, "eh! et une bonne fille, je vous en répond, qui ne fera jamais parler d'elle." When at some family party the guests were passing the evening in telling stories of robbers, and it came to his turn—"Once upon a time (he began)—Jadis, il y avoit, un fermier général———ma foi, Messieurs, j'ai oublié le reste."

When St. Ange, who plumed himself on the refined delicacy of his flattery, said, on arriving at Ferney, "To-day I have seen Homer; to-morrow I shall see Sophocles and Euripides, then Tacitus, then Livy:" "Ah! Monsieur," said his ancient host, alarmed at the outline of a long visit, which he seemed fated to see filled up, "Ah, Monsieur! je suis horriblement vieux. Ne pourriez vous pas tâcher les voir tous le même jour?" The sketch probably was left unfinished by this interruption. So when an English traveller who had been to see Haller, heard Voltaire speak loudly in his praise, and expressed admiration of this candour, saying Haller spoke not so well of him: "Hélas!" was the admirable answer, "il se peut bien que nous avons tort, tous les deux." A graver rebuke was administered by him to an old lady who expressed her horror at finding herself under the same roof with a declared enemy of the Supreme Being, as she was pleased to term Voltaire:—"Sachez, madame, que j'ai dit plus de bien de Dieu dans un seul de mes vers que vous n'en penserez de votre être."

A striking picture of his powers of conversation is given by Goldsmith, who passed an evening in his company about the year 1754. He describes it, after saying generally that no man whom he had ever seen exceeded him; and Goldsmith had lived with the most famous wits of the world, especially of his own country—with Burke, Windham, Johnson, Beauclerk, Fox. There arose a dispute in the party upon the English taste and literature. Diderot was the first to join battle with Fontenelle, who defeated him easily, the knowlege of the former being very limited on the subject of the controversy. "Voltaire," says Goldsmith, "remained silent and passive for a long while, as if he wished to bear no part in the argument which was going on. At last, about midnight, he began, and spoke for nearly three hours; but in a manner not to be forgotten—his whole frame was animated—what eloquence, mixed with spirit—the finest strokes of raillery—the greatest elegance of language—the utmost sensibility of manner! Never was I so much charmed, nor ever was so absolute a victory as he gained."

ROUSSEAU is selected for the second biography. The author's judgment of *the man* is justly condemnatory, while he warmly praises the inimitable graces of his style.

LORD BROUGHAM'S CRITICISM ON ROUSSEAU'S "CONFESSIONS."

All Rousseau's works, except his posthumous memoirs, the *Confessions*, we have had occasion already to consider. But that is, beyond any question, and very much beyond any comparison, his masterpiece. There is no work in the French language of which the style is more racy, and, indeed, more classically pure. But its diction is idiomatical as well as pure. As if he had lived long enough away from Geneva to lose not only all the provincialisms of that place, but also to lose all its pedantry and precision, he writes both with the accuracy and elegance of a Frenchman, and with the freedom of wit and of genius, even of humour and drollery—yes, even of humour and drollery; for the picture of the vulgar young man who supplanted him with Madame de Warens shews no mean power of caricature; and the sketches of his own ludicrous situations, as at the concert he gave in the Professor's house at Lausanne, shew the impartiality with which he could exert this power at his own proper cost and charge. The subject is often tiresome; it is almost always his own sufferings, and genius, and feelings; always, of course, but of that no complaint can be justly made, of his own adventures; yet we are carried irresistibly along, first of all by the manifest truth and sincerity of the narrative which the fulness of the humiliating confessions at every step attests, and then, and chiefly, by the magical diction,—a diction so idiomatical and yet so classical—so full of nature and yet so refined by art—so exquisitely graphic without any effort, and so accommodated to its subject without any baseness,—that there hardly exists another example of the miracles which composition can perform. The subject is not only wearisome from its sameness, but, from the absurdities of the author's conduct, and opinions, and feelings, it is revolting; yet on we go, enchained and incapable of leaving it, how often soever we may feel irritated and all but enraged. The subject is not only wearisome generally, revolting frequently, but it is oftentimes low, vulgar, grovelling, fitted to turn us away from the contemplation with aversion, even with disgust; yet the diction of the great magician is our master; he can impart elegance to the most ordinary and mean things, in his description of them; he can elevate the lowest, even the most nasty ideas, into dignity by the witchery of his language. We stand aghast after pausing, when we can take breath, and can see over what filthy ground we have been led, but we feel the extraordinary power of the hand that has led us along. It is one of Homer's great praises, that he ennobles the most low and homely details of the most vulgar life, as when he brings Ulysses into the swineherd's company, and paints the domestic economy of that unadorned and ignoble peasant. No doubt the diction is sweet in which he warbles those ordinary strains; yet the subject, how humble soever, is pure unsophisticated nature, with no taint of the far more insufferable pollution derived from vice. Not so Rousseau's subject: he sings of vices, and of vices the most revolting, and the most base—of vices which song never before came near to elevate; and he sings of the ludicrous and the offensive as well as the hateful and the repulsive, yet he sings without impurity, and contrives to entrance us in admiration. No triumph so great was ever won by diction. The work in this respect stands alone; it is reasonable to wish that it may have no imitators.

This is well thought and well expressed, and will entitle the noble lord to much respect as a critic. Equally just, discriminating, and able is the sketch of the

CHARACTER OF ROUSSEAU.

Of his character it is almost as easy to speak with confidence

as of his writings. It seems certain that so much genius never was in any other man united to so much weakness. The fruits of an education exceedingly neglected, nay, in his earlier years very ill directed, were gathered from his youth upwards at each stage of his progress; but many men have been as much neglected, and many more spoilt in their childhood and boyhood, without ever becoming what he was. We are to add, therefore, to the causes of his misery, perhaps of his misconduct, an hereditary disposition to melancholy, to brooding sadly over realities, and to indulging in the sad miseries of the imagination. Nor was this all: he formed a kind of system or principle for himself of the most unsound nature and dangerous consequences. He seems to have thought that the free indulgence of the feelings was a duty as well as a privilege, and never to have doubted that those feelings which naturally arise in the breast are therefore innocent and right. The only evil which he could perceive was in their restraint; and as even to regulate them is to restrain, he not only regarded such self-government as superfluous, but as hurtful. The current was in his view pure and harmless; the obstacles which broke its course, the dykes which confined it, the canals which guided it, were the only objects of aversion and of blame. It is obvious to ask if he who had undertaken to write upon education a work of much length and elaboration, had ever observed the workings of our nature in infants, in very young children. It is a branch of the subject which he seems never to have studied; else he must have seen how the mere animal predominates at that age. At first pure selfishness prevails, and indulgence of every appetite is the rule. Next succeeds, with nearly equal selfishness, fear as soon as any restraint is applied, and fear invariably gives rise to the protection of falsehood. All natural propensities are eagerly indulged; all restraint is distasteful. Among others, the love of truth is a restraint imposed by tuition, and like all restraints, it is a violence to natural propensities. Now Rousseau erected into his rule of conduct the self-indulgence which the rules of reason and virtue proscribe alike. The divinity he worshipped was sentiment, feeling, often amiable, often reasonable, sometimes contrary to reason, sometimes inconsistent with virtue; and always, when indulged in excess, offending against reason, and leading to offences against virtue. Whoever reads his *Confessions* must perceive that he never could conceive he was acting wrong when he was following the bent of his feelings; scarcely that he was acting imprudently when he was sacrificing to them his own plainest and highest interests. To such a pitch was his folly on this point, this cardinal point, carried, that we find him unable to conceive how any one could ever reproach a man with his worst crimes after he had once openly avowed them, or rather after he had allowed certain things to be wrong; for, having admitted in the *Emilie* that whoever under any pretext or from any motive whatever withdrew from the performance of his parental duties, must expect ever after to weep bitterly over his fault (*sa faute*), he declares that it "was surprising any person after such an avowal could ever have the courage to reproach him with the fault" (*faute*) of sending his five infants to the Foundling Hospital. He altogether forgets that the courage of making such confessions, even had they been much more full and specific, instead of being any defence to ward off the punishment of universal reprobation, was a virtue of an equivocal kind, and might be taken as easily for callous impudence as for sincere penitence.

The natural result of the system on which his moral feelings were built, was that the most undeviating selfishness took possession of his whole soul. Self-indulgence was his rule—self-restraint his abhorrence. The sophistry with which he so constantly seeks to cover over this vice is pitiable when it is not ridiculous. For many years he had almost ceased even to write to Madame de Warens; and for above two years after his removal to Neufchâtel, the last years of her miserable life, she was, as he too well knew, plunged in the depths of misery—she who had supported him while she had a farthing to give—she to whom he owed his whole existence for the first ten years and the most destitute of his life—she for whom he had so often avowed, and also felt, the most tender affection, and who had ever treated him like an anxious mother—not only did he remain for those two years a day's journey from her residence without ever repairing to see and to console, if he could not relieve and reclaim her, but he never gave her the comfort of a letter to shew he still bore her image in his heart—and why? "because he feared to sadden her heart (*contrister son cœur*) with the story of his disasters!"—As if she had not real disasters of her own—as if the straw on which she was perishing of want offered not wherewithal to touch her more nearly than the tale of his fancied wrongs and trumpery persecutions! The least sagacity is enough to pierce through this flimsy veil of hypocritical cant. Every one sees that he was unwilling to interrupt his own enjoyments by the sight of her misery, and therefore did not repair to Chambery—that he was unwilling to interrupt his walks, or his readings, or his writings, or his musings, and therefore did not write letters that might have led to asking assistance which he did not choose to give.

HUME is next depicted, and ample praise is awarded to his political discourses, and his style as an historian, while the principles of his ethical philosophy and the errors and prejudices that deform his history, are freely admitted. The truth of the following passage will readily be acknowledged:—

BROUGHAM ON HUME'S HISTORY OF ENGLAND.

If from the cardinal virtues of fidelity, research, and accuracy, we turn to the great but secondary accomplishments of the historian, we can scarcely find expressions too strong to delineate the merit of Mr. Hume. His style is altogether to be admired. It is not surpassed by Livy himself. There is no pedantry or affectation, nothing forced or far-fetched. It flows smoothly and rapidly, according to the maxim of the critic, "Currere debet et ferri." It seems to have the "lactea ubertas" of Livy, with the "immortalis velocitas" of Sallust. Nothing can be more narrative; the story is unbroken, it is clear, all its parts distinct, and all succeeding in natural order; nor is any reflection omitted where it should occur, or introduced where it would encumber or interrupt. In both his narrative and his descriptions there is nothing petty, or detailed more than is fit or needful; there is nothing of what painters call spotty—all is breadth and bold relief. His persons are finely grouped, and his subjects boldly massed. His story is no more like a chronicle, or his views like a catalogue of particulars, than a fine picture is like a map of the country or a copy of the subject. His language is more beautiful and powerful than correct. He has no little tendency to Gallicisms. He has many very inaccurate, some ungrammatical phrases. In this respect he is far behind Robertson. The general effect, however, of his diction is unequalled. He cannot be said to write idiomatic English, being indeed a foreigner in that sense; but his language is often, nay, generally racy, and he avails himself of the expressions, both the terms and the phrases, which he finds in older writers, transferring them to his own page. In this he enjoys a great advantage over Robertson, who, resorting necessarily to Latin, or to foreign or provincial authors, could not manage such transfers, and was obliged to make all undergo the digestive and assimilating process, converting the whole into his own beautiful, correct, and uniform style. Another reach of art Hume has attained, and better than any writer in our language: he has given either a new sense to expressions, or revived an old, so as never to offend us by the neology of the one process or by the archaism of the other. With this style, sustained by his profound philosophy, there can be nothing more beautiful than some of his descriptions of personal character, or of public feeling, or of manners, or of individual suffering; and, like all great masters of composition, he produces his effect suddenly, and, as it were, with a single blow.

"Joined in friendship and in fame," continues the noble biographer, "with the great man whose life and writings we have been contemplating, and equally with him founder of the reputation of our country for excellence in historical composition, was WILLIAM ROBERTSON." His passion for letters was early displayed:—

He had laid down for himself a strict plan of reading; and of the notes which he took there remain a number of books, beginning when he was only fourteen, all bearing the sentence as a motto which so characterized his love of learning, indicating that he delighted in it abstractedly, and for its own sake, without regarding the uses to which it might be turned—"*Vita sine litteris mors.*" I give this gloss upon the motto or text advisedly. His whole life was spent in study. I well remember his constant habit of quitting the drawing-room both after dinner and again after tea, and remaining shut up in his library.

(*To be continued.*)

VOYAGES AND TRAVELS.

Adventures in New Zealand, from 1839 *to* 1844. By EDWARD JERNINGHAM WAKEFIELD, Esq. In 2 vols. London, 1845. Murray

AT the age of nineteen, urged by curiosity, Mr. E. J. WAKEFIELD joined the expedition that sailed for New Zealand in the year 1839 in the good ship *Tory*, under the command of his uncle, Colonel WAKEFIELD. It was his intention to land the settlers, to see the country, and to return with the *Tory*. But on his arrival, he found the whole scene so new, so interesting, so exciting, that he was tempted to remain to watch the progress of the infant colony, and to aid the early struggles of the settlers. For four years and a half he postponed his departure, and now he has come back with a portfolio of sketches and a narrative of his adventures, to which recent events in the colony have given peculiar importance.

Mr. WAKEFIELD is evidently an enthusiast. His love of

enterprise is apparent in every page. He is not content to follow in beaten tracks; he will not be bound by formulas and conventionalities. He mingled freely with the natives, learned their language, won their confidence; became a sort of ambassador between them and the Europeans, arranged their differences, softened asperities, and materially aided the peaceful progress of the settlement. Thus he acquired a practical wisdom and self-reliance beyond his years, and it is quite a psychological study to mark the change from the adventurous, almost reckless, boy introduced to us in the early part of the narrative, to the experienced, prudent, sagacious man who discourses of statesmanship at its close.

As a literary work it cannot be termed artistic. Mr. WAKEFIELD is not a practised penman; he is not versed in the mystery of book-making, but possesses an art more pleasing. He prefers to put his thoughts into words instead of phrases. Having something to say, he says it, without pausing to pick and choose the expressions in which it shall be clothed. He tells us, with charming *naïveté*, just what he saw and felt, disguising nothing, and exaggerating nothing. It is the story of the man of action, stirring and energetic, bringing before us with distinctness places and persons, and creating in us a personal interest in events—the interest we take in a romance extended to a reality.

A considerable portion of the work is devoted to the disputes between the Home Government, the officials, the settlers, and the natives. Into these Mr. WAKEFIELD enters with characteristic earnestness, and with the zeal, and probably the one-sidedness, of a partisan. But as this theme is not altogether within our province, and there is so much else to interest and amuse the general reader, we propose to limit our illustrative extracts to passages that fall more properly within its title of *Adventures in New Zealand*.

It was in the month of August that they entered

QUEEN CHARLOTTE'S SOUND.

The scenery became more and more majestic as we advanced into this noble estuary. Its outer mouth is nine miles wide. High wooded mountains rise on both sides; numerous islands and projecting points dot the expanse of still water which penetrates far into the interior; and a glimpse of the Southern Alps is obtained in the extreme distance.

Eager to touch the land, I got into a small canoe with Nayti, who paddled me ashore. The hills, which rise to the height of 1,000 or 1,500 feet on three sides of the cove, are covered from their tops to the water's edge with an undulating carpet of forest. How well Cook has described the harmony of the birds at this very spot! Every bough seemed to throng with feathered musicians, and the melodious chimes of the bell-bird were especially distinct. At the head of the cove is a small level space of land, formed by the alluvial deposit of three rills from the mountains, which here empty themselves into the bay. Landing here, I remained for some time absorbed in contemplating the luxurious vegetation of grass and shrubs, and the wild carrots and turnips which remain as relics of our great navigator. Rich historical recollections crowded on my mind as I tried to fix on the exact spot where Cook's forge and carpenter's shop had stood; and I was only roused from my reverie by the arrival of some more of the party, bent on the same object. We collected some shells, pebbles, and plants, and returned to breakfast on fresh potatoes and some of the fish which had been caught in abundance from the ship in the evening.

Another specimen of his descriptive powers is this graphic sketch of

THE PLACE OF CLIFFS.

The cliffs increase in height as you advance into the reach, so that the forest-trees on their edge seem like feathers; the song of the birds among them is only faintly heard, and the streams which rush over the steep are frittered into the thinnest spray long before they reach the water. Facing you, the cliff is surmounted by a steep hill of the additional height of some 500 or 600 feet, which seems to tower proudly over the trench in which the river flows; and on its top, the Natives told me afterwards, are cultivations, springs of water, and woods of large timber, and ample room to support many hundreds of people when compelled to take refuge there. Though the river has a considerable descent here, and the polers have to work hard throughout the distance in ascending, the gradual increase in the height of the cliffs combines with the way in which the strata strike the waterline to produce a remarkable optical deception. It seems as though you were rapidly descending; and I have more than once noticed, that in returning towards the sea at the rate of ten miles an hour, you appear to be going up hill at this particular spot. Add to this, that out of a dark cavern in either cliff, near the water's edge, a large stream comes roaring, and echoing, and foaming into the river; that an augmenting darkness is produced as you advance, by the height of the cliffs and the comparative narrowness in which the river flows; and that some old legend or superstition makes the Natives speak in whispers and compose their features to seriousness; and the sublimity of the whole scene may be imagined. Such was the intense excitement produced on me by this burst of Nature's majesty, when I first went through the pass, that I relieved myself involuntarily by a deep sigh and a rushing of tears to my eyes, when we had passed on into the comparatively tame and reposing scenery which immediately follows.

The main interest of the narrative centres in the many and accurate pictures of the natives, and the scarcely more civilized races of whalers, beach-combers, and other refuse of Europe, who have established themselves on these coasts, where they are beyond the restraints of law and society. Some of them are worth preserving.

SAM PHELPS THE BULLOCK DRIVER.

Sam Phelps, a drunken, foul-mouthed bullock-driver, from one of the neighbouring colonies, was (by fines for intoxication) a frequent contributor to the revenue. * * * Sam appeared not to care so much for the fine—he had got used to that, and paid it with great regularity; but the manner of inflicting it seemed to offend him, and he took his own means of revenging himself. His team of bullocks was soon christened "Shortland," "Smart," "Best," and "Cole;" and he used to apply the coarsest epithets to them as he flogged them along. One day the Colonial Secretary, stately and pompous as usual, happened to pass the dray. Brutal threats to "cut *Shortland*'s tail off if he did not move on," to "break his heart," to "cut his liver in two," or to "whip his skin off," startled him in his promenade; and on turning round he saw old Sam "whacking" his team. To the surprise of the spectators, the Chief Magistrate asked the bullock-driver whether "he applied those expressions to him." Sam answered, with an innocent grin, "I wasn't a speakin' to you; I'm a drivin' my bullocks; that's my business:" and the Colonial Secretary retreated from the scene, amidst a repetition of the most frightful imprecations, threats, and mockery of the bullock-driver.

A SCRAMBLE.

I was in the 'tween decks when it began; and, hearing a loud and continued stamping on the deck, thought the natives were "rushing" or attacking the ship. Under this impression, I sprang aft to obtain a weapon of defence from among those always ready in the cabin. On my way, I met E. Witi, one of the chiefs of a tribe which had effected a quiet division; and he reassured me by telling me that no harm would be done to the white people, and that I had better go up in the rigging and look upon the way in which the natives divided their goods.

Following his advice, I clambered up into the long-boat between the masts, and was at first bewildered at the sight. About 150 natives were piled above the various heaps of goods, writhing, struggling, stamping, pulling each other's hair and limbs, tearing blankets, shivering whole cases of pipes and looking-glasses, and withal yelling and screaming in the most deafening manner. Some of the wildest had stripped naked. Disengaging themselves for a moment from the mass, they tightened the thong of their tomahawk handle round their wrist, and prepared to plunge into the thickest of the mass, where some dearly-prized article was in contention among a heap of furies. Barrett, however, and some other white men well known to the natives, pinioned the arms of two or three of the wildest with their own, and gradually restored order and peace. The combatants looked exceedingly crest-fallen as they gathered up the remains of the broken things; but took especial pains to tell us it was no fault of ours, but the *porangi* or "foolishness" of the Maori. Others, who had assumed a quiet, watchful attitude during the disturbance, smilingly produced from under their mats some chain-hook, sounding-lead, or other handy weapon, with which they had armed themselves in case of the worst.

This appears to be a favourite mode of appropriating property in New Zealand. It is even adopted as a punishment. As an instance—

The crime of adultery was most severely punished by Ngamotu, or "the Islands," one of the principal chiefs, on his wife. He stripped her naked, and dragged her along the beach by the hair of the head, beating her violently at intervals. Nor did any one attempt to interfere; the whole body of natives remaining passive spectators of the cruel penalty. The adulterer's house was visited by the assembled relations of the wife and husband, who plundered it of every thing they could lay their hands on, while he offered no resistance, or even remonstrance, according to Maori custom. The taua, or "foray," extended to a hut belonging

to him on the island, from which Barrett's attendants brought mats, flax, and other articles in great glee.

Mr. WAKEFIELD confirms the fact that cannibalism *does* exist in New Zealand. He tells a story of a chief who stayed out late one night, was waylaid by a hostile tribe, and was found next morning with his head cut off and his heart taken out; doubtless being deemed an epicure's bit by the assassins. He asserts that RAUPERAPA had a slave girl killed and dressed for dinner on the unexpected arrival of a stranger. When attempts were made by the Governor to put down the custom, one of the tribes sent him word, "that they had nothing but dry fern-root to eat, and would much enjoy a slice of his fat sides to moisten it."

One of the most vivid sketches in these volumes is the description of

THE FIRST SETTLEMENT AT NELSON.

The little village at the haven was all life and gaiety. Two large wooden stores and a house for immigrants, belonging to the company, were the centre of business, as labourers came for their rations, or rolled casks and bales into the store. The *Lord Auckland* was discharging immigrants on the beach; the two Deal boats of the company were being launched or hauled up by their weather-beaten crews, or making trips to the shipping; and knots of whalers who had come on a cruise to the new settlement, were loitering about on the scattered cannon, ploughs, and cart-wheels. Among these beach-combing wanderers, I recognised many old acquaintances. Some of these eccentric characters seemed curiously divided between contempt for the inexperience of the "jimmy-grants," as they called the emigrants, and surprise at the general industry and bustle prevailing. The cloudless weather, hotter than I had yet felt it in New Zealand, and the vivacity of the scene, made one think that races or a fair was going on, rather than a serious settlement. All seemed affected by the bright blue sky and lovely scenery around. In the midst of the toil and confusion of landing goods, and looking for relations in the crowd, every countenance beamed with good humour and enjoyment. The very whalers would now and then condescend to shew an awkward clodhopper the handiest way of hauling a package up the sloping beach. But few natives figured in the scene; as this spot had not been inhabited for many years, owing to the constant danger from the proximity of the mountains, whence Pakihure and his brother fugitives were said to have more than once made successful forays upon the dispersed settlements of their conquerors, and of the few Ngatiawa who had arrived in Blind Bay after its conquest by Raupheraha and his followers. Such at least was the reason assigned to me by Mark, the young chief of Rangitoto, on D'Urville's Island, who came while I was here on friendly visit to Captain Wakefield.

Near the highest point of the path between the haven and the town was pitched the small square tent in which Captain Wakefield slept. From hence he had only a few steps to walk to the flag-staff, where he communicated to the shipping by means of Marryatt's signals; and he was conveniently placed for going to whichever location required his presence.

In the midst of the great amphitheatre was a low isolated mound. Here a long range of wooden houses served as hospital, survey-office, and emigration barracks; and a constant stream of immigrants with their bundles was flowing either way, between the summit of this small Acropolis and the nearest point of the lagoon to which the tide would allow the large boats to ascend the channel of the Maitai. Wooden houses, tents, sheds formed of boughs, frames of clay walls and thatched roof, and heaps of goods and chattels of various kinds, were scattered over different parts of the flat. Here and there a newly-arrived party might be seen cutting a spare encampment out of the high fern, and erecting their sheds and gipsy fires in the space thus formed. But the principal cluster of population was along the banks of the Maitai, and on the edge of the wood.

The long straight lines cut by the surveyors through the fern gave an odd appearance to the landscape; and along these glades short posts were stuck into the ground at regular intervals, with the numbers of the sections on either side, in readiness for the approaching selection. As I walked along these future streets, quail, either single or in coveys, frequently started up before my steps. They abound all over this part of New Zealand.

Mr. WAKEFIELD, while resident at Wanganui, contracted an intimate acquaintance with one of the native chiefs, called E. KURU, to whose friendship he was indebted for an introduction to native manners and customs, and much of the most interesting scenery. Here is the picture of

A CHIEFTAIN'S MANSION.

The terraced flat between a steaming gorge at the western extremity of Kakaramea and the lake is covered with plantations and isolated houses. Among these latter that of Heuheu is prominent. It is about forty feet long, fifteen broad, and of a proportionate height. A narrow verandah ornaments the northern front, before which a square is reserved from the kumera grounds which surround it on three sides. On the day that we went, by previous appointment, to pay our first visit to the old man, about two hundred people had assembled in the little square, and Heuheu, who sat at one end of the verandah, attended by his principal wife, motioned us to a seat while he went through the necessary tangi with the Wanganui natives. A splendid feast followed. Two hundred kits of boiled potatoes and kumeras, five pigs skewered like birds and baked whole; eight or ten pots full of white-bait, and three calabashes of pigeons and tuis stewed in their own fat (a sort of *galantine de gibier*), were brought in by a long train of slaves, and piled up in the centre of the square. After this had been distributed among the visitors, the chief talked to me about Wanganui, the governor, and Poniki, and asked me to come and see him again before I left the neighbourhood. In the meanwhile he gave me five pigs for food while I remained at Tokanu, and said he was ashamed of having no food to offer me such as white men liked. He expressed great gratitude for my reception of him and his war-party at Wanganui the autumn before; and begged me to look about the country and call it my own, and the people my people. But he accompanied this with a warning not to try and buy the land from him, for he had determined never to sell either that or his chieftainship.

He concluded the interview by saying that he remembered I was fond of hearing the songs and seeing the dances of the natives. So like a baron of olden time shouting "A hall, a hall!" he yelled "He haka, he haka mo Tiraweke!"—"A dance, a dance for Tiraweke;" and a hundred men and women, headed by his wife Hokokai, went through some spirited hakas and waiatas for an hour.

From Terapa to Tokanu the shore is formed by a swamp, which reaches to the hills. About a mile beyond Tokanu, a settlement called Wai eriki, or "warm water," is situated on some patches of rich dry land, on the banks of the branching creeks which drain the swamp between the hot springs and the lake. Beyond this a point runs out half a mile to the north; and at this point the three branches of the Tonga Riro, or upper Waikato, flow into the lake. About the mouths, and in the creeks and lagoons all along between them and Tokanu, dwell thousands of ducks of various sorts, which afford excellent sport. I spent many hours in exploring the various retreats among the rushes and flags, from which they did not rise till my little canoe came within half gun-shot.

Another insight into the manners and customs of the people is afforded by this

HISTORY OF A SLAVE.

Turori, a sister of Herekiekie, the chief of Tokanu, at Taupo, had been taken captive at the battle of Waitotara in 1840, and had fallen to the share of a man christened Wiremu, or "Williams," at Manawapou. But being esteemed a great beauty among the natives,—that is to say, being of very masculine figure, with large prominent features, a bushy head of hair, loud voice, and well tatued between the lower lip and the chin,—Turori had soon become the ruler of her master, to any extent but that of letting her return to her native country.

But there were many more claimants to her affections among the natives of the neighbouring pass, and she had at length abandoned her master to go and marry a handsome young teacher at Otumatua, called Nera, or "Naylor." A fierce quarrel of course ensued between the master and the husband. The relations of either party took part in the dispute, which they mingled strangely with their religious discussions. But it ended in the belle remaining with her husband, and ruling him as she had ruled her master.

At the request of her brother, I had tried to ransom her when I returned from Taupo; having sent two of my boys with a double-barrelled gun each to lay at the feet of her master, with my letter, begging him to accept them as payment for his slave, and to allow her to return to her family. But he had refused; and the boys brought me back the guns, and a private message from the slave, that had I come on horseback she would have jumped up behind to fly to Wanganui.

Now, however, she was perfectly reconciled to the life which she led with her husband, who was a fine, good-humoured youth, and with her position as the acknowledged belle of the country.

As I had brought her several letters and presents from her relations at Taupo and Wanganui, Turori was delighted to shew me how thoroughly she joined in the grateful and respectful feelings of all her tribe towards me; and she ordered her husband about in all directions to make our party comfortable.

(To be continued.)

FICTION.

Sybil, or the Two Nations. By B. Disreali, M.P. London, 1845. Colburn.

Another of Mr. Disraeli's brilliant fictions, not so amusing as *Coningsby*, because not *quite* so personal, but vastly more to be admired, because its aims are altogether higher and nobler.

Coningsby was mainly a political satire, and the object of the fiction was to attack certain men offensive to the writer, even more than a system of which he disapproved. But *Sybil* is levelled at principles and systems, and although persons are not spared, and satire is wielded with undiminished vigour, yet are these secondary only to the grand design, which is to exhibit in its most striking forms the great social evils of our generation, the line of demarcation drawn between rich and poor, so that they constitute in fact *two nations*, mutually prejudiced against, mutually ignorant of, each other, an evil which it is the primary purpose of Young England to attack, and if possible to remove.

The idea is thus expressed by the novelist.

"This is a new reign," said Egremont; "perhaps it is a new era."

"I think so," said the younger stranger.

"I hope so," said the elder one.

"Well, society may be in its infancy," said Egremont, slightly smiling; "but, say what you like, our Queen reigns over the greatest nation that ever existed."

"Which nation?" asked the younger stranger, "for she reigns over two."

The stranger paused; Egremont was silent, but looked inquiringly.

"Yes," resumed the younger stranger, after a moment's interval; "two nations, between whom there is no intercourse and no sympathy; who are as ignorant of each other's habits, thoughts, and feelings, as if they were dwellers in different zones, or inhabitants of different planets; who are formed by a different breeding, are fed by a different food, are ordered by different manners, and are not governed by the same laws."

"You speak of ——" said Egremont hesitatingly.

"The rich and the poor."

The design of *Sybil* is to exhibit, under the convenient form of a fiction, to the eyes of the rich what are the feelings, the thoughts, the ways, the wants, and wishes of the poor. This design is not new; it has been accomplished of late with power and effect by Dickens, and Jerrold, and Mrs. Trollope; by the two former of these with more fidelity than by Mr. Disraeli. In truth, admirable as is the purpose, brilliant the composition, absorbing the interest of *Sybil*, it must be allowed that the pictures of working-class life and character, as presented in *Sybil*, are not real. How, indeed, can they be so? What has the author seen and known of the working-classes, save the small experience of an election visit, and the half-dozen *soirées* in the manufacturing districts? He has never mingled with them but in their Sunday clothes; never has he sat with them in their unguarded hours, heard their talk, witnessed their emotions, inspected their economy, shared their secrets. All, therefore, that he paints of them and their sayings and doings must be the sketches of a vivid imagination drawing pictures of its own from the suggestions of newspaper reports and such like. And so, in fact, it is. With a substratum of truth running through the descriptions of labourers' life in these volumes, there is a mass of error and of exaggeration. The objection is not preferred against Mr. Disraeli as a fault; it is the unavoidable consequence of his position. He is himself a member of one of the "two nations" pictured in his fiction; he has shared the severance he denounces; he, as one of the rich, has not mingled with the poor; he has been, equally with his generation, the victim of the established conventionalities; his very pursuits and tastes would shut him out from the sympathy of other classes than his own. Nay, if the truth must be told, there are special reasons why *he* is not like to have been a companion of the poor. Mr. Disraeli *was* not always what he *is* now. In his younger days he was as assiduous a courtier of aristocracy as London could produce. No man more zealously sought the smiles of the great; and he who would win them, if he have not birth or rank to boast, must sedulously shun association with any thing in manner, or pursuit, or opinion, that would subject him to the suspicion of those who rule the realms of fashion.

That Mr. Disraeli's honest sympathies are with the poor, we do not doubt: that his aspirations are genuine, that he would *now* practise what he preaches, it would be unfair to deny. He has linked himself with "the condition-of-England question," and the contemplation of it has taught him wisdom; and that wisdom he is endeavouring to diffuse among those whom it would be like to reach in no other shape. But this does not militate against our assertion that *Sybil* is not a faithful picture of the *two* nations. It reflects to the very life that with which the author is familiar, that which he draws from observation; but it does *not* exhibit in their veritable colours the men and the manners it borrows from imagination instead of transcribing from the reality.

We will not anticipate the pleasure of our readers by a foreshadowing of the plot of a novel that will be perused by all of them. It will be enough for the purpose of information to the curious, to say that the *two* nations are, as indicated above, the rich and the poor. Sybil, the heroine, belongs to the latter, being the daughter of a working man, a sensible, bold, energetic fellow, conscious of the wrongs and false position of his class, and resolved to right them. She is, of course, a beautiful creature, and the necessities of the novelist make her accomplished far beyond aught that could be found in her sphere, if the author were to search England over. The hero, hight Egremont, belongs to the other nation, the rich; he is a man of birth and fashion, possessing some good sense mingled with many affectations. He falls in love with Sybil, and in pursuit of her mingles with the nation to which he had been before an utter stranger, and thus learns the practical philosophy which it is the aim of the novel to inculcate. The lovers run a race of adventure through the prescribed space of three volumes; among other probabilities, the beautiful Sybil being committed to prison, and threatened with a public trial for Chartism, from which she escapes through the benevolent interference of Lord John Russell (!!); and then, to complete the romance, she proves *not* to belong to the *nation* of the poor at all, but to be in fact an heiress and a baroness, and then she marries Egremont, and the curtain falls.

Such is the strange unnatural plot; but it is still more strange that Mr. Disraeli did not feel how entirely his practical illustration has departed from his theory. He desires to break down the huge barrier which has been built up by modern habits between the rich and the poor. He writes a brilliant book to exhibit the folly and the danger of such tendencies in our social system. For this purpose he introduces to us two personages, one an aristocrat by custom, the other of nature's aristocracy, and shews us, in a succession of powerful scenes, how unjustly and foolishly the two classes hold themselves apart; how wrongly each judges the other; how unsubstantial are the distinctions that separate them; how infinitely greater is the man, as God made him, than he can be made by any titles or honours man can confer upon him. Having eloquently and forcibly proclaimed these truths, by example as well as by precept, he ends by practically sweeping them away, to accommodate his story to the prejudices he has been denouncing; as if to shew that, after all, even in fiction, he could not venture to unite the two nations against whose disseverance he has so energetically declaimed, he resorts to the stale and extravagant figment of a title and a fortune coming to his heroine just when it was wanted to take her out of the one class and put her into the other, before he dares unite nature's gentlewoman with society's gentleman.

We ask, what is this but an avowal that title and riches are, after all, in the author's judgment, the only passports to esteem, and that the principles he boasts so loudly are but fine phrases to catch the popular ear, and do not form a part of the life and soul of the man who utters them?

Still are they not the less truths because there may be some insincerity in the utterer; and many and important are the truths which, amidst much fallacy and some extravagance, are shadowed forth rather than distinctly defined by Mr. Disraeli in these volumes. Whether he has not very clear perceptions of his own principles, or if he wants courage to avow them and push them to their inevitable conclusions, we will not venture to assert; but few reflecting minds will turn from the perusal of these pages without a consciousness of thoughts suggested which will influence them through all their after-lives. The keen and polished satire will attract some,

and the brilliancy of the composition others; but unconsciously all will find themselves infected by the profounder meanings hidden under the flashing and the sparkling that have delighted their fancies.

Many of the subordinate characters are admirably drawn, the whole man—face and form, manner and mind—being brought before us by half a-dozen of those happy touches of description in which Mr. DISRAELI excels all living writers, nay, in which he is without a rival in the whole range of English literature. More particularly is this displayed in the portraiture of characters in his own class—the statesmen and would-be statesmen, the intriguing women, the place-hunters, the toadies, the underling officials, and the frivolous and effeminate fops who compose so large a part of that which is called *society* in aristocratic circles. Here Mr. DISRAELI is at home, and doubtless he draws from the life, so very life-like are his sketches. Not so when he attempts character in the class of which he has no personal knowledge; here he fails, and can no more endure comparison with DICKENS than can the latter compete with him in the drawing-room and the club.

We have remarked that there is too much disquisition: we must add that there is also a little too much of the fanciful apparent in it. Mr. DISRAELI is not a man of argument, but of wit; his fancy is more powerful than his reason; he is only half a philosopher, having the imagination that is an element of that character, but wanting the corrective presence of *causality* (to use a scientific term) that is essential to its perfection. Hence it is that he seldom reaches more than half a truth. His imagination suggests new and large views of things, but he is unable to track them backward, and define their limits and their sources; or onward, and pursue them to their consequences. He must be content to leave this duty to others having less of the creative faculty he enjoys, and more of the reasoning faculty he wants; and content he ought to be even to point the way to an end which all must anxiously desire, although to others must be committed the task of practically conducting society to the goal he has indicated.

We have dwelt more at length upon this novel than is quite consistent with the restricted space of a weekly journal, because it is an uncommon work in itself; because it is the production of a man who has made much stir in the world of late; and, above all, because it professes to be an embodiment of the principles which THE CRITIC is established to infuse into literature and art. Scarcely need we add that *every* library should order and every reader peruse it, for that its subject and its author will already have insured. But we cannot conclude without a few passages taken at random, which will exhibit to the impatient something of the manner of the work.

The following dialogue has caught more of the language than of the thoughts of the working class. Misses Caroline, and Harriet, and Julia are talking politics, and protesting that they would marry no man who was not a Chartist.

The widow shook her head. "I don't like these politics," said the good woman, "they bayn't in a manner business for our sex."

"And I should like to know why?" said Julia. "Ayn't we as much concerned in the cause of good government as the men? And don't we understand as much about it? I am sure the Dandy never does anything without consulting me."

"It is fine news for a summer day," said Caroline, "to say we can't understand politics with a Queen on the throne."

"She has got her ministers to tell her what to do," said Mrs. Carey, taking a pinch of snuff. "Poor innocent young creature, it often makes my heart ache to think how she is beset."

"Over the left," said Julia. "If the ministers try to come into her bed-chamber, she knows how to turn them to the right about."

"And as for that," said Harriet, "why are we not to interfere with politics as much as the swell ladies in London?"

"Don't you remember, too, at the last election here," said Caroline, "how the fine ladies from the Castle came and canvassed for Colonel Rosemary?"

"Ah!" said Julia, "I must say I wish the colonel had beat that horrid Muddlefist. If we can't have our own man, I am all for the nobs against the middle class."

As a specimen of the satire with which the novel is rife, take this admirable hit at the small agitation that raged not long since in relation to

THE BARONET'S BADGE.

"In spite of the ministers, and in spite of the peers, had the poor king lived, we should at least have had the badge," added Sir Vavasour mournfully.

"The badge!"

"It would have satisfied Sir Grosvenor le Draughte," said Sir Vavasour; "and he had a strong party with him; he was for compromise, but d— him, his father was only an accoucheur."

"And you wanted more?" inquired Egremont, with a demure look.

"All, or nothing," said Sir Vavasour; "principle is ever my motto—no expediency. I made a speech to the order at the Clarendon; there were four hundred of us; the feeling was very strong."

"A powerful party," said Egremont.

"And a military order, sir, if properly understood. What could stand against us? The Reform Bill could never have passed if the baronets had been organized."

"I have no doubt you could bring us in now," said Egremont.

"That is exactly what I told Sir Robert. I want him to be brought in by his own order. It would be a grand thing."

"There is nothing like *esprit de corps*," said Egremont.

"And such a body!" exclaimed Sir Vavasour, with animation. "Picture us for a moment, to yourself, going down in procession to Westminster, for example, to hold a chapter. Five or six hundred baronets in dark green costume—the appropriate dress of *equites aurati*; each, not only with his badge, but with his collar of SS; belted and scarfed; his star glittering; his pennon flying; his hat white with a plume of white feathers; of course the sword and the gilt spurs. In our hand, the thumb-ring and signet not forgotten, we hold our coronet of two balls."

Egremont stared with irrepressible astonishment at the excited being, who unconsciously pressed his companion's arm, as he drew this rapid sketch of the glories so unconstitutionally withheld from him.

"A magnificent spectacle," said Egremont.

"Evidently the body destined to save this country," eagerly continued Sir Vavasour. "Blending all sympathies; the crown of which they are the peculiar champions; the nobles, of whom they are the popular branch; the people, who recognize in them their natural leaders. But the picture is not complete. We should be accompanied by an equal number of gallant knights, our elder sons, who the moment they come of age, have the right to claim knighthood of their sovereign; while their mothers and wives, no longer degraded to the nomenclature of a sheriff's lady, but resuming their legal or analogical dignities, and styled the 'honourable baronetess,' with her coronet and robe, or the 'honourable knightess,' with her golden collar of SS, and chaplet or cap of dignity, may either accompany the procession, or, ranged in galleries in a becoming situation, reign influence from above."

"I am all for their going in the procession," said Egremont.

"The point is not so clear," said Sir Vavasour solemnly; "and, indeed, although we have been firm in defining our rightful claims in our petitions, as for "honorary epithets, secondary titles, personal decorations, and augmented heraldic bearings,' I am not clear, if the Government evinced a disposition for a liberal settlement of the question, I would not urge a too stringent adherence to every point. For instance, I am prepared myself, great as would be the sacrifice, even to renounce the claim of secondary titles for our eldest sons, if, for instance, they would secure us our coronet."

"Fie, fie, Sir Vavasour," said Egremont, very seriously, "remember principle: no expediency, no compromise."

"You are right," said the baronet, colouring a little; "and do you know, Mr. Egremont, you are the only individual I have yet met out of the order who has taken a sensible view of this great question, which after all is the question of the day."

There is a great truth in this stricture upon

HISTORIES OF ENGLAND.

If the history of England be ever written by one who has the knowledge and the courage, and both qualities are necessary for the undertaking, the world would be more astonished than when reading the Roman annals by Niebuhr. Generally speaking, all the great events have been distorted, most of the important causes concealed, some of the principal characters never appear, and all who figure are so misunderstood and misrepresented, that the result is a complete mystification, and the perusal of the narrative about as profitable to an Englishman as reading the *Republic* of Plato or the *Utopia* of More, the pages of *Gaudentio di Lucca* or the *Adventures of Peter Wilkins*.

Mr. MACAULAY is the man for this achievement, and if rumour may be relied upon, he has set himself to the task. How ably Mr. DISRAELI can portray character will be seen by this sketch of

LORD SHELBURNE.

He adopted from the first the Bolingbroke system; a real royalty in lieu of the chief magistracy; a permanent alliance with France instead of the Whig scheme of viewing in that power the natural enemy of England; and a plan of commercial freedom, the germ of which may be found in the long-maligned negotiations of Utrecht, but which, in the instance of Lord Shelburne, was soon in time matured by all the economical science of Europe, in which he was a proficient. Lord Shelburne seems to have been of a reserved and somewhat astute disposition; deep and adroit, he was, however, brave and firm. His knowledge was extensive and even profound. He was a great linguist; he pursued both literary and scientific investigations; his house was frequented by men of letters, especially those distinguished by their political abilities or economical attainments. He maintained the most extensive private correspondence of any public man of his time. The earliest and most authentic information reached him from all courts and quarters of Europe; and it was a common phrase, that the minister of the day sent to him often for the important information which the cabinet could not itself command. Lord Shelburne was the first great minister who comprehended the rising importance of the middle class; and foresaw in its future power a bulwark for the throne against the "great revolution families." Of his qualities in council we have no record; there is reason to believe that his administrative ability was conspicuous; his speeches prove that, if not supreme, he was eminent, in the art of parliamentary disputation, while they shew on all the questions discussed a richness and variety of information with which the speeches of no statesman of that age, except Mr. Burke, can compare.

Such was the man selected by George III. as his champion against the Venetian party after the termination of the American war. The prosecution of that war they had violently opposed, though it had originated in their own policy. First minister in the House of Lords, Shelburne intrusted the lead of the House of Commons to his Chancellor of the Exchequer, the youthful Pitt. The administration was brief, but it was not inglorious. It obtained peace, and, for the first time since the revolution, introduced into modern debate the legitimate principles upon which commerce should be conducted. It fell before the famous coalition with which "the great revolution families" commenced their fiercest and their last contention for the patrician government of Royal England.

By way of variety, let us extract a description of

LIFE AT THE CLUBS.

This club was Hatton's only relaxation. He had never entered society; and now his habits were so formed, the effort would have been a painful one; though with a first-rate reputation in his calling, and supposed to be rich, the openings were numerous to a familiar intercourse with those middle-aged nameless gentlemen of easy circumstances who haunt clubs, and dine a great deal at each others' houses and chambers; men who travel regularly a little, and gossip regularly a great deal; who lead a sort of facile, slipshod existence, doing nothing, yet mightily interested in what others do; great critics of little things; profuse in minor luxuries, and inclined to the respectable practice of a decorous profligacy; peering through the window of a club-house as if they were discovering a planet; and usually much excited about things with which they have no concern, and personages who never heard of them.

Mr. DISRAELI complains bitterly of the revolution which placed WILLIAM the Third upon the throne: to that he attributes many of our present most formidable difficulties, especially the establishment of that gigantic aristocracy whose influence has since held sovereign as well as subject in thraldom. Thus he describes the position, at the close of the eighteenth century, of what he terms

THE VENETIAN PARTY.

The situation of the Venetian party in the wane of the 18th century had become extremely critical. A young king was making often fruitless, but always energetic, struggles to emancipate his national royalty from the trammels of the factious dogeship. More than sixty years of a government of singular corruption had alienated all hearts from the oligarchy; never, indeed, much affected by the great body of the people. It could no longer be concealed that, by virtue of a plausible phrase, power had been transferred from the Crown to a Parliament, the members of which were appointed by an extremely limited and exclusive class, who owned no responsibility to the country, who debated and voted in secret, and who were regularly paid by the small knot of great families that, by means of this machinery, had secured the permanent possession of the king's treasury. Whiggism was putrescent in the nostrils of the nation; we were probably on the eve of a bloodless, yet important, revolution; when Rockingham, a virtuous magnifico, alarmed and disgusted, resolved to revive something of the pristine purity and high-toned energy of the old Whig connection, appealed to his "new generation" from a degenerate age, arrayed under his banner the generous youth of the Whig families, and was fortunate to enlist in the service the supreme genius of Edmund Burke.

In another mood take

LORD LORAINE—A STREET SKETCH.

Lord Loraine, a mild, middle-aged, lounging, languid man, who passed his life in crossing from Brookes' to Boodle's, and from Boodle's to Brookes', and testing the comparative intelligence of these two celebrated bodies; himself gifted with no ordinary abilities, cultivated with no ordinary care, but the victim of sauntering, his sultana queen, as it was, according to Lord Halifax, of the second Charles Stuart.

To conclude, we commend to the most serious thoughts of our readers a reflection with which the first volume closes, and which bears a far more extensive application than that given to it by Mr. DISRAELI:—

THE GREAT FACT.

"I will frankly own to you, I never had much faith in any of these proposals or proposers; but they were a change, and that is something. But I have been persuaded of late that there is something going on in this country of more efficacy; a remedial power, as I believe, and irresistible; but whether remedial or not, at any rate a power that will mar all or cure all. You apprehend me? I speak of the annual arrival of more than 300,000 strangers in this island. How will you feed them? How will you clothe them? How will you house them? They have given up butcher's meat; must they give up bread? And as for raiment and shelter, the rags of the kingdom are exhausted, and your sinks and cellars already swarm like rabbit-warrens."

"'Tis an awful consideration," said Egremont, musing.

"Awful," said Gerard; "'tis the most solemn thing since the Deluge. What kingdom can stand against it? Why go to your history—you're a scholar—and see the fall of the great Roman empire—what was that? Every now and then, there came two or three hundred thousand strangers out of the forests, and crossed the mountains and rivers. They come to us every year, and in greater numbers. What are your invasions of the barbarous nations, your Goths and Visigoths, your Lombards and Huns, to our population returns?"

The Goldmaker's Village. Translated from the German of H. ZSCHOKKE. London, 1845. Burns.

SEVEN editions attest the popularity of this tale in Germany, and the translation was undertaken in the hope that its circulation may help to promote an object which has of late largely engaged public attention—an object which, for THE CRITIC and its readers, possesses a peculiar interest—the amelioration of the condition of the poor.

The tale has an interest apart from this. It is a truthful picture of German peasant life, and it is told in the simple strain that forms so remarkable a feature in German narrative. The plot, if it can be said to deserve the name, is very inartificial. Oswald returns from the wars to his native village of Goldenthals, finds the inhabitants plunged in ignorance, immorality, and poverty, and vigorously sets about their reform, in spite of scandal and persecution. He establishes schools, and enforces cleanliness and politeness upon the children. By degrees they carry their teachings and improved habits into their homes. He founds a savings-bank; practically exhibits the advantages of prudence and forethought; shews the people how to convert all about them to profitable uses; turns their thoughts upon religion; discourages intemperance by finding other occupations for idle hours; and, finally, after many thwartings and severe trials of his patience, succeeds in making the village one of the most happy and thriving in the whole country. The admirable means adopted to this end, and the sagacious manner of working them out, should be sought in the tale itself, which will be read with pleasure and profit by all who interest themselves in the problems relative to the social condition of the empire, which form the subject-matter of the principles of YOUNG ENGLAND.

EDUCATION.

The Travels and Adventures of Thomas Trotter, as told by himself. Edited by Peter Parley. London, 1845. Darton and Co.

WHO is Peter Parley?

This question, eagerly asked by thousands, who have read

with pleasure and profit the works of that charming old gentleman, has perplexed many a papa. The mystery is now solved; Peter is no longer a shadow, but a good, substantial American gentleman, hight S. G. GOODRICH, who has been tempted by the popularity of his writings to visit us in person, and, being here, to publish another series of volumes for the especial pleasure of young England; the first of which is the neat little book whose title is copied above.

Now Mr. GOODRICH, the *real* Peter Parley, expresses his surprise to find the name he has made so famous unblushingly assumed by more than one literary thief in London, and he complains with much justice of the piracy, not only because it affects the sale of his own works, but as inflicting upon him the still greater annoyance of responsibility for the wretched trash which has been thus palmed upon the British public as his. This delusion can, however, no longer endure, now that his personality is proclaimed by himself. Henceforward Mr. GOODRICH will be Peter Parley, and the only genuine Peter Parley will be Mr. GOODRICH, and if people after this permit themselves to be imposed upon, the fault will be their own.

Like the most popular of his previous works, this one is in the form of a narrative. It is the story of one Thomas Trotter, a Bostonian, who goes to sea, is wrecked on the coast of Spain, rests at Gibraltar, Sicily, Malta, Syracuse; ascends Mount Ætna, embarks for Naples, visits all that is worth seeing in that city and its neighbourhood, including Herculaneum and Pompeii; proceeds to Rome, and thence to Florence, Pisa, Venice, Milan, Genoa, and Leghorn, returning to his home enriched with a store of information, which he gives to his young friends in the singularly simple, intelligible, and graphic manner which has made the previous works of Peter Parley such universal favourites. The secret of their success is, that every child can understand them, and understanding, he remembers them; and the facts thus pleasantly conveyed to his mind remain indelibly impressed there, and educate him almost without the consciousness that he is learning. Let any parent or teacher open this little book and begin to read it aloud in an easy, agreeable manner, and in ten minutes every child in the room will spontaneously leave his play and come to listen.

MISCELLANEOUS.

The Chronicles of Fashion. By Mrs. STONE, Authoress of "The Art of Needlework," &c. 2 Vols. London, 1845. Bentley.

"Do as others do," is the maxim and motto of the most imperious, and the most capricious of all absolute powers—fashion—dogmatic, oppressive, and invisible. Many a hapless wretch found to his cost that he had transgressed the unknown laws of the Holy Inquisition; many a luckless wight may discover that the massive tomes of our statutes contain a trap for his ignorance; but more often still has a breach of the unwritten law of fashion been visited with severity upon the daring trespasser within its realm, without a sufficient knowledge of *ton* to qualify him as a worthy subject. But as the winds, when once they have blown, may be registered and noted in all their waywardness, so the ever-varying decisions of fashion may be chronicled, although they afford even less clue to the future than the passing breeze. This idea of chronicling the past glories and follies of fashion has been happily worked out by Mrs. STONE in a pleasant, gossiping book, which is fitted, both by its exterior and interior attractions, to lie upon the table, for the amusement and instruction of a passing hour, and as an infallible specific for the wearisome five minutes before dinner. Anecdotes of the manners and customs of the fashionable world of the last three hundred years abound in striking contrasts to themselves and to the present time; and these lighter frivolities often reveal much of the real character of society in general, and suggest inquiry into the causes of those marked changes which have taken place. What surprise would the "public" now feel at an order of the Privy Council forbidding plays on Thursdays, because they interfered with bear-baiting, and generally condemning them as tending "to the great hurt and destruction of the game of bear-baiting and like pastimes, which are maintained for her Majesty's (Queen BESS's) pleasure." What would Father MATHEW think of the repetition of the masque at Theobald's before JAMES I. and the King of Denmark, when the *ladies* could not go through their parts because they were dead drunk; and their majesties, taking the hint, were soon afterwards safely conveyed by their attendants to their respective beds? But to our book. Mrs. STONE has followed somewhat the irregular nature of her subject, and omitted to arrange her matter as methodically as she might have done in point of time; but the general divisions, under the heads of Banquets and Food, Manners, Habitations, Carriages, Amusements, Costume, Stars of Fashion, &c. &c. are aptly chosen, while too elaborate a classification has been well avoided. ELIZABETH'S reign is selected as the birth of the fashionable world, and among other reasons especially because then began the system of coming to town for the season, which, in spite of edicts and proclamations, has continued ever since, and will only cease when the universal adoption of fast trains at 300 miles an hour will render a house in London quite superfluous. As it is, numbers come up for Thursday's opera, and return to talk of *all* the stars, and the half-dozen operas, which have gladdened their eyes and ears. We shall skip over the opening chapter, which chronicles our national characteristic of substantial dinners, and amuse our readers with an extract from a vehement invective against the new fashion of coaches, consequent upon these incursions of the country upon the town. It is from the pen of TAYLOR, the water-poet, whose poems were more remarkable for their quaint titles than for their beauty.

THE WORLD RUNS ON WHEELS; OR, ODDS BETWEEN CARTS AND COACHES. 1623.

"I think never since Phaeton brake his neck, never land hath endured more trouble and molestation than this hath by the continual rumbling of these *upstart* four-wheeled tortoises.

"Whence comes leather to be so dear, but by reason (or, as I should say, against reason) of the coaches and carroaches who consume and take up the best hides that can be gotten in our kingdom, inasmuch that I cannot buy a pair of boots for myself under an angel, nor my wife a pair of boots (though her foot under the seventeens) under eight groats, or three shillings, by which means many honest shoemakers are either undone or undoing, and infinite numbers of poor Christians are enforced to go barefooted in the cold winters.

"A wheelwright is an ancient, a profitable, and a trade which by no means can be wanted; yet so poor it is, that scarce the best of them can hardly ever attain to better than a calfskin suit, or a piece of neck beef and carrot roots to dinner on a Sunday; nor scarcely any of them is ever mounted to any office above the degree of a scavenger, or a tything-man at the most. On the contrary, your coachmaker's trade is the most gainfullest about the town. They are apparelled in satins and velvets, are masters of their parish, vestrymen, who fare like the emperors Heliogabalus or Sardanapalus, seldom without their mackeroones, parmisants, jellies, and kickshawes, with baked swans, pasties, hot or cold, red-deer pies, which they have from their debtors worships in the country. They have been the universal decay of almost all the best ash-trees in the kingdom, for a young plant can no sooner peep up to any perfection, but presently it is felled for the coach; nor a young horse bred of any beauty or goodness, but he is ordained from his foaling for the service of the coach."

These "closets on wheels" must have been much exposed to the weather, for forty years later glass windows were only beginning to be used, as we learn from an entry by that prince of fashionable chroniclers, Pepys, who mentions, as a "pretty thing,"

That my Lady Peterborough, being in her glass coach, with the glass up, and seeing a lady pass by in a coach whom she would salute, the glass was so clear that she thought it had been open, and so ran her head through the glass.

But your true hater of novelties can always find out or imagine objections, and so the water-poet continues:

"The cart is an open transparent engine; that any man may perceive the plain honesty, there is no part of it within or without, but it is in the continual view of all men; on the contrary, the coach is a close hypocrite, for it hath a cover for any knavery, and curtains to veil or shadow any wickedness. Moreover, it makes people imitate sea crabs in being drawn sideways. The superfluous use of coaches hath been the occasion of many vile and odious crimes; as murder, theft, cheatings, hangings, whippings, pillories, stocks and cages; *for housekeeping* never decayed till coaches came into England."

A similar objection was made when coals were first introduced into London, and it is worthy of note that Mrs. STONE, a

few pages further on, indulges in a half-suppressed tirade against those "monstrous unintellectual" railways. So hard is it to see ourselves as others see us.

There are some good observations contrasting the magnificent propriety of LOUIS the Fourteenth's harem, and the outrageous debauchery of CHARLES the Second's court; but we would add, that this part of the contrast, and the different tone of the two nations subsequently, is a strong argument to shew that outward propriety is often dearly purchased, and that it is infinitely better in the end that vice should appear as it is, although the colouring of the picture should be more disgusting in the retrospect. A day's amusement at the court of the merry monarch, a nickname which has saved his memory from some of the obloquy it deserves, is thus described by Mrs. STONE, and affords a fair specimen of her original writing.

Sometimes they would have "a greate banquet at Mortlack;" sometimes they went so far as Richmond; sometimes they anchored at Chelsea, then a most delightful country spot; sometimes they pic-nic'd at Greenwich, frightening the echoes from their propriety, and startling the deer in their *then* sylvan retreats; sometimes they merely took a short excursion, and hastily landed to drive in Hyde Park, or to revel and "collation" in the Mulberry or Spring Garden. But on all and every of these occasions they were attended by musicians,—the more aristocratic revellers by an accomplished band in a separate boat, and they made the air vocal with revelry and melody. A gay and gallant sight it must have been on a bright and sparkling morning (our ancestors were wiser than we in this matter; their summer day did not *commence* in the sultry heat of noon), when the tide gushed merrily on, the light spray danced about the bows of the boat, and fell in glittering drops from the oars of the rowers,—the sunlight glancing on the gay and picturesque attire of the revellers, on dancing plumes and fluttering streamers, and yet more, on gay and pleasure-seeking countenances,—as barge after barge glides along,—the air vocal now with the rich sweep of wind-instruments—anon with the light tinkle of guitars, or the merry burden of voices in some choice madrigal,—until one general sensation is seen to pervade even the numerous and separate parties which are scattered on the river;—the rowers simultaneously rest on their oars, the ladies wave their handkerchiefs, the gentlemen lift their hats, and "The King! the King! God bless him!" bursts forth in one deafening cheer, as a splendid barge, resplendent with gold, majestically floats along, all others yielding way. The good-humoured king, known more by his dark hue than from any dignity of demeanour, steps into a conspicuous place, and, bareheaded, acknowledges the greetings around, on which the acclamations are redoubled. Yet in the intervals may be heard the light ringing laugh of that youthful beauty in whose ear Buckingham, ever ready to worship the rising sun, is breathing his witticisms; while at the stern of the vessel, conspicuous only from her quietude, is the unassuming and kind-hearted Queen; and at a little distance, a haughty beauty, who casts scornful and ill-pleased glances towards the courtly Buckingham and his merry companion. The barge darts forward, stops at Whitehall stairs, and the party disembark amid the cheers of the spectators, who even call a proud smile to the lip of the slighted beauty by their loud encomiums on her loveliness.

In an incredibly short space of time the whole party are mounted and cantering towards Hyde Park. It must have been on this occasion, surely, that Mr. Pepys was so delighted with the court party, Lady Castlemaine having a *yellow* plume in her hat; but the happy and triumphant Mrs. Stewart had her hat cocked and a red plume, and moreover, "with her sweet eye, little Roman nose, and excellent taille," seems to have eclipsed, as he sorrowfully confesses, even the object of his own especial and unfailing admiration, Lady Castlemaine. The Queen had "a crimson short pettycoate, and her hair dressed *à la négligence*; mighty pretty; and the King rode hand in hand with her,"—as a loving husband should do.

Just as Vauxhall is rising we trust, phœnix-like, from the ashes of neglect, we will give a sketch of its old rival,

RANELAGH.

There were four entrances by Doric porticos opposite each other, an arcade encircled the building, and near it was a gallery, within which were forty-seven boxes, beautifully painted and ornamented, and each lighted by a bell-lamp in front; they were divided by pillars, each alternate one having a looking-glass from top to bottom in a gilt frame; over these boxes, which were occupied by parties taking refreshments, was a gallery. The ceiling was divided into oval panels, connected with wreaths of flowers, each panel containing a celestial figure on a sky-blue ground. The whole was lighted (exclusive of the lamps in the boxes and gallery above) by twenty-eight glass chandeliers hung from the ceiling in two circles!

Here was given a magnificent entertainment by the Spanish ambassador, in honour of the recovery of GEORGE the Third.

The queen was here of course, and the royal family, and six hundred other ladies were invited, who all obtained a prize in a lottery, which formed part of the evening's entertainment. The highest prize was a gold watch enriched with diamonds. The queen obtained an etui case, containing a medallion of the king. On this occasion the circle of boxes in the rotunda was thrown into the form of a Spanish camp, each pent or box guarded by a boy dressed in Spanish uniform. The gallery above was arranged as a temple of Flora, the rotunda and gardens were brilliantly illuminated, and twenty pleasure-boats, also highly illuminated, sailed up and down the Thames in front of the gardens, letting off rockets as they passed; there were fireworks, and illuminated arches, temples, &c. in the garden. Tea was made by women ornamented with wreaths of flowers, and the company generally were attended by a hundred valets in scarlet and gold, and as many footmen in sky-blue and silver. The supper-service of the Queen and royal family was entirely gold; the table-cloth alone cost ninety guineas. Many of the wines and fruits were imported from Spain for the occasion.

There are so many amusing bits worth extracting, that we do not know which to choose; but passing over the account of the gallantry of the early part of the last century, we come to a most rich specimen of what duchesses and fashionable ladies could do when their curiosity was excited. It occurred in 1738, not 1638, as it is oddly enough printed.

At the last warm debate in the House of Lords it was unanimously resolved that there should be no crowd of unnecessary auditors; consequently the fair sex were excluded, and the gallery destined to the sole use of the House of Commons. Notwithstanding which determination, a tribe of dames resolved to shew on this occasion that neither men nor laws could resist them. These heroines were Lady Huntingdon (afterwards Whitefieldian), the Duchess of Queensberry, the Duchess of Ancaster, Lady Westmorland, Lady Cobham, Lady Charlotte Edwin, Lady A. Hamilton, and her daughter Mrs. Scott, Mrs. Pendarvis, and Lady Francis Saunderson. I am thus particular in their names, since I look upon them to be the boldest assertors and most resigned sufferers for liberty I ever read of. They presented themselves at the door at nine o'clock in the morning, where Sir William Saunderson respectfully informed them that the Chancellor had made an order against their admittance. The Duchess of Queensberry, as head of the squadron, pished at the ill-breeding of a mere lawyer, and desired him to let them up stairs privately. After some modest refusals, he swore by G— he would not let them in. Her Grace, with a noble warmth, answered by G— they would come in, in spite of the Chancellor and the whole House. This being reported, the Peers resolved to starve them out, and an order was made that the doors should not be opened till they had raised the siege. These Amazons now shewed themselves qualified for the duty even of foot soldiers. They stood there till five in the afternoon, without sustenance, every now and then playing volleys of thumps, kicks, and raps against the door, with so much violence that the speakers in the house were scarcely heard. When the Lords were not to be conquered with this, the two duchesses (very well apprised of stratagems in war) commanded a dead silence for half an hour, and the Chancellor, who thought this a certain proof of their absence (the Commons being also very impatient to enter) gave orders for the opening of the door, upon which they all rushed in, brushed aside these competitors, and placed themselves in the front rows of the gallery. They staid there till after eleven, when the House rose, and during the debate gave applause, and shewed marks of dislike, not only by smiles and winks (which have always been allowed in these cases), but by noisy laughs and apparent contempt; which is supposed the true reason why poor Lord Herveg spoke miserably.

The rage for public amusements was so great that in 1770, at the very time that WILKES was riding triumphant upon the excited passions of the mob, the House of Commons adjourned to enable its members to attend a masquerade in Soho-square, and the masquers had to make their way through the crowd, who repeatedly forced them to lower their masques to shew their beauty.

We would gladly have given some space to the interesting account of BEAU NASH, the far-famed king of Bath, whose character Mrs. STONE does merited homage to, as a remarkable instance of a man not spoilt by what we should term the most frivolous of all occupations, that of master of ceremonies at a fashionable watering-place. One anecdote of his tact, however, we must give in spite of the warning that we have reached the limits of our notice. He was resolved to get rid

of gentlemen's boots at parties, as he had banished ladies' aprons; but a strong opposition was raised to this last exercise of royal power, although they had given up swords and tobacco-pipes. He announced that Punch, then *the fashion*, would exhibit in a new scene for the delight of Bath.

PUNCH IN BOOTS.

Full of eager anticipation, the fashionable world of Bath crowded to see the show; and intense indeed was the expectation as the new scene opened with Punch and a beautiful lady preparing for their night's repose: but to the horror of the fair one, Punch was stepping into bed with his boots on. She desired him to remove them; he refused. She remonstrated; but Punch was firm. "Madam," said he, "do you, a stranger, presume to instruct me, an inhabitant of this polished and fashionable city, in etiquette?—My boots! Remove my boots! Why, madam, you might as well tell me to pull my legs off. I never go without boots. I never ride,—I never dance without them; and this at Bath is considered true politeness."

Neither would give way, and Punch went off in high dudgeon; but the gentlemen of Bath did not wear boots again.

Fifteen portraits ornament the *Chronicles of Fashion*, and altogether we pronounce it without hesitation as one of the pleasantest made-up books we have seen for some time, and one that will in every way reward the reader. The concluding pages are a startling and eloquent appeal to the votaries of fashion in favour of the victims of fashion,—the overworked milliner. They may be summed up in the reply there cited, of one who knew by experience the evil and its remedy. "Unless you can give *consideration* to the higher ranks, you will be unable to work any reform in the hours of business." Would that the remedy were likely to be as universally adopted as it is undeniable.

A Popular History of Priestcraft in all Ages and Nations. By WILLIAM HOWITT. Seventh edition, with large additions. London, 1845. Chapman.

THIS new and elegant edition of a work which has enjoyed an extensive popularity appears at a moment when it is likely to engage more than usual attention. Some extensive additions have been made; many chapters are entirely new, and the preface states that it contains at least three times the original quantity of matter.

Probably there are few readers to whom this work in one of its many forms is unknown. Its design is obvious from its title. History, ancient and modern, has been ransacked for facts illustrative of the evils of priestcraft. The fault is, that it is one-sided; the abuses only of priesthoods are presented; their uses, the many benefits they have conferred, are altogether passed by. Priestcraft is an abuse by ambitious men for purposes of self-aggrandizement, of one of the noblest principles implanted in us by the Divinity. It is not fair to argue againss the use from the abuse. Because some cardinals have preferred earth to heaven, and some bishops have looked more to royalty than religion, it is not to be inferred that humble parish priests, scattered over the whole face of the land, are mischievous or even useless. WILLIAM HOWITT'S book is curiout and instructive, as exhibiting the danger of confiding too much power to individuals or classes; but it presents only one side of the question. The volume is elegantly printed, and published at a very moderate price.

ART.

ROYAL ACADEMY EXHIBITION.

THE seventy-seventh exhibition of the Royal Academy was opened to the public on Monday the 5th inst. It is decidedly inferior to that of last year, when, heightening the splendour of the talent, CALCOTT and MACLISE, E. LANDSEER, EASTLAKE, and MULREADY shone forth with unwonted lustre. The first-named of these is no more; the second has sent nothing to the gallery, and the three others exhibit one picture each. Nevertheless the exhibition, though not excellent, is one of average merit. Without offering any thing deserving to be included among first-class art, it contains several good works, and a great many to which belongs the praise due to respectable mediocrity. In short it is, as it should be, a fair and speaking exposition of the existing state of British art, with its several peculiarities, and therefore will be regarded with curiosity by the foreign, and interest by the English connoisseur. The most obvious merit of our artists is *colour*. Herein they stand unrivalled throughout the world. What was the distinguishing excellence of the Venetian and Dutch schools we have inherited alone; individual exceptions may, and indeed do, appear among other nations, but no *school* existing can lay so just a claim to this praise as the British. We wish our artists were as perfect in other respects. If they would pay more attention to drawing, and cultivate the higher excellences of sentiment and expression, in which, taken as a body, they are deficient, how infinitely would they exalt the status of art, and, as a consequence, improve the taste and judgment of the people! Had we the imagination, backed by the accurate drawing, of the French, with the mastery of expression and happy sentiment of the Germans, what a grand school would be ours! That much of this is acquirable cannot be controverted. Drawing is a purely mechanical art, in which those who strive and persevere never fail to attain correctness; expression is a form of it resulting from quickness of observation and surety of hand; but for sentiment and imagination we must go further; these are dependent upon idiosyncrasies of mental temperament, and may be quickened only by an improved education, which of a truth our artists do sorely need.

One improvement of late years is so manifest that we may not overpass it without especial praise; and that is, the distinctness of line and careful finish which, broadly speaking, mark the works latterly produced in contradistinction to those exhibited some ten or twelve years ago. This of itself marks the advancement of British art; and if no grand works have been produced to render memorable this year's exhibition, it is something at least to feel that art has neither retrograded nor remained stationary, but that a slight advance has been made by the generality of our artists, if only in this one particular.

In history-painting the Gallery this year offers nothing very commendable. The first subject that strikes the visitor is CHARLES LANDSEER'S *Eve of the Battle of Edge-hill*, an unequal work, good in parts, but too much of a strength in the accessories; other points, too, are open to censure. Sir WILLIAM ALLAN'S *Battle of St. Vincent* is clever and spirited, which is all that can be said of it. Mr. LANCE sends a well-composed and sweetly-coloured representation of an incident in the life of Marechal Biron; and Mr. ELMORE another, of the chiefs of the Guelph and Ghibelline factions in Florence. Of scripture-history, the most striking work is *The placing of the Infant Moses in the Ark*, by Mr. E. U. EDDIS, which for expression, careful drawing, and forcible colouring is remarkable, and decidedly an improvement over his picture of *The Raising of Jairus's Daughter* which we praised last year. Mr. HERBERT also exhibits a characteristic skilfully-grouped scene of *St. Gregory teaching Boys to sing his Chant;* a subject very probably suggested by Mr. Pugin, whose portrait this artist exhibits. Mr. CLAXTON'S *Jews lamenting over the Ruins of Jerusalem* is a work also deserving of attention.

Of imaginative and poetical compositions the Gallery has this season the usual complement. Mr. EASTLAKE contributes a scene from the masque of *Comus*, which has all the delicacy of finish and purity of colour, but less of the feeling and expression, which generally mark his productions. Mr. WARD has an incident in Lord Chesterfield's ante-room, founded on his lordship's neglect of Dr. Johnson, which abounds in character, truth of costume, and colour. There is also of this class a charming work by WEBSTER, called *A Dame's School;* and Mr. F. GOODALL submits a clearly-painted and happily-managed picture, *Le Bon Cure*, which nevertheless exhibits traces of that self-repetition we warned him against in our notice of his works at the British Institution last February. Akin to the last named, both in subject and sentiment, is Mr. FRITH'S *Village Pastor*, a picture that for variety of character, colouring, and general treatment, is most meritorious, and does the artist infinite credit.

Of portraits we have as usual an oppressive redundancy. We think the Academicians would do no small service to the more meritorious branches of art if they limited the number for exhibition permitted to each artist as low as two. It is not only wearisome, but downright insufferable, to have such an overwhelming array of unknown and blank faces to endure,

each the counterpart of the other, affording interest only to the friends and relatives of the party reflected, and occupying space that might far more profitably to the public have been otherwise filled. The President of the Academy sustains his position as a limner of heads against his younger competitors most manfully. Mr. PICKERSGILL exhibits some good heads. Mr. KNIGHT has improved visibly; some of his portraits are admirable, especially one, a full-length of Richard Hotham Pigeon, Esq. in the East room. Mr. PATTEN too sends some life-like characteristic heads which support his reputation; but of Mrs. CARPENTER, who sends five portraits, we regret we cannot speak so favourably.

In landscape the exhibition is this season remarkably strong. In the painting of skies, to which far too little attention had been paid until of late, a palpable and unmistakeable improvement is visible. Instead of being mere flat surfaces, as formerly, we now look, as we do in nature, into the depths of space, and recognize portraiture of the many varieties of clouds which float through the air and overshadow the land. Mr. ROBERTS has two fine works—*The Ruins of Thebes*, and *Jerusalem from the Mount of Olives*: for the grandeur, force, and the sentiment they inspire, these pictures are admirable. *The Morning Hymn of the Wood Nymph*, by Mr. DANBY, will attract much notice; it is poetically, not truthfully handled. The license of the artist has overpassed nature; for with so powerful a light as that of a rising sun, the gloom through which it penetrates could not exist. STANFIELD contributes no fewer than five of his elaborate and magical sea-views, and E. W. COOKE two of the same nature, and but little inferior to the Academician. BRIGHT has one powerfully-painted landscape, and COLLINS several. Mr. CRESWICK sends seven of his vivid and nature-reflecting works. He never has appeared to so much advantage as he does this season. Imitation cannot be carried further than he has pushed it.

In the Miniature Room the name of THORBURN eclipses equally the old and the new competitors. Here, too, may be found one of the most spirited, characteristic, and forcible transcripts from nature, in the shape of a pencil drawing, we ever remember to have seen. It is by Mr. GEORGE SHEPHEARD,—perhaps the ablest master of this pleasing but difficult art with whose works we are acquainted.

We regret that we cannot speak favourably of the sculpture this year. The chief attraction, from its size, is a statue of the Queen, by Mr. NIXON, intended for the Royal Exchange. It is of the heroic stature; heavy and ill-proportioned. There are a few spirited busts, by BEHNES, JONES, WEEKS, MACDOWELL, and BUTLER, and there is a spirited statue of Sir Sidney Smith, by Mr. KIRK. Of imaginative and poetic works, there is none that deserves especial mention, if we except a pleasing group of Paul and Virginia, by Mr. MARSHALL; certainly there is nothing in the room equal to the *Huntsman unleashing his Dogs*, by GIBSON, and the statue of Lady Godiva, by BEHNES, in last year's exhibition.

We now proceed to a notice of such of the works exhibited as seem to deserve a special comment.

No. 7. *Portrait of a Lady.* Mrs. CARPENTER.—We cannot congratulate Mrs. CARPENTER on this portrait; it is unquestionably inferior to most of her productions. The copper-coloured shot silk, though novel in a picture, harmonizes ill with the complexion of the lady, to which it imparts a disagreeable chilliness. Excepting where the landscape on the left is of a violent green, the colour is weak; and the background is very slovenly painted.

No. 9. *A Welch Lass and Cattle at a Mountain Spring.* T. WOODWARD.—This is a simple and truthful transcript of a common incident in rustic life. Extreme care has been bestowed on the figures; there is a presence of silvery light and a freshness of atmosphere in the picture that make one breathe more freely, by sympathy, though in the centre of smoky London.

No. 11. *The Governess.* R. REDGRAVE.—An unimproved repetition of his *Governess* of last year. The tenacity with which modern artists cling to any subject which once has been successful is quite amusing. The great painters of old did not sin thus. Once having embodied their thought, they went on seeking fresh imagery, new combinations; hence the variety and novelty which delight us in their works.

No. 12. *Aurora and Zephyr.* W. ETTY, R. A.—There is a glow and splendour of colour in this picture quite intoxicating to the eye. The sentiment of passion is happily embodied in the hurried action of the figures. Inaccuracy of drawing is the most obvious of the few blemishes in this captivating work.

No. 16. *The Parting of Sir Thomas More from his Daughter.* S. A. HART, R. A.—Were it not from its proximity to the last-noticed subject, by which it suffers in colour, this would pass for a creditable picture. As it is placed, the flesh tones appear raw and chalky; but there is merit to redeem this in the expression which the artist has stamped on the countenances of the sorrowful actors in this melancholy scene.

No. 33. *Portrait of Lady Sale.* J. SANT.—A meritorious portrait of a meritorious person. In colour it is notably good. The introduction of a green India scarf over a dress of black velvet, and the opposition to these of a sienna-brown table-covering and scarlet ottoman, prove that the artist, without once violating harmony, has a judicious eye for the arrangement of contrasts.

No. 34. *Ruins of the Great Temple of Karnac, in Upper Egypt.* D. ROBERTS, R.A.—A subject equally striking by its grandeur and associations, and distinguished by the masterly ability evidenced in its treatment. In the middle ground stand the mighty ruins of the great temple, surviving by thousands of years the people who raised up that immense edifice, and the religion to which it was dedicated. Behind the Libyan hills on the left, the sun is sinking; his level rays light up the distant surface of the Nile, stretch across the ruin-strewn plain, and strike the lofty walls and hundred pillars of the temple. On the left, in the foreground, is a huge tank, cut deep in the living rock, and holding water; on the right are some natives at their devotions and amusements. Stretching away through the middle ground is a long caravan, with reposing camels in front, and servants pitching tents. Out of these materials the artist has produced a noble work. The sentiments it conveys are those of vastness, grandeur, and repose: so powerfully do these act that the impression left behind will not soon pass away from memory.

No. 49. *Thinking of the Future.* H. M. ANTHONY.—A forcibly-painted interior, simple in composition, and natural in colour.

Nos. 50 and 77. *Whalers* (see *Beale's Voyage*). J. M. W. TURNER, R.A.—It is impossible to deny these curious pictures the merit of originality of conception and masterly treatment. There is an air of reality in these scenes that makes us feel as one of the actors, and to experience the excitement one can well suppose belongs to such perilous adventures. We tremble for the fate of the boats over the back of the monster whale. The usual extravagances of white lead and Naples yellow which disfigure this artist's works, form, with a want of distinctness, the drawback from the merits of these entertaining views.

No. 61. *The Brow of the Hill.* T. CRESWICK, A.—This is a covetable little production. The "pathetic light" of evening (as Wordsworth has beautifully termed it) streams over a broken landscape, and a river, which steals away into the distance. The feeling of repose suggested hereby is delicious.

No. 62. *On the Tees—Evening.* F. M. YOUNGMAN.—This is a feeble and far-off imitation of BRIGHT, without the smallest modicum of that artist's force and rustic feeling.

No. 65. *The Mole of Ancona, with Trajan's Arch.* C. STANFIELD, R.A.—Just the subject in which this artist excels. The composition is picturesque, the effects truthful, and the water and sky are exquisitely painted.

No. 66. *Portrait of Mrs. Thwaytes.* A. E. CHALON.—This must surely have been painted *to order*; for we cannot believe that of his own accord the artist would have ventured on such an extravagance. Of gaudy furniture, and jewels rich and rare, there is profusion, and great pains have been taken to subdue their meretricious glare. There is an air of vulgarity and silly display about this work which nothing can redeem or extenuate.

No. 71. *Portrait of M. Thomas Ralli de Constantinople.* Sir M. A. SHEE, P.R.A.—Here is a quiet impressive head that contrasts finely with the foregoing. The countenance is characteristic, the colouring forcible and clear, and the figure stands out boldly from the background.

No. 63. *Fish.* H. J. PIDDING.—It is seldom we have seen fish so cleverly painted. The phosphoric hues of the mackerel are conveyed with marvellous truth.

No. 75. *Autumn.* J. D. WINGFIELD.—A charming pic-

ture, which, though placed so low, will well repay attention. It would not discredit WATTEAU, in whose manner it is treated.

No. 78. *Portrait of Very Rev. E. B. Ramsay.* J. W. GORDON, A.—This is the second-best portrait in the exhibition. The disposition of light and shade is judicious and original. In attitude the figure is characteristic and easy, every accessory in keeping, and the local colour perfect throughout.

No. 87. *Peter the Great teaching his Subjects the Art of Ship-building.* Sir W. ALLAN.—This work is the property of the Emperor of Russia. We will only say of it that we regret that an abler specimen of British talent is not going to Russia in its place.

No. 91. *Portrait of a Lady.* W. MULREADY, R.A.—Remarkable for its power and the daring opposition of colour which it presents. A lady in a gown of pink silk is seated on a green-covered sofa, with her head and neck relieved by a purple curtain. The lady is projected by these with a force quite startling. The figure is accurately drawn, and of original line; while the flesh-tints, though a little thin, are clear and life-like.

No. 109. *Cupid interceding for Psyche.* W. ETTY, R. A.—It is difficult to determine whether the luscious colouring or voluptuous sentiment of this beautiful work is the most subduing. As if to render it complete, the drawing here is faultless,—a rare honour for this otherwise successful artist.

No. 117. *Venice—Evening: Going to the Ball.* And No. 162, *Morning: Returning from the Ball.* J. M. W. TURNER, R.A.—Notwithstanding the extravagance of colour, these are really magnificent pictures. For space and depth, for original and masterly oppositions and combinations, each of these subjects (the last-named especially) is wonderful.

No. 126. *Undercliff, Isle of Wight.* W. COLLINS, R.A.—Whoever examines this work must perceive at a glance that it was a study from actual nature. There is here no sacrifice of accuracy of feature to pictorial prettiness. The incident in the foreground where one boy is helping the other over the edge of the acclivity, is one of those strokes of observation for which Mr. COLLINS is remarkable. The broad shadows on the sea and land are finely thrown in. To the true lovers of unadorned nature, one such work as this, with its simplicity and truth, is worth more than all the Academy-formed landscapes produced in a year.

No. 131. *The Heiress.* C. R. LESLIE, R.A.—There is great delicacy of finish, skilful composition, and a happy tone of colour in this. The story, moreover, is legibly told.

No. 140. *The Marquis of Londonderry.* F. GRANT, A.—Though to this full-length has been assigned the most favourable central position, we are at a loss to discover the merit which secured it. In a work of such pretensions, it is long since we have witnessed a more decided failure. The composition is poor and faulty. From behind the shoulders of the horse springs a plain stone arch, a segment only of which is contained by the picture. The figure of the marquis is badly drawn, his complexion chalky and cold. The charger by his side is ill-proportioned, as the respective lengths from the chest to its head, and then to its hoofs, will abundantly testify.

No. 141. *The Shepherd's Prayer.* E. LANDSEER, R.A.—This is the only work Mr. LANDSEER exhibits this season. It represents a shepherd at sunrise on a plain, kneeling before a stone crucifix placed over a water-trough. He is imploring protection for his flock, which lie around him. It is a strange subject, but handled with that masterly ability which is impressed on every thing this artist undertakes. The flat plain at sunrise, with the flock scattered over it, and a steeple on the horizon, is a downright reality. The expression of trustful reliance on the countenance of the shepherd, the close imitation of textures in every object introduced, and the carefulness of the finish throughout, are deserving of especial notice and commendation.

No. 145. *A Sketch.* W. MULREADY, R.A.—A complete little cabinet gem, quite equal to the best works of the most esteemed of the Dutch painters, in whose manner it was painted.

No. 149. *Scene from Moliere.* C. R. LESLIE, R.A.—When we object to the hardness which disfigures this work, the artist will remind us it is a candlelight scene. True; but with artificial light, where the rays do not strike or illuminate by reflection, we have obscurity. Here every thing is made out with a decision that amounts to hardness. The draperies are stiff and ill-cast.

No. 154. *Returning from the Village.* W. F. WITHERINGTON, R.A.—The best of this artist's works this season. The effects are admirably managed; the shadows through the avenue are transparent and cool, and heighten to reality the burst of sunlight which passes over the girl and child, rocks and rivulet, in the foreground.

No. 172. *What a Beauty!* and No. 87, *The Barrow Pig.* J. WARD, R. A.—It is no faint praise to say of these that they are replete with rustic feeling, and quite worthy of MORLAND.

No. 196. *Landscape—Evening.* J. J. CHALON, R. A.—A poetic sentiment breathes throughout this landscape. The warm sun-beam streaming over the broken ground, and illumining the rocky ledge which relieves the oak-trees, is that of nature itself.

No. 197. *A portion of the Church of San Benedetto, Subiaco.* S. A. HART, R. A.—An interior difficult to manage is here successfully treated. The effects are skilfully disposed, and the figures appropriately introduced where they best assist the composition.

No. 206. *Portrait of Professor Owen.* H. W. PICKERSGILL, R. A.—A powerful life-like portrait. The head is impressed strongly with character and intelligence.

No. 222. *From Milton's Comus.* C. L. EASTLAKE, R.A.—There is more of sentiment than of imagination in this work. For harmony and purity of colour it is unrivalled by any work in the gallery; the flesh-tints are perfection. The figure personifying virtue, and the angel in communion with her, have feet and hands disproportionately and obtrusively large.

No. 223. *Portrait of R. H. Pigeon, esq.* J. P. KNIGHT, R.A.—The best full-length in the exhibition. The figure is erect and dignified, and stands boldly out from the background; the head beams with life and thought. In composition this work is unaffected and judicious; extreme care has been bestowed on the finish, and every object introduced is of value to the general effect.

No. 233. *The Water Cart.* F. R. LEE, R.A.—A clever landscape—one that, if it had but more force, might challenge comparison with GAINSBOROUGH, so genuine is the rustic feeling it displays. It is a limited view, and singular for the disposition of the effect. The foreground and distance are in shadow, while through the middle ground floods a brilliant passage of sunlight. The line is picturesque, and the local colour faultless.

No. 228. *Miss Singleton.* F. GRANT, A.—This is the most successful of Mr. GRANT's portraits. Both in composition and colour, this work casts into shade most of the female portraits this season exhibits.

No. 254. *The Action and Capture of the Spanish Xebeque El Gamo, 32 guns, and H.M.'s Sloop Speedy, 14 guns, off Barcelona.* C. STANFIELD, R.A.—This spirited and admirable representation of a sea-fight will command more attention and admiration than any other work by this master. The vessels are *brought to* close together; and the English have left their ship in charge of a single man—the surgeon, while they board the Spaniard. On the decks and sides of the *Xebeque* the work of carnage goes forward with terrible earnestness. It is hard to conceive a more spirited representation of such a scene than this. The impression produced by this terrible struggle for mastery is heightened by the stillness and serenity of a sunny sky and calm sea. The dark low hull of the English ship is judiciously contrasted against the light-coloured and lofty sides of the Spaniard. The water is exquisitely painted, flat, transparent, and reflective, but the sky is somewhat deficient in depth.

No. 253. *Lady De Tably.* J. R. SWINTON.—If the execution equalled the conception of this portrait, it would be excellent. As it stands, however, the mechanical part is slovenly and poor. The shadows want transparency, the lights are heavy, but the flesh-tints are good.

No. 259. *Dancing Nymph.* W. ETTY, R.A.—Another of Mr. ETTY's unrivalled specimens of colouring. The works of no school that ever existed surpass this in its peculiar excellence.

(To be continued.)

THE DRAMA.

A STARTLING incident has opened to us a view of the prostrate position of the press in relation to the drama, of which we had no previous suspicion. Of course we were not ignorant of the system of orders giving to the press admission to the theatres, an arrangement to which, in itself, no objection can be offered, for it could not be expected that a journal should pay for admission of its critics whose labours are the mainstay of the theatres. But we were not prepared for the discovery of the condition of thraldom into which it is the endeavour of some of the managers to reduce the press in return for the privilege of orders. The discovery chanced thus.

When THE CRITIC became a weekly journal, and arrangements were being made for a regular series of dramatic criticism, formal application was made to the manager of each of the theatres requesting the usual press privilege of admission for the purpose of such criticism, and the first weekly number of THE CRITIC containing the statement of our views and plans on the subject of the drama was transmitted with the application. The answers received were generally such as might have been expected; but from Mr. WEBSTER, the manager of the Haymarket, we were astonished to receive a note referring to our commentary, and stating that he could not extend any privileges to a critic so predisposed against him. The plain meaning of which is, "you are too independent for me; I can only give orders to those who will praise me without scruple; in return for an admission, I expect a puff and not a criticism."

Now let us see what was the remark that so offended Mr. WEBSTER? This only. Commenting upon the Haymarket, and alluding to the so-called comedy of *The Sheriff of the County*, and two or three others of a like class, we observed that they were only "*elaborate farces.*" Now we appeal to any person who has seen it, whether this remark is not strictly *true;* are there among the public two opinions about it? Certainly some portions of the press did speak of it in other terms, to our great amazement at the time, ignorant as we were then of *the system.* Now the mystery is explained. The penalty for speaking the truth, when it is an inconvenient one, is exclusion for the critic who dares to be honest.

So be it. If such be the system, we desire to have nothing to do with it. THE CRITIC will accept orders from no place of public amusement but upon the most explicit understanding that it is to tell the plain, honest truth, and exercise its judgment with perfect freedom. The same principle that has been so successfully adopted in its reviews of books will doubtless be equally successful in its notices of the drama. Managers, like publishers, will find that, however unpleasing may be censure, plain-spoken criticism will, in the long run, prove the most advantageous, by engaging the confidence of the reader in praises. Honesty is the best policy in literature as well as in life; and managers may rely upon it that the influence which its strict observance must ultimately procure for a journal will more advantage them by its applause of what they do well than by its censure of what they do badly.

After these remarks, it is scarcely necessary to say that Mr. WEBSTER'S treatment of us will in no manner affect our comments upon his theatre. The same praise will be awarded to his merits, the same objections offered to his failings, as will be accorded to others who have not sought to impose upon us any degrading conditions.

BALFE'S NEW OPERA.

DRURY LANE.—The charming, piquant ANNA THILLON has at last appeared to gladden the hearts of a discerning public, and prop the fallen fortunes of Old Drury. Mr. BALFE must pardon our mentioning the lady first; but neither he nor his *librettist* would have written *The Enchantress* but with the knowledge that Madame THILLON and no other was to perform the heroine of it.

There can be no doubt that *The Enchantress* was written to order—that, indeed, if the *Crown Diamonds* had not succeeded so triumphantly last year at the Princess's with this charming actress and singer as *La Caterina*, she would not have delighted a Drury-lane audience this cold, comfortless May, with her inspiriting presence as the fascinating *Stella*. In the *Crown Diamonds* we are introduced to a tribe of most interesting bandits, over whom a Queen of Spain, under an assumed name, ruled with despotic power; to whom she mortgages her crown jewels for the good of an empty exchequer, and exercises her power, both as Queen of Spain and Queen of coiners, in favour of a young Spanish noble, who ultimately shares with her the crown. In *The Enchantress* the aforesaid interesting bandits and forgers become bold and noble smugglers; the Spaniards are metamorphosed into Sicilians; a bewitching pirate daughter of the chief of the gang succeeds the enchanting queen of the bandits, possessing a similar authority over her companions, which she uses in behalf of a particular young gentleman, who eventually turns out to be the rightful monarch of Sicily, and of course marries the king-maker, the fair enchantress.

And now, having noticed the family likeness that exists in the two operas, we cannot but say that Messrs. BALFE, ST. GEORGES, and BUNN are severally entitled to commendation. Mr. BALFE for the clever, lively, pleasing melody that runs throughout the whole opera; Mr. ST. GEORGES, who almost equals M. SCRIBE in the neat construction of his piece; and Mr. BUNN, for the liberal manner in which he has lavished upon its production new and splendid scenery, costly dresses, and well-drilled supernumeraries.

At the same time the opera would have gone off with greater spirit at the Princess's, though probably it had not been so handsomely apparelled; because the size of the house is better adapted for the performance of comic operas, and for the exhibition of the finished by-play of our fair visitor; but principally because there is but one English singer in London that could at all play up to Madame THILLON, and that singer is now at the Princess's—we mean Mr. ALLEN. Mr. HARRISON, with a more powerful voice, through the defects of an unwieldy figure, and a stiff and ungainly action, makes but a poor representative of the courtly lover or gay adventurer.

Mr. BUNN has been blamed for employing a Parisian dramatist to write the libretto for an English opera, thereby, it is said, intimating that no English dramatist would be equal to that stupendous undertaking; but may it not be replied, that no English playwright of ability would take upon himself the task? or even if such were found, though the piece might, and most probably would, be more wittily written, it certainly would not, in the performance, be nearly as effective? It is a melancholy fact, that we must be beholden to our neighbours on the other side of the Channel for many things, and we are afraid at present we must include among them opera-books. Is not the libretto, injured as it must necessarily be by the diluting process of translation, immeasurably superior to the balderdash that has weighed so heavily on others of Mr. BALFE'S operas—to wit, the *Siege of Rochelle, Joan of Arc*, and that most incomprehensible of plays—the *Daughter of St. Mark.*

The performers exerted themselves to their utmost, and if they failed, it was not for want of will. Mr. BORRANI, as the pirate *Ramir*, sung well, but was not the enterprising clever chieftain he was intended to represent. Yet if his acting was not so good as might be wished, his fine manly voice made ample compensation. He was heard to most advantage in "She is seen when the vapours," and in the trio in the last act, when, as *Ramir*, he resigns *Stella* to her young and royal lover. By the way, we were at a loss to understand why, when this trio was deservedly encored, Mr. BORRANI thought it expedient to read the dying letter of his friend *Telles* again. Mr. HARRISON'S unfitness for the sprightly lover has already been alluded to; but he was encored in "Who hath not heard?" which he sang very sweetly. But how can we sufficiently eulogize Madame THILLON'S performance?—It was of its kind perfection. Her beauty, archness, and delicious warbling enchanted all her hearers, independently of the five different becoming costumes she wore. One song, "A youthful Knight," excited the audience to perfect enthusiasm, and will be a great favourite in the drawing-room. "The Young Nadir," too, is a most pleasing melody. But it was when she captivates the grave senators that she exhibited her wonderful power of execution. The pirate chorus "Ever be happy and light as thou art," must not, too, be forgotten—the burden was frequently repeated. And now we must close our notice, which has already extended beyond reasonable limits.

NECROLOGY.

THE LATE WM. GILLIES, ESQ.

The *Morning Chronicle* lately recorded the death of William Gillies, esq. in the 84th year of his age. The long intimacy of the deceased with its original proprietor, Mr. Perry, may afford an appropriate apology for devoting in its columns a few unassuming lines to his memory. Mr. Gillies, for one devoted to the active pursuits of business, was a man of considerable literary attainment; and his conversation, lively and entertaining to the last, and always warmed with an ardent and even youthful interest in the deep concerns of humanity, derived a peculiar charm from his personal reminiscences of many distinguished *literati* and politicians, with whom it had been his good fortune to

become associated at Mr. Perry's and other kindred circles. To these old times he fondly recurred; and singularly delightful it was to witness a man considerably past the period usually allotted to human existence, exhibiting none but the physical attributes of old age, and these so tempered as to be forgotten in the contemplation of the unabated activity of his mind, and the glowing fervour of a most benevolent heart.

CORRESPONDENCE.

TO THE EDITOR OF THE CRITIC.

SIR,—I wish to call you attention to a crying evil in the Book Trade. The Society for Diffusion of Useful Knowledge, for instance, advertises a Biographical Dictionary. Several parts, at 11s. or 12s. each, are taken in, and about 4*l.* 4s. thus paid, when, for some cause not explained, the work stops. This is not their first, though, as far as I know, it is the heaviest of the kind. I recollect a History of Rome in similar circumstances, which is never, I suppose, to be finished. A History of Greek Literature is similarly circumstanced, but the payments there were not heavy. The Dictionary job is too bad. Want of funds and subscribers *seems* to be the cause of delay. But surely even an individual is bound to calculate his means beforehand, and not commit a fraud on the public—how much more a large Society.—I am, &c. ANONYMOUS.

CRITIC OF INVENTIONS, ETC.

[Ingenious inventors of articles of use or ornament are as deserving of critical notice as is an ingenious author, and a knowledge of the true merits of inventions is equally interesting to the public. We purpose to supply an existing defect in critical journalism by devoting a division of THE CRITIC to a fair description of, and honest judgment upon, any article seeking public patronage that may be submitted for notice.]

PORTABLE LIFE-BOAT.—It is somewhat strange that, amid the numerous and valuable inventions that have been introduced to the public within the last few years, there has been none calculated nor intended to supply the means of escape from vessels in distress when at sea, by the absence of which hundreds, if not thousands, of lives are annually lost. We have life-boats on shore, and various other means by which assistance can be rendered to ships when at no great distance from the land; but such is the cumbersome nature of their construction, that sufficient room for them can hardly be found even in our larger vessels; and the great desideratum has been such a boat as should, when *in* use, serve all the purposes of an ordinary life-boat, and when *not* in use, require but little room for stowage. From drawings with which we have been favoured of a recent invention, we are led to hope that the deficiency to which we have alluded no longer exists; certainly, if the utility of the invention may be measured by the ingenuity which it displays, we have good ground for indulging in that hope, and that the "Portable Life-boat" will be found a most valuable acquisition to vessels of all classes. We are not at present at liberty to give a minute description of the invention, but we may observe that the drawings represent a boat twenty-three feet long, six feet wide, and three feet deep; her form is very similar to that of an ordinary ship's boat, and she is fitted up with seats, flooring, rudder, oars, &c. complete. She is constructed of strong, yet light materials (her weight being less than that of a ship's cutter twenty feet long), and is, we should think, likely to prove a good, stiff sea-boat. A prominent feature of the invention is the ingenious distribution of tin air-boxes, one foot square and five inches deep, to the extent of *one hundred and forty-four feet*, which render it impossible that she can sink, even if by any accident she should fill with water, and though a considerable number of persons may be on board. The whole is so arranged that, when not in use, the boat may be stowed away within a case about five feet square and three deep, and we are informed that she may be got ready for sea by two men in one minute. Mr. W. A. Woodley, of Taunton, Somersetshire, is the inventor, and we earnestly hope that his ingenuity and philanthropy in devising and carrying out the means to supply a most serious deficiency in our marine will meet with due reward. We are informed that boats on this plan may be built of any length from ten to sixty feet, and that the former may be reduced to two feet, while the latter may be put into a case seven feet square.

NOVEL PLAN OF A VIADUCT.—A portion of the evidence given this week in a railway committee describes one of the most novel and bold engineering projects which this age of mechanical wonders has produced. To secure a rapid communication with Ireland, it is felt to be extremely desirable to continue the North Wales Railway across the Menai Straits to Holyhead. The existing suspension-bridge is too weak to bear the railway trains, and the erection of a stone bridge is deemed impracticable. In these circumstances they propose to extend an iron tube or gallery across that arm of the sea which, from the top of the one bank to that of the other, is 900 feet broad. There is a rock in the middle of the water which divides the space into two; the tube will, therefore, be in two lengths of 450 feet, built like an iron ship of strong plates fastened by rivets, and perhaps strengthened by longitudinal ribs of iron. Its section is to be 25 feet by 15—that is, as we understand it, 25 feet in height and 15 in width. One line of rails, we suppose, will pass along the bottom, on which the locomotive and train will travel, and small openings will of course be made on the top to admit light. Though the length of each tube (450 feet) will be at least equal to the breadth of St. Andrew-square, they seem to think that it will maintain a nearly horizontal position by its rigidity, at a height above the water sufficient to allow masted ships to pass, and this, too, while it is loaded with a railway train weighing sixty or eighty tons. Such a conclusion, though sanctioned by Colonel Pasley, seems to us very questionable. Perhaps they intend to make the tube in the form of an arch, with a level roadway on the top to support the rails.—*Scotsman.*

ROYAL POLYTECHNIC INSTITUTION.—Among the numerous models which are exhibited in this noble institution, we have much gratification in noticing a machine for making draining-tiles. It seems to us to be of vast utility for agricultural purposes, and also for ornamental grounds, gardens, &c. or any land which abounds in springs. This machine is portable, and worked by hand; or, if required, by horse or steam-power, and is complete within itself. The mould for forming sockets or pipes is new, and perfect in its operation. From the simplicity of its horizontal movement, the machine is not liable to derangement; and, as it throws itself out of gear as soon as all the clay is worked out of the container, it is not easily injured. The fixed container, expeditiously filled with a sufficient quantity of clay, is capable of producing from 5,000 to 7,000 draining-tiles of the ordinary size per day, worked by hand by one man or two boys. The machine, slightly altered, also makes bricks equally well. All stones in the clay are crushed to pieces without retarding the movement; and these are the only machines hitherto offered to the public, for which with most clays no previous preparation of the clay is required,—an expense generally greater than the cost of making. All those who are interested in agriculture should go to the Royal Polytechnic Institution, and see the machine in operation daily, and they will therefore be better able to judge its merits. It also has another thing greatly in its favour, that of being taken to pieces in a very short time, which is of much advantage for carriage, preserving, cleansing, &c. With all these advantages, no doubt it will meet with that patronage it deserves, from all those who follow agriculture, either for pleasure or profit.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

THE following singularly interesting case of Mesmerism, which occurred before MESMER lived to give it a name, is narrated in the *Dublin University Magazine* for the present month. It claims a prominent place among the record of facts which it is the purpose of this Journal to preserve.

PREMESMERITE MESMERISM.

Père Lebrun, in his *Critical History of Superstitious Practices*, cites a letter of the celebrated Huygens to the Abbé Marsenne, dated November 26, 1640, in which it is related that they had a prisoner at Antwerp who could see through all kinds of stuff and clothing, provided only the same were not red. Once came several charitable women to him in the prison, with a view to comfort him in his ill fortune; but in the midst of their Christian-like discourse he began to laugh, and being asked of the reason of this unmannerliness, made answer without shame, "Because one of you hath no shift on."

Now, if this virtuous woman had by chance had on a red petticoat, she would not have been thus put out of countenance.

Delrio, in his *Disquisitiones Magicæ*, printed at Mayence in 1606, says, "In Spain is a sort of men who are called *Zahuris*. When I sojourned at Madrid, in 1575, a boy was to be seen there of this class. These men are said to perceive what is hid in the bosom of the earth; subterraneous waters, metals, buried treasures, and dead bodies. The thing is generally known, and the possibility of it is believed not only by poets, but by philosophers.'

Oken gives us, in the *Journal of Curiosities*, the history of a lady of Lisbon, named Pedegache, who was possessed of a faculty similar to this of the Zahuris, and who made a great noise not only in Portugal, but in all Europe, in her time. According to the accounts of different travellers, this extraordinary woman had the gift of seeing far down into the bowels of the earth, as also into the human body. Père Lebrun, in his work above cited, describes her as having "true lynx-eyes;" as a proof of which he mentions that when the King of Portugal was in need of water for a new building, and such had in vain been dug for, she discovered several springs by mere looking. This took place in the presence of the king, who rewarded her with a pension, and the decoration of the order of Christ for whomsoever she should marry. "It is a pity," observes Père Lebrun, "that she does not understand medicine; for, what is still more surprising (than the power of seeing into the earth), she also sees into the human body. These gifts, however, she can exercise only when fasting. She sees how the blood moves, how digestion goes on, how the nutritious juices are formed. She discerns all the several parts of the body and their various operations; she descries diseases which evade the observation and experience of the skilfulest physicians, whom, in comparison with her, it is no injustice to hold for blind; and, accordingly, people are more disposed to consult her than them."

The *Mercure de France* of 1728 contains a notice of this lady, of whom it says, "She perceives what is hid in the earth, distinguishing stones, sand, springs, to the depth of thirty or forty fathoms. Into the human body she cannot see, except when it is unclothed; but, the body being naked, she discerns the heart, the stomach, and other viscera, is aware of abscesses, if such there be, and detects the seeds of disease lurking in the juices. She can tell, in the seventh month of pregnancy, if the child coming into the world be male or female."

This faculty, as we learn from another source, first discovered itself in her when a child of three years, and in a curious manner—namely, by her suddenly announcing one day, with great *naïveté*, that the maid, who was then laying the table-cloth, "had a little child in her body." No suspicion was harboured at the time that the maid was in the state thus indicated; the result, however, confirmed the child's declaration. This becoming known, the ladies of Lisbon made trial of the wonderful gift of the little girl, by bringing their lap-dogs to her when in a hopeful way; and the child would tell them not only the number of the coming offspring, but indicate likewise the colours of the same, the result always verifying her prognostications. As she grew older, by her power of seeing through opaque bodies, she detected thefts in the most hidden nooks and recesses of houses, and saw concealed springs, and veins of metal in the earth. It is much to be regretted, as Oken remarks, that the Academy of Paris, which had heard of this extraordinary gift, had not an opportunity of putting into execution its intention of investigating the same, because the husband of Donna Pedegache, though a Frenchman, was of too jealous a temper to permit his wife, a woman of uncommon beauty, to undertake the journey. It could, in consequence, not be ascertained whether the astonishing faculty possessed by her had its ground in the structure of her eyes, or in any other speciality of her bodily constitution. Donna Pedegache once made a journey, in company with some friends, through a part of Portugal, when, happening to look out of the carriage in a place where the road crossed a low range of hills, she caused a halt to be made, and declared that here, some thirty feet deep, an antique basin of considerable size, adorned with the rarest carving, was buried. Notice of this was given to the court, and the monument of antiquity being dug for, was really found.

In a French work of 1738, which Oken quotes, is this passage:—"I made the personal acquaintance of Donna Pedegache, the fair lady who is so miraculously gifted. What I have to relate of her will scarcely be believed—namely, that in the human body she can see the obstructions which impede the functions of important organs, when the sufferers unclothe themselves in her presence. At first the doctors in Lisbon would believe nothing of the matter; but they were convinced of it when more than one *post mortem* examination had verified her *diagnosis* to the minutest particular. A man had the misfortune to fall from a height of twelve feet, and to break three of his ribs; he was healed, but a continued lively sensation of pain remained; he consulted Donna Pedegache, who, on regarding the place in which he experienced this inconvenience, perceived a considerable lodgement of extravasated blood. In consequence of this discovery the man was healed."

This example, Oken observes, of "self-developed Mesmerism," will now appear incredible to no physiologist who has taken part in the progress of science in our times, for it involves only such facts as those of which recent times have afforded a multitude of examples. Its importance consists chiefly in this, that it belongs to a time previous to Mesmer's famous discovery, consequently is free from all possible suspicion.

The *rationale* of this lady's gift, as well as of that of the Zahuris and the Antwerp prisoner, Oken finds in a heightening of the "central sense," such as is seen in somnambulists. Persons in the magnetic sleep, he reminds us, tell with the greatest exactness the hour upon a clock in a distant place. Now, it is the same thing whether the clock be separated from the clairvoyante by walls and air, or by earth; and the distinguishing of things buried is no ways more wonderful than that of objects otherwise removed from the range of vision. The same is true of things in living bodies, of the intestines, the blood, the bones, worms, and the like. Earth, walls, air, flesh, are in this point of view similar media, through which the (central) sense acts, as the sense of the eye through the air, or through glass (which is also an earthy substance), both which, so far from obstructing this sense, act rather as its conductors. Our eye is affected by coloured bodies at the distance of miles, because its organization renders it sensible of the subtlest workings that take place in our system. Now, if another organ of the body—a finger, for instance—were through a morbid refinement of structure placed in a similar condition of susceptibility to the subtlest influences, why, asks Oken, should not it also take cognizance of more remote bodies? It is established that there is no body in the world, were it but a particle of dust, that does not act upon all others—an alteration in which does not involve an alteration in all others. All the atoms of which the universe, materially considered, is made up, gravitate towards each other. Each individual atom attracts, and is attracted by the whole remaining mass; and if a single atom be displaced, there is not one force in all creation the direction of which is not changed. Now, our eyes, our fingers, are to each other as different thermometers. One indicates the slightest change of temperature by great spaces, another by small, a third gives as yet no sign of being affected. A magnet on the table feels the iron under the table—yea, it feels the iron at the north pole, deep under the earth; the intervening substances are for it as were they not, because the power that informs it has only in the iron its counterpart.

Thus, we see with the eyes, and therewith hear not—taste with the tongue, and therewith see not, because out of the multiform variety of the physical, like allies itself to like. Thus in a crowd we see only those persons whom we seek; the rest are present without our consciousness. Whither the attention is directed, thither it goes, passing through what intervenes without being stayed thereby. As in our spirit, so it is in nature, which is also a spirit. The brain is sensible of pain in the toe; the sensation coming through the body, which the brain perceives not. One natural body is aware of, or is acted on by another and a remote one, without being sensible of those which lie between, and through which the action by which it is affected passes. Man is also a natural body—a magnet, whose *iron* is the object, whatever it may be, to which his attention is directed, or his organization adapted. To see into the earth, or into other people's bodies—or more properly to *feel* into them, is therefore nothing miraculous or preternatural; and they who manifest such a power are only to be considered as fine electrometers, photometers, thermometers, magnetometers—in short, polarimeters.

It is a pity that the *material* of the antique basin discovered by Donna Pedegache is not given. If it was metal, then the thing is common; but if it was of marble, then we must assume that the hill over which the travellers were passing was not of chalk, but of sand or clay. Persons susceptible of metallic irritation receive an electric shock, even in a carriage, when they pass from one kind of soil to another, after which, in a certain time, a counter-shock follows, by which is indicated the depth of the stratum.

It should not be passed over that Donna Pedegache was one of twins. There are grounds to believe, Oken tells us, that in cases of twin pregnancy one child may magnetize the other; in which event one may come into the world in a state of clairvoyance, and very likely continue to somnambulate all his life.

MR. SPENCER HALL IN READING.—Mr. Hall having accepted an invitation to Reading to deliver a course of three lectures on Mesmerism, the first was given on Wednesday evening, the 7th instant, and proved highly satisfactory to a very respectable audience. The experiments were confined for that evening to two lads introduced by Mr. Hall, and who manifested some very interesting phenomena, especially those resulting from the influence of music upon them in the sleep-waking condition. The feeling inspired by the music was expressed in the most perfect manner, not only by the countenance, but by postures which changed in strict accordance with every variation of the musical thought. A series of phreno-mesmeric experiments were also tried with complete success. Mr. Hall's visits here will doubtless have the effect of removing a large portion of the yet lingering prejudices which some of the medical profession have anxiously striven to cherish.

BASINGSTOKE.—(*From a Correspondent.*)—In the course of numerous experiments in producing mesmeric sleep, I have uni-

formly observed, that however the patient's mind may be passively disposed, and even expecting to feel mesmeric influence, no such effect ensues until the mind of the Mesmeriser is concentrated on the individual and on the object desired.

I have sat behind my patients, reading a book or mentally singing a song, while they supposed I was mesmerising them, but no sleep ensued until I turned my mind exclusively to them.

Under these circumstances, I have mesmerised the patient from an adjoining room, and sometimes at a distance of 100 yards.

Last week, having occasion to go to Birmingham, I previously arranged with a friend to induce in one of my patients *here*, a quiet state of mind, without his having any knowledge of my intentions. The hour fixed was 15 minutes past 8 P.M. on the 13th instant (London time). At that hour I retired to my room in Birmingham, and concentrated my mental energies on the object desired for twelve minutes.

On my return home, a few days after, I was informed that at nineteen minutes past eight on that evening, he fell into the mesmeric coma, and being put to bed, remained so until ten next morning, when he awoke spontaneously, without any unpleasant feeling beyond that of hunger.* The youth is about sixteen years old. I annex his name with my own, which you are at liberty to use at your discretion. Yours, faithfully E. WHEELER.

LITERARY INTELLIGENCE.

AMERICAN LITERATURE.

WE are indebted to the editor of a literary journal recently established at New York, under the title of *The Broadway Journal*, for a file of his papers, and a promise that it shall be regularly forwarded for the future. From the numbers before us it is apparent that excellent taste and high principle preside over the management. The criticisms are distinguished for the largeness and liberality of their views; on the subject of international copyright the loftiest principles are avowed in opposition to the piratical interests of the American booksellers. The essays on Art are singularly thoughtful, and from many of them even our more accomplished artists might glean instruction.

But if, as we presume, the *Broadway Journal* be a fair representative of American literature; if all, or even the best, of native publications be reviewed in its columns, the first exclamation of every reader will be "What a paucity of books for so great a country!" It is evident that the Americans still look to England for their literature. Their home manufacture is, upon the shewing of their best literary journal, trifling in quantity and mean in quality. The eight numbers we have already received do not contain above four or five *reviews* of American books; some score indeed are introduced with short notices, but from their titles, and the brevity with which they are dismissed, it is evident that they are not deemed, even by their countrymen, deserving of critical examination. Some clever wood-cuts are introduced, and the column of original poetry is generally of a better class than the column appropriated to rhymers in the English journals. The sixteen quarto pages are occupied with able criticisms on English books, original essays on various topics, and of various merit, and literary and scientific intelligence.

Nevertheless, as this journal is the best procurable record of American literature and art, we welcome its arrival, and shall make a point of informing the readers of the THE CRITIC of whatever it may contain of novelty, so as to complete the *conspectus* of the doings of *mind* throughout the civilized world which it is the aim of the conductors to compress into these pages.

The first number contains a beautifully written paper by Mrs. CHILD, an authoress well known to English readers, on a performance on the violin by OLE BUL of an original composition called *Niagara;* in which, it would seem, that great artist sought to express in music the emotions produced by a visit to the Falls. As a specimen of our contemporary's contributors we present this eloquent article to the regards of the readers of THE CRITIC.

OLE BUL'S NIAGARA.

BY L. MARIA CHILD.

You ask me for my impressions of Ole Bul's *Niagara*. It is like asking an Æolian harp to tell what the great organ of Freyburg does. But since you are pleased to say that you value my impressions, because they are always my own, and not another person's—because they are spontaneous, disinterested, and genuine—I will give you the tones as they breathed through my soul, without anxiety to have them pass for more than they are worth.

I did not know what the composer intended to express. I would have avoided knowing, if the information had been offered; for I wished to hear what the music itself would say to me. And thus it spoke! The serenely beautiful opening told of a soul going forth peacefully into the calm bright atmosphere. It passes along, listening to the half audible, many-voiced murmurings of the summer woods. Gradually, tremulous vibrations fill the air, as of a huge cauldron seething in the distance. The echoing sounds rise and swell, and finally roar and thunder. In the midst of this stands the soul, striving to utter its feelings.

> "Like to a mighty *heart* the music seems,
> That yearns with melodies it cannot speak."

It wanders away from the cataract, and again and again returns within sound of its mighty echoes. Then calmly, reverentially, it passes away, listening to the receding chorus of Nature's temendous drums and trombones; musing solemnly as it goes, on that vast sheet of waters, rolling now as it has rolled, "long, long time ago."

Grand as I thought *Niagara* when I first heard it, it opened upon me with increasing beauty when I heard it repeated. I then observed many exquisite and graceful touches, which were lost in the magnitude of the first impression. The multitudinous sounds are bewildering in their rich variety.

> "The cataracts blow their trumpets from the steep."
>
> "The whispering air
> Sends inspiration from the rocky heights,
> And dark recesses of the caverned rocks;
> The little rills, and waters numberless,
> Bend their notes with the loud streams."

There is the pattering of water-drops, gurglings, twitterings, and little gushes of song.

> "The leaves in myriads jump and spring,
> As if with pipes and music rare
> Some Robin Goodfellow were there,
> And all the leaves in festive glee
> Were dancing to the minstrelsy."

The sublime waterfall is ever present, with its echoes; but present in a calm contemplative soul. One of the most poetic minds I know, after listening to this music, said to me, "The first time I saw Niagara, I came upon it through the woods, in the clear sunlight of a summer's morning; and these tones are a perfect transcript of my emotions." In truth, it seems to me a most wonderful production; a perfect disembodied poem; a most beautiful mingling of natural sounds with the reflex of their impressions on a refined and poetic mind. This serene grandeur, this pervading beauty, which softens all the greatness, is probably the principal reason why it does not captivate the ears of the public as much as they had anticipated.

It is a great disadvantage to any work of art to be much talked of before it appears. People had formed all sorts of expectations, and were disappointed not to hear their own conceptions uttered in sound. Some expected to hear all *Niagara*, with its powerful bass notes, on the violin alone; and apparently forgot that they owed to Ole Bul's genius the grandly expressive orchestral accompaniment. Some, it is said, even complained that they did not hear the cataract. Their ears might have been better satisfied, perhaps, if there had been a great hydrant running, or a huge water-wheel revolving, behind the scenes.

I supposed that *Niagara* was not received with loud applause, because the souls of the audience were, like my own, too much stilled by its solemn and majestic beauty. When I heard that many were disappointed in it, I felt as if my spirit would be suffocated to remain in a city, that had not souls to appreciate a production like that. But one never need distrust the human soul. It always responds to what comes from the soul. During the following days, people who were strangers to Ole Bul were continually saying to me, "I was indignant at the want of enthusiasm." "Really, I have never before been so much impressed with Ole Bul's genius." Then came tidings that foreign critics, and musical amateurs, who were present, thought it a composition full of majesty and beauty, and were surprised that it was not received with warmer applause. Like all refined and skilfully elaborated productions, it will take time to grow upon the popular ear. If I were to hear it a hundred times, I should discover some new beauty every time, though I should never be able thoroughly to appreciate it. The artist has thrown into it the earnest strength of his soul, and prepared it with great care, because he wished to offer a fitting tribute to this country. Perhaps America will not discover the magnificence of the compliment, till applauding Europe teaches her its value.

At the second concert, a Rondo Giocoso, of Ole Bul's composing, greeted my ears for the first time. It is the lightest,

* I suppose Birmingham to be distant from Basingstoke one hundred miles in a direct line.

airiest thing imaginable; like the hum of bees among the flowers. It is the very Spirit of Joy, throwing smiles and roses as she dances by.

Then, too, I heard *The Solitude of the Prairie* for the first time; and never did music so move the inmost depths of my soul. Its spiritual expression breathes through heavenly melodies. With a voice earnest and plaintive as the nightingale, it spoke to me of inward conflict; of the soul going forth into solitude, alone and sad. The infinite stretches itself out, in darkness and storm. Through the fierce tempestuous struggle, it passes alone, alone, as the soul must ever go through all its sternest conflicts. Then comes self-renunciation, humility, and peace. And thus does the exquisitely beautiful music of this Prairie Solitude lay the soul lovingly into its rest.

Many, who have hitherto been moderate in their enthusiasm about Ole Bul, recognize in these new compositions more genius than they supposed him to possess. Tastefully intertwined fantasias, or those graceful musical garlands, rondos, might be supposed to indicate merely a pleasing degree of talent and skill. But those individuals must be hard to convince, who do not recognize the presence of genuine inspiration, in the deep tenderness of the mother's prayer, that sounds as if it were composed at midnight, alone with the moon; in the fiery, spirit-stirring eloquence of the *Polacca Guerriera*, composed at Naples, in view of flaming Vesuvius,—in the deep, spiritual melody of the *Prairie Solitude*, and in the bold yet serene grandeur of *Niagara*. The individuality of Ole Bul's compositions, their unrepeating variety, and certain passages which occur in them all, have frequently suggested to my mind the existence of a latent slumbering power, which has not room to exert its full strength in music composed for the violin.

I speak as a novice, but my speech has the merit of being unaffected. In the presence of mere skill, I know not what to say. It may please me somewhat; but whether it is more or less excellent than some other thing, I cannot tell. But bring me into the presence of genius, and I know it, by rapid intuition, as quickly as I know a sunbeam. I cannot tell how I know it. I simply say, This is genius; as I say, This is a sunbeam.

It is an old dispute that between genius and criticism, and probably will never be settled; for it is one of the manifold forms of conservatism and innovation. In all departments of life, genius is on the side of progress, and learning on the side of established order. Genius comes a prophet from the future, to guide the age onward. Learning, the lawgiver, strives to hold it back upon the past. But the prophet always revolutionizes the laws; for thereunto was he sent. Under his powerful hand, the limitations gradually yield and flow, as metals melt into new forms at the touch of fire.

This is as true of music as of every thing else. Its rules have been constantly changing. What is established law now, was unknown or shocking a hundred years ago. Every great genius that has appeared in the art has been accused of violating the rules. The biographer of Haydn says, "The charming little thoughts of the young musician, the warmth of his style, the liberties which he sometimes allowed himself, called forth against him all the invective of the musical monastery. They reproached him with errors of counterpoint, heretical modulations, and movements too daring. His introduction of *prestissimo* made all the critics of Vienna shudder." An English nobleman once begged him to explain the reason of certain modulations and arrangements in one of his quartetts. "I did so because it has a good effect," replied the composer. "But I can prove to you that it is altogether contrary to the rules," said the nobleman. "Very well," replied Haydn, "arrange it in your own way, hear both played, and tell me which you like the best." "But how *can* your way be the best, since it is contrary to the rules?" urged the nobleman. "Because it is the most agreeable," replied Haydn; and the critic went away unconvinced.

Beethoven was constantly accused of violating the rules. In one of his compositions, various things were pointed out to him as deviations from the laws, expressly forbidden by masters of the art. "*They* forbid them, do they?" said Beethoven. "Very well. *I* allow them."

Do not understand me as speaking scornfully of knowledge and critical skill. Only presumptuous, self-conceited ignorance does this. On the contrary, I labour with earnest industry to acquire more and more knowledge of rules in all the forms of art. But, in all the higher and more spiritual manifestations, I recognize laws only as temporary and fluxional records of the progressive advancement of the soul. I do not deny the usefulness of criticism; but genius for ever remains the master, and criticism the servant.

Whether critics will consider *Niagara* as abounding with faults, when they examine into its construction, I cannot conjecture. It is their business to analyse genius, and the mischief is, they are generally prone to dissect in the shadow of their own hands. To speak playfully, it is my own belief that cataract thunderings, sea-moanings, tree-breathings, wind-whistlings, and bird-warblings, are none of them composed according to the rules. They ought all to be sent to Paris or Rome, to finish their education, and go silent meanwhile, unless they can stop their wild everlasting variations.

I have not yet learned to become reconciled to the sudden crash of the orchestra, which, in almost all complicated music, comes in to snap beautiful melodies,

> "As if a lark should suddenly drop dead,
> While the blue air yet trembled with its song."

I suppose it is right, because all composers will have it so. Moreover, I know it is so in nature, and it is so in the experience of the soul. But, after all, those clashing instruments always seem like the devil in the universe, of whom it never becomes quite clear to me what need there is of his being there.

I have less affinity for fun than for earnest impassioned utterance; but really there is no withstanding the admirable comic power of tone and gesture in Signor Queerico (Sanquirico). In this dull heavy atmosphere, which has for weeks hung over us like a pall, he is positively a benefactor, as agreeable as a glimpse of sunshine.

We shall continue this notice of the file just received, and from time to time notify the most interesting of the contents of each fresh arrival.

BRITISH ASSOCIATION.—The fifteenth meeting will be held at Cambridge in the week commencing Thursday, 19th June. The time was fixed thus much earlier than usual in order to suit the "commencement," which is on the 24th. Sir John Herschel, bart. F.R.S. is the president for the present year.

REGISTER OF NEW PUBLICATIONS,

From April 16 to May 2.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded by letter will be duly inserted.*

LIST OF NEW BOOKS.

American Factories and their Female Operatives, by Rev. W. Scoresby, 12mo. 2s. cl.
Anderson's (Rev. J. S. M.) History of the Church of England in the Colonies, Vol. I. 8vo. 14s. cl.
A Posy of Stray Wildlings, by Emma Dodimeade, 18mo. 2s. 6d. cl.
Bankers' Magazine, Vol. II. 8vo. 12s. cl.
Bible Reader's Hand-Book, by the Rev. T. Cobbin, A.M. royal 32mo. 2s. 6d. cl. gilt edges.
Bishop of Calcutta's Exposition of the Colossians, 1 vol. 8vo. 12s. cl.
Bishop of Chester's Exposition of the Second of Corinthians, 1 vol. 8vo. 9s. cl.; ditto 2 vols. 12mo. 9s. cl.
Book for Young Women, by the Wife of a Clergyman, 18mo. 1s. cl. 6d. swd.
Book of the Toilet, 18mo. illuminated cover, 1s. swd.
Bride (The), by Arthur Freeling, 32mo. 2s. 6d. cl.; 3s. 6d. silk.
Cobbett's (William) English Grammar, new edit. 12mo. 6s. bds.
Congregational Lectures, Eleventh Series, "Payne's Lectures on Original Sin," 8vo. 10s. 6d. cl.
Conquest of Scinde, by Major-Gen. Napier, Part II. 8vo. with plans, 12s. cl.
Corron's (C. W., M.A.) System of English Grammar, 12mo. 2s. 6d. cl.
Cox's Companion to the Sea Medicine Chest, revised and enlarged, by R. Davis, 20th edit. 18mo. 2s. cl.
Ede's (R. B.) Practical Facts in Chemistry, new edit. 18mo. 3s. 6d. cl.
Falls, Lakes, and Mountains of North Wales, by Louisa S. Costello, with Illustrations, square 8vo. 14s. cl. gilt.
Family Medicine Directory, by Charles Dinneford, 12mo. 2s. 6d. sd.
Geary's Prayers, 18mo. reduced to sell, 1s. 3d. and with Appendix, 1s. 9d. cl.
Gentleman's Hand-Book of Letter Writing, imp. 32mo. 1s. cl.
German Delectus, on the plan of Valpy's Delectus, by E. Albrecht, M.A. and J. C. More, 12mo. 6s. with Lexicon; without Lexicon, 5s. cl.
German University Education, by W. C. Perry, 12mo. 4s. 6d. cl.
Graham's (Thos. J., M.D. &c.) Treatise on the Diseases of Females, 4th edit. 8vo. 11s. bds.
Gwilliam's Tramps in the Isle of Wight, 1 vol. post 8vo. 5s. cl.
Hare's Sermons, 2 vols. 12mo. 6th edit. 10s. cl.
Hope of the Apostolic Church, being Twelve Lectures delivered during Lent, 1845, by Clergymen of the Church of England, with Preface, by Rev. T. R. Birks, 12mo. 5s. cl.
Housemaid's Complete Guide and Adviser, by Miss A. M. Sargent, 12mo. 6s. sd.
Influence, a Moral Tale for Young People, by Charlotte Anley, 4th edit. fcp. 8vo. 6s. cl.
Insect Life, by D. Badham, M. D. fcp. 4s. 6d. cl.
Jenkin (Rev. T. W.) on the Union of the Holy Spirit and the Church in the Conversion of the World, 2nd edit. fcp. 8vo. 6s. cl.

Kendall's (G. W.) Expedition across the Prairies, Map and Plates, 2 vols. fcp. 8vo. 12s. cl.
Library of Travel, Vol. II. "Egypt and Nubia," by J. A. St. John, 8vo. 9s. cl.
Memoir of the Life, Writings, and Correspondence of the Rev. Edward Pearson, D.D. 8vo. 6s. cl.
Memoirs of Prince Charles Stuart, commonly called "The Young Pretender," by C. Louis Klose, esq. 2 vols. 8vo. 1l. 5s. cl.
Mesmerist (The), or New School of Arts, 2nd ed. 18mo. 2s. sd.
Nonconformist's Sketch Book, by Edward Miall, 12mo. 3s. 6d. cl.
Novels and Romances of Anna Eliza Bray (in 10 vols.) Vol. I. "The White Hoods," fc. 8vo. 6s. cl.
Old Testament History in Simple Language, for the Young and Unlearned, by a Country Clergyman, square 16mo. 4s. cl.
Peace for the Dying Christian, extracts selected by H. Drummond, First Series, 12mo. 3s. 6d. cl.
Philosophy of Music, 2 vols. fc. 8vo. 1s. 6d. each, sd.
Poets of Yorkshire, commenced by the late W. C. Newsam, and completed by John Holland, 12mo. 5s. cl.
Price's Modern Gardener, 5th edit. improved, fc. 8vo. 1s. 6d. cl.
Recantation; or, the Confessions of a Convert to Romanism, fcp. 8vo. 6s. cl.
Reports of the Committee of the Board of Trade, on the various Railways projected and in progress, with General Index, 8vo. 2s. 6d. sd.
Secress of Prevorst (The), by Justinus Kerner, M.D. from the German, by Mrs. Crowe, fcp. 8vo. 6s. cl.
Seven Lectures on Somnambulism, translated from the German of Dr. Arnold Wienholt, by J. C. Colquhoun, fcp. 8vo. 4s. cl.
Smuggler (The), by G. P. R. James, 3 vols. post 8vo. 1l. 11s. 6d. bds.
Sportsman in Canada (The), by F. Tolfrey, 2 vols. post 8vo. 1l. 1s. cl.
Standard Novels, Vol. XCVII. "Cecil; or, the Adventures of a Coxcomb," 12mo. 6s. cl.
Studies of the New Testament, by a Layman, 2 vols. 8vo. 15s. cl.
Sybil; or, the Two Nations, by B. Disraeli, 3 vols. post 8vo. 1l. 11s. 6d. bds.
Thornton's Family Prayers, 18th edit. 12mo. 3s. cl.
Todd and Bowman's Physiology, Vol. I. 8vo. 15s. cl.
Tuck's Railway Shareholders' Manual, 4th edit. 12mo. 3s. cl.
Twelve Views in Dovedale and Ilam, from Drawings, by Edward Price, 4to. 10s. swd.
Typology of Scripture (The), by the Rev. P. Fairbairns, 12mo. 7s. 6d. cl.
Ulrich, a Tale, by the Countess Hahn-Hahn, Vol. I. imperial 32mo. 2s. swd.
Views of the Voluntary Principle, by E. Miall, royal 18mo. 3s. 6d. cl.
Voice from the Sanctuary on the Missionary Enterprise, Introduction by James Montgomery, 8vo. 8s. 6d. cl.
Whewell's Elements of Morality, 2 vols. demy 8vo. 1l. 4s. bds.
Williams's (Rev. J.) Gospel Narrative of the Resurrection harmonized, fc. 8vo. 8s. cl.

To Readers and Correspondents.

P. S. *will require some practice in the art of writing before his productions will be fit for the press. His MS. lies for him at the office.*
S.—*The poem, however curious its origin, has no intrinsic merit to claim a notice. It lies at the office.*
"Tracts for the Nineteenth Century" will not suit us. The MS. lies at the office.
M. J.—*We are not aware of such a personage as Samuel Lever, LL.B. Certainly he is not known in the literary world.*
JOHN DONALD.—*Smith, Soho; Bohn, Covent-garden.*
A. B. G. (Glasgow).—*Knight's is the most complete and accurate; Cornwall's the most beautifully printed.*
S. A. (Bridgewater).—*To add publishers' names to the list of new works would subject each item of the list to advertisement duty.*
A READER.—*The contradictions are the result of insufficient observation. The passages quoted, however, are not so contradictory as they appear; the explanation would be too long for a note, but if our correspondent were to watch narrowly half a dozen cases, he would soon discover the meaning of the writers, both of whom are right to a certain extent, but they have not sufficiently defined their meaning.*
T. BROWN.—*We cannot offer an opinion, not knowing the works named.*

TO SUBSCRIBERS.

A Portfolio, for preserving the current numbers of THE CRITIC *for reading and reference, on a new and convenient plan, may now be had at the Office, or by order of any bookseller in the country, price 4s. 6d.*

The subscription for the half-year, if paid in advance, for a stamped copy, to be sent regularly by post, is 8s. 6d. only, which may be transmitted in penny postage stamps.

ADVERTISEMENTS.

THE NOVEL TIMES:—Separate Issue of each of the Works.—In compliance with suggestions from several quarters, the Publisher begs to announce a SEPARATE ISSUE of each of the works published in THE NOVEL TIMES. On the the 31st inst. with the Magazines, Part. I. price one shilling, and No. I. price 3d. of THINGS OLD AND NEW, by the author of "The Subaltern;" and Part. I. price one shilling, No. I. price 3d. of LETTERS FROM THE ORIENT, by the Countess HAHN HAHN, translated from the German, by the Author of "Caleb Stukeley."—Office, 12, Wellington-st. North, Strand. Sold by all Booksellers and Newsmen.

On the same day, Part I. price one shilling, and No. I. price 3d. of a NEW ROMANCE, by G. P. R. JAMES, Esq.

Just Published in Cloth, gilt edges, Splendidly Illuminated,

TRUE POLITENESS; being the "WHY AND BECAUSE" of GOOD MANNERS. For LADIES, 1s.—For GENTLEMEN, 1s.

"These little volumes not only give complete directions as to the Etiquette of Society, but shew why a certain line of conduct is proper; and why it has become so definitely adopted as to assume the denomination of Etiquette."

Published for the Author by
Darton and Clark, 58, Holborn Hill, London.

Just published, price 2s., in cloth, 2s. 6d.

MESMERISM IN DISEASE; a few Plain Facts, with a selection of Cases, proving its efficacy in Deafness, Tic Douloureux, St. Vitus's Dance, Epilepsy, Hysteria, Spinal and other affections of the Nervous System,

By HENRY STORER, M.D.
Licentiate in Medicine and Surgery.
London: H. Bailliere, 219, Regent-street; and Miss Williams, Bath.

Just published, 1 vol. 12mo. price 3s. 6d.

CLARENCE de MANFREDO. Traduit de l'Anglais de Lord Normanby, par EMILY NEWTON.

"Ce petit poëme mélancolique et amoureux est ecrit en prose Française, par une plume Anglaise, à laquelle une certaine naïveté grammaticale, et j'oserai dire, une sorte de tourneur exotique, n'ote rien de sa grace ou plutôt donne une grace de plus."—*Le Constitutionnel.*

Dulau and Co., 37, Soho-square; and all other booksellers.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, AND GENERAL LIFE OFFICE,
25, PALL MALL, LONDON,
AND
22, NASSAU STREET, DUBLIN.
SUBSCRIBED CAPITAL, 500,000*l.*

THIS Office was established in 1841 for the Assurance of DISEASED as well as HEALTHY LIVES, having caused Tables to be specially calculated for that purpose.

MEMBERS OF CONSUMPTIVE FAMILIES ASSURED at equitable rates.

INCREASED ANNUITIES granted on UNSOUND LIVES, the amount varying with the particular disease.

HEALTHY LIVES are assured at LOWER RATES than at MOST OTHER OFFICES.

More than TWO-THIRDS of the population are NOT ASSURABLE in OTHER OFFICES, from the prevalence of disease, and in several of the leading Assurance Societies in London, 23 per cent. or more than one in five of the applicants, are rejected on examination.

About THREE-FOURTHS of the POLICIES already issued by THIS SOCIETY are on DISEASED LIVES, the majority of which had been PREVIOUSLY REJECTED by other OFFICES.

A CAPITAL of HALF-A-MILLION STERLING FULLY SUBSCRIBED, affords a complete guarantee for the fulfillment of the Society's engagements. F. G. P. NEISON, Actuary.

COMPOSITIONS FOR WRITING WITH STEEL PENS.

STEPHENS'S WRITING FLUIDS.—These Compositions, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary ink. In warm climates they become essential. They consist of—

A BLUE FLUID, changing to an intense black colour.

PATENT UNCHANGEABLE BLUE FLUID, retaining a deep blue colour.

A SUPERIOR BLACK INK, of the common character, but more fluid.

A SUPERIOR CARMINE RED, for contrast writing, adapted for Artists, and those who use water-colours.

A CARBONACEOUS RECORD INK, unchangeable by any chemical agent.

A MECHANICAL RULING and PAPER ARCHITECTURAL DRAWING INK. Superior to the best Indian Ink for the above purposes, and has the advantage of being ready for immediate use. It rules without breaking, and follows the brush or ruling-pen with the greatest facility.

Bottles at 3d. each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense.

Also, a new kind of MARKING-INK for Linen, and INKHOLDERS adapted for preserving Ink from evaporation and dust.

Prepared by HENRY STEPHENS, the inventor, 54, Stamford-street, Blackfriars-road, London, and sold wholesale and retail by booksellers and stationers, in bottles at 3d., 6d., 1s., and 3s. each.

CAUTION.—These unchangeable BLUE FLUIDS are Patent Articles. The public are, therefore, cautioned against imitations, which are infringements, to sell or use which is illegal.

A verdict of 2,000 dollars, liable to be increased to 6,000 dollars, having been obtained against parties who have been convicted of selling imitations of this article, in violation of the patent right of the inventor, in the United States of America, and several notices having been repeatedly issued to caution persons against infringing those rights in this country, by making or selling this Article, the Proprietor issues this as a final notice, which, if disregarded, he will be compelled to institute proceedings at law against all who may be committing these illegal acts.

HENRY STEPHENS, 54, Stamford-street, Blackfriars-road, London.

STEPHENS'S SELECT STEEL PENS.

The utmost possible care having been bestowed upon the manufacture of these articles, so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

Schoolmasters and the Trade supplied on liberal terms.

THE CRITIC,

And Journal of Literature.

SATURDAY, MAY 24, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

ADVERTISING.

As the comments upon which we adventured a fortnight since appear to have interested our readers, and many inform us that the subject is one of practical utility to them, we now resume it.

Having shewn what are the best media to be selected where it is desired specially to address a professional class, let us consider now in what manner the attention of the general public can best be secured.

Several considerations will affect the decision, but for convenience sake they may be arranged under two heads; first, according to the nature of the advertisement; secondly, according to the classes intended to be addressed.

Much will depend upon the nature of the advertisement. If it be literary, a literary journal should be preferred: if mercantile, a general newspaper: if of the miscellaneous class, the same.

Then, again, according to the class of persons to whom the advertisement is addressed should be the choice of the journal. Those intended for the higher classes should be inserted in very different newspapers from those directed to the lower classes. But perhaps the most convenient mode of treating the subject will be to name each of the advertising journals, and state what are its peculiar advantages and disadvantages,—for what it should or should not be selected, and the results of our experience of its charges and its value as an advertising medium. At the close, a summary of the conclusions derived from the investigation, which will necessarily be a long one, will serve to recal the reasons adduced, and as a manual to guide the advertiser when need arises.

The first of the general advertising media is, of course, the *Times*; and because everybody advertises there, every person thinks he must do the same. But there is no greater fallacy than the popularity of the *Times* as an advertising medium. It should be remembered that an advertisement is wasted unless it be seen. If a journal have a million of readers, the cost of an advertisement is wasted if it do not attract their attention. The *Times* has the largest circulation of all the journals; but in fact, for the purpose of advertising, it is one of the worst of them. And for this reason: its advertisements are too numerous to be read. Not one in a thousand of all the readers of the *Times* even glances his eye over the crowded columns of the advertisements, much less pauses to peruse them. Practically, they are as completely burked as if they had been inserted in a journal having only a hundred subscribers. More especially is this apparent since the introduction of the supplementary sheet of advertisements. That is *invariably* thrown aside by readers. It is never looked at by anybody, and the newsmen are constantly directed not even to send them, so completely are they deemed a nuisance. An advertisement inserted there is utterly lost; and nothing so exhibits the unreasoning force of habit than that, in the face of such a palpable waste of their money, persons should still continue to send advertisements to the *Times*, with the probability that they are paying for the oblivion of the supplement. The *Herald* has adopted a wiser plan, and has devoted a portion of its supplement to all leading articles and some important news, so as to insure to its advertisers the full benefit of its circulation, by compelling its reader to take and to read both paper and supplement: the latter is indeed the best because the least crowded, part of the *Herald* for advertisements.

These obvious considerations would satisfy any reflecting person that the *Times* is a bad medium for a general advertisement, and experience confirms what the judgment must pronounce of it. But the objection applies only to *general* advertisements, that is, such as are addressed to everybody, which nobody *looks for*, and which are intended only to *catch the eye*. There are some sorts of advertisements for which the *Times* is especially adapted; such as those addressed to particular persons for particular purposes. The test will be this:—

Ask yourself, will this advertisement be looked for by anybody? Is its subject something which somebody is likely to be in search of? If so, it should be sent to the *Times*, because people who are seeking advertisements go to find them there. Such are—places wanted, businesses for sale, houses and apartments to be let, specific articles for sale, as horses, carriages, &c. But if it be an advertisement of something none are likely to be actually seeking, but intended merely to attract attention, then the *Times* may be considered as almost worthless. New publications, estate sales, tradesmen's advertisements, and such like, are entirely thrown away upon it; or, at least, they would be more seen in almost any other journal, however obscure.

The results of our own experience confirm these remarks. We scarcely remember to have traced the sale of a single copy of any publication to an advertisement in the *Times*, though there is scarcely a journal beside from which an obvious result did not accrue. We shall have occasion, hereafter, to state one test which will be conclusive upon the small value of the *Times* as a medium for general advertisements.

Its charges are moderate. Unlike the other journals, its prices are in proportion to length. Short advertisements are charged 5*s*., but the scale is nearly double when the advertisement exceeds ten lines. The charge proposed for inserting the prospectus and list of subscribers to the CRITIC was 40*l*. It would have occupied about three columns. This will give some idea of its prices.

But here we must pause again.

THE PROPOSED REDUCTION OF THE BANKING HOURS.

OUR attention has been lately directed to this question, through the efforts which are being used to bring the subject before the Committee of Bankers in the shape of a memorial now receiving the signatures of those engaged in the banking-houses of the metropolis.

The question was some time since brought prominently before the public, through the voluntary exertions of the leading bankers in the City, and the comments of the daily press. It is not therefore necessary now to enter upon the merits of the memorial, our purpose being to lend such assistance as we can to the favourable decision of the bankers. By taking this course, the opportunity of confirming the determination they almost unanimously came to (that of restricting the hours of business to 4 instead of 5 o'clock) will be afforded them, and we think there are some grounds of justice in the request. Under the present system, the work of a banking-house is of a fluctuating and wearisome character, rendered so chiefly by its protracted duration. Banking is the twin sister of commerce. The proposed change is mainly dependent for for success upon the sympathy evinced by the mercantile community, and when we consider the alterations which have taken place in the offices of the influential class of merchants, we can entertain little or no doubt of their readiness to fall into any plan of reduction which the Committee of Bankers may consider it wise to adopt. Those acquainted with the operations of a London banking-house must be fully conscious of the unceasing attention and assiduity requisite for their due performance. The peculiar requirements for efficient and respon-

sible duties are always productive of consideration and esteem, and there are perhaps few branches of the commercial community more entitled to regard than that whose interest and amelioration we are desirous of promoting. Concurrently with the proposition for the reduction of one hour, it has been suggested that, by the merchants altering the day of collection from the Saturday to the Friday, the bankers would be enabled to clear their cheques at an earlier hour on Saturday, instead of leaving the pressure of the day's work until 3 or 4 o'clock. This might be productive of temporary inconvenience, but we are of opinion that by such an alteration the interests of the bankers and the public would alike be consulted. The operations would become more progressive and more equally divided than under the fluctuating and incidental nature of the present system; and believing that the minds and health of those engaged in banking-houses would be materially consulted by the proposed change, we heartily hope it may be adopted.

Whatever has a tendency to improve the physical or mental condition of any class of the community engaged in labour of head or hands, will always find in THE CRITIC a zealous support.

LITERATURE.

BIOGRAPHY.

The Life of the Rev. Joseph Blanco White, written by himself, with portions of his Correspondence. Edited by JOHN HAMILTON THOM. In 3 vols. London, 1845. Chapman.

THE Rev. JOSEPH BLANCO WHITE twice changed his religious *profession*; for that he was accounted, by those who knew him not, as "a man intellectually unsteady, fickle, and apt to change." His friends esteemed him otherwise, and attributed his mutations to the progress of an honest mind, ardently seeking the truth, sufficiently humble to be wiser to-day than it was yesterday, and having the rare courage to avow its convictions. His autobiography and correspondence will help to a judgment of, and probably throw some light upon, a character which, whether stamped with littleness or greatness, is an interesting study for the mental philosopher.

Mr. BLANCO WHITE was of Irish descent; but his grandfather migrating to Seville, in Spain, his father married a lady of the country, and there the subject of this memoir was born. At first he was intended to be a merchant, but his tastes were so decidedly in the direction of learning, that after a while his parents determined to send him into the Church. For this purpose he entered a Dominican college, and thence removed to the University of Seville.

He states that even at this early period he had contracted a "great hatred of *established* errors." A quarrel with one of his father's confessors first made him conscious of this tendency, and kindled the spirit that was never afterwards laid.

His picture of the discipline of the university is very curious. He was compelled, among other devotions, to read in an audible voice the whole service of the day out of the *Breviary*, a task which occupied an hour and a quarter. Another irksome duty was the *Oracion Mental*, or *Meditation*.

> The person who is about to go through this exercise shuts himself up in a room, or retires to some dark corner of a church, and, having read a kind of skeleton sermon, of which a great variety is found in the Spanish books of devotion, kneels down, closes his eyes, and tries to spin out the three or four points proposed for meditation into sundry mental ponderings, interspersed with appropriate internal ejaculations. To be able to move oneself to tears is considered a most satisfactory sign of Christian progress. This is not a mere popular fancy. The Church of Rome looks upon a constant propensity to shedding tears as a peculiar gift from heaven, the existence of which is one of the proofs of sanctity admitted in the trial for canonization. It is called, technically, *donum lachrymarum*.

All this disinclined him to an ecclesiastical life, and a visit to Cadiz still further strengthened his aversion. But the interference and influence of his mother, whose heart was set upon seeing her son a priest, prevailed over his scruples, and he took orders, and was almost immediately elected rector of his college.

In his character of priest he was introduced into the nunneries of the neighbourhood, and experience of their tendencies left upon his mind a perfect horror of those institutions. He says that the presence of a new confessor is an event in the lives of the miserable beings shut up in them; his aid is eagerly sought. "In a short time," he remarks, "I found myself obliged to spend about two hours a day in listening, sometimes to the minute and anxious narrative of a nervous recluse, who scarcely deemed herself safe from the crime and punishment of an insincere confession, when she had stated every thought, word, and deed, however innocent, which had occurred in the even tenor of her dull life, during the preceding week; sometimes to really painful tales of hopeless misery."

The consequences of the system might be anticipated from the slightest acquaintance with human nature.

> These poor prisoners, in the dull monotony of their lives, in the agitated state of a soul troubled with all the fears of a morbid conscience—perhaps with the remorse of such guilt as can only increase their despair—have no one to whom they may confide their sorrows but the priest, whom they choose as their confessor. Yet even this poor consolation is often rather nominal than real. Old priests generally grow indifferent to the anxiety of this kind of *penitents* (such is the correlate name to that of Confessor) and treat them harshly. Sentimental fools (a class, if not numerous, never extinct) increase the existing malady, and expose themselves and their spiritual charge to very serious dangers. When therefore a sensible woman thus confined for life, meets with a priest, who being on his guard against even the remotest risk of a hopeless, and, in those circumstances, dishonourable affection, proves his real interest by listening patiently, and establishes his authority by deciding promptly and confidently; she cannot but look upon him as the last support of her wrecked happiness, or rather as the last help against complete misery. In all cases whatever, a confessor who does not torment the poor prisoners, must become their dearest friend, as being the only person to whom they can freely communicate their sorrows. Hence the eagerness with which such nuns as have not *engaged* themselves to a confessor; such, as death, absence, or some other accident, has deprived of a spiritual director whom they liked, and lastly, such as, deprived of other means of change and novelty, seek for these gratifications in the confessional, beset every member of the clergy, who, enjoying some reputation for learning, does not decline that employment.

And further on he says, "I have, in the course of my life, come in contact with characters of all descriptions; I have seen the human mind at various stages of elevation and debasement; but *souls* more polluted than some of the professed vestals of the Church of Rome, never fell within my observation."

Shortly afterwards, the yellow-fever broke out in Seville, making fearful ravages, and he and his family removed to Alcala, a small town in the neighbourhood. He was appointed a chaplain of the Chapel Royal of St. Ferdinand, and the path of preferment to the highest offices in the church was opened to him, when his prospects were blighted by the doubts that sprung up in his mind as to the truth of the faith he had been ordained to teach.

The change of opinion was just such as, in the first instance, would be likely to ensue from the presence of doubt: from unreasoning acquiescence in every article and form of his church, he took refuge in a total disbelief of Christianity. Admitted behind the scenes, and seeing *some* imposture, he jumped to the conclusion that it was all imposture: daily practising so much deceit, he was unable to separate the false from the true; surrounded by an atmosphere of superstition, he could not mark the boundaries that distinguished superstition from religion.

His was not a mind to play the hypocrite. But what could he do? The law punished heresy with death. A priest he must remain, or quit the country; to leave his parents would have been death to them.

In the midst of the storm that was raging in his mind, between his reason and his prejudices, his intellect and his interests, one of his sisters died and the other took the veil, and this tempted him to contemplate emigration to the United States; but still the same considerations for his parents chained him to his native soil. He accepted an invitation to Madrid, where, by the king's license, he remained for twelve months, during which period he was appointed catechist to the Royal Pestalozzian Academy, in whose management he took great interest. While there, the Revolution broke out; he forthwith carried to the Supreme Junta, at Seville, the narrative of the events at

Madrid, and was appointed one of the editors of a weekly periodical, entitled *Semanario Patriotico*, which had been received extremely well by the nation. Under his management, it became still more popular. But its tone of independence and liberal tendencies were unpleasing to the Government, and it was suppressed. It had produced, however, the effect of making him known as a man of learning and ability, and he was chosen by the University of Seville one of a committee of two to prepare a constitution for the Cortes. His colleague was a Doctor of Laws, named SEVANES, an advocate of great reputation, but who devolved the whole business on our autobiographer, after they had agreed upon the *principles* to be recommended. These were, "a disregard of ancient form and privileges; a mere toleration of the grandees; and one Chamber."

They were desirous of seeing some of the doings of the Inquisition, and they demanded access to the prohibited books.

> The Holy Tribunal authorized me to enter the place where the confiscated books had been thrown together, and take out whatever I pleased. It is quite impossible to describe the state of the room into which I was admitted. The floor was covered with large heaps of books in perfect confusion: the dust, which in the burning summers of Andalusia penetrates to the inmost recesses, had settled upon every thing to the depth of more than a quarter of an inch. On moving the confused volumes, for the sake of completing a few valuable works, the secretary and myself were involved in a cloud. I succeeded in obtaining two copies, nearly complete, of the *French Encyclopædia*. That work must have been frequently seized by the Tribunal: the floor was covered with volumes of its various dictionaries tumbled in distracting confusion. I now forget what other works I was able to save from the worms, which, with a devouring power, of which people who have not seen their ravages in hot climates can form no conception, had reduced a great number of volumes to fragments. The liberated captives were shared equally between my colleague and myself; and as the Inquisition ceased to exist soon after, under the transient sway of Joseph Buonaparte, my own portion are likely to be still in the hands of some of my Spanish friends.

In the year 1809, Mr. WHITE resolved to leave Spain, where residence had become unsafe, so great was the revolutionary excitement. But it was with difficulty he effected the object, for the mob had resolved to prevent the emigration of the influential and the wealthy. After some narrow escapes, he succeeded in reaching Cadiz, and shortly afterwards embarked for England.

The voyage to Falmouth was prosperous, and thence he proceeded to London. Having a few introductions, he speedily found himself hurried into society, before he had sufficiently mastered the English language, either to speak it or to understand it when spoken by others. This appears to have troubled him greatly, and to have produced a taciturnity in company, which he never succeeded in conquering completely. He says that, although his attention was continually directed for many years to the study of the language of his adopted country, he suffered in society from a consciousness of "*undue* inferiority," arising from that want of ease and grace of diction, which a native can display.

> The reason seems to be that even upon the subjects most familiar to my mind, I must repeat the original process of analysis through which I became originally acquainted with them, every time that I have to speak or write upon them. Kant says, that eloquence consists in making the work of the understanding one of Imagination. That transfer from the one faculty to the other, seldom or never takes place in my mind; or if it does, it is performed simultaneously with the act of thinking. Hence my delivery has at all times been laborious; and conversation seldom fails to exhaust me. When I happen to be in company with one of those who speak with great rapidity, I feel such an unnerving conviction of my incapacity to have a real interchange of thought with such a person, that I cease almost to think. In such cases I never fail to imagine myself in the state of an unfortunate insect which happens to stand on the brink of the hole which the lion ant makes in the sand. I feel stunned by the discharge of words which rattle on my ears and bewilder my brain.

His first object in London was to find some profitable employment. His friends suggested a Spanish newspaper, and introduced him to Mr. DULAU, the bookseller, as an enterprising man who would be likely to assist the design. But unfortunately he became associated in the scheme with a wily emigrant priest, named JUIGNE, who made a bargain altogether one-sided. WHITE was to do the work, and to be paid only if it succeeded, while his companion was to do nothing, and if it failed, to be responsible for nothing; but if it prospered, to have all the profits beyond a certain small monthly allowance to the labourer. WHITE, however, entered upon his task with characteristic energy. He took a wretched lodging in Duke-street, Westminster, and issued the prospectus of the *Espanol*, which was to be the name of the new journal. Not only did the writing of it devolve upon him, but the correction of the press also, every sheet of which employed five or six hours.

But two numbers of the unlucky journal had not appeared before he was doomed to experience the troubles of an editor. He had resolved to pursue a path of perfect uprightness and independence, and to praise and blame, support or oppose, upon the intrinsic merits of men and things, without reference to persons or parties. The consequence was, that he offended all in turn, and after a turbulent existence of five years the journal was discontinued. But it obtained for the editor a boon which secured the happiness of all his after-life. The services he had rendered to the government won from them as a deserved reward a pension of 250*l.* a year, which he enjoyed until the close of his long and laborious literary career.

But his editorial labours did not prevent him from devoting every spare moment to the study of the English language and literature. At this time, it must be remembered, he had quite abandoned the Roman Catholic creed, and was an avowed sceptic. Still he continued his investigations into the history, the philosophy, and the ethics of Christianity; and, like almost every thinking man, he speedily found that his abhorrence of the abuses with which ambition working upon superstition had overlaid it, had blinded him to the greatness and beauty of the truths hidden under the huge mass of error, and his mind recovering its calmness turned again to the investigation of the entire subject. The result could not be doubtful where the purpose was sincere and the reason powerful. Mr. WHITE recognized the sublime truths of Christianity, and he preferred that form of it which is taught by the Church of England. Forthwith he removed to Oxford, with intent to qualify himself for the ministry in that Church.

Scarcely had he been a year at Oxford when Lord HOLLAND offered to him the tutorship to his son and heir, the Hon. HENRY FOX. After some demur, the proposal was accepted, and he took up his abode at Holland House, where he remained two years, when, wearied of the task of teaching, he resigned his post and returned to London to pursue the more congenial occupations of a *littérateur*, contributing to the magazines and periodicals. It was then that he commenced "Doblado's Letters" in the *New Monthly Magazine*, which obtained considerable celebrity; he established a journal for Spanish America, named *Las Variedades*; and published in rapid succession two pamphlets, severally entitled *Internal Evidences against Roman Catholicism*, as an answer to Mr. BUTLER'S *Book of the Roman Catholic Church*, and the *Poor Man's Preservative against Popery*, both of which were successful, and public honours followed in their train: the University of Oxford conferred on him the degree of M.A. by diploma, though not without some opposition in the Convocation. This determined him to settle in Oxford, as a member of Oriel College.

At this point he pauses in his narrative, that he may present a connected and minute sketch of *his mind* in England, more especially in relation to the succession of changes of opinion on the subject of religion. This is indeed the most curious and interesting, and, as a study of character, the most valuable portion of the autobiography. Nevertheless we cannot dwell upon it as its intrinsic importance would deserve, without danger of violating one of the fundamental rules that govern the conduct of THE CRITIC, or, at least, without incurring suspicion of infusing opinions, where in truth we are but stating facts. We will therefore touch on this section of the memoir but lightly, and with an earnest endeavour to avoid whatever might seem likely to offend a prejudice.

The process by which he passed from Romanism to infidelity, and thence by a natural reaction to Protestantism, has been already described. The tendency of his disposition was obviously to extremes. He was an enthusiast by temperament, and his Protestantism was as *ultra* as had been his

Catholicism, and was followed by the same result. Being in the Church, he allied himself with the evangelical party at first, and then he verged towards Unitarianism.

For these changes he alleges reasons, of course. He is very anxious to satisfy the world that he was actuated by sincere and disinterested motives. Of this there can be no doubt. But admitting this, the question still remains, how far these many changes are compatible with that good sense and sound judgment to which he lays claim.

The remainder of the three volumes are occupied with extracts from his journals and correspondence. Although these are far too cumbrous, and should have been compressed into a single volume, they contain, scattered among a great deal of uninteresting matter, much that is worth perusing. Notwithstanding his changes of creed, Mr. WHITE appears to have preserved the friendship and respect of the greater portion of his acquaintances, even of those whose communion he had quitted, a fact which argues in him the possession of estimable qualities of heart as well as of head. Among his correspondents are numbered many of the most famous personages of his day, whose letters will be read with eager curiosity, if only for their names' sake. Among them we find SOUTHEY, Lord HOLLAND, Mrs. HEMANS, COLERIDGE, Dr. CHANNING, &c. From these, as well as from the journal, we purpose to select a few illustrative and interesting passages.

In a letter, dated July 13th, 1825, we find

COLERIDGE'S OPINION OF IRVING.

My friend Edward Irving, who is more earnest in his love of truth, and more fervent in his assurance that what is *truth must* be Christianity, and more out of all risk of the apostolic Anathema Maranatha than almost any man I have met with—and with fewer prejudices, national or sectarian. I would he had been of our Church, which, however, he has learnt to love and reverence, even by contrast with his experience of our present Dissenting clergy—most degenerate successors of the Baxters and Calamies of old.

A letter from SOUTHEY on the 22nd of August in the same year, contains this scrap of "the doctor:"—

TREATMENT OF THE DYING.

Note-making is a sort of idle occupation in which I am fond of indulging. It is a way of stringing together the odds and ends of one's knowledge, and throwing loose facts in the way of those who may know how to employ them better. I am not certain that a common practice in England has not originated in a similar feeling to that which rendered the existence of such persons as your Despenadora possible. Nurses used to pluck the pillow and bolster from under the head of persons in the act of death, under a notion that the sufferer could not die if there were any pigeon's feathers in them. Perhaps what they did under this persuasion, was first done to cut short the struggles of death; and the notion originally imagined to afford an excuse for it. It is said of Dr. Heberden, that he ordered his own son to be bled when the agony began, saying, "he will now die easier." For obvious reasons this practice can never be allowed, but I wish it were thought unlawful to torment the dying with applications which cannot avail to any other end than that of prolonging their sufferings, and keeping them from their rest.

SOUTHEY ON REVIEWING.

Like you I dislike the occupation, because it withdraws me from better things, and, like you, I find the quantity of time which it requires disproportionately great in comparison with that which is more worthily, and therefore more willingly, bestowed. But in no other way can we possibly obtain half, or half of half, the number of readers, and the great majority of those readers come with a degree of deference to the dictates of a review, which they never feel when any other book is in their hands. This is a preposterous folly, and a great public evil. But while I let pass no opportunity of exposing it as such, I am fain to take advantage of it, and make it subservient as far as may be in my power, to good purposes.

COLERIDGE was emphatically a man of great ideas and good intentions. He had projected, among other things, a complete system of philosophy. Lord LIVERPOOL had promised him a pension, but died before the grant was made. The poet complains of the necessity thus imposed upon him, "of scribbling what the public *like*, instead of giving what the mind of the country *wants*." The same letter informs us what were

COLERIDGE'S PROJECTS.

One of the books is now transcribing for the press; of the other, the materials are all collected, and the first part, and half of the second, composed, and fit for the press; and when I say that this amounts to three large volumes, and that the whole work, which, however, is capable of being published as three several works, will consist of six, containing my system of Philosophy and Faith, as the result of all my researches and reflections concerning God, Nature, and Man, you will not wonder that I name it my OPUS MAXIMUM, the harvesting of my life's labours. Yet as I awoke last night, or rather with the poor relic of volition breaking the enchanter's talisman, succeeded at length in awakening myself out of a terrific fantastic dream, which would have required tenfold the imagination of a Dante to have constructed in the waking state, I could not but thank God on my knees for the lesson of humility I had received, exclaiming, O vanity! I have but a few hours back announced myself to my friend as the author of a System of Philosophy on Nature, History, Reason, Revelation; on the Eternal, and on the Generations of the Heaven and the Earth, and I am unable to solve the problem of my own dreams! After many years' watchful notice of the phenomena of the somnial state, and an elaborate classification of its *characteristic* distinctions, I remain incapable of explaining any one figure of all the numberless persons of this shadowy world, and have only attained to an insight into the utter shallowness and impertinency of all the pretended theories hitherto advanced.

Mr. WHITE, in combination with Archbishop WHATELEY and Mr. SENIOR, projected a new quarterly review, which afterwards appeared under his editorship, and the title of the *London Review*. SOUTHEY's aid was asked and promised, and the same epistle contains also

SOUTHEY'S ADVICE TO AN EDITOR.

Be of good heart in your new undertaking, and it cannot fail. My advice is, that you should have always a considerable proportion of attractive matter, for which current literature may always supply abundant subjects. You know very well I do not mean that sort of flippancy which has so often disgraced the *Quarterly*, for good and sound information may be conveyed in a cheerful form. A good journal I know you will make it; get for it the character of an entertaining one, and you will have hit your own mark as well as the publishers,—theirs, because the journal will sell widely; yours, because readers will be tempted to read what they may be the better for reading.

One thing more: if you could so *time* your publication as to come out between the regular times of the *Quarterly*, it would (I think) be favourable for your sale, and (this I am sure of) have a friendly appearance.

Here is a pretty passage from a

LETTER FROM MRS. HEMANS.

I fear you have never received what I had given directions for having sent to you, a copy of my last publication, the *Records of Woman*; if not, will you inform me how it is likely to be safely conveyed, and I will renew my order for its transmission. I have now been settled about six months near Liverpool, and though I meet with much kindness, and have even attached myself to some individuals whose society interests me, still *you* will understand all those undefined longings for the streams and the mountains of my childhood—sudden pictures flashing before the mind's eye—remembered sounds that come and go, and waken the heart to gushings of painful tenderness—all those *exile* feelings, in short, by which I am but too frequently visited. Such things, I suppose, must be, in all deep and *severed* hearts, until the "better country, even the heavenly," shall be reached—where there is "no variableness, neither shadow of change."

But our limits compel a pause. The rest of this biography must be reserved for another notice.

SCIENCE.

Human Magnetism; its claims to dispassionate inquiry. Being an attempt to show the utility of its application for the relief of human suffering. By W. NEWNHAM, Esq. M.R.S.L. &c. London, 1845. Churchill.

(SECOND NOTICE.)

IN pursuance of the promise with which we closed the former notice of this valuable and interesting volume, we now return to it, opening at the chapter at which we parted from it, and which treated of the influence of the imagination in the production of magnetic phenomena.

Mr. NEWNHAM admits that imagination *might* produce many of the phenomena; but he denies that it *could* produce *all* of them, and he proves, by the cases of children and persons who have been operated upon without their knowledge,

that in fact the phenomena are often produced without any aid from the imagination.

But even if *all* were imagination, as its opponents assert, the mystery still remains as before, and is equally worthy of investigation. *How* does imagination produce such effects? What is the mental condition, called imagination, which thus exhibits itself? To what uses may this strangely powerful faculty be applied? Are we advanced a single step nearer towards the truth by changing the name from Mesmerism to Imagination? Do not the *facts* still remain as inexplicable as before?

The next chapter is devoted to a sketch of CHARDEL'S views, and some thoughts on Energia or Actinism. CHARDEL'S theory may be shortly described as thus. Light is the principle of life. The rays are received by the blood in its passage through the lungs, where it parts with its carbon and takes the principle of light and heat ftom the atmosphere, and converts it into nervous structure, fitting it for the development and preservation of the vital phenomena. The principle of life thus emanating from LIGHT is disturbed by whatever prevents the blood from receiving its proper quantity of it. "To supply the waste of this principle is the object of Magnetism, viz. to succour with the imparted life of the Magnetiser the drooping and exhausted life of the sufferer."

As an extension of these views, Chardel considers that during the state of magnetic somnambulism, the individual *imagines* that he hears or sees by the great plexus of nerves of organic life. But this is a mistake;—and the error consists in confounding the *echo* of sensation, with *sensation itself*. The movements of the soul or spiritual principle, are communicated to the *spiritualized life*, with which it is enveloped,—and are then reflected upon, and communicated to the great plexus of organic life.

This theory has received some confirmation by the recent discoveries of ROBERT HUNT, whose investigations of photography have brought out the new and startling fact that the sun's rays have a principle in them apart from light and heat, which produces a specific effect,—an actual chemical change—upon all bodies on which they impinge. This subtle but powerful element, which seems destined to change the face of science, has been termed *Actinism*.

Mr. NEWNHAM deems it not improbable, that to this principle may be ultimately assigned all the magnetic phenomena, and especially clairvoyance. It is a subject of profound interest, and should, at least, receive the most anxious attention of every philosophical Mesmerist; but we must pass now to the next chapter.

Somnambulism and *Clairvoyance* are here discussed. Mr. NEWNHAM opens with the remark, that the mesmeric phenomena of somnambulism, which are proved beyond question to exist in the natural state, are the most vehemently denied when alleged to be produced by Mesmerism. But mere denial is no answer to a specific narrative of facts. Mr. NEWNHAM cites from the famous report of the Commission of the Royal Academy in France, the following experiments, which bear so close a resemblance to those conducted with ADOLPHE by the Society for the Investigation of Mesmerism, and reported in a recent number of THE CRITIC, that we extract them.

CASE OF M. PETIT.

After these preliminary observations we proceeded to verify the phenomena of sight with the eyes closed.

M. Ribes, member of the Academy, presented a catalogue which he drew from his pocket. The somnambulist, after some efforts which seemed to fatigue him, read very distinctly these words:—*Lavater, it is very difficult to know men.* These last words were printed in a very small type. A *passport* was placed before his eyes; he recognised it, and described it under the term *pass-man*. Some minutes afterwards, a license to carry arms was substituted for the passport, to which it has the greatest possible resemblance, and it was presented to him by its blank surface. M. Petit could only distinguish that it was a framed document, and very like the former; but on the other side being turned to him, after some moments of attention, he read distinctly these words, *de par le roi*, and on the left, *port d'armes*. An open letter was then shewn him, which he said he could not read, not understanding English; it was, in fact, a letter in English.

M. Bourdois drew from his pocket a snuff-box, on which was a cameo set in gold. The somnambulist could not at first see it distinctly; he said that the gold case blinded his eyes. When the gold setting was covered with the fingers, he said he perceived the emblem of fidelity. Being urged to say what was that emblem, he added, I see a dog; he is as if prepared for a sacrifice before the altar:—this was, in fact, the figure represented.

A sealed letter was shewn him: he could discover nothing of its contents. He merely followed the direction of the lines with his finger:—but he read easily the address, although it contained a very difficult name—A. M. de Rockenstroth.

All these trials fatigued M. Petit extremely. He was left to rest for a short time; then, as he was very fond of play, it was proposed to him, in order to relieve him, to take a hand at cards. In proportion as these experiments of pure curiosity seemed to have annoyed and fatigued him, so did he accomplish with ease and dexterity that which gave him pleasure, and to which he was led by his own inclination.

One of the party, M. Raynal, formerly inspector of the university, played a game at piquet with M. Petit, and lost. The latter played his cards with the greatest ease, and without ever being wrong. Many times we uselessly tried to put him out in his play by subtracting or changing the cards—he counted with surprising facility the number of points marked on the cards of his adversary which he had to play to.

The same report describes other cases submitted to the examination of the Commissioners. We take one only.

CASE OF PAUL VILLAGRAND.

On the 12th of January the commission reassembled at the house of M. Foissac, where were already M. Em. de las Cases; M. le Comte de Rumigny, first aide-de-camp of the king; and M. Ségalas, member of the Academy. M. Foissac told us, that he was about to somnambulise Paul, and that in that state, with a finger placed upon each closed eye, he would, notwithstanding the complete occlusion of the eyelids, distinguish the colour of cards, read the title of a book, and even some words or lines taken by chance from the body of the work itself. After two minutes of magnetic passes, Paul was asleep. The eyelids being held firmly closed, constantly and alternately, by MM. Fouquier, Itard, Marc, and the reporter, a pack of new cards, of which the stamped envelope was torn at the moment, was presented to him: they were shuffled, and Paul recognised easily and successively the king of spades, the ace of clubs, the queen of spades, the nine of clubs, the seven of diamonds, the queen of diamonds, and the eight of diamonds.

The eyes being still firmly closed, but now by M. Ségalas, a volume with which the reporter was furnished was presented to him. He read on the title-page, *Histoire de France*. He could not read the two next lines, but then read the name *Anquetil*, which was preceded by the preposition *par*. The book was opened at p. 89, and he read in the first line *le nombre de ses — :* he passed over the word *troupes*, and continued, *au moment où on le croyait la plus occupé des plaisirs du carnaval*. He read also the running title *Louis*, but could not read the Roman figures which followed. A paper was given to him on which had been written the words *agglutination* and *magnetismé animal;* he spelt the first and pronounced the other two. Finally they presented to him the *procès-verbal* of this sitting; he read distinctly the date, and some words more legibly written than the rest. In all these trials the fingers had been applied over the whole of the opening of both eyes, pressing the upper downwards upon the lower eyelid; and we remarked that the globe of the eye had been in a constant movement of rotation, and seemed to be directed towards the object of vision.

On the 2nd of February Paul was magnetised at the house of MM. Scribe et Bremard, merchants, No. 29, Rue St. Honoré. The reporter was the only member of the commission present at this meeting. The eyelids were closed as on the former occasion, and Paul read in a work entitled the *Mille et un Nuits*, the title, the word *préface*, and the first line of this preface, with the exception of the word *père*. He was shewn a book entitled *Lettres de deux Amies*, by Madame Campan. He distinguished upon the stamp the figure of Napoleon; he pointed out his boots, and said that he also saw two females; then he read fluently the four first lines of the third page, with the exception of the word *ravir;* then he recognised, without touching them, four cards which were successively presented to him—two at a time; these were the king of spades and the eight of hearts, the queen and the king of clubs.

Mr. NEWNHAM frankly admits the great difficulties that impede the investigation of *clairvoyance*. The very tests employed disturb the faculty, and often suspend it altogether, by exhausting the brain, producing irritation, and diverting the attention. Moreover, it is variable in its operation, dependent upon health and other conditions as yet unknown, so that it can never be fairly judged by failures: it is not by any number of disappointments, but by one clearly successful case, that the existence of the faculty is to be determined.

Turning to the particular phenomena of somnambulism, our author proceeds to consider them in detail. First, treating of the transposition of the senses, "that is, when the patient sees, feels, tastes, hears, touches, and reads by the stomach, by the hands or feet, or by some other portion of the body." Mr. NEWNHAM admits that he can offer no rational explanation of this phenomenon, although of its existence he is perfectly satisfied; and he adduces some instances of their occurrence in the natural state. But first let us note the

CASE OF M. CALIXTE.

Calixte, being magnetised, a card was applied over the region of the heart, and he pronounced it to be, without any hesitation, the ace of spades. The eyes being plugged with cotton, and then covered with a thick bandage, he played with perfectly new cards, several games at écarté, with some of the most sceptical, and that without being once wrong. If his adversary announced a card different from the one which he had actually played, the somnambulist was displeased, complained of the bad faith, and generally added:—Why do you wish to deceive me? I see better than you do, and in order to prove it, there still remain in your hand such and such cards.

One of the players, being extremely distrustful, having raised the bandage of the magnetised, in order to convince himself that no ray of light could possibly reach the visual organ, received from the somnambulist a violent apostrophe in rather unmeasured language, and owed his own conversion to Magnetism to the following experiment.

"You think, then, that I *can* see by my eyes, do you?" said the somnambulist. "You yourself, then, are blind enough not to understand that my eyelids, being compressed by the plugs and bandage which are horribly uncomfortable to me, it is perfectly impossible for me to perceive any thing by my ordinary senses. Well, then, go into the next room—fasten against the wall with a white wafer, any card of your own choice, and you will then know whether I can recognise it or not." Calixte in a short time announced the king of diamonds, which was the fact.

Twelve pieces of ribbon of different colours or shades, were next presented to him, and he distinguished each in the most precise manner.

A watch "*en savonette*," that is in the form of a globe, was shewn to him, the hands having been previously misplaced; and this being placed over the region of the heart, he told the precise hour which it indicated.

"Gentlemen," said M. Ricard on another occasion, "we intend to try to make Calixte execute certain movements which you will indicate to me—and without any *ordinary communication* with him; as soon as the card shall be given me, on which the movements to be executed have been described, I will speak to him no more, and will remain without movement. Calixte," said he, placing himself before his somnambulist, who was seated, "I am about to give you some directions—attend to me—and do what I tell you." At this moment, M. L—— took one of the cards and presented it to M. Ricard, who, after having read it, dropped both his arms, looked steadfastly at Calixte, and remained himself immovable. After some minutes waiting, the somnambulist said, "*I know not what to do!*" and the first experiment failed. The second and the third failed equally.

"Gentlemen," said he then, "negative facts, however numerous, cannot invalidate positive facts;—thus should all the experiments which I am about to institute fail, vision, notwithstanding the closure of the eyes by a thick bandage, would not be in any measure unproven. Moreover, we are perhaps too numerous; and I should not be surprised if the clairvoyance of the patient were exhausted for to-day; nevertheless, we will continue the trial." Consequently a fourth, and then a fifth experiment was tried, and partially succeeded, but only partially, for it was necessary to prompt the somnambulist a little. A sixth experiment was then tried, which I will describe, because its success was complete.

Calixte, his eyes bandaged as before, sat with his face turned towards the wall; three paces behind him were M. Ricard and M. Teste, and at twenty paces there stood an organ. All was quiet, the sound of the organ began, and at the same time Calixte beat time; but after some minutes, and immediately after a sign which M. Teste made with the hand to M. Ricard, the somnambulist ceased beating the time, although the Magnetiser said nothing, and although the sound of the organ continued.

Such was the sixth experiment, and I will now relate the last, which was also attended with complete success.

As soon as the attention of the somnambulist was thoroughly gained by his Magnetiser, M. L. gave him one of the hundred little cards, of which I have before spoken: then Calixte, his eyes being still bandaged, arose from his seat, advanced some steps towards his Magnetiser—stopped for an instant—returned—stopped again—got up into a chair—stamped his feet impatiently—then finally placed his heels upon one corner of the chair—closely applied his arms to the whole length of his body—became stiffened all over—then inclined himself backward—and finally fell in a heap into the arms of M. Ricard, who had purposely come and placed himself behind him.

The card was now given to us, and contained the following sentence:—"Make the somnambulist get up into a chair, and then make him fall backwards into the arms of his Magnetiser."

Thus terminated our sitting, the most interesting, and perhaps the most complete, which has ever taken place in Paris. I have thanked M. Ricard for it, as for a great benefit which he has conferred upon me.

The reasoning with which Dr. FRAPART, the reporter, tests the experiments is a perfect specimen of logical argument. We now take from Mr. SANDBY'S work a very singular and interesting case of natural somnambulism, in which transference of sensation is distinctly exhibited. The patient was a young lady who had been thrown into a state of nervous excitement by the sudden death of her father. Some of her senses were lost, and others exalted to an extraordinary degree.

All colours she can distinguish with the greatest correctness by night or by day, whether presented to her on cloth, silk, muslin, wax, or even glass—and this I may safely say, as easily on *any part of the body as with the hands*, although of course the ordinary routine of such an exhibition of power takes place with the hands,—the other being that of mere curiosity. Her delicacy of mind, and high tone of religious feeling are such, that she has the greatest objection to make that which she regards in the light of a heavy affliction from God, a matter of show or curiosity to others, although to ourselves, of course, all these unusual extravagances of nervous sensibility are manifest for at least twelve out of every twenty-four hours. She can not only *read with the greatest rapidity* any writing that is legible to us, music, &c. with the *mere passing of her fingers over it*, whether in a dark or light room (for her *sight* is for the most part suspended when under the influence of the attack, or paroxysm, although she is perfectly *sensible*, — nay, more *acute* and *clever* than in her natural state): but within this month past she has been able to collect the contents of any printing or MS. by merely laying her hand on the page, without *tracing* the lines or letters, and I saw her last night only *declare the contents of a note just brought into the room* in this way (when I could not decipher it myself without a candle), and with a rapidity with which I could not have read it by daylight. I have seen her develope hand-writing by the application of a note to the back of her *hand*, *neck*, or *foot;* and she *can do* it at any time.

"Her power ceases," adds the narrator, "the moment the attack passes off;" between the attacks she is in a perfectly natural state.

But here we must pause again, though purposing to continue the examination of this most valuable contribution to the cause of science as other claims upon our columns may permit.

Lectures on Electricity. By HENRY M. NOAD, Author of "Lectures on Chemistry," &c. London: Knight and Sons.

THE extraordinary research employed in compiling these lectures, and the manner in which the results of FRANKLIN'S, LAXTON'S, WOLLASTON'S, and other great electricians' experiments and discoveries are condensed, have been already approved by the sale which greeted the two previous editions. In its present form the work is dedicated to ANDREW CROSSE, esq. of Broomfield, whose labours in the science are so justly estimated. It is what it pretends to be, "a useful and succinct account of some of the most important facts relating to electrical science." The value of this edition is considerably enhanced by an appendix, in which many recent discoveries are described. The new phenomena of electricity from steam are treated of; and the pages are studded with wood-cuts, amounting in number to nearly three hundred.

VOYAGES AND TRAVELS.

Narrative of the United States Exploring Expedition, during the Years 1838, 1839, 1840, 1841, 1842. By C. WILKES, U.S.N. Commander of the Expedition, M.A. Th. S. &c. Five vols. London and New York, Wiley and Putnam.

A WORK from such an origin as this, comes before the critical eye with a good grace. We are prepossessed in favour of a book, the researches necessary for the compilation of which were instituted by a Government, with the ostensible purpose of ob-

taining and spreading knowledge. We hail with joy the attempt made by the proposers of the enterprise here recorded. Their aim was good. They endeavoured to bring under the view of the geographer and geologist some of the unknown and doubtful regions of the earth. That they have partly failed in their object is no disgrace to the enterprising individual who conducted the expedition, nor should it tend to damp the ardour of those who employed him. America was not peopled from the first ship which visited its shores, nor was the character of Australia known on the return of the first expedition to that remote land.

But although that we would speak encouragingly of this book, we must pronounce an honest opinion of it. We will not blind our eyes to its manifold faults. First, its bulk and gorgeous decorations, and consequent price, unfit it for wide circulation. It is expected that knowledge now-a-days be rendered at a cheap rate; the more useful a book is likely to become, the more should economy be studied in the printing, binding, &c. Much selfishness and jealousy is displayed in these pages.

Lieut. WILKES claims precedence in discoveries which it is well known were made public to the world long before his expedition reported its visits and doings. No new country is alluded to with certainty, and of the tracts mentioned as newly discovered, we knew quite as much before as he is capable of communicating. He attributes a great deal of importance to his Antarctic cruise, alleging that he discovered land, which he takes great pains to prove was either a continent or a collection of islands. All, however, is dubious and uncertain. D'URVILLE, BELLANEY, and ROSS, travellers of great note, have raised similar theories, and written on the same subject. A little boasting from America must, however, be expected, on a first essay at discoveries of such an important nature as that of which the volumes before us treat. It is in keeping with the national character of the country. But we will take the most charitable view of the failing, and assign it to an over-zeal in the undertaking. May this enthusiasm be preserved, and be the means of spurring to future enterprise!

The volumes are emphatically American, and, to borrow a phrase from the country, their entire aspect "fixes" them as of Yankee origin. There is a bluster of manner very disproportioned to the matter. The events and scenes recorded prove that the spots visited, and difficulties encountered, are far other than of the class so glibly described in the "tours" and "voyages" with which the press teems. There is some grumbling with government officials, and abuse for ill-usage; and if the hints which the Lieutenant throws out are to be regarded, he certainly was not equipped for his voyage in a manner reflecting much credit on American foresight. Ill-constructed ships, unwholesome bread and flour, insufficiency of clothing for the men, are alluded to in plain terms.

The squadron, consisting of six vessels, sailed on the 18th of August, 1838. It was the aim of Lieut. WILKES to inform himself of the existence, and to mark the position, of rocks, shoals, and islands in the Southern and Pacific Oceans. He also ventured as far as prudence would allow in various longitudes, towards the south pole, surveying the almost unknown Polynesian groups. The Columbian river, and the territory of the United States on the seabord of the north coast of America, were also visited. After traversing some of the adjacent seas, including that of Japan, he returned by way of China, Singapore, and the Cape of Good Hope. Scientific observations were an especial object, and a corps of professors, amounting to nine, accompanied the expedition. Their notes and descriptions are interspersed with the Lieutenant's narrative, and add much to the value of the work. Superb plates and cuts illustrate admirably much which could not be otherwise distinctly conveyed.

Steering for the Gulf stream, the squadron made for Madeira. Worth recording is Lieut. WILKES's manner of accounting for the appearances which have frequently frightened and misled voyagers, and which may be termed

IMAGINARY ROCKS.

At eight A.M. the look-out cried out, "Rocks, or a wreck on the starboard bow!" which at once created an excitement on board. We stood for it. It had at first every appearance of a rock, then that of a wreck with the masts gone. It proved, however, to be a large tree of cotton-wood, one hundred and twenty feet in length, and fourteen feet in circumference at the height of five feet above the roots. It had been a long time in the water, was full of barnacles, and much eaten by the teredo navalis. Great quantities of fish were about it, consisting of dolphins, sharks, &c. We did not, however, succeed in taking any. In rough weather it might easily have been mistaken for a rock, particularly if passed in twilight or at night. There is little doubt in my mind that many of the numerous vigias that appear in our charts have as little foundation. No current was experienced hereabouts; and I am led to the conclusion that a sort of eddy or still water is here found, wherein most of the wood carried by the Gulf stream becomes deposited for a time.

To Terra del Fuego, its celebrated promontory Cape Horn, together with the inlets, bays, and currents so common in the neighbourhood, the squadron devoted a considerable time. They passed

THE STRAITS OF LE MAIRE.

The Straits of Le Maire were before us; we were just in time to take the tide; and with a fair wind we sailed rapidly through the strait passing its whirls and eddies, now quite smooth, but in a short time to become vexed and fretted by the returning tide. The squadron glided along with all its canvass spread to the breeze, scarcely making a ripple under the bows. The day was a remarkably fine one for this climate, and the sight beautiful, notwithstanding the desolate appearance of the shores.

I cannot see why there should be any objection to the passage through the Straits of Le Maire, as it gives a vessel a much better chance of making the passage round the Cape quickly. No danger exists here that I know of. A vessel with the tide will pass through in a few hours. As for the "race and dangerous sea," I have fully experienced it in the Porpoise on the side of Staten Land, and am well satisfied that any vessel may pass safely through it at all times and in all weathers, or if not so disposed may wait a few hours until the sea subsides and the tide changes. We were only three hours in passing through. We entered the straits with studding-sails set, and left them under close-reefed topsails.

Arrived at Madeira, the reader is presented with several anecdotes. We cannot but think much of this matter unworthy a place in a sort of demi-official narrative of a national "expedition." By accident we light upon one of

THE TIMES AND MADEIRA WINE.

The inhabitants of Madeira are much alive and justly jealous of the reputation of their wines, which are generally the engrossing topic of conversation. An amusing excitement existed during our visit. A London paper (the *Times*) had asserted that foreign wine had frequently been introduced into Madeira, and afterwards exported as the genuine article, to the United States in particular; and what gave more force to the story, it was stated as a fact, that seventy pipes had lately been entered at the expense of 1,000 dollars, and re-manufactured. Everybody was up in arms. The Commercial Association of Funchal passed resolutions denouncing the publication in strong terms, as designed by certain interested persons to injure the reputation of the wine of Madeira. So strict are the laws to prevent frauds, that even genuine Maderia, after being once shipped, cannot be returned to the island. I heard, however, of an attempt, and but one, to smuggle in Teneriffe and Fayal wines, which was discovered. The casks were broken, the wine destroyed, the boats confiscated, and the smuggler condemned to be transported to the coast of Africa.

On leaving Madeira, they bent their course southward. The morning after their departure, Lieut. WILKES found at daylight that his squadron was not within sight. He hove to, and in a few hours was joined by the missing barks, which had been becalmed for several hours, although all the vessels were near when the breeze sprung up. The cause of the separation was a *vein* of wind, such a phenomenon being of frequent occurrence in that locality. Strongly contrasting with the grand Spanish city they had shortly before quitted, was the spot they next touched at. We preserve part of the sketch of

THE ISLAND OF ST. JAGO.

There are many high peaks and mountains in its centre, which afford a fine background for the barren and uninteresting coast scenery. The time of our arrival was just after the rainy season, the island consequently presented a more verdant appearance than it does at other seasons of the year. Our consul, J. Gardiner, esq. came on board, and made us welcome to all the island afforded. An officer was despatched to call upon his excellency the governor, to report our arrival, who proved to be a black man. Knowing that the regulations required permission for vessels to depart, the request was made during the interview, which he readily granted at any hour we chose. The town of Porto Praya

is prettily situated on an elevated piece of table-land, and looked well from the anchorage. The bay is an open one, but is not exposed to the prevailing winds. There is generally a swell setting in, which makes the landing unpleasant and difficult. The only landing-place is a small rock, some distance from the town, and under a high bank, on which there is, or rather was, a fortification, for it is now entirely gone to decay. It commands the bay, and is situated about two hundred feet above the sea. The horizontal stratification of the red and yellow-coloured sandstone shews most conspicuously in this cliff, and forms one of the most remarkable objects on this part of the island. It is of tertiary formation, and contains many fossils. I regretted extremely that my time did not permit me to make a longer stay, as we left the island under the impression that there is much here to be found that is new in the various departments of natural history. Between this bluff and the town is an extensive valley, in which there are many date-palms, cocoa-nuts, and a species of aloe. On landing, a stranger is immediately surrounded by numbers of the inhabitants, with fruit, vegetables, chickens, turkeys, and monkeys, all pressing him with bargains, and willing to take any thing for the purpose of obliging their customers. Many of them continue to follow until they meet with some new customer. The soil, rocks, and every thing around on the surface, shew unequivocal marks of volcanic origin. The rock above the tertiary formation is a thick bed of cellular lava, with fragments of the same strewn in every direction over it. A thin and poor soil gives but little sustenance to a light herbage. Goats and asses are found in great numbers grazing upon it. The length of our visit did not permit us to make much examination, yet the character of the vegetation was unequivocally African. The walk from the landing to the town is exceedingly fatiguing, and the road deep with sand. The first view of the town on entering it is any thing but striking, and all the ideas formed in its favour are soon dispelled. The houses are whitewashed, and in general appearance resemble those inhabited by the lower orders in Madeira, but they are much inferior even to them. The north-east of the town is composed of rough stone houses, covered with palm leaves. The streets are wide, and in the centre is a large public square, the middle of which is occupied by a small wooden monument, said to be emblematical of royalty! A chapel, jail, and barracks constitute the principal public buildings. The fort, which flanks the town, is almost entirely in decay. This is the case with almost every thing we saw here: the place is, indeed, little better than an African town. The houses are of stone, one story high, partly thatched, and others tiled. Their interior presents only a few articles of absolute necessity. Of comfort and cleanliness, in our sense of the words, they have no idea. The houses and streets are filthy in the extreme, and in both of them, pigs, fowls, and monkeys appear to claim, and really possess, equal rights with the occupants and owner. The population is made up of an intermixture of descendants from the Portuguese, natives, and negroes from the adjacent coast. The Negro race seems to predominate, woolly hair, flat noses, and thick lips being most frequently met with. The number of inhabitants in St. Jago is about thirty thousand. Porto Praya contains two thousand three hundred, of which number one hundred are native Portuguese. The language spoken is a jargon formed by a mixture of the Portuguese and Negro dialects. Most of the blacks speak their native tongue. Mr. Hale, our philologist, obtained here a vocabulary of the Mandingo language, and found it to agree with that given by Mungo Park.

About three months after their first departure from America they arrived at Rio Janeiro, where we find this description of

ST. JANEIRO CIVILIZATION.

All these blacks are from different parts of the coast, and having been hostile tribes, retain much of their antipathy to each other. In general they are kindly treated, and become firmly attached to their masters; more, however, from clannish feeling than from gratitude, of which virtue they seem to possess little. They are baptized by their owners as soon as purchased, and in the cities attend mass regularly, and go to confession, but they are never thought to become entirely civilized. Those who receive their freedom in reward for faithful services, or purchase it, conduct themselves well; their descendants are much superior in point of intelligence. Many of them own slaves, and prove much more severe masters than the whites. Male slaves are put to any trade or craft they may desire. Females are for the most part employed as mantua-makers, and almost all the finery worn by the higher circles at public *fêtes* is made by slaves. Indeed, many masters and mistresses are dependent on the labour of their slaves for their daily support. There are some blacks who are priests, and others officers in the army; indeed, some of the deputies would not pass for white men elsewhere.

The accounts of the Patagonian and Petcherai tribes, though vastly differing, are extremely interesting. The phrenological development of the head of the latter seems to be ill-foreboding. Short faces, narrow foreheads, and high cheek-bones, betray the low standard of their minds. They were found entirely naked, with the exception of a piece of seal-skin sufficient to cover the shoulder, and which was worn on the side against which the wind blew. They are a small race, not being more than five feet in height, of a light copper-colour, "which is much concealed by smut and dirt." They seem to be very jealous of their women.

PETCHERAI WOMEN.

The women were never suffered to come on board. They appeared modest in the presence of strangers. They never move from a sitting posture, or rather squat, with their knees close together, reaching to their chin, their feet in contact, and touching the lower part of the body. They were extremely ugly. Their hands and feet were small and well-shaped, and from appearance they are not accustomed to do any hard work. They appear very fond and seem careful of their young children, though on several occasions they offered them for sale for a trifle. They have their faces smutted all over, and it was thought, from the hideous appearance of the females, produced in part by their being painted and smutted, that they had been disfigured by the men previous to coming alongside. It was remarked that when one of them saw herself in a looking-glass, she burst into tears, as Jack thought from pure mortification. The men are employed in building the huts, obtaining food, and providing for their other wants. The women were generally seen paddling their canoes. When this party of natives left the ship and reached the shore, the women remained in their canoes, and the men began building their temporary huts; the little children were seen capering quite naked on the beach, although the thermometer was at 40°. On the hut being finished, which occupied about an hour, the women went on shore to take possession of it. They all seemed quite happy and contented. Before they left the ship, the greater part of them were dressed in old clothes, that had been given to them by the officers and men, who all shewed themselves extremely anxious "to make them comfortable." This gave rise to much merriment, as Jack was not disposed to allow any difficulties to interfere in the fitting. If the jackets proved too tight across the shoulders, which they invariably were, a slit down the back effectually remedied the defect. If a pair of trousers was found too small around the waist, the knife was again resorted to, and in some cases a fit was made by severing the legs. The most difficult fit, and the one which afforded the most merriment, was that of a woman to whom an old coat was given. This she concluded belonged to her nether limbs, and no signs, hints, nor shouts could correct her mistake. Her feet we thrust through the sleeves, and after hard squeezing she succeeded in drawing them on. With the skirts brought up in front, she took her seat in the canoe with great satisfaction, amid a roar of laughter from all who saw her.

A still further account of the natives will perhaps be interesting to our readers.

Towards evening Messrs. Waldron and Drayton visited their huts. Before they reached the shore, the natives were seen making a fire on the beach for their reception, evidently to avoid their entering their huts. On landing, one of the men seemed anxious to talk with them. He pointed to the ship, and tried to express many things by gestures; then pointed to the south-east, and then again to the ship, after which, clasping his hands, as in our mode of prayer, he said, "Eloah, Eloah," as though he thought we had come from God. After a little time, they gained admittance to the hut. The men creeping in first, squatted themselves directly in front of the women, all holding out the small piece of seal-skin to allow the heat to reach their bodies. The women squatted three deep behind the men, the oldest in front, nestling the infants. After being in the hut, Mr. Drayton endeavoured to call the attention of the men, who had made signs to him before entering, to know whether they had any idea of a Supreme Being. The same man then put his hands together, repeating as before, "Eloah, Eloah." From his manner, it was inferred that they had some idea of a God or a Supreme Being. Their mode of expressing friendship is by jumping up and down. They made Messrs. Waldron and Drayton jump with them on the beach, before entering the hut, took hold of their arms, facing them, and jumping two or three inches from the ground, making them keep time to a strange song.

All our endeavours to find out how they ignited their fire proved unavailing. It must be exceedingly difficult for them to accomplish, judging from the care they take of it, always carrying it with them in their canoes, and the danger they thus run of injuring themselves by it. Their food consists of limpets, mussels, and other shell-fish. Quantities of fish, and some seals, are now and then taken among the kelp, and with berries of various kinds, and wild celery, they do not want. They seldom cook their food much. The shell-fish are detached from the

shell by heat, and the fish are partly roasted in their skins, without being cleaned. When on board, one of them was induced to sit at the dinner-table; after a few lessons, he handled his knife and fork with much dexterity. He refused both spirits and wine, but was very fond of sweetened water. Salt provisions were not at all to his liking, but rice and plum-pudding were agreeable to his taste, and he literally crammed them into his mouth. After his appetite had been satisfied, he was in great good humour, singing his "Hey meh leh," dancing and laughing. His mimicry prevented any satisfactory inquiries being made of him relative to a vocabulary. Some of the officers painted the faces of these natives black, white, and red; this delighted them very much, and it was quite amusing to see the grimaces made by them before a looking-glass. One of these natives remained on board for upwards of a week, and being washed and combed, he became two or three shades lighter in colour. Clothes were put on him. He was about twenty-three years of age, and was unwell the whole time he was on board, from eating such quantities of rice, &c. His astonishment was very great on attending divine service. The moment the chaplain began to read from the book, his eyes were riveted upon him, where they remained as long as he continued to read. At the end of the week he became dissatisfied, and was set on shore, and soon appeared naked again. It was observed, on presents being made, that those who did not receive any began a sort of whining cry, putting on the most doleful-looking countenances imaginable. They are much addicted to theft, if any opportunity offers. The night before they left the bay, they stole and cut up one of the wind-sails, which had been scrubbed and hung up on shore to dry. Although we had no absolute proof of it, we are inclined to the belief that they bury their dead in caves.

In the account of the southern cruise, we find this picture of

THE CHILIANS.

The Chilians are extremely fond of the dance called the samacueca. This may be called the national dance, and is in vogue among the common people. It is usually performed at the chingano, which is a kind of amphitheatre, surrounded by apartments where refreshments, including strong drinks, are sold, and is generally well filled with both sexes. The dance is performed on a kind of stage, under an open shed. The music is a mixture of Spanish and Indian, and is performed altogether by females, on an old-fashioned long and narrow harp, one end of which rests on the lap of the performer, and the other on the stage, ten feet off. A second girl is seen merrily beating time on the sounding-board of the instrument. On the right is another, strumming the common chords on a wire-string guitar or kitty, making, at every vibration of the right hand, a full sweep across all the strings, and varying the chords. In addition to this they sang a national love-song, in Spanish, at the top of their voices, one singing a kind of alto; the whole producing a very strange combination of sounds. The dance is performed by a young man and woman; the former is gaudily decked in a light scarlet jacket, embroidered with gold lace, white pantaloons, red sash, and pumps, with a tiny red cap; whilst that of his partner consists of a gaudy painted muslin dress, quite short and stiffly starched, not a little aided by an ample pair of hips; thrown over all is a rich coloured French shawl; these, with well-fitted silk stockings, complete her attire. These last are in truth characteristic of the Chilian women of all classes, and they take no pains to conceal them. One not unfrequently sees the extravagance of silk stockings in the washer-women at their tubs, and even with their hands in the suds. The dress in general fits neatly, and nature is not distorted by tight lacing, or the wearing of corsets. Nothing is worn on the head, and the hair being parted, and equally divided from the forehead back to the neck, hangs down in two long plaits on each shoulder to the waist. The style of dancing is somewhat like a fandango. The couple begin by facing each other, and flirting handkerchiefs over each other's heads, then approaching, slowly retreating again, then quickly shooting off to one side, passing under arms without touching, with great agility, rattling and beating time with castanets. Their movements are quite graceful, those of their feet pretty, and withal quite amorous; the gestures may be readily understood, not only by the native audience, but by foreigners. I cannot say much for its moral tendency.

Whilst on one of their rambles, the conchologist and mineralogist of the company visited Lake Lanto, of which they relate a very touching legend. It is remarked that the whole of the company met with hospitable and kind treatment nearly throughout their voyage. Siusinga afforded them much amusement. The following account is given of

GIMBLET FAITH.

This new faith has made some progress among these islands, and has the following singular origin: a native of Savaii, by name Seeovedi, was taken from that island by a whale-ship, and did not return for several years. During his absence he visited several ports, where it would seem he obtained some notions of the forms and ceremonies of the Roman Catholic Church. Possessed of considerable natural shrewdness, he founded on this knowledge a plan to save himself from labour for the future, by collecting followers at whose expense he might be maintained. During his absence, and while on board the whale-ship, he had received, as is usual in such cases, instead of his native name, that of Joe Gimblet; and this cognomen is now firmly attached to the sect of which he was the founder. Having formed the plan of founding a sect, he did not scruple as to the means of carrying it into effect; for he boldly claimed a heavenly mission, professing to hold converse with God, and asserting that he possessed the power of working miracles, raising the dead, &c. He soon gained many proselytes, and had attained great consideration and authority, when unfortunately for him he was called upon to exert his pretended power of raising the dead, by restoring to life the favourite son of a powerful chief called Lelomiava, who had been murdered. Joe did not hesitate to undertake the accomplishment of this miracle. He in the first place directed a house to be built for the reception of the body, and when it was finished he required that it should be supplied with the best provisions. In conformity with this requisition, the choicest articles of food that could be obtained were regularly handed to Joe for the use of the defunct, upon whom he alone waited, while every other person except the chief and himself was excluded from the building. The food thus regularly supplied as regularly disappeared, and Joe assured the chief that his son had eaten it, and under this bountiful allowance would soon recover his strength and walk forth. In this way time wore on, until the patience of the old chief began to shew symptoms of being exhausted. This somewhat alarmed Joe, but as he was a fellow of infinite resources, he contrived to evade inquiry and procrastinate, hoping, no doubt, that some lucky incident might turn up, by which he should be enabled to extricate himself from the dilemma. Unfortunately for him, however, after another month of anxious suspense the old man's pigs and taro fell short, notwithstanding the chief's dependants had for a long time been restricted from using them. All of them were in fact much reduced by their compulsory fast, with the exception of Joe, whose rotundity of form seemed to indicate that he at least ran no risk of starvation. Whether it were owing to the suspicions which his jolly appearance excited, or that he began to entertain doubts of Joe's supernatural powers, is not known; but one day old Lelomiava determined to satisfy himself of the progress making in the restoration of his son. With this design he entered the house, and was shocked with the sight of his son's body in a state of loathsome putridity. He immediately summoned Joe, and informed him that it was time that the promised miracle should be accomplished, adding, that it must be done by morrow's dawn. Joe immediately redoubled his exertions, and prayed hastily to all the saints of his calendar. He, however, knew full well what would be his fate if he remained to encounter on the morrow the anger of the savage chief. He therefore effected his escape during the night, and made his way to his native island. There he remained for some time incog. but now ventures to appear openly, practising his impositions boldly, and is the worst antagonist the missionaries have to deal with. This story was related by the old chief himself, who, instead of finding his son restored to life, was compelled to bury his body, which he did, with the exception of the head. This he put in a box, and suspended beneath the peak of the roof of his house, where it remains, a witness of his credulity and of the gross imposition that was practised upon him. While the party remained at Siusinga, a sick native was brought from the coast to a neighbouring house, and their host, the Gimblet priest, was called upon to pray for him. This afforded them an opportunity that might not otherwise have occurred, of learning some facts in relation to the ceremonies of this sect. On this occasion, the priest approached the house where the sick man lay, and when upon the stone platform in front of it, he drew forth a book from the folds of tapa in which it had been carefully enveloped. He then called upon Jehovah, returning thanks for the many blessings which had been conferred on his people, and asked for a continuance of the same, invoking the name of Jesus. He ended by inquiring the Divine pleasure concerning the sick man, and begging mercy for him. The nature of the book could not be distinctly seen, as it was again carefully inclosed in the tapa as soon as the ceremony was over; but so far as it was visible, it bore an unquestionable resemblance to a blank note-book! The proselytes of this sect, in case of sickness, confess their sins to one another, and have a number of fast-days, which are rigidly kept. Their Sabbath occurs only once a month, and is celebrated by the firing of guns and the puerile mummery in which their worship consists.

Wakefield's Adventures in New Zealand, from 1839 *to* 1844.
(CONCLUDING NOTICE.)

We resume our notice of these volumes.

Many of the first settlers are now thriving men, and most of them, from the very nature of their existence, thus isolated from society, are *characters*. Take, for instance,

OLD JENKINS.

The most extraordinary elevation was, perhaps, that of Robert Jenkins. He had come in one of the vessels from Sydney at the same time as the first colonists from England. Soon after the move to Thorndon, he bought a barrel of beer, and set it on tap in a miserable little hut on the beach. He had then crept on from one thing to the other, until he had a pretty neat grog-shop, with the sign of the "New Zealander." When the town sections were given out, he took a lease of part of one of the most valuable sections near Te Aro, and built on it a large brick house, which quite looked down upon the wooden cottage beside it in which the bank was situated. Here he did a thriving business; having his bar full of boatmen and sailors, whalers, bullock-drivers, stockmen, and others of the thirsty class, and a neat parlour in which commercial transactions and sales of cattle and horses were often concluded over a jug of beer. At length he built extensive stables, with four stalls and five loose boxes; speculated a little in buying cattle and setting up a butcher next door to him; took in horses to livery and to be broken in; and became the owner of considerable property both in land and stock. When I left, he was paying a rent of 20*l.* a year for one hundred acres of hill-pasture near the town, had made an excellent road up the steepest hill in the neighbourhood to his section, had fenced in half of it, and had a fine troop of brood mares running on the farm.

"Old Jenkins," as he is generally called, is quite a character. He can suit his conversation and manners to any class of society, and there is not a gentleman in Wellington who will not willingly chat over the news of the day with him at the door of his tavern, and often be glad to profit by his experience and knowledge of the world. For, although of unknown origin, and ignorant even of writing, he has many sterling qualities. Though a public-house keeper, he is an absolute observer of temperance without having taken the pledge; and he can boast an uncommon share of vigour, manly independence, and public spirit. He is one of those men who must be in a new community to obtain the estimation which they deserve.

Here, as everywhere, the Scotch beat all other people in patient perseverance and well-directed industry, and consequently prove the most successful colonists. A striking example of this trait of national character is afforded in the following narrative of a triumph over native hostility by

A SCOTCH SETTLER.

Bell had managed to locate himself here, notwithstanding considerable opposition from the natives, by an admirable mixture of firmness, good temper, and kindness. He had first paid the natives for putting up the frame of a house, and had then filled up the walls with kareau and clay, and whitewashed them. A little garden had succeeded. He had then proceeded to clear off the flax, and fern, and other scrub, which was waist-high on the land which he meant to plough. When he began this operation, the interruption commenced. One perseveringly annoying and ill-tempered chief headed the malcontents; but Bell had made a friend of another, by judicious presents and attentions, and obtained some protection from him whenever the persecution became a little too serious. The friend was Kiri karamu, the chief who had signed the deed at Kapiti, and afterwards accompanied E Kuru and myself hither to the grand sale. He was a repudiator of the bargain generally; but had appreciated the advantages of having a good pakeha to live near him, and teach him how to plant potatoes and grow wheat. He never did more than remonstrate with E Waka, the troublesome neighbour; apparently conniving at extortion, though he would not allow violence to be used.

During the progress of the ploughing, E Waka used to come and watch, and keep walking by the side of the old farmer, telling him he should plough no more. But Bell pretended not to understand him, and smiled at him, and geed the bullocks, and warned E Waka to get out of the way of them when they turned, and ploughed on. E Waka got furious; but Bell wouldn't look a bit frightened, and told him he didn't understand him; "He must go to the boys," meaning his own sons; "they'd talk Maori to him:" and he geed the bullocks, and ploughed on. The patience of E Waka soon got exhausted, and he retired sulkily towards the house, after putting in some pegs a few yards beyond where Bell had got to, pointing to that as his ultimatum. And while the good-wife gave him a large mess of bread and milk, or a smoking dish of pork and potatoes, and the sons and daughters chatted good-humouredly to him while they built a pigsty or put up a stock-yard, old Bell was ploughing on. And E Waka ate and smoked, and basked in the sun, wondering at the industry of the pakeha, till he got sleepy, and crept back to his village for the day.

The next morning, however, he would be afoot pretty early to besiege the *pakeha maro*, or "hard white man," as he called him. But he was never early enough; and the first sight that met his eyes was always his *bête noire*, the team of bullocks, and the old man trudging steadily along the fresh furrows. E Waka would begin by looking for his pegs, and hunt about for a long while, grumbling and puzzling, before he found out that the plough must have gone over them some hours ago, if not the evening before. And while he was hunting, the plough sped quietly on. Then came the remonstrance, and the shrug of the shoulders, and the fury, and the good-humoured indifference, and the reference to the boys, and the meal, and the sleepiness, and the return home, and the careful pegging of the ground as before. The same story over again; no patience could stand it; old Bell and the team went on, slow, sure, and regular as the course of the sun.

And besides, on one occasion, when E Waka had brought a large troop of attendants, and threatened to commit some violence, the old man had called his stalwart sons to his side, and, taking up a spade or a plough-share, had said, in broad Scotch, while his resolute looks and prepared attitude interpreted his words into a universally intelligible language, "Dinna ye think to touch a thing that's here noo; for if ye do, by the God that's abune us, I'll cleave ye to the grund! A bargain's a bargain; I've paid ye richt and fair; and I'll gar ye keep to it."

Then E Waka *would* look frightened; and begin to think his good daily meal was better than a blow of old Bell's weapon, and peace was soon restored.

And when the ploughing was done, the planting potatoes was too amusing to be interfered with; for they ridiculed the idea of expecting any crop from potatoes cut into small pieces. "Bide and see," said the old man, and they waited with anxiety for the time of crop, and the report spread far and wide that the old *pakeha* with the *cows* was very good and brave and industrious, but that he was certainly gone *porangi*, or mad, for he had cut up his seed potatoes before he put them in. "Poor old man!" they said, "his trouble must have turned his head—such a very absurd idea!"

But the crop came better than their own from whole potatoes, and they stared, and found that the foolish old man could teach them some lessons in growing food; and they soon honoured him as much for his knowledge as they had learned to stand in awe of his courage and resolution.

And though they have not yet allowed him to use the whole of his section, he has now fifty acres under plough cultivation, sends grain and grass seed enough to Wellington to pay for the luxuries which his family require, owns several cows and a flock of sheep, calls himself the "Laird of Wanganui," and gives harvest-home festivals. He talked of buying a horse, and caring for no man, when I last saw him.

Among the most singular of the vegetable productions of New Zealand is

THE RATA.

This is a curious but very common plant, which is at first a parasite, winding round large trees of the forest till it encircles and destroys them, when its numerous coils join together in one hollow trunk, leaving their victim to rot inside.

The rata thus full grown is certainly the monarch of the New Zealand forest. In the gnarled form and tough contortions of its limbs, it much resembles the oak, and is therefore highly valued by ship-builders for knees and timbers. The foliage has also the noble appearance at a distance of the English forest-king. But the plant is of the myrtle kind, and bears a bright crimson blossom in such abundance that, at its time of flowering, the forests look as though some playful giant had dipped every other tree in crimson dye and stuck them up again.

This tree is somewhat irregular in its flowering, and earlier in some parts of the country than in others. But this fairy hue is generally thrown over the wooded steeps soon after the middle of summer, about harvest-time.

Mr. WAKEFIELD, in common with every traveller who has visited New Zealand, is not impressed with a very favourable opinion of the missionaries.

They are too much embued with the spirit of the tradesman, and some of their dealings with the natives appear not to have been characterized by the strictest adherence to equity. The converts among the natives, especially those who set up for preachers, are, it seems, for the most part unmitigated rascals. Hypocrisy is their profession, and admirably is it practised. They assume long faces, sing psalms, and cite texts; but they do not scruple to lie and cheat; they are profligates of the

worst description, and have abandoned their own religion without imbibing a spark of the *spirit* of Christianity.

This is Mr. WAKEFIELD's summary of the general results of intercourse with Europeans upon the characters of the natives.

The natives about Wellington were becoming a useful and industrious race. Almost every settler had two or three attached to his establishment, who acquired some knowledge of the English language and of the useful arts. Many were building houses after the European fashion, and adopting European clothing; they were learning the use and value of money, and the forms of commerce to a certain extent; and some of them had acquired great decency, and even polish of deportment, by their constant and familiar intercourse with the colonists of all classes. It may be worthy of note, that Epuni was building a wooden cottage with boarded floor, a door, and glass windows, in the pa of Pitone; that his son, E Ware, acted as pilot to an emigrant ship, having boarded her outside the heads, in a whale-boat manned by his own countrymen, all dressed like English sailors, and brought her in to the anchorage in front of the town; that E Tako and Richard Davis took to European clothing entirely, and that both had deposits at the bank; while Davis had bought a horse for eighty pounds, which he used to let out, with saddle and bridle, at ten shillings a day; and that the captain of the ship *London*, when half his European crew had deserted the ship, found no difficulty in engaging eight native hands for the voyage to India and England.

In the perfectly wild tribes, the high sense of honour and dignity among the chiefs, and their absolute political authority, served to maintain a certain integrity and straightforward conduct towards the stranger; and those who had talents to acquire authority had also, with but few exceptions, the will to exercise it with justice and kindness towards the white man by whom it was merited.

In the partly civilized tribes, which were at the same time converted, the political authority of the chiefs was already much weakened; but its place was supplied, to a certain degree, by the example of law and order, and by the stirring spirit of emulation; that is, by the influence of the civilized community.

In the merely converted tribes, the authority of the chiefs was suddenly and totally overthrown, without the substitution for it of any political organization, in order to save the tribe from anarchy.

This view was confirmed by my subsequent observations, as the consequences of the two systems became more and more developed.

We might gather a whole CRITIC full of passages of equal or greater interest; but already we have been tempted beyond our proper limits by the curiosity that attaches to the subject-matter, and we must now reluctantly conclude by heartily recommending these volumes to the book-club and the circulating library.

Travels in Sweden, by IDA, Countess HAHN HAHN. London, 1845. Clarke and Co.

ANOTHER of Mr. CLARKE's cheap and elegant series of original and translated works. These travels were reviewed in THE CRITIC soon after their publication in Germany; we have now, therefore, only to announce this translation of them, and to add that it is executed with fidelity and elegance.

POETRY.

Sacred Verses, with Pictures. Edited by the Rev. ISAAC WILLIAMS, B. D. Part I. London, 1845. Burns.

WE were in doubt whether to classify this beautiful publication under Literature or Art—if the poetry be introduced to add interest to the engravings, or the engravings to illustrate the poetry. Whatever the design of editor and publisher, they have produced a work altogether novel in its plan and aspect. It consists of many distinct sheets of the finest paper, on one side of which are printed, upon two elegantly bordered pages, two poems, with wood-cut illustrations of extraordinary merit, perfect gems of art, many of them copies of subjects chiefly, if not entirely, from ALBERT DURER, executed in a peculiar, but very effective style, and forming an era in the history of wood engraving indicating another onward stride. Of the poetry, some is original, some selected from our best sacred poets; the selections being, as usual in such cases, far superior to the originalities, which cannot boast of much more than smooth versification and pious sentiment.

Of these sheets the first part now before us contains twelve, and all are so beautiful, that it is difficult to prefer any one for special commendation. But the reader's attention may be directed to "The Flight into Egypt," and "The Agony," as proofs of the power of the graver in modern hands.

Like all the works published by Mr. BURNS, the typography is exquisite.

FICTION.

Dawn Island, a Tale, by HARRIETT MARTINEAU.

THIS tale was written expressly for the League Bazaar, and its purpose is avowedly to diffuse, through the medium of a fiction, the principles of free trade. Viewed as a literary work, without reference to the error or truth of the doctrines it is designed to promulgate, it is skilfully adapted to its end. The tale is interesting, and contains many passages of very powerful writing. The volume is exquisitely printed and beautifully bound, and forms a handsome contribution to the extraordinary exhibition of the products of mental and mechanical skill which is now attracting all the world to Covent Garden Theatre.

EDUCATION.

The Classical Students' Translation of Horace. By the Rev. H. P. HAUGHTON, B. A. Author of "The Middle System of Teaching Classics." London, 1845. Longman and Co.

ALREADY have we noticed with commendation the system for teaching the classics introduced by Mr. HAUGHTON. This translation of HORACE is intended for the use of students who adopt that system.

The plan of the translation is thus. The original is rendered word for word: wherever a word of the original is rendered by two or more words, they are connected; the renderings are, as far as possible, the derivatives from the original; wherever the translation is, from its verbal or derivative character, obscure, it is explained; ellipses necessary to the sense are supplied in italics. Explanatory and critical notes are given where required, and all indelicate passages are omitted.

The mere description of the design is sufficient to recommend it.

The author suggests that the student should thus proceed. First, he should read the translation, then the translation and the original alternately, repeating the former after the latter; then the translation should be closed, and the original simply rendered; and, lastly, the original should be read by itself.

Mr. HAUGHTON asserts that by help of this translation a hundred lines of the author might be mastered in three hours by one who has commenced Latin only a few weeks: thus the whole works of HORACE, containing nearly eight thousand lines, may be translated in less than a quarter of a year.

We can only express our confidence that this is no vain boast. The system is obviously a sound one, and the translation before us is executed with uncommon fidelity.

Cordially do we commend this volume to all who seek a rational method of acquiring a knowledge of the classics.

RELIGION.

Sixteen Lectures on the Causes, Principles, and Results of the British Reformation. By J. H. HOPKINS, D.D. Bishop of Vermont, U.S. Philadelphia, 1844. Campbell and Co.

THE feelings of alarm excited in England by the religious controversies of the last few years have been shared by the Episcopalians of the United States, and various works have been published echoing the tocsin cry of "To the Law and to the Testimony," in opposition to the claims put forth in favour of tradition and authority, and non-natural interpretations. Bishop HOPKINS's *Sixteen Lectures*, which were forwarded to us some weeks back, are calculated to be of much service to the cause of Episcopacy as established by the Reformation in England, by directing the minds of the mass of the community to the real question at issue between them and the Roman Catholics. They are marked with good sense, earnestness without virulence, and a plain practical method of viewing the different questions, which is equally true, and may be of

much more use, than a parade of learning, while at the same time the quotations which he does use are apt and forcible. He passes in review the various subjects of the rule of faith, embracing the comparative right of the Bible and tradition, the claims of celibacy in priesthood, the monks and the nuns, the supremacy of the Pope, the worship of the Virgin and the saints, of relics and of images, the doctrines of persecution, purgatory, satisfaction, and indulgence, and, lastly, transubstantiation; and the way he has treated these subjects may be best stated by a quotation from his opening lecture:—

I do not design, however, to content myself with merely taking the statement of Roman Catholic doctrine from this writer, nor from any of the controversialists of the present age; because it is a part of my design to show the change which the Reformation has wrought in the Church of Rome herself: and therefore I shall set before you the acts of their councils, the dogmata of their schoolmen, the declarations and bulls of the Popes, their canon laws, their authorized forms of worship, their catechisms, their breviary, the statements of their historians, and of their distinguished bishops; pursuing in every instance, the rule laid down by the courts of justice in all civilized nations, viz. that *the best evidence of which the nature of the case admits*, shall be given. On our side we shall adduce, first, the authority of the Scriptures, and next the testimony of the earlier fathers which the Church of Rome has herself handed down to us, whose names are placed upon her list of saints, and inscribed with honour in her canon law.

As an illustration of his turning the weapons of his antagonists against themselves, we would especially refer to his proofs of the differences of opinion held in the Romish Church on the subject of the Pope's supremacy; his contrast between Dr. WISEMAN'S statement that such supremacy "is purely spiritual," and the following passage from the bull in which PIUS VII. excommunicated NAPOLEON, in 1809:

"Let our persecutors then," says the Pope, "learn once for all, that the law of Jesus Christ has subjected them *to our authority, and to our throne*. For we also *bear* the *sceptre*, and we can say our power is far superior to theirs. Already have so many sovereign pontiffs been forced to similar extremities against rebellious princes and kings, and shall we be afraid to follow their example?"

Bishop HOPKINS does not dilate upon the faults that are chronicled in the history of the middle ages, which, in our opinion, are far too much dwelt upon, since the clergy at any period must share the character of the period, as being composed of men brought up amid its influences; and the real question is rather, have not the clergy, with all their faults, stood above and helped to raise the rest of society? These lectures would, we think, be popular in England, amongst the religious readers of the middle classes, who are desirous of a clear statement, and who will here see the arguments of Dr. WISEMAN, the most able and learned of living Roman Catholic divines, fairly grappled with. The following passage well answers the objection which has been much urged of late, even by professing members of our own Church:—

Shall men be allowed to say that the Reformation is a failure, because strife and dissension abound amongst the ranks of Protestants, and even our own beloved and well-ordered Church is not wholly at rest? Shall they be allowed to say that the Reformation is a failure, because the Church of Rome still stands in strength and majesty, proclaiming her unchangeableness, and predicting her final victory? As well may they tell us that Christianity has been a failure, because Christendom itself is in subjection to the world, and the hearts of men are still corrupt and selfish, and infidelity walks side by side with faith, and the Church Universal is rent into hostile divisions, and darkness still shrouds the sight of Israel, and the false prophet still keeps millions in bondage, and Paganism still holds down more than half the race of man, although eighteen centuries have rolled their round since the sublime commencement of the apostolic Church on the day of Pentecost.

But false, and ungrateful, and absurd would it be esteemed by every candid mind, to argue thus with respect to Christianity. Incalculable are the blessings which the world owes to the Gospel, notwithstanding the prevalence of evil; and if it has not effected all that might have been anticipated, the fault is not in the Gospel, but in those who refuse to adopt it. Precisely in the same manner may we decide the question concerning the good effects of the Reformation. Its great leading principle was, the re-publication of the Book of God, which, for ages, had been thrust aside to make way for the authority of the Church, and the heavy yoke of human tradition. And vast have been its blessed results in every quarter of Christendom. It has disarmed the ecclesiastical oppressor, restored the primitive faith, overthrown the Inquisition, burst the captive's chains, opened the prison doors, quenched the flames of torture, established the claims of conscience, purified the lives of the priesthood, diffused useful knowledge, restrained the tyranny of monarchs, and recognized, on the broad scale of the divine judgment, the temporal and eternal rights of man. Nay, the Church of Rome herself has felt the benign influence, which, although it has indeed changed none of her dangerous and anti-Christian principles, has yet, wherever she comes into contact with Protestants, modified and improved their practical application.

English Churchwomen of the Seventeenth Century. London: Burns. Derby: Mozley and Sons.

THE purpose of this volume is to place on record an account of the actions and lives of English ladies who took a prominent part in the Church affairs of the seventeenth century. The time selected was one peculiarly rife with heroism among the ladies of the Establishment. The enthusiastic zeal of the Puritans in the cause which they deemed the cause of God, and the changes worked by the great Rebellion, were influential in rousing the dormant spirit of the friends of state religion.

We have a great partiality for biographies, even though they be somewhat partial and one-sided. Revelations of the virtues and failings, the excellencies and defects, of those who have battled with the world before us, are always fraught with useful lessons. They have done something to help the progress of society. But for them, perhaps, our social condition would have been stationary. Wanting a knowledge of the past, the world would continue unchanged and unchangeable. The facilities afforded for the commune of existing minds with those of yore, and the means thus provided to compare the actions of our forefathers with our own, and test their wisdom by their results, is an advantage which cannot be overestimated.

But this assumes that biography at least *aims* at honesty. In the book before us we can discover no such rule of rectitude influencing the author. The book is wanting in literary merit. We look in vain for an original thought among his many commentaries, nor can we find a single interesting passage for extract. Throughout there is commonplace sentiment combined with a bigotry which is always peculiarly unpleasing. The actions recorded are ill-selected, for they deserve no prominence, being such only as would be performed by every upright person. The characters of whom it treats are all personages of rank and title, and they are, therefore, held as saints or martyrs, or both, without proof of actions entitling them to a tithe of the applause that greets them. Thus the advantages usually looked for in biography are wholly wanting. The work is worthless for good, and the best that can be said of it is, that it is a harmless inanity.

ART.

EXHIBITION OF THE ROYAL ACADEMY.

SECOND NOTICE.

272. *The Wood-Nymph's Hymn to the Rising Sun.* F. DANBY, A.—Perhaps no work in the exhibition commands such universal admiration as this. It is undeniably a striking and meritorious picture—one that addresses itself to the imagination more than the judgment, and is, therefore, better understood. The manner in which the artist has treated his subject deserves notice. He has confined the interest of the picture to the middle ground. There through a dark grove of firs and other trees the sunbeams penetrate, touch with scarlet light the figure of a single dancing nymph, and glint through a sombre and vacant foreground in two narrow rays. Between the trees the sea is visible, and the cliffs and the pinnacled rocks which skirt the bay are illumined brilliantly with the sunbeams. In order to give reality to his sunlight, the artist has kept the body of the landscape of a depth approaching to blackness, and has thus sacrificed truth generally to this one requirement. Still there is a world of poetry in this work; much is left to the fancy, which every one will supply unconsciously, according to his capacity; and there are few but will long remember the gratification this landscape afforded.

274. *Richmond Hill.* G. HILDITCH.—There is some force and much truth of colour in this view. It would seem to have

been an actual copy of Nature herself, having received small assistance in the shape of composition from the artist. The group of trees on the right is carelessly and coarsely painted, the foliage massed indifferently, and the colour heavy. The gleam of sunlight striking the figure and foreground is both vivid and forcible.

275. *The Eve of the Battle of Edge-hill.* C. LANDSEER, R.A.—Though extremely clever in parts, this is neither an impressive nor a pleasing picture. Considered with an eye to its pretensions,—for it is manifestly an ambitious attempt at the historic—it must be pronounced a failure. The most obtrusive defect that strikes the spectator is a want of force and centralization of the interest in some particular part of the composition. The grouping has little to recommend it; there is lack of boldness in the opposition of colour, every thing is of a strength, and in many places the proportions and the drawing are incorrect. The artist has oddly divided his subject in the centre, as usual. Last year, in his *Noah's Ark*, he gave us a wooden pillar; he has here introduced a tree almost in the middle of the picture. There is, however, much careful, and indeed able painting; the textures throughout are exquisite; the colour is pure, but a little too chalky in the complexions of the figures, and the pains bestowed on the finish deserve high praise. The man-at-arms and the Flemish charger on the left—the horse reminds one of an animal by RUBENS—are admirable, and the landscape portion of the scene is characteristically handled.

276. *Taking the Veil.* N. J. CROWLEY.—This is a large picture, which has at least force to recommend it. The draperies are cast boldly; but the colour and texture are indifferent, and wherever foreshortening has been attempted, the result is failure.

287. *Landscape.* H. J. READY.—With all its hastiness and slovenliness, there is ability in this picture. It bears the stamp of coinage direct from nature, being full of power, and of a happy colour.

291. *Italian Roadside.* G. B. MOORE.—A picturesque subject, handled in a congenial spirit. In colour, indeed, it is variegated, spotty, and cloudy; but the effect has been adroitly thrown in.

292. *Scene in Lord Chesterfield's Ante-room in* 1748, *an incident founded on his Lordship's neglect of Dr. Johnson.* E. M. WARD.—We commend this able work to the attention of all who visit the gallery. It is replete with character and interest. A number of suitors are waiting Lord CHESTERFIELD's appearance in his ante-room. Among them is the literary leviathan, Dr. JOHNSON, who is seated, and leaning upon his crabstick cudgel. There are also a maimed officer of the navy, a clergyman, a country squire, and a widowed mother and her orphan son. While these are impatiently waiting his lordship's pleasure, some over-dressed opera-singers pass through the chamber, eyeing the suitors disdainfully, direct to the great man's presence. The entire conception of this composition is good—so good, indeed, as to challenge comparison with our immortal HOGARTH. The story is clearly told; there is nothing without a purpose, even to the minutest incident, such as the gaping of the clerk with his presentation volume of sermons beneath his arm, and the watch in the hand of the wooden-legged officer. The whole is well connected, the lights are judiciously let in, and the tone of colour and finish are exquisite.

298. *Portrait of the Hon. Miss Browne.* S. WEST.—We have here an unaffected life-like portrait, simple in composition, and of a clear and pearly colour. The limbs are round and fleshy, but the head wants more relief, and the figure distinctness of line.

301. *The Windings of a River;* and 318, *A Place to remember.* T. CRESWICK, A.—A pair of charming landscapes, limited in prospect, and combining rocks, water, and wood in the proportions which this artist most affects. Imitation can hardly be carried further; the rocks with their angular sides project with the reality of actual substance, and the water is as transparent and reflective as nature. In the last-mentioned picture an effect of sunlight streaming over a ridge, a small deep river in shadow, and striking a rocky mound and some trees on the opposite bank, is finely imagined and as successfully represented. A single figure, appropriately introduced and neatly painted, removes the feeling of loneliness which this artist's subjects for the most part suggest.

304. *Commodore Nelson boarding the San Joseph at the Battle of St. Vincent.* Sir W. ALLAN, R.A.—The chief objection to this large picture is, that, considering its magnitude, it is painted for too close a view; the colour, too, is sombre in an extreme degree. Counterbalancing these defects, the work has not a little artistic generalship, with great spirit and force in parts. The exciting and energetic rush of the British sailors, headed by the brave NELSON, to gain possession of their enemy, is represented with astonishing accuracy.

310. *Portrait of the late Admiral Sir Philip Caldwood Durham.* J. WOOD.—An ably-painted full-length. The figure stands well, the accessories are becoming, and the whole is painted with a broad and full brush.

319. *The Deer-park at Bolton Abbey.* H. JUTSUM.—Both in composition and colouring, there is an air of veritable nature in this landscape. It is, however, sketchy and unfinished. The effect introduced is happy, and for the manner in which he has painted the water which flows through the scene, the artist deserves commendation.

323. *Ariel.* H. J. TOWNSEND.—This is a poetical thought felicitously carried out. This composition painted in fresco would have even a happier effect that it has in oils.

325. *Sabrina.* W. E. FROST.—A group of beautiful nymphs are here bearing "the guiltless damsel" through the waters to the hall of Nereus. There is a sweet serenity of expression on the countenance of Sabrina, infinite grace in the figure of the Nereids. An unpleasant impression, however, is conveyed to the spectator by placing the point of view *beneath* the waters.

333. *Cologne, from the South.* E. W. COOKE.—The sky is finely painted; the flocculent white clouds float sluggishly, and cast their cool shadows on the land with the reality of nature. The water, though flat and reflective, is less fluid than in most of the works by Mr. COOKE.

334. *The First Love of Napoleon Buonaparte.* C. LUCY.—This charming little picture represents the future Emperor, then an humble sous-lieutenant, eating cherries with Mademoiselle COLEMBIER, daughter of Madame COLEMBIER, one of his earliest and steadiest friends. The artist has treated his subject with the simplicity of sentiment most becoming to it. There is a fulness of light, and a happy, pearly tone of colour; the heads are characteristic, and the delicacy of finish throughout is most praiseworthy. The left arm of NAPOLEON, on which he is leaning, is, however, disproportionately large, a defect the artist will do well to remedy, when opportunity offers.

335. *On the River You, Norfolk; Morning.* H. BRIGHT.—Remarkable for fidelity to nature, and for the inspiration of rustic feeling under which it has been produced. There is subject enough in this cabinet landscape for a large picture; the effects are cleverly disposed, and the force of colour is most striking.

338. *St. Gregory the Great teaching the Roman boys to sing the Chant which bears his name.* J. R. HERBERT, A.—We have here a work that improves upon acquaintance. The distinctness and prominence of the figures; the absence of all attempt at prettiness in the composition; the boldness, yet harmony of the contrasts; the mellow colouring, and the extreme care everywhere bestowed on the finish, all combine to render this a work of great desert.

337. *Scene on the Banks of the Medway on a Stormy Day.* W. E. DIGHTON.—We are glad to find this artist, in the landscape before us, sustaining the praise we adjudged to him in our notice of his able work in the British Institution this year. The work before us is a truthful reflex of nature in one of her angry moods—cold, wet, and boisterous. The sky is admirably painted, and the effects, both in water and land, are most judiciously thrown in. The gleam of light penetrating the clouds, and falling upon the wet rank grass and figures on the left, gives increased value to the picture.

347. *The Knights Charles and Ubaldo, searching for Rinaldo, came in sight of the two Nymphs.* W. D. KENNEDY.—The chief attraction of this lies in the colour; the nymphs are, however, well drawn, but in hackneyed attitudes.

354. *View from Porbney, looking towards Exeter.* F. R. LEE, R.A.—Perhaps the best, though by no means the most interesting, of Mr. LEE'S works here exhibited. It has a low horizon, with a lofty grove of trees overhanging a pit in the immediate foreground. Between the trunks of the pines is laid out a prospect of the country, which tells very agreeably. The handling is characteristic; and the very absence of effort, and of all attempt at picturesque combination, proves in this case the greatest of considerations.

354. *The Shepherdess.* W. GUSH.—We select this for notice, because the name of the artist is unknown to us, and he has produced a clever picture. Though hung so high, it will repay attention, for its merits shine out through two removes from *the line.* The countenance of the shepherdess, though not Jewish, (which, by the catalogue, we learn it should be, as the citation alluded to Rachael of old), is handsome. The draperies are gracefully adjusted, and contrast harmoniously in colour; the flesh tones are clear and pearly, and the handling is free and masterly.

356. *Scene near Zeldkirch in the Tyrol.* C. STANFIELD, R.A.—A most picturesque composition. Mr. STANFIELD, however, has been less happy in painting the water than we ever remember to have found him. It is solid and semi-opaqe, and might well be mistaken for ice.

357. *Repose.* A. D. COOPER.—A work which does the artist infinite credit. The cool twilight shade of a wood is exquisitely conveyed, and the reposing figures of the woman and child are most sweetly painted, and of great beauty.

358. *Brighton Pier—a strong breeze.* R. C. LESLIE.—The turbulence of an angry sea, and the reflection of strong white light thereon, are expressively and truthfully conveyed; but the sky is flat, and over-hastily executed.

360. *A Dame's School.* T. WEBSTER.—For character, colour, composition, and accuracy of drawing, this picture is beyond praise. The diversified humour, the expression, and attitudes of the children, have been caught and transferred to canvas with the greatest felicity.

361. *Le bon Cure.* F. GOODALL.—In this work we again welcome the happy genius, the prompt and chaste fancy which has now for two seasons contributed to the gratification of the lovers of art, and added to the number of true painters. The subject is simple and natural, and such has been its treatment. The Cure passing through the street, stops (hard by a door, beside which a young mother, with children occupied around her, is suckling an infant), and encourages with his blessing a dutiful boy, who with another has been fetching water from a well. It is a broad noonday effect, and people are gossiping in the street, at the head of which stands the church. Out of these commonplace accessories the artist has produced a touching and beautiful work. There is neither affectation nor straining after effect any where visible; nor is any thing introduced which is needless, and does not add either to the sentiment or story of the composition. The only objection we have to urge is that already advanced in the introductory summary in our last number—namely, the iteration of characters we have been before introduced to in the artist's previous works.

366. *Jews Lamenting over the Ruins of Jerusalem.* M. CLAXTON.—We regret our inability to congratulate Mr. CLAXTON on this his undertaking. The grouping has too much the character of academy combinations to be satisfactory. The flesh tints are foxy, the contrasts in the draperies inharmonious; and there is an extravagance of grief in the lamentation of the actors which nothing short of anguish arising from death or personal suffering could occasion.

367. *Tent-scene, Cingarries Playing to a Turkish Family.* W. MULLER.—A far superior picture to the last, though placed above it, is this. So much does it abound with character and the unstudied arrangement of actual life, that one perceives at a glance it is the product of a sketch made upon the spot.

364. *A Group in the Meadows.* T. S. Cooper.—A most admirable reflection of nature. The cattle group picturesquely, and the light summer sky finely, painted. It is seldom we find distance conveyed so well, on a plain (where there are no objects to give by their perspective standard a notion of it) so well as in this pleasing landscape.

405. *Jerusalem from the South-east—the Mount of Olives.* D. ROBERTS, R.A.—Equally by its associations, extent, and grandeur, an impressive subject. The view is taken from a hill where King Solomon set up the worship of Ashtaroth. In front of this is a ravine, and next, on a rocky mound, stands the Mosque of Omar on the site of the Great Temple of Solomon. Rising on a height behind this, at a distance, are the white minarets and towers of Bezstha. On the left of the Mosque El Akna, with a square tower, and covered by a dome, is the Church of the Holy Sepulchre, believed to cover the site of Calvary. The effects over this extensive view are very skilfully adjusted. The middle ground is in strong light; broad pencils of sunbeams slant from the hill upon the left, and illuminate the city, while the ravine and walls in the foreground are in shadow. In short, the artistic management is of the ablest kind.

411. *Shylock, and the friends of Antonio.* C. H. LEAR.—There are earnestness of purpose and some expression to recommend this work. But the Jew is deficient in character—he is "not the Jew whom Shakspeare drew," but a mere English beggar from the roadside.

413. *Portrait of Thomas de Quincy.* E. J. WATSON GORDON.—This would be an interesting portrait were it merely for the sake of the individual whom it represents—the English opium-eater. It has, however, intrinsic merits of its own to recommend it, being simple and natural in arrangement, strongly marked with character, and of a truthful tone of colour.

423. *Portrait of A. W. Pugin, Esq.*—In this work we fancy we recognize the genius of Mr. Pugin himself equally with that of the artist: we mean in the conception of the thing. In composition, if not original, it is at least odd;—a revival of the manner of Cornelius Jansen, and some other of the Dutch painters. The architect stands, compass and scale in hand, behind a scarlet-covered table, clad in a black velvet gown, and relieved by a tightly-stretched curtain of green damask, whereon in the corner are the *arms of Pugin*, and a clever, beautifully executed monogram of the artist. The head is characteristic and life-like, and the colouring mellow. It is painted much too thin, will not last many years, and is from the easel of HERBERT.

438. *Landscape Composition, Italy.* W. D. KENNEDY.—There is some classic sentiment and feeling in this composition. The lines compose gracefully, the sky is soft, and the air refreshing.

444. *Mr. Robertson's "Little Wonder" winning the Derby.* A. COOPER, R.A.—This huge and unsightly work, painted beyond a doubt to order, should never have been offered for exhibition, much less should so favourable a position have been assigned to it, to the prejudice of so many superior works.

445. *Gregory passing through the Slave-market at Rome.* J. SANT.—Originality of composition, truth of expression, and a low quiet colour distinguish this picture. The introduction of Ethiopians is, however, purely gratuitous, and not warranted by authority. The kneeling figure on the right is admirably drawn, and as powerfully painted.

443. *Homestead, with Horses—Evening.* J. DEARMAN.—There is a truthful glow of colour here, with a due share of rustic feeling. Something, however, is wanting in the right hand corner to balance the interest of the group of men and horses on the opposite side.

453. *Portrait of Harwood Banner, Esq.* G. PATTEN, R.A.—A life-like, characteristically-handled portrait, marked by force, and very carefully finished.

454. *The River in the Glen.* T. CRESWICK, A.—Never was the tumbling rush of water over a rocky bed more finely painted than here. The green slippery rocks are real, and the little pools within their angles are as pellucid as in nature. This landscape, for truth and force, is a miracle.

CHIT-CHAT ON ART.

SALE OF THE DRAWINGS OF THE LATE SIR A. CALCOTT, R.A.—On Thursday, May 8, the sale of the drawings made by the late Sir Augustus W. Calcott, R.A. late curator to the Royal Galleries, was commenced at Messrs. Christie and Manson's Rooms in King-street, St. James's. The number of lots disposed of that day, out of near 600, was 154, consisting of sketches in pen-and-ink and pencil, and drawings in bistre, Indian ink, and water-colours. Some of the sketches were very nicely treated, although most minute in size. The coloured drawings consisted principally of views in England and Wales, and were very pretty little subjects. The price the various lots fetched was very good, almost every person present being anxious to obtain some memento of the late highly-esteemed artist. In addition to Sir A. Calcott's drawings was a volume, containing seventy-nine exquisite small drawings by Stothard, R.A. in colours and Indian ink, on sacred subjects; and illustrations to Homer, Shakspeare, Bunyan, Hayley, Addison, and Rogers. On Saturday, May 11, the lots brought good prices, and the biddings were carried on with spirit, though the room was attended by few persons who were not dealers in works of art, or who were not agents for others. Lot 323, a book of 80 sketches, brought 5*l.* 10s. Lot 324, a book with 80 sketches, 7*l.* 7s. Lot 339, a coloured drawing, a bay-scene, near Naples, 13*l.* 13s. Lots 340, 341, 342, the studies of the heads of the witches in *Macbeth*, brought 4*l.* 10s. each, and were bought by Mr. White. They are very fine. Lot 377, an Italian convent, 10*l.* 10s. Lot 378, boats near Rotterdam—frame, fetched 47*l.* 15s. Lot 385, an Italian convent on a height, 18*l.* 18s. Lot 387, a sea-coast, 24*l.* 3s. Lot 388, the Castle of Chillon, 23*l.* 2s. Lot 389, an Italian town on a lake, with boats and figures, 25*l.* 4s.; and lot 390, an English landscape, a very masterly specimen of the artist, 39*l.* 18s. The sale of these works of Sir A. Calcott was followed by that of a few lots, drawings by Stothard, which formed part of his collection, and by that of a few pictures of old masters and others. The best lots brought the following prices:—Lot 397, a collection of 70 small drawings, in colours and Indian ink, of sacred subjects and illustrations of Homer, Shakspeare, &c. in a quarto morocco-bound volume, 51*l.* 9s. Lot 404, an angel praying, a fragment in fresco, Fillipino Lippi, 52*l.* 10s. Lot 420, a calm, with man-of-war and fishing-boats, Monamy, 15*l.* 4s. 6d. A man and two women on horseback, trampling on their foes; an illustration of Bowles's poem, Stothard, 16*l.* 16s. Lot 425, a *fête champêtre*, Stothard, 25*l.* 4s. Lot 427, a Dutch boat in a gale, Loutherbourg, 15*l.* 15s. The remaining lots were sold on Monday. There were many drawings in pencil and with the pen amongst them.

MUSIC.

The Memory of the Past. A Canzonet, written by Mrs. BUTLER. Composed by JAMES HINE. London: Lonsdale.

THESE are the words selected by Mr. HINE for expression in music:—

Yet once again, but once before we sever,
Fill we the brimming cup, it is the last;
And let those lips, now parting and for ever,
Breathe o'er this pledge the memory of the past.

Joy's fleeting sun is set, and no to-morrow
Smiles on the gloomy path we tread so fast;
Yet, in the bitter cup, o'er-filled by sorrow,
Lives one sweet drop, the memory of the past.

But one more look from those dear eyes now shining
Through their warm tears, their loveliest and their last;
But one more strain of hands in friendship twining,
Now, farewell all, save memory of the past.

The sentiment of these verses has been caught by Mr. HINE, whose strain is sad and sweet, and recommends itself to the listener by its peculiar appropriateness to the words. The composition is simple and unaffected, and may readily be mastered by the vocalist who will trust to her feelings for expression.

The Bouquet Quadrilles. Composed by T. W. SAUNDERS. These lively and elegant quadrilles are an original contribution to a cheap publication, entitled the *Musical Bouquet*. The airs are pleasing, and inspire, as they are inspired by, the spirit of the dance. We recommend them as a desirable addition to the portfolio.

MADEMOISELLE THEMAR.—Part of the musical talent collected by Madame Bunsen at the Prussian legation, on Monday evening, was Mdlle. Thémar, a native of Prussia, who for some time has been distinguished at Brussels, Spa, and various places on the Continent as a pianist of the first order. The astonishing vigour, facility, and precision of Mddle. Thémar's execution, combined with the expression and finish of her performance, much of which is of her own composition, gave great satisfaction to the distinguished party, and justify the expectation that she will prove a star of no small magnitude amidst the variety of musical talent at present collected in the metropolis.

Ernst, the violinist, in conjunction with the celebrated critic, Saphir, gave a concert lately in Vienna, for the benefit of the numerous families impoverished by the recent inundation. The concert produced three thousand florins. Ernst has also given two or three concerts for the poor.—*Musical World.*

We regret to hear that Mr. Coleman, the inventor of the æolian attachment, on his return from this country to America, a few weeks ago, was seized with a virulent attack of measles, which carried him off in the prime of life.—*Musical World.*

THE DRAMA AND PUBLIC AMUSEMENTS.

THE dramatic proceedings of the week have been characterized by no inconsiderable animation. A new opera at Drury-lane, an interesting revival at the Opera, and a spirited version of a deservedly popular French drama at the Princess's, are the chief features which call for brief notice at our hands. And first, as in duty bound, let us turn to her Majesty's Theatre. Here, after an undisturbed repose of well nigh seven years, *Il Pirata*, an early work by BELLINI, was, on the 13th instant, revived, at the especial desire of the Duchess of MECKLENBURG STRELITZ, previous to her return to her adopted home. The revival was successful enough to attract the Queen's attention, at whose command the opera was repeated on Saturday. There was a most inconvenient crowd assembled on both occasions. Indeed, night after night, the pressure in the Opera pit is so great, that we are sometimes, for a moment, disposed to wish Mr. LUMLEY'S management less effective, that so our *physique* might enjoy more elbow-room. The *Gazza Ladra* was produced on the 15th, for the benefit of LUCILE GRAHN, who, unless she be the most unreasonable of foreigners, must have been thoroughly satisfied with the result. Among other novelties on this occasion, she danced, with CERITO, the *Minuet de la Cour*, in a manner which renders us much more independent of FANNY ELSSLER than we thought we were. There was a new burlesque dance by the Viennese children, which followed the solemn minuet in most amusing contrast.

We next come to *The Enchantress*, BALFE's new opera, which, after sundry delays, setting expectation on a most intolerable edge, was brought out at Drury-lane on the 14th, with Madame ANNA THILLON as its heroine. The work written expressly for this theatre, by M. de ST. GEORGES, is of the French *comique* school, full of stirring events, restless with action, crowded with moving accidents by flood and field. The plot, in its general outline, is none of the most original in the world; but the details, the "situations," exhibit much inventive ingenuity. As a matter of course, in these days of useful knowledge, no writer, dramatic or otherwise, must venture to put forth a real unreality; and accordingly *The Enchantress* is no enchantress, but merely a mysterious mortal maid, who pervades the piece, and acts upon all its events and personages with apparently supernatural effect. The daughter of a virtuous-minded pirate on a large scale, whom, unseen, the Introduction dismisses from the world, she has succeeded, when the first act commences, to the command of his band, and to his self-delegated mission to restore to the throne of Sicily its rightful heir, dispossessed by a nefarious prime minister, who, now eighteen years since, when the Prince was yet an infant, had given him to the pirate "to be disposed of." The pirate, however, instead of *disposing* of him in the way desired, intrusted him to an honest peasant, under whose roof the child, *Silvio*, has grown up a man, to *fortune and to fame unknown*, indeed as yet; but handsome, brave, and good, worthy of his high destiny, and of the love which *Stella*, the *enchantress*, his high-souled restorer to the seat of his ancestors, bestows upon him, and which, as is most just and natural, he returns with interest. "'Vails not to tell" the progress of the plot; suffice it to say that, assuming infinite disguises, overcoming each difficulty and each danger, by her wit, her wisdom, and her resources of various kinds, she at length effects her long-cherished object, and is seated by the side of the grateful Prince on the throne she has achieved for him. *The Enchantress*, as a musical composition, is a work of unquestionable merit, exhibiting a higher aim and purer tendency on the part of its talented and prolific author than perhaps any of his former productions. Some of the concerted pieces are most skilfully written, and two or three of the airs are likely to attain general popularity, as gracéful and at the same time easy compositions. Madame THILLON's charms lose somewhat of their effect when seen from the far distance of the centre and the corner boxes; and this applies not only to her face and acting, but to her voice also, which is scarcely powerful enough to fill so vast a space; but, to the ear of the more approximate audience, she sings manifestly better than last season, and to their eye she appears more fascinating. The only wonder is she should give herself so much trouble for the sake of such a stick as Mr. HARRISON (*Silvio*). BORRANI sang well. The *mise en scène* is at once gorgeous and in admirable taste. Mr. BUNN has certainly a first-rate conception of this sort of thing. Madame THILLON was called for at the end of the piece and rapturously received; but then so was Mr. HARRISON, and so was Mr. WEISS; circumstances which, so far, must have corrected any undue exultation on the part of the fair *cantatrice*.

Turn we now, not to survey, but to glance at the new drama at the Princess's. It is entitled *The Chevalier de St. George*, and is a version, extremely well executed, of a French play, which was brought out with great success at the St. James's Theatre in the early part of the present season. The hero there was enacted by LAFONT—here he is impersonated by WALLACK; and the highest praise we can bestow upon the latter, without the comparison which naturally suggests itself to the mind with the former, needs not be odious to Mr. WALLACK. He depicted the noble-minded, generous, intellectual, warm-hearted *Creole*, the story of whose wrongs and their reparation forms the basis of the plot, with the utmost truthfulness, animation, and grace; and he was most admirably supported by Mrs. STIRLING, undoubtedly one of the very best actresses—she will like the term better than *artistes*—on our stage. *The Chevalier de St. George* will deservedly have a long run.

The French plays continue to attract crowded audiences, for the simple reason that the French plays are thoroughly attractive. Mr. MITCHELL is one of the few theatrical directors who understand the principle, so constantly acted upon in other business, that where the public know they can get money's worth for their money, there will they come with their money; and he accordingly selects good plays to be played, and the best actors he can secure to act them. REGNIER took his benefit on Wednesday, being unfortunately the last night but three, not only of his own engagement, but of that of the admirable PLESSY. M. PHILIPPE, by far the most extraordinary escamoteur that ever mystified our faculties, has resumed his entertainments, on the Tuesdays, Thursdays, and Saturdays; and we counsel our readers, in all conscientiousness, to go and see them.

The other circumstance of the past week which we have to record, as connected with the Drama, is one which has given us sincere pain and regret: Mr. STRICKLAND, the accomplished actor at the Haymarket Theatre, died on Sunday last, at his residence in Hercules-buildings, Lambeth, after an illness of but a week's duration, at the age of forty-seven. His talents were great and various; in characters such as those he filled in *Tom Noddy's Secret*, in *The Thimble Rig*, and so on, he was unrivalled by any performer we ever saw; and most assuredly he leaves no one behind him to take his place. Peace be with him!

THE ADELAIDE GALLERY.

This, the parent of all institutions partaking of its character, has just been re-opened to the public, with new management, and under circumstances that promise well for its future success. The whole of the interior has undergone renovation, and we understand that it is the intention of the present proprietors to carry out, as far as possible, the object of the

projectors of the establishment, providing for inventors and manufacturers the means of bringing forward their works, so as to shew their practical capabilities, and to enable all to judge of their merits; and for a place of resort, where amusement is blended with instruction, and recreation with scientific investigation; and most certainly such institutions as these are invaluable in large towns, as affording to youth rational enjoyment of such a character as to lead their minds by the most agreeable route to more serious studies, and, doubtless, such exhibitions as are made daily at the Adelaide Gallery have often stimulated the inquiring mind of boyhood to exertions in the paths of knowledge which in after-life have led to those discoveries that have advanced science, and shed honour upon the country which gave them birth. As the first established of all institutions of a scientific kind, we cannot help regarding the Adelaide Gallery with a certain degree of reverence, and we are happy to be able to announce that it is once more open to the public, and likely to recover its former proud position. Many novelties have been added to the collection, already rich in one of the most interesting objects in nature, the electrical eels, two of which are now living in the Gallery, being, we believe, the only ones in Europe. We were also shewn preparations for a model of PILBROW'S Atmospheric Railway on an immense scale, having a tube of five inch diameter and 105 feet in length. The gallery has generally been improved, and is decorated with several fountains, which are kept at play during the day and evening, giving a brilliancy of effect which their neighbours might worthily imitate.

ORIGINAL CONTRIBUTIONS.

CANZONET.

BY CALDER CAMPBELL.

WHEN the lark of morning, soaring
From its fragrant clover bed,
Mounts the blue sky o'er my head,
With a carol full of glee,—
Then, while gentle sunshine, pouring
Early beams on flow'rets fair,
Wakes the soul to praise and prayer,
My first thoughts are turned on thee!

And when twilight gathers, slowly,
Sombre shadows o'er the land;
When the bird and bee expand
Homeward wings to hive and tree,—
Then, when minds are melancholy,
And the dying day instils
Sickly fears of future ills,
My glad thoughts are turn'd on thee!

CORRESPONDENCE.

ADVERTISING.

TO THE EDITOR OF THE CRITIC.

"Many of the subscribers to THE CRITIC, especially the country booksellers, have repeatedly requested information as to the best papers in which to advertise, and their various charges and circulation."—CRITIC, May 10, 1845.

I find many good remarks in the above number as regards advertising; and I take leave to give the Proprietors of THE CRITIC a hint that they have a fair opportunity of extending their advertising columns among the BOOKSELLERS to three or four times the amount to what appear at present;—that is, by reducing the scale of prices. The present high charges exclude BOOKSELLERS from inserting the various articles they otherwise would do, and which I am confident would be a mutual advantage. I know of more than one BOOKSELLER that paid from *forty to fifty pounds* for an insertion of the leading articles of their several stocks; but such practices are now abandoned, as the benefit arising went all to the proprietors of the newspapers, and none to the bookseller. Large sums have also been paid for inserting printed catalogues in the various magazines and reviews. This is also so great a drawback, that very few have recourse to it. Let the Proprietors of THE CRITIC insert a scale of moderate prices for a column and so on, and they will soon find them filled by the various advertising booksellers, among whom would be your obedient servant,—

May 19, 1845. ANTIQUARIUS.

[We have long felt the justice of our correspondent's complaints. A fortnight since, the *Athenæum* charged *ten shillings* for an advertisement of *four lines*. The *Publisher's Circular* is almost as expensive, although its circulation is less than one-half that of THE CRITIC. The charges of THE CRITIC have been fixed upon the most moderate scale; and if the booksellers throughout the country would agree to make it the medium for their announcements, we would undertake to insert them at prices that would come within their means, and to enlarge THE CRITIC to any number of pages that might be necessary to give them a place, without trespassing upon the columns devoted to the reader. A scale of prices appears in the *Bookseller's Circular*, and cannot fail to give general satisfaction. Of course, for a string of advertisements, or frequent repetitions, a special agreement would be made at a considerable reduction even from that moderate scale.—Editor CRITIC.]

NECROLOGY.

MRS. SMYTHE, OF METHVEN.

The decease of this lady removes another of the subjects of Burns's Muse from this scene—being the heroine of one of his sweetest lyrics, "Blythe, blythe, and merry was she." Mrs. Smythe's maiden name was Euphemia Murray, of Lintrose, called in the poetic language of the country, the Flower of Strathmore. She was on a visit to her relative, Sir William Murray, of Ochtertyre, grandfather of the present baronet, where Burns met her, on one of his northern excursions, when he was the honoured guest at the tables of the nobility and gentry. She accompanied him as one of a small party to Glenturret, on the Ochtertyre estate, near Crieff, and charmed the poet alike by her personal accomplishments and her sympathy with his admiration of the beauties of nature. These suggested the song, with which her name will ever be associated, which he engrafted upon an old ditty, of which only the two first lines of the chorus survive in the modern song.—*Scotsman*.

M. A. G. VON SCHLEGEL.

The *Presse* announces the death on the 12th inst. at Bonn, on the Rhine, of M. A. G. von Schlegel, known in France by the friendship which united him to Madame de Staël, and by his unceasing antipathy to our classic literature. M. von Schlegel was, with his brother Frederic, who died at Vienna in the year 1822, the founder of what is called the romantic school of German literature, a school which includes amongst its members Werner and Novalis, and of whom the only representative who now remains is Louis Tieck. The dramatic criticism of M. Schlegel will ever be highly estimated, although sometimes too exclusive. He might be reproached with too great an admiration for Calderon, but he rendered real service to German literature by familiarising it with that poet and with Shakspeare.

MR. STRICKLAND, THE ACTOR.

We regret to state that this excellent performer died on Sunday, after an illness of about a week. He has left a widow, but no children. Thus has been cut off in the prime of life (his age was only 48) one of the few remaining ornaments of the British stage. Strickland was the legitimate successor of Dowton and Fawcett, and his loss at the present moment will be felt most severely. There is no actor on the boards who can at all supply his place. It is now about ten years since Strickland came to town. He made his first appearance before a London audience at the Strand Theatre during the management of Hammond. He was soon afterwards engaged by Braham for the St. James's, and when that theatre closed, his services were secured by Mr. Webster for the Haymarket Theatre, where he has remained ever since, and where we had hoped for years to come to have enjoyed the delight which we always derived from witnessing his artistical efforts. But "Alas, poor Yorick!" An attack of inflammation of the lungs, which defied the utmost efforts of medical skill, has, in one short week, removed him from the stage of life, and his friends are left to regret his loss, which they feel to be irreparable.—*Sun*.

CRITIC OF INVENTIONS, ETC.

[Ingenious inventors of articles of use or ornament are as deserving of critical notice as is an ingenious author, and a knowledge of the true merits of inventions is equally interesting to the public. We purpose to supply an existing defect in critical journalism by devoting a division of THE CRITIC to a fair description of, and honest judgment upon, any article seeking public patronage that may be submitted for notice.]

SUDDEN EXTINCTION OF FIRES.—The Fire Annihilator and the Inundator are the names given to two contrivances both dependent on the same principle, for suddenly extinguishing fires,

which are daily exhibited at the Adelaide Gallery. The inefficiency of water speedily to accomplish the object, the difficulty sometimes of procuring it, and the necessity of bringing a great manual force into operation before it can be used in overwhelming quantities, have led the ingenious inventor of the Annihilator and the Inundator to look for another substance to answer the same end. He has found it, singularly enough, in a compound which is nothing but non-explosive gunpowder. The inventor takes charcoal and nitre, in the same proportions as they are used to form gunpowder, and adding to them plaster of Paris, he obtains a substance which readily deflagrates and evolves immense volumes of gases. Now, it is well known that combustion cannot take place in an atmosphere wholly composed of the product of combustion, and consequently the object is to envelope any burning mass with the gases evolved by the sudden combustion of the non-explosive gunpowder. The compound is a chemical invention; its application is by mechanical means now to be described. Inclosing the deflagrating compound in a strong iron retort, or cylinder, it is ignited by pressing down a small piston, which brings into contact some chlorate of sulphur, and a small portion of sugar, which instantly inflames, and thus a supply, large or small, according to the quantity required, is obtained of gases in which combustion is impossible. A hose connected with the retort conveys the gases at pleasure to any spot, or building, on fire, and immediately extinguishes the flames. The inventor, to exhibit the effect of his contrivance, kindled a considerable mass of the combustibles now prepared for lighting fires, which he fairly stated was only imperfect combustion—the showy flame and heavy smoke of a combination of turpentine—and then brought to bear on the mass a jet of gas from deflagrating his non-explosive gunpowder in a small retort, about as large as a pint pot, and the flame was instantly extinguished. There can be no doubt, therefore, we think, that a body of gas, evolved as proposed, directed on a fire, would immediately extinguish it; but between that and bringing the principle into practical and ready operation, there is, we are afraid, a considerable interval. The vast heat produced by the gases as they are evolved, is one difficulty which we have some doubts whether the machinery could get over, or practise, supposing the gases to be applied in the simple manner in which the fire was recently extinguished. A retort containing and pouring forth through a tube a volume of gases intensely ignited, is not a very manageable object; but the inventor seems to have gone some way towards conquering this difficulty; and the drawings which he supplies of a "house-fire annihilator," a little stationary contrivance, as large, perhaps, as a shop stove; of a "double fire annihilator" for out-door service, placed on a wheels, and as big as a couple of hogsheads; of a "district fire annihilator," twice as big; and a "brigade fire annihilator," as large as a railway locomotive, which it resembles, indicate the means by which the principle may be practically applied.

The Inundator is an application of the principle which seems to us rather cumbrous and of comparatively little value. As if not confident of his own theory that the products of combustion will extinguish fire, the inventor goes from gas applied as a means of putting fire out, and employs its expanding volume to throw a stream of water on the flame. We do not see the utility of the duplication. Connecting the retort in which the gases are evolved with a reservoir of water placed in the bottom of a house or theatre, or factory, and laid on to every part of a building, he forces out the water by forcing in the gas, and then produces a powerful, but not a lasting jet of water. The Inundator is far less satisfactory than the Annihilator, and the inventor's notion of applying it to pump out a vessel which has sprung a leak, is to us not feasible. Considering the immense mass of property which is annually lost by fire, and the lives which are sacrificed, the subject is well worthy of being prosecuted; and, though we fear Mr. Phillips's invention will not answer all his sanguine expectations, his efforts deserve encouragement.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and nove phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

LETTER FROM MR. BRAID.

TO THE EDITOR OF THE CRITIC.

SIR,—It is refreshing, amidst the general hostility which has prevailed against the candid investigation of the phenomena of Mesmerism, to find a journal so replete with learned and candid criticism as THE CRITIC, devoting so much of its space for this laudable inquiry. You did me the favour to give, in one of your early numbers, a very lucid and favourable analysis and review of my little work on Hypnotism. I have lately published some papers in the *Medical Times*, giving an historical and physiological sketch of the science, and have been able to trace self-hypnotism to the Magi of Persia, who, for religious purposes, have been in the habit of throwing themselves into the condition by means essentially the same as those I have recommended and practised for like purposes, namely, by fixing the thoughts and sight on the tip of the nose, and suppressing the respiration. From Persia, where it was practised at least 2,400 years ago, the same practice passed into India shortly after, and by degrees into other countries. It is by this means that the Fakirs or Jogee of Hindostan have produced their ecstatic trances, and performed their wonderful feats. But all this is explained in the *Medical Times*, for which numbers I shall inclose you an order to the publisher, and you will perhaps favour them with a notice in THE CRITIC. In the number for December 28, you will find I have given some very important details of experiments to PROVE *the extraordinary exaltation of the perceptive organs during the nervous sleep*, and, as a natural corollary, appended a note, giving the same explanation of Miss Martineau's servant's clairvoyant marvel, as you did in THE CRITIC for the 15th January, namely, that the extreme quickness of hearing enabled her to overhear the aunt telling the tale below stairs whilst she was in the sleep.

I think you will admit, when you read my papers, that they afford strong proof of my position that the influence inducing the sleep is *subjective* or *personal, not an affluence passing from the operator to the patient*, as is supposed by Mesmerists generally. You may rest assured that the true cause is the imperfectly purified blood, arising from the suppressed respiration, resulting from attention to the processes acting as a narcotic, from its want of due stimulating action on the brain, which induces somnolency in the first instance. I here refer to the *general course* of hypnotism in *first instances;* for after the impressibility has been stamped on them, many become liable to fall into the condition through imagination or belief, habit and sympathy, and imitation; and the habit of abstraction or concentration of attention gives an *active* character to the condition of the *mind*, instead of the *passive* state which accompanies the accession of *common* sleep. The result of this is, that the activity of mind renders it susceptible of being readily excited and directed by the slightest suggestion; and from the law of concentration, superinduced by the process of hypnotizing, the mind is entirely concentrated on whatever idea, passion, or emotion it is directed to, and hence the extreme activity of the resulting manifestation, mental and physical. My object in changing the name was to get rid of what I believed to be an erroneous theory promulgated by Mesmer, about a magnetic fluid being the *cause* of the sleep, and still more so to bespeak a candid hearing to the phenomena capable of being induced by artificial contrivance, from those who would not condescend to read any thing published under the name of Mesmerism. I have reason to know that my book and papers have tended to advance the general cause much more than they would have done had they appeared under the other designation, or with the ultra views of many Mesmerists.

In reference to the phenomena of *phreno-mesmerism*, at page 96 of my treatise on Hypnotism, I remarked, "Is there any great improbability that, by calling the muscles of expression into action during the hypnotic state, by titillating certain nerves, the impression of the feeling with which such external manifestation is generally associated, should be reflected on the brain, and excite in the mind the particular passion or emotion? I think it highly probable that this is the true cause of the phrenological manifestations during the hypnotic condition, &c. I presume the different points pressed on, through the stimulus given to various fasciculi of nerves, call into action certain combinations of muscles of expression in the face and general frame, and also influence the organs of respiration, and thus the mind is influenced, *indirectly*, through the organs of common sensation, and the sympathetic (system of nerves); as sneezing is excited in some by too strong a light irritating the optic nerves." In this view of the subject, it would resolve itself into the laws of sympathy, and the question then is, where are the external or superficial points of the sympathies located? Experience must decide this," &c. And again, at page 146, "I think it highly probable, that by thus calling into action muscles which are naturally so exerted in manifesting any given emotion or propensity, they may, by reflection, thereby rouse that portion of the brain, the activity of which usually excites the motion. In this case there would be a sort of inversion of the ordinary sequence, what is naturally the consequence becoming the cause of cerebral and mental excitation," &c.

In my farther researches and experiments on this subject, the results of which were published in the *Medical Times*, 11th Nov. 1843 and 31st August, 1844, I fully explained that the passions

and emotions can be excited by muscular action excited either on the head, face, trunk, or extremities; and that, as certainly as the muscular action or attitude is excited, of any passion or emotion, and which can readily be done at the proper stage of sensation, through the reflex function of the nervous system, which produces a sort of instinctive action, as certainly shall we excite those feelings in the mind which usually precede such muscular action or attitude.

In the papers referred to above, I have explained the different stages of sensation and tendency to action, by attending to which you may soon satisfy yourself of the correctness of my views, by operating on your own friends. "At what I call the second stage of sensation, the muscles subjacent to any point titillated, instantly have a tendency to contract, or *the patient manifests a tendency to lean against the point touched;* and then the tendency to self-balancing, so remarkable in somnambulic patients, calls into action certain associated combinations of muscles; and finally, as already explained, such muscular action or attitude creates, or excites, or suggests a corresponding idea in the mind of the patient, through the laws of sympathy and association."

The *third* stage is that where there is *rigidity* of all the muscles, or RIGID catalepsy, with *diminished* tactual sensibility. (In the *second* stage, I ought to have added, there is *increased sensibility and* SLIGHT *rigidity.*) In the *third* stage, the patient may be pricked or pinched, with little or no feeling; but continued gentle pressure, or friction, WILL REDUCE *the rigidity in the subjacent muscles,* and the member or part will be drawn in the *opposite* direction, *in consequence of the continued undiminished action of their antagonists.*

I have clearly proved, as well as yourself, that the passions and emotions may be excited by manipulating the head, or scalp, and that the results realized during the *second* stage have a remarkable coincidence with the phrenological organs of phrenologists. However, as the very *reverse* effects are realized by manipulating the *same points during the* THIRD *stage from what are realized during the* SECOND *stage,* this affords evidence to demonstration that the manifestations *do* not arise from a magnetic fluid, or stimulus of any sort, passing *directly* from the *finger of the operator* to the *subjacent portion of the brain;* but, as the effects on the muscles of expression are inverted, or reversed, so ought the points manipulated to be changed or reversed, to produce the intended results. Now this is precisely what happens, —the *same muscular action being excited* from OPPOSITE *points,* both in the head, trunk, and extremities, in the *one* stage, from what happens in the other. Still, however, the same muscular action and mental feeling accompany each other, *in whatever manner the muscular action has been excited;* and this I consider strongly corroborates my theory of the cause of the phenomena of phreno-mesmerism. If any additional proof were wanting on this point, the demand would be fully satisfied by the following facts, which were realized at a first trial on a patient who never saw another hypnotized, and there was not a single word or whisper by any one to indicate the manifestations expected, or which were realized. The angles of the mouth being depressed, gave the idea that all her friends were dead, and the spectators crying; on elevating them, as in laughter, instantly she saw them *all alive again and quite cheerful.* However often this was repeated, the same corresponding ideas were thereby excited. *Depressing the eye-brow* suggested the idea of some one *quite blind;* but on *elevating it,* without changing the contact of the finger, the person who appeared blind immediately before, was now *staring as wide as he could stare.* In like manner, pressing gently over eventuality with the points of a finger and thumb, and *gently approximating them so as to cause corrugation of the integuments,* and putting the question, "What do you think?" as in deep reflection, the answer was, "It won't answer." "What won't answer?" "That business he is about undertaking." On separating them, so as to *remove the corrugation,* without my saying any thing whatever, she said in a cheerful tone "Ah, *it looks much better now; I think it* WILL *succeed.*" On approximating them again, "No, it will not do; your reasoning is good, but *still I do not think it will answer.*" By *reversing it,* instantly the answer was *sanguine again.* Without changing the point of contact, by simply very gently *depressing the integuments,* the same *gloomy ideas* were engendered, and again, by slightly *elevating* them, all was *sanguine and glowing.* I have tried the same sort of experiments with other parts of the forehead and face, and hairy scalp, and the same varieties resulted according to the varied anatomy of expression thereby induced. I have tried the same with other patients with like results; and even touching and exciting an organ, such as veneration, with the point of one finger, without any movement of the scalp at all, by giving an inclination of the *head forward and downward,* by the other hand, *religious horror was instantly manifested;* but by *elevating the head,* so as to give an *upward or heaven-directed aspect* to the countenance, the former emotion gave place instantly to *ecstatic devotion.* The same results have been realized, however often tried, and that with various patients, none of whom either saw the others operated on, or heard of what had been realized by such experimental trials with others; and in none of them was there any auricular suggestion given even in the faintest whisper. I was particularly guarded on this point myself, and no one else present knew any thing about what was likely to occur. Similar varieties were also induced in reference to other emotions tested.

Whoever will observe the result of auricular suggestion of any passion or emotion, will see in highly sensitive subjects the anatomy of expression beautifully manifest itself, provided the patient is in the proper stage, which can only be satisfactorily and certainly realized by those who pass into the second—conscious state—thatis, so as to forget when awake what occurred during the sleep, but to have a recollection of the same when in the sleep again. Those who do not pass beyond the *first* stage, or that during which they can remember after awaking all which happened during the sleep, in general have the reason and will sufficiently active to enable them to counteract or control, to a certain degree, what they would otherwise promptly manifest from such muscular or auricular suggestions, were they in the *second* conscious stage. In the *latter* condition, *without exercising the tedious process of reasoning, as during the primary stage,* they now seem prompt to act in obedience to whatever idea is suggested to their minds, and therefore act as during monomania, being entirely absorbed in some particular contemplation, or in the execution of some special act, and *hence the remarkable vigour and precision of such acts.*

I observe one remarkable feature in the record of your experience of mesmeric phenomena. You seem to think there is good reason to believe in the existence of real clairvoyance; that patients can read or perceive objects through opaque bodies or at a distance. All my investigations tend to a contrary conclusion, although I have seen much which misled others, and induced them to believe as clairvoyance what I could clearly explain otherwise. It is most desirable that this debatable point should be settled by a set of experiments which could admit of no mistake, and which might determine the matter in one way or other with mathematical accuracy. With this view I had a few tests prepared to have been applied to Alexis last summer, but he was off before arrangements could be made for a *séance* for the purpose. A few months ago I sent them to Cheltenham to have been applied to Adolphe, when there with Dr. Owens and Mr. Vernon; but through some mischance the opportunity was lost. Since then, I have read what you have published in THE CRITIC as accomplished by him at the Mesmeric Society and by your own personal friends; and as you thus stand in some manner pledged as a believer in clairvoyance, may I ask the favour of your applying my tests, if possible, to Adolphe and others before the Mesmeric Society, and let the results be published in THE CRITIC. *I do not believe any one of them will give a literal reading of the tests;* BUT BY ALL MEANS LET US HAVE THE FACTS. If you require to look at the print, I must beg leave to caution you *to keep your lips firmly compressed the whole time;* for hearing is so quick that they might discover letters whilst you were imagining you were only *mentally* repeating them, but whilst you were unconsciously articulating them so faintly as not to be perceived by yourself or others. I know, from experience, that no bandaging of the eyes should be relied on. The mode of applying the tests is fully explained in the *Medical Times* for 28th of December, 1844, and my reasons for wishing the subject to be so rigorously investigated are there fully explained. You will find in those papers also my mode of accounting for the vigilant experiments of Mr. Hall, referred to in your last number of THE CRITIC. I have there entered my strong protest against such experiments being frequently repeated, for what appears to me to be sufficiently good reasons.

It is my intention shortly to republish the papers on "Magic Mesmerism, Hypnotism," &c. in a separate form, with an introductory chapter embracing several other important points. But in the meantime some of the views contained in this letter, as well as in the *Medical Times,* may be of use to you and interesting to many of your readers, and I beg only to add that they are quite at your service. I am yours, &c.

JAMES BRAID.

3, St. Peter's-square, Manchester, May 8, 1845.

BATH. — (*From a Correspondent.*) — Charles Chiffinch, of Combe Down, called upon me to be mesmerised for his deafness. Whilst I was making the necessary passes, Mrs. S. who was sitting behind with her feet touching the leg of Chiffinch's chair, went into a state of mesmeric somnambulism. When I placed my hand upon Chiffinch's head (on veneration), for the purpose of endeavouring to send him to sleep, she began giving a description of a person who she said was preaching a sermon, and when I touched Chiffinch's organ of mirth, she said, "Oh, it is such a funny sermon!" I directed my attention and the passes to the cure of Chiffinch's deafness, and though I have not been able to send him into the sleep, still he has been very visibly affected, and can hear much better; but the most strange thing

is, that upon waking Mrs. S. she found herself deaf. I immediately made the passes down the left ear, and her hearing returned in that ear; but she was still deaf in the right ear. I then directed my attention to the right ear, and her hearing returned. The restoration of her hearing was effected whilst she was in the waking state.—S. D. SAUNDERS, Ivy Cottage, Lyncombe-hill.

LITERARY INTELLIGENCE.

THE LATE MR. HOOD.—We are sure that the public will learn, with deep regret, what, however, was foreshadowed to his friends by years of sickness and suffering, that Mr. Hood has left a widow and two children in straitened and precarious circumstances, with no other means of subsistence than a small pension, terminable on the failure of the widow's life, barely sufficient to supply a family of three with common necessaries, and totally inadequate for the education and advancement of the orphan children. Even this scanty resource has been of necessity forestalled to a considerable extent during the last five months, in order to meet the heavy sick-room and funeral expenses. We have just heard that the following nobleman and gentlemen, admirers of Mr. Hood's genius, but, above all, of the generous devotion of that genius to the cause of suffering humanity, have formed themselves into a committee, for the purpose of raising a sum by subscription, to be held in trust for the benefit of the family during the widow's life, and at her death to be divided between the children, whom that event will leave destitute. Committee; The Marquis of Northampton, Baron de Rothschild, R. Monckton Milnes, Esq. M.P., Harrison Ainsworth, Esq., A. Spottiswoode, Esq., T. Reseigh, Esq., Dr. W. Elliott, Lord Francis Egerton, Sir E. Bulwer Lytton, Bart., T. Noon Talfourd, Esq., D. Salomons, Esq., Samuel Phillips, Esq., W. Harvey, Esq.—*Athenæum*.

We hear that Mr. Nisbet, of Bristol, the author of *The French in Rheinstadt*, has had the honour of receiving the gold medal for science and art, accompanied with a most gracious letter of thanks from that enlightened and patriotic Sovereign, the King of Prussia.

In a very popular journal published in Paris, *Le Livres des Familles*, appears a tale, *Le Trappeur des Montagnes Rocheuses*, which it acknowledged from *The Travels of Silliman*. We are requested to state that the tale is from the pen of Percy B. St. John, the author of *The Trapper's Bride*, it having originally appeared in *Chambers' Edinburgh Journal*, under the title of *Baptiste Brown*.

It is announced that all the respectable booksellers in Dublin will close their houses of business at seven o'clock in the evening during the summer season.

One of the sons of Schiller, the German poet, filling the office of Keeper-General of Woods and Forests in Wirtemberg, has just been created a baron, by the title of Baron Schiller de Lorch.

BOOKSELLERS' CIRCULAR.

EXTENSIVE arrangements are in progress for the purpose of placing THE CRITIC in the foremost rank as a Literary Journal.

A numerous corps of contributors in various departments of literature, art, and science has been engaged.

Foreign literature will receive in THE CRITIC more attention than has hitherto been given to it by any of the English journals. Negotiations are pending with writers versed in the various literatures of Europe and America, to supply a systematic record of the doings of *mind* abroad, in like manner as we purpose to chronicle the proceedings at home.

A gentleman, whose name (were it usual to announce those of contributors) would command respect and confidence, has undertaken the duties of dramatic criticism; still, however, with the understanding that it is to be brief in quantity, and thoroughly impartial.

From all quarters, we continue to receive the most gratifying expressions of approval, and the most cordial promises of support.

Some of the booksellers who subscribe to THE CRITIC have been kind enough to address a few lines, stating what is the estimation in which it is held by their customers. We are desirous of collecting such evidences of public opinion and appending them to the prospectus. May we, therefore, ask those of our readers who are booksellers, and therefore hear what others say, to drop us a line, shortly stating what is the character THE CRITIC receives from their subscribers, as well as their own opinion of its fitness to fulfil the purposes of a Bookseller's Circular and advertising medium? Such evidence would be of great value, and if any will take the trouble to transmit it, we will gladly pay the postage of the letter.

And this reminds us of a topic to which our attention has been directed from many quarters. It relates to Advertisements.

It has been proposed by many of the Booksellers to make THE CRITIC the central medium for *all* the announcements of the Trade; but they require some assurance that the charges shall be moderate, and that they shall not be mulcted in the ruinous prices demanded by the only two publications in which they appear at present; namely, the *Publisher's Circular* and the *Athenæum*. We have given the subject an anxious consideration, and are prepared to accede to their wishes. In the hope, therefore, that the suggestion will be carried out, and that THE CRITIC will ere long be adopted as the *Booksellers' Circular*, and contain *all* their announcements, and assuring our friends that only a great number of advertisements can justify such prices, we propose the following scale:—

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

When the width of our columns is calculated, this scale is less than one-half the charge of the *Athenæum*.

Further to consult the convenience of Booksellers, we propose to insert lists occupying some space, and advertisements for frequent repetition, at a considerable reduction from the scale, to be agreed upon at the time.

And whatever addition to the pages of THE CRITIC may be required for advertisements will be made without increasing its price, so that the reader's territory shall not be unduly encroached upon.

In answer to some queries, it may be proper to repeat that, inasmuch as THE CRITIC does not profess to review proof-sheets, it cannot promise to notice books before they are published. It desires to be esteemed rather for the impartiality and completeness of its criticisms than for the rapidity of their appearance. The latter may attract more at first, but the former will please most in the end.

REGISTER OF NEW PUBLICATIONS,

From May 17 to May 24.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Abraham's (Rev. C. J.) Unity of History; or, Outlines of Lectures on Ancient and Modern History, 8vo. 5s. cl.
Beggar's Coin; or, Love in Italy, by J. R. Beste, 18mo. 4s. hf.-bd.
Bennett's (Rev. W.) Principles of the Book of Common Prayer, 1 vol. demy 8vo. 12s. cl.
Black's Picturesque Tourist of Scotland, 4th edit. with maps and plates, fc. 8vo. 8s. 6d. cl.
Book of the Twelve Minor Prophets, a new translation, with Commentary, by E. Henderson, D.D. 8vo. 16s. cl.
Bridal of Salerno, a Romance in Six Cantos, by J. L. Ellerton, M.A. post 8vo. 10s. 6d. cl.
Buchanan's Comfort in Affliction, 12th edit. 12mo. 3s. 6d. cl.
Burn's (J.) Youthful Christian, containing Counsels, Cautions, and Examples, 18mo. reduced to 1s. 6d. cl.
Chart of the Architecture of York Cathedral, arranged by F. Bedford, sheet 3s., case 5s.
Cobbett's (W.) English Gardener, new edit. 12mo. 6s. bds.
Combe's (A., M.D.) Physiology of Digestion, with relation to the Principles of Dietetics, post 8vo. 5th edit. revised and enlarged, 2s. 6d. sd.
Contributions to the History, &c. of Sexual Diseases, by J. H. Robertson, M.D. 8vo. 4s. cl.
Courtney's (J. S.) Guide to Penzance and its Neighbourhood, post 8vo. 7s. cl.
Cultivation of Orchidaceous Plants, by John Henshall, 8vo. 14s. cl.
Discourses for Parents and the Guardians of Youth, from the German of D. F. V. Reinhard, post 8vo. 7s. 6d. cl.
Doctrine of the Supernatural Established, by the Rev. H. Edwards, D.D. 18mo. 2s. 6d. sd.
Eastern Romance, Vol. II. 12mo. 6s. cl.

ADVERTISEMENTS.

COMPOSITIONS FOR WRITING WITH STEEL PENS.

STEPHENS'S WRITING FLUIDS.—These Compositions, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary ink. In warm climates they become essential. They consist of—

A BLUE FLUID, changing to an intense black colour.

PATENT UNCHANGEABLE BLUE FLUID, retaining a deep blue colour.

A SUPERIOR BLACK INK, of the common character, but more fluid.

A SUPERIOR CARMINE RED, for contrast writing, adapted for Artists, and those who use water-colours.

A CARBONACEOUS RECORD INK, unchangeable by any chemical agent.

A MECHANICAL RULING and PAPER ARCHITECTURAL DRAWING INK. Superior to the best Indian Ink for the above purposes, and has the advantage of being ready for immediate use. It rules without breaking, and follows the brush or ruling-pen with the greatest facility.

Bottles at 3d. each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense.

Also, a new kind of MARKING-INK for Linen, and INKHOLDERS adapted for preserving Ink from evaporation and dust.

Prepared by HENRY STEPHENS, the inventor, 54, Stamford-street, Blackfriars-road, London, and sold wholesale and retail by booksellers and stationers, in bottles at 3d., 6d., 1s., and 3s. each.

CAUTION.—These unchangeable BLUE FLUIDS are Patent Articles. The public are, therefore, cautioned against imitations, which are infringements, to sell or use which is illegal.

A verdict of 2,000 dollars, liable to be increased to 6,000 dollars, having been obtained against parties who have been convicted of selling imitations of this article, in violation of the patent right of the inventor, in the United States of America, and several notices having been repeatedly issued to caution persons against infringing those rights in this country, by making or selling this Article, the Proprietor issues this as a final notice, which, if disregarded, he will be compelled to institute proceedings at law against all who may be committing these illegal acts.

HENRY STEPHENS, 54, Stamford-street, Blackfriars-road, London.

STEPHENS'S SELECT STEEL PENS.

The utmost possible care having been bestowed upon the manufacture of these articles, so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

Schoolmasters and the Trade supplied on liberal terms.

THE NOVEL TIMES:—Separate Issue of each of the Works.—In compliance with suggestions from several quarters, the Publisher begs to announce a SEPARATE ISSUE of each of the works published in THE NOVEL TIMES. On the the 31st inst. with the Magazines, Part. I. price one shilling, and No. I. price 3d. of THINGS OLD AND NEW, by the author of "The Subaltern;" and Part. I. price one shilling, No. I. price 3d. of LETTERS FROM THE ORIENT, by the Countess HAHN HAHN, translated from the German, by the Author of "Caleb Stukeley."—Office, 12, Wellington-st. North, Strand. Sold by all Booksellers and Newsmen.

On the same day, Part I. price one shilling, and No. I. price 3d. of a NEW ROMANCE, by G. P. R. JAMES, Esq.

Just Published in Cloth, gilt edges, Splendidly Illuminated,

THE CHEAPEST PERIODICAL IN THE WORLD!—THE WELCOME GUEST OF EVERY HOME!

THE FAMILY HERALD is not only the cheapest but the most amusing and instructive Literary Miscellany ever published. It consists of interesting Tales, extraordinary Adventures, wonderful Narratives, remarkable Events, moral, familiar, and historical Essays, select Poetry, instructive Biographies, comic Sketches, amusing Allegories, the wisest Sayings of the wisest Men, important Facts; useful Advice for self-improvement, salutary Cautions, scientific Discoveries, new Inventions, hints to Housekeepers, practical Recipes, diverting Sports and Pastimes, ingenious Puzzles and Riddles, facetious Sayings, humorous Jokes, &c. &c. affording agreeable and harmless recreation for all the members of a family. Wisdom and cheerfulness, mirth and propriety, are here pleasingly blended together, in a manner never hitherto attempted; and while morality is inculcated with the attractive ease of familiar conversation with an old friend, useful lessons are taught without the aid either of austerity or a stern countenance.

This wonderfully cheap Supplement to every newspaper is adapted for all classes, tastes, and ages, grave or gay, rich or poor. It contains something of everything; facts and philosophy for gentlemen, hints and entertainment for ladies, questions and problems for youth. A Publication combining knowledge with gladness has long been wanted; and as a proof of the great popularity of the *Family Herald*, it has in a very few months become a general favourite, and the most extensively circulated of the English Periodicals, having met with a hearty welcome in every nook of the Empire—being equally encouraged in the Mansion and the Cottage, the play-ground and the workshop.

No politics—no party spirit—no controversy—no personalities—no ribaldry.

Sold in Weekly Numbers at One Penny, in Monthly Parts at Sixpence, and in Yearly Volumes. May be had, by order, of every bookseller and dealer in periodicals.

Vol. II. just published, price only 7s. 6d. is the only English periodical that contains all that has yet appeared in Paris of Eugene Sue's wonderful romance of the "Wandering Jew," and upwards of a hundred other highly interesting tales.

The "Wandering Jew" appears in Parts XV. to XXIV. stitched in neat covers, price 5s.; or in Numbers (63 to 100), price 4s. unbound.

A cotemporary, in reviewing this popular periodical, says:—"It is certainly a very well-selected miscellany of most entertaining and instructive reading. We warmly recommend the *Family Herald*; it is—what we can say of so few of the cheap periodicals now-a-days—it is a *safe* book to admit within the sacred precincts of the family circle."

No. 105, being the first of a New Volume, was published May 3.

Part XXV. being the first Part of a New Volume, will be published the first week in June.

The present is a favourable opportunity to commence.

The public are earnestly solicited to try a single Number.

London: published by G. Biggs, 421, Strand.

ROWLAND'S MACASSAR OIL.

PATRONIZED BY

"THE QUEEN,"

AND THE ROYAL FAMILY OF GREAT BRITAIN,

AND THE SEVERAL

SOVEREIGNS AND COURTS OF EUROPE.

This ELEGANT, FRAGRANT, and TRANSPARENT OIL, in its *preservative*, *restorative*, and *beautifying* qualities for the Human Hair, is unequalled throughout the whole world. It *preserves* and *reproduces* the *hair*, even at an advanced period of life; prevents it from *falling off* or *turning grey*; *restores grey hair to its original colour*; frees it from *scurf* and *dandriff*, and renders it *soft*, *silky*, *curly*, and *glossy*—Facts abundantly proved by innumerable testimonials, which are open for inspection at the proprietors'. It preserves its virtues unimpaired by the change of climate, and is alike in use from the frigid to the torrid zone—from the assemblies of St. Petersburg to those at Calcutta and the remote East.

For CHILDREN, it is especially recommended as forming the basis of

A BEAUTIFUL HEAD OF HAIR!!!

Price 3s. 6d.—7s.—Family Bottles (equal to four small) 10s. 6d.; and double that size, 21s.

CAUTION.—Each genuine bottle has the words

ROWLAND'S
MACASSAR OIL

engraved in two lines on the Wrapper; and on the back of the *Wrapper* nearly 1,500 times, containing 29,028 letters.

*** All other "*MACASSAR OILS*" are FRAUDULENT COUNTERFEITS!!!

Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, London, and by Chemists and Perfumers.

THE CRITIC;
And Journal of Literature.

SATURDAY, MAY 31, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

TO READERS.

WE omit the usual leading articles to make room for various intelligence relating to literature and art with which the season has crowded our columns. A continuation of the commentaries on Advertising, and a further exposition of the Principles and Policy of Young England, were in type, but postponed for the reasons above stated.

LITERATURE.

HISTORY.

Louis XIV. and his Contemporaries. By BENJAMIN BENSLEY. London, 1845. Darton and Clark.

ALTHOUGH, as we presume, this volume is mainly intended to aid the work of education, as a book for the school library, and to attract the young to the study of history, yet has it merit and interest for readers of all ages, and therefore have we transferred it from the class "Education," to that in which it appears.

Mr. BENSLEY has collected from a vast number of authorities all the most curious and amusing anecdotes relating to LOUIS XIV. and his contemporaries, and strung them together in chronological order. The result, without pretending to the formality of history, is a narrative that resembles in some measure the charming old chronicles, where we are introduced to men and women in friendly and familiar acquaintance, instead of the stately but shadowy abstractions that stalk before us in the *regular* history. Here we have the spirit and manner of the times; the people live and move distinct and individualized: other personages beside kings and nobles engage our sympathies, and even they become human beings when exhibited out of state, and interest us in themselves as well as in their fortunes.

And Mr. BENSLEY is a master of this fascinating species of story-telling. He writes as if in fancy he had summoned about his study table a circle of youths and maidens full of the curiosity of their years, and was proceeding to tell them "all about LOUIS the Fourteenth and the great people who lived in his time." In simple, intelligible, but graphic language he narrates the most striking incidents of the reign of the *Grand Monarque*, with the gossip of his court, and the oddities of the personages by whom he was surrounded, omitting whatever scandal-mongers have handed down to us unfit for youthful ears, and turning facts to account by skilfully but briefly pointing their moral.

To this description of it, which is strictly faithful, it is almost needless to add, that it can be recommended with confidence to all, whether old or young, who like a book which adds the interest of a romance to the utility of a history.

History of the United States, from the Discovery of the American Continent to the War of Independence. By GEORGE BENCROFT. London: Fullarton and Co.

THIS is a reprint of the best History of the United States that has yet appeared. The author is more of the annalist than of the chronicler; most laborious in research, most careful in citing his authorities, but stringing his facts together in the order of time, without much regard for the other more attractive qualification of style in the narration of them.

Mr. BENCROFT is obviously wanting in imagination. He cannot call back the past before us, and make the dead live again and dwell in our memories like persons whom we had seen and known in the flesh. Hence he is what would be called a "dry" writer. But he compensates in some measure for this defect by his unwearied research and the impartiality he displays in the production of his facts, without reference to their bearing upon any sect or party. He commences with the first settlement of America, describes the formation of each separate state, and concludes with the declaration of independence. As the best, if not the only accessible history of the United States, this will be a valuable addition to the library. As it was published some time since, we must not enter upon a minute examination of it. The present English edition is contained in one large handsome volume, with type of pleasant size for reading, without resort to double columns, and it is illustrated with some half-dozen very respectable engravings and a map. It is moreover copiously indexed.

BIOGRAPHY.

Lord Brougham's Lives of Men of Letters.
(CONCLUDING NOTICE.)

AFTER a merited eulogium on Dr. ROBERTSON'S style and manner as an historian, Lord BROUGHAM seizes the opportunity to introduce a disquisition on historical writing, in which he sets forth certain views which he has not only long cherished, but upon which, as it would seem, he has partially acted. From the deep interest excited by the simple narrative of the voyage of COLUMBUS, he argues that history might be made more amusing and far more useful if employed for the purpose of causing men to despise the intrigues of courts, and to execrate the wars produced by the ambition of kings and nobles.

> The same events had then studded their page, the same picturesque details given it striking effect, the same graphic colours added life to it, and yet the right feelings of the reader would have been exerted and cherished; nor would the historians have made themselves accomplices with the vulgar in the criminal award of applause and of fame by which the wicked actions of past times are rewarded, and the repetition of the same offences encouraged.

He complains also that historians are capricious and uncertain in their panegyrics, marking some for unmitigated obloquy, others for extravagant praise, and seldom giving credit to the same person both for virtues and vices. The BORGIA family and RICHARD III. are adduced as instances of this prevalent failing.

HOW BROUGHAM WOULD WRITE HISTORY.

> It is not, however, merely by abstaining from indiscriminate praise, or by dwelling with disproportioned earnestness upon the great qualities, and passing lightly over the bad ones, of eminent men, and thus leaving a false general impression of their conduct, that historians err, and pervert the opinions and feelings of mankind. Even if they were to give a careful estimate of each character, and pronounce just judgment upon the whole, they would still leave by far the most important part of their duty unperformed, unless they also framed their narrative so as to excite our interest in the worthy of past times; to make us dwell with delight on the scenes of human improvement; to lessen the pleasure too naturally felt in contemplating successful courage or skill, whensoever these are directed towards the injury of mankind; to call forth our scorn of perfidious actions, however successful; our detestation of cruel and bloodthirsty propensities, however powerful the talents by which their indulgence was secured. Instead of holding up to our admiration the "pride, pomp, and circumstance of glorious war," it is the historian's duty to make us regard with unceasing delight the ease, worth, and happiness of blessed peace; he must remember that
>
> "Peace hath her victories,
> No less renown'd than War:"
>
> and to celebrate these triumphs, the progress of science and of art, the extension and security of freedom, the improvement of national institutions, the diffusion of general prosperity — exhausting on such pure and wholesome themes all the resources of his philosophy, all the graces of his style, giving honour to whom honour is due, withholding all incentives to misplaced interest and vicious admiration, and not merely by general remarks on men and on events, but by the manner of describing the one and recording the other, causing us to entertain the proper sentiments, whether of respect or of interest, or of aversion or of indifference, for the various subjects of the narration.
>
> It is not to be denied, that history written in this spirit must differ materially from any of which we have as yet the experience: it is only to be lamented that those great masters, whose writings we have been contemplating, did not consecrate their mighty talents to so good a work. To the historians of all ages joining with the vulgar, and, indeed, writing as if they belonged

themselves either to the class of ambitious warriors and intriguing statesmen, or to the herd of ordinary men whom successful crimes defrauded at once of their rights and their praises, may be ascribed by far the greater part of the encouragement held out to profligate conduct in those who have the destinies of nations in their hands. At all events, this is certain: if they could not eradicate the natural propensity in the human mind towards these errors when unrefined, they might have enlightened it, and have gradually diffused a sounder and better feeling.

So deeply have I always felt the duty of attempting some such reformation in the historical character and practice, that I had begun to undertake the reigns of Henry V. of Elizabeth, and of Alfred, upon these great principles. A deep sense of the inadequate powers which I brought to this hard task would probably have so far grown upon me as its execution advanced, that I should have abandoned it to abler hands; but professional, and afterwards judicial, duties put an end to the attempt before it had made any considerable progress. Nevertheless, I found no small reason to be satisfied of success being attainable, when I came narrowly to examine the interesting facts connected with national improvement and virtuous conduct, and I am sure, that whoever may repeat the attempt will gather encouragement from the proof, which I have drawn from the master-piece we have been contemplating, that the events and characters of past times lend themselves to an effective narrative, conducted on right principles.

The great truth proclaimed in this passage will excuse its length. May we express a sincere hope that the noble lord may fulfil the design he has begun, and give to the world such a history as he has here described, or at least sufficient of it to serve as an example to others. Thus does he portray the

CHARACTER OF ROBERTSON.

The history of the author is the history of the individual, excepting as regards his private life and his personal habits: these were in the most perfect degree dignified and pure. Without any thing of harshness or fanaticism, he was rationally pious and blamelessly moral. His conduct, both as a Christian minister, as a member of society, as a relation, and as a friend, was wholly without a stain. His affections were warm, they were ever under control, and therefore equal and steady. His feelings might pass for being less strong and lively than they were, partly because he had an insuperable aversion to extremes in all things, partly because, for fear of any semblance of pretension, to which he was yet more averse, he preferred appearing less moved than he really was, in order to avoid the possibility of feeling less than he externally shewed. But he was of opinions respecting conduct which led to keeping the feelings under curb, and never giving way to them; he leant in this towards the philosophy and discipline of the Stoics; and he also held, which was apt to beget the same mistake as to the warmth of his heart, that exhibitions of sorrow, any more than of boisterous mirth, were unfit to be made; that such emotions should as far as possible be reduced to moderation, even in private; but that in society they were altogether misplaced and mistimed. He considered, and rightly considered, that if a person labouring under any afflictive feelings be well enough at ease to go into company, he gives a sort of pledge that he is so far recovered of his wound, or at least can so far conceal his pains, as to behave like the rest of the circle. He held, and rightly held, that men frequent society, not to pour forth their sorrows, or indulge their unwieldy joys, but to instruct, or improve, or amuse each other, by rational and cheerful conversation. For himself, when he left his study, leaving behind him, with the dust of his books, the anxious look, the wrinkled brow, the disturbed or absent thoughts, he also expected others to greet his arrival with the like freedom from cares of all sorts, and especially he disliked to have his hours of relaxation saddened with tales of misery, interesting to no one, unless, which is never the object of such narratives, there be a purpose of obtaining relief.

His conversation was cheerful, and it was varied. Vast information, copious anecdote, perfect appositeness of illustration, —narration or description wholly free from pedantry or stiffness, but as felicitous and as striking as might be expected from such a master—great liveliness, and often wit and often humour, with a full disposition to enjoy the merriment of the hour, but the most scrupulous absence of every thing like coarseness of any description—these formed the staples of his talk. One thing he never tolerated any more than he did the least breach of decorum; it was among the few matters which seemed to try his temper—he could not bear evil-speaking, or want of charity. No one was likely ever to wrangle with another before him; but he always put down at once any attempt to assail the absent. His own nature was singularly charitable and kindly; he always viewed the conduct of others in the least unfavourable light; and when he heard any objections urged, he would suggest something that at least left the blame mitigated when it could not be warded off or made doubtful. Of course, this remark applies to cases where the matter was ambiguous, and the general character and conduct were good. No man ever expressed a greater abhorrence of any thing plainly bad, or a nobler scorn of any thing mean; and his sentence went forth in such cases with an awful and an overpowering force.

The men of science next engage the biographer's attention, and this is his sketch of

DR. BLACK AS A LECTURER.

His style of lecturing was as nearly perfect as can well be conceived; for it had all the simplicity which is so entirely suited to scientific discourse, while it partook largely of the elegance which characterized all he said or did. The publication of his lectures has conveyed an accurate idea of the purely analytical order in which he deemed it best to handle the subject with a view to instruction, considering this as most likely to draw and to fix the learner's attention, to impress his memory, and to shew him both the connection of the theory with the facts, and the steps by which the principles were originally ascertained. The scheme of the lectures may thence be apprehended—the execution imperfectly; for the diction was evidently, in many instances, extemporaneous, the notes before the teacher furnishing him with little more than the substance, especially of those portions which were connected with experiments. But still less can the reader rise from the perusal to any conception of the manner. Nothing could be more suited to the occasion; it was perfect philosophical calmness; there was no effort; it was an easy and a graceful conversation. The voice was low, but perfectly distinct and audible through the whole of a large hall crowded in every part with mutely attentive listeners; it was never forced at all, any more than were the motions of the hands, but it was any thing rather than monotonous. Perfect elegance as well as repose was the phrase by which every hearer and spectator naturally, and as if by common consent, described the whole delivery. The accidental circumstance of the great teacher's aspect, I hope I may be pardoned for stopping to note, while endeavouring to convey the idea of a philosophic discoverer. His features were singularly graceful, full of intelligence, but calm as suited his manner and his speech. His high forehead and sharp temples were slightly covered, when I knew him, with hair of a snow-white hue, and his mouth gave a kindly as well as most intelligent expression to his whole features.

It appears that Lord BROUGHAM wrote the epitaph on WATT affixed to the magnificent monument by CHANTREY, and, as proceeding from the pen of an intimate acquaintance, the reader will peruse with interest this

CHARACTER OF WATT.

His manners were most attractive, from their perfect nature and simplicity. His conversation was rich in the measure which such stores and such easy taste might lead us to expect, and it astonished all listeners with its admirable precision, with the extraordinary memory it displayed, with the distinctness it seemed to have, as if his mind had separate niches for keeping each particular, and with its complete rejection of all worthless and superfluous matter, as if the same mind had some fine machine for acting like a fan, casting off the chaff and the husk. But it had besides a peculiar charm from the pleasure he took in conveying information where he was peculiarly able to give it, and in joining with entire candour whatever discussion happened to arise. Even upon matters on which he was entitled to pronounce with absolute authority, he never laid down the law, but spoke like any other partaker of the conversation. You might observe him, however, with his pencil in his hand, ready to prove what might require explanation, and he was an adventurous disputant who would not rather see his intellect play in illustrations than descend with demonstrative force. He was ever in pursuit of truth or the gratification of a rational curiosity, and this attempered as well as guided his talk. If he seemed occasionally to be moved beyond the interest thus excited, it was when he perceived any thing uncandid or unfair, or, above all, indirect and dishonest. The attempts of one man to appropriate another's inventive merit were the things that most roused his indignation; for, regarding discovery and invention as the most precious of all property, he could not bear the sight of its violation, and would stop minutely and curiously to ascertain the relative shares of different individuals, when any doubt was raised upon the distribution. His conversation was withal spirited and lively—it was easy and concise, and without the least of a lecturing formality. His voice was deep and low, and if somewhat monotonous, it yet seemed in harmony with the weight and the beauty of his discourse, through which, however, there also ran a current of a lighter kind; for he was mirthful, temperately jocular, nor could any thing to more advantage set off the living anecdotes of men and things with which the graver texture of his talk was interwoven,

than his sly and quiet humour, both of mind and of look, in recounting them. No one who had the happiness of knowing him, no member, more especially, of the club in Edinburgh, which he frequented as often as he visited that capital, can ever forget the zest which his society derived from the mixture of such various matters as those to which I have referred; and one of its most distinguished founders* has justly said, that in no other person was there ever observed so "fine an expression of reposing strength and uninterrupted self-possession as marked his whole manner."

Ample justice is done to the perseverance, the ability, and the benevolence of PRIESTLEY; and then a brief memoir, concluding, with some curious personal traits, is given of

CAVENDISH.

His personal history cannot be expected to have any striking interest; yet they who have been dwelling on his scientific eminence will not be displeased to know somewhat of his ordinary life. He was of a most reserved disposition, and peculiarly shy habits. This led to some singularity of manner, which was further increased by a hesitation or difficulty of speech, and a thin shrill voice. He entered diffidently into any conversation, and seemed to dislike being spoken to. He would often leave the place where he was addressed, and leave it abruptly, with a kind of cry or ejaculation, as if scared and disturbed. He lived in a house on Clapham Common, and his library, vast in extent, was at another place, because he made it accessible to all, and did not wish to be troubled by those who resorted to it. He allowed friends to take books from it, and he himself never took one without giving a receipt for it. On the death of his librarian he began the practice of himself attending one day in the week to give out and take in books. His large income was allowed to accumulate; and when his bankers, after finding that a very considerable balance was always left in their hands, mentioned the circumstance, suggesting that it might be invested to some profit, he answered with much simplicity, that if the balance was an inconvenience to them, he could go to another banker. Himself a man of no expense, his habits never varied, nor did his style of living at all suffer a change on succeeding to his uncle's large fortune. His purse was ever accessible to the claims of charity, as well as to proposals for the promotion of scientific pursuits. Having formed a high opinion of Dr. (afterwards Sir Charles) Blagden's capacity for science, he settled a considerable annuity on him, upon condition that he should give up his profession and devote himself to philosophy; with the former portion of which condition the Doctor complied, devoting himself to the hopeless pursuit of a larger income in the person of Lavoisier's widow, who preferred marrying Count Rumford. Mr. Cavendish received no one at his residence; he ordered his dinner daily by a note which he left at a certain hour on the hall table, where the housekeeper was to take it, for he held no communication with his female domestics, from his morbid shyness. It followed, as a matter of course, that his servants thought him strange, and his neighbours deemed him out of his mind. He hardly ever went into society. The only exceptions I am aware of are an occasional christening at Devonshire or Burlington House, the meetings of the Royal Society, and Sir Joseph Banks' weekly conversaziones. At both the latter places I have met him, and recollect the shrill cry he uttered as he shuffled quickly from room to room, seeming to be annoyed if looked at, but sometimes approaching to hear what was passing among others. His face was intelligent and mild, though, from the nervous irritation which he seemed to feel, the expression could hardly be called calm. It is not likely that he ever should have been induced to sit for his picture; the result therefore of any such experiment is wanting. His dress was of the oldest fashion, a greyish green coat and waistcoat, with flaps, a small cocked hat, and his hair dressed like a wig (which possibly it was) with a thick clubbed tail. His walk was quick and uneasy; of course he never appeared in London unless lying back in the corner of his carriage. He probably uttered fewer words in the course of his life than any man who ever lived to fourscore years, not at all excepting the monks of La Trappe.

Sir HUMPHREY DAVY and SIMSON complete the catalogue. Of the former there is a less minute description than of either of his scientific contemporaries, probably because he was less intimately known to the artist. But this is the anecdotical sketch of

SIMSON, THE MATHEMATICIAN.

His private life is generally unvaried, filled with speculative inquiry, amused by scientific reading, variegated only by philosophic conversation, unless when its repose is broken by controversy, an incident scarcely possible in the story of mathematicians. Dr. Simson loved to amuse his leisure hours, and unbend his mind in the relaxation of society; and from the simplicity of his manners and the kindliness of his disposition, as well as from his very universal information, he was ever a most welcome member of the circles which he frequented. He lived in his college chambers to the last, but received his friends occasionally at a neighbouring tavern, where a room was always kept at his disposal. He attended a club near the college, and in good weather its members dined every Saturday at Anderston, a suburb of Glasgow. In these meetings his chair was always reserved for him, being left vacant when he happened to be absent. It is also said to have been his habit to sit covered. He was fond of playing for an hour or two in the evening at whist, and of calculating chances, at which he generally failed; but he was on the whole a good player, though he was not very patient of his partner's blunders, nor always bore a bad hand of such partner with philosophic meekness. He was fond of music, and sometimes would sing a Greek ode to a modern air. Professor Robison says he twice heard him sing in this manner "a Latin hymn to the Divine Geometer," and adds, that the tears stood in his eyes as he gave it with devotional rapture. His voice was fine, says the Professor, and his ear most accurate. That he did not always interrupt his geometrical meditations in the hours of relaxation is very plain, not only from the singular anecdote already related of his discovery of porisms, but from the date of "Anderston" attached to some of his solutions, indicating that they had occurred to him while attending the Saturday meetings of the club in that suburb. In all his habits he was punctual and regular, even measuring the exercise which he took by the number of paces he walked. Anecdotes are related of him when interrupted by some one on his accustomed walk, and after hearing what was said, continuing at the number he had just before marked, and surprising his acquaintance by speaking the next number aloud. He was exceedingly absent; and the younger part of the university pupils were wont to play upon this peculiarity. It is related that one of the college porters being dressed up for the purpose, came to ask charity, and in answer to the Professor's questions, gave an account of himself closely resembling his own history. When he found so great a resemblance, adds the story, he cried out, "What's your name?" and on the answer being given, "Robert Simson," he exclaimed with great animation, "Why, it must be myself!"—when he awoke from his trance. Notwithstanding his absent habits, he was an exceedingly good man of business; he filled the office of Clerk of the Faculty in the University for thirty years, and managed its financial and other concerns with great regularity and success. Like all minds of a higher order, his not only had no contempt for details, but a love of them; and while clerk he made a transcript with his own hand of the University records, for which he received a vote of thanks from the Senatus Academicus.

We now close a volume admirably fitted for popular reading; the very work for the book-club; adapted to all capacities, wholesome in its tendencies, and if not very profound or very eloquent, full of lessons taught by experience, and conveyed in a form peculiarly calculated to impress them upon the mind, especially upon that of the young about to enter upon the arena of active life, with "the world before them where to choose."

We presume that this volume is but a part of a series. Its successors will be heartily welcomed, if the same spirit of fairness should preside over, and the same sound principles pervade, them.

SCIENCE.

The Physiology of Digestion, considered with relation to the Principles of Dietetics. By ANDREW COMBE, M.D. 5th edition. Edinburgh, 1845. Maclachan & Co.

As a practical, rational, intelligible exposition of the physiology of digestion, and the rules thence derivable for its healthful preservation, or restoration if impaired, this work of Dr. COMBE is without a rival in our language. Its unprecedented popularity is not the effect of fashion, ever running after new remedies for old diseases, but the result of conviction arrayed to the sober judgment by the palpable good sense that pervades every page. A book so well known needs not further comment than simply to announce that a new and revised edition of it has just issued from the press, printed in the elegant and convenient form, and sold at the trifling price, of *Murray's Colonial Library*. No family in the land should be without this book: the rich should present it to the poor as a valuable

* Lord Jeffrey. The club was called from the day, Friday, on which it met at supper, after the business of the week was over, and the half-holiday of Saturday only lightly hanging over the heads of the lawyers who chiefly composed it. Mr. Watt was an honorary member. He had for his colleagues no less distinguished men than Professor Playfair, Sir Walter Scott, Lord Corehouse, Mr. Horner, Mr. Elmsley, Sir W. Drummond, and several who still survive and fill exalted places in the State.

gift; and all who regard health should read it with attention. The most untaught can understand it, and the most learned profit from it.

VOYAGES AND TRAVELS.

A Glance of Belgium and the Rhine. By THOMAS RAMSAY, Esq. London, 1845. Ollivier.

To interest the general reader in the note-book of a tourist it is by no means necessary that his wanderings should have been in ways little trodden. A country before unexplored is of itself an attraction, and might rivet attention in default of any other. But the most frequented highways, *even* Belgium and the Rhine, might be rendered as fresh and captivating as a travel in the remotest regions of the earth, if the traveller would be content to tell us his impressions of things instead of attempting guide-book descriptions of them, or portray men and manners, ever varying and ever amusing, instead of cathedrals, and rivers, and hills, which are the same now as they were seen by the first of the countless multitudes of tour-writers who have preceded him through the same routes.

Mr. RAMSAY has not kept this principle in view when composing his recollections of Belgium and the Rhine. His volume is a transcript of his note-book, and his note-book is a transcript of the guide-book. He describes minutely the places he visited, and the *sights* they contain; and if this had been the first account of them it would have been acceptable. But we have had some hundreds at least of descriptions of the same places and the same sights; half of our population has seen them, and the other half has read of them many a time; and therefore as a mere description it has the proverbial tediousness of a twice-told tale. But even a description of familiar objects may be invested with all the attractions of novelty by some peculiarity or beauty of style in the describer. He may paint in words, or so clothe the real with the ideal as to present them to the mind in an aspect altogether new. This, however, Mr. RAMSAY has not done. There is not a spark of imagination in his style nor any charm of sentiment in his thoughts; nor does he win our sympathies by inter-communion of mind; his are simply *memories*, not *impressions*. He tells only what he saw, not what he felt,—the emotions and the thoughts quickened in him by foreign places and persons. Nor does he amuse by portraiture of man in the various phases under which he is presented to the observant eye, always more alive to peculiarities when taking pleasure than when the mind is absorbed in business.

In truth, Mr. RAMSAY'S tour is a very unnecessary publication, and it is difficult to see what could have been the inducement to confide it to the press. It is wanting in all of substantial interest that gives worth to travels, and its composition is not the most correct and elegant. The preface opens with an apology for appearing in print, proving that the traveller had doubts of its propriety; and he refers the resolution to a wish to contribute "his humble mite of information" respecting the countries through which he sped. But we have found no information which is not already given by *Murray's Hand-book*; and indeed no small portion of the volume is occupied with extracts from VICTOR HUGO and others; Mr. RAMSAY appearing to have made it a rule, for lack of language and ideas of his own, to borrow those of the French poet.

Such being a faithful account of this volume, we cannot recommend any book-club or library to order it, but in fairness to the author we take two or three of the best, because most novel, passages we can find. They who purpose a tour during the coming (if ever it *will* come) summer, may bear in mind

THE HOTEL D'ANGLETERRE, AT LIEGE.

We quitted the Hotel d'Angleterre at Liege with much regret. We had enjoyed the most comfortable and handsome accommodation. Our bed-rooms were beautiful drawing-rooms, with the beds in recesses, separated by tasteful drapery. The floor was polished, and had a small Turkey carpet in the centre. Every thing wore an air comfort, combined with elegance. The *salle à manger*, too, was all to our heart's content. Add to these recommendations unbounded civility, and moderate charges, and ours, it will be admitted, were enviable quarters.

The mistakes of Englishmen imperfectly acquainted with the continental languages, are a continual food for fun. Here is as good a one as we have seen.

A BLUNDER.

There was with us a very nice family party of our own country folks, whom we had first met with in the omnibus at Liege, consisting of an elderly gentleman, his wife, and two lovely daughters, with another gentleman, also somewhat stricken in years, and apparently a military officer who had seen some service, and whom we took to be the young ladies' uncle. We had found them agreeable enough—the young ladies, we thought, only a little too reserved, and rather prudish. Papa had alighted to make inquiry as to what was to be done. He was evidently an English country gentleman of the old school, and knew little, and cared less, perhaps, about *parlez-vous-ing*, or any other outlandish practice. He went up to a Prussian officer, and having contrived, he thought, to make himself understood and to understand in return, he ran back to the carriage, and said aloud,—"*The duennas are to get out—come, all you duennas,—come, make haste.*" The ladies alighted accordingly, and we saw the two young ones pouting their pretty lips, and heard them indignantly, in tones "not loud but deep," exclaiming "*Duennas*, indeed!" Scarcely had they done so, however, when the man in Prussian uniform hastily acquainted them that it was all a mistake—it was not the *duennas*, by any means, that were to get out of the carriage, but only the baggage and themselves that must go through the *Douane*—in plain English the custom-house, which was not there, but at Aix. It was hard to say whether the laugh was most against the father or the daughters—if blushes should decide, we would say the latter; but at any rate there *was* a hearty laugh, and ultimately all the party appeared to enjoy it exceedingly.

Our readers have heard of the holy coat at Treves, and the immense crowds of pilgrims that have flocked to it from all parts of Catholic Europe. Mr. RAMSAY translates from a French journal called *L'Espérance* the following extraordinary scene of

THE PILGRIMS AT TREVES.

As night approached, the procession still advanced at a slow pace towards the square of the cathedral, making the air resound with the monotonous chanting of the litanies. There were, as on all similar occasions, more women than men, who walked two abreast. The company consisted of country people and poor peasants, who gained their bread by the sweat of their brow. The women wore the costume of Lorraine peasants, except the bonnet, which was flat and round, and of party colours. Blue, red, and white formed by their mixture an *ensemble* quite picturesque.

The long file of pilgrims having reached the massive gates of the church, wended their way into its silent nave, gloomy and almost deserted. On the splendidly illuminated altar-piece, the approaches to which were by two lateral staircases, shone forth in a gold frame the precious relic. This tunic, or coat, nearly in the shape of a French blouse, was of a fine texture; the colour inclined to a brownish shade, somewhat like brown ochre. At each side of the frame, the glass of which was at a great distance from the coat was seen an oval opening, allowing the hand to pass and touch the relic. A priest seated on each side of these openings received the strings of beads and medals from the pilgrims' hands, as they mounted the right staircase, after which they were consecrated by being put into contact with the coat, and were then returned to the faithful; who, while contemplating this wonderful scene, sometimes forgot themselves in sleep, obliging the beadle to awaken them, and guide them to their places. A little in front was a large deep basin, intended to receive the offerings of the faithful; it contained some gold and much silver. Along the whole of the right staircase from the altar, pilgrims presented themselves to solicit charity for the support of the church, for the immaculate conception, and other objects. At present, from calculations that have been made, more than 30,000 men and women have passed daily as pilgrims before the relic, and poured out their offerings at its feet. From the 18th of August, the festival of St. Helena, who is said to have given the relic to the town of Treves, until the 30th of September, more than 1,300,000 pilgrims had visited the relic. The sum received may therefore be estimated at 500,000 frs. at the least. This is divided into three shares—one for the building of the cathedral of Cologne, the other for the town, and the third for the cathedral, *i.e.* for the clergy of Treves. The concern thus seems to be in a most prosperous state, and to be likely to bring the waters of Pactolus into this blessed city, through the concourse of pilgrims, from motives of curiosity. Indeed, the crowd was so great that a bed could scarcely be obtained. The hotels were so full that the private houses in the vicinity were all put under contribution. The streets were constanly paraded by thousands of living beings, and all business was postponed. In the midst of this concourse of people, dioramas, panoramas, menageries, and plays offered to the public their attractions. The whole town had a holiday look, as at fair time in Paris, both by night and day. The traveller lodged in a front room was

unable to close his eyes. Groups of pilgrims succeeded each other by turns seeking shelter for the night. Temporary buildings were raised outside the town, where, for two-pence per head, a bundle of straw received the weary heads of the visitors to the relic. As early as two in the morning processions were moving in all directions, singing litanies, and making the streets resound with grounding their sticks as they walked. An uproar pervaded every place, very unlike that emotion which should attend a religious duty. Only indifference and *ennui* were depicted on the faces of the most part of those who followed the immense procession, and the chanting with a strong nasal accent harmonised strangely with all these profane noises.

Scenes and Adventures in Spain, from 1835 *to* 1840. By Poco Mas. In 2 Vols. London, 1845. Bentley.

Who is Poco Mas? Is he Englishman or Spaniard? Is the name real or assumed? What was his business in Spain? How did he contrive to see and hear so much?

These are questions that present themselves to every person who opens these volumes, and glances at the contents. Some of them we cannot solve; others may be answered. Poco Mas is an Englishman; that is certain. The name was not given to him by his godfathers and godmothers, but is a sort of nickname affixed to him in Spain. What was his precise position about the army is a mystery. Some conjecture that he was attached to the staff of Espartero; others more plausibly, that he was "own correspondent" to one of the morning papers; and there is a reporter style in his narrative which indicates that this was a part, if not the whole, of his employment. He has the well-known pushing activity and brazen daring of the class to which he belongs. He is everywhere, note-book in hand, ready to make a paragraph. But inasmuch as he was present in all the principal engagements, and it is to be presumed—for on this point he is chary—took part in them, it is probable that he did double duty, wielded sword as well as pen, and was officer or reporter, or both, as occasion required.

However this may be, he has produced a very amusing work, which conveys the best pictures of the events of the civil war in Spain that have yet been contributed to the English library. His powers of description, especially of battles, are very great, and he delights to pursue war beyond its romance into its realities, and to record the calamities that follow in its train, and which historians are wont to omit, as if conscious how terribly they would mar the glory of the achievement.

The praises of Espartero are a prominent theme; but not to the exclusion of others. Colonel Wylde has his share of honour, and their title to admiration is not rested upon vague exclamations of praise on the part of Poco Mas, but is proved by narratives of their gallant actions, as witnessed by one who shared their enterprises and their perils.

Nor does he refrain from justice to opponents. He awards due credit to the bravery of the Carlists, and the good and bad deeds of both parties are applauded or reprobated according to their deserts, with a spirit of impartiality very commendable in one who was a partaker in the conflict, and therefore could scarcely be exempt from the influence of partisanship.

Moreover he enjoyed opportunities for visiting the Spanish Court, of which he presents a vivid and characteristic picture, and he has preserved a series of pen-and-ink portraits of the most illustrious personages of all nations and of both parties, whom he beheld there.

After so minute an account of the nature of the contents of these volumes, it will be unnecessary formally to track the author's steps, and weary the reader with two or three columns of names and dates. The most pleasing mode of exhibiting the author's manner and the sort of entertainment which may be anticipated will be to take from different parts of the volumes some of the passages which we had noted as of special interest either for the subject or the style.

THE EARL OF CLARENDON.

His Excellency was universally respected and beloved in Madrid, and throughout Spain: never had a British minister a more important, a more arduous duty to perform, than fell to the share of Mr. Villiers; and never was any duty fulfilled with more tact and judgment. Amid the whirlwind of political passions which tore up society in Spain by its roots, the British minister was looked up to with confidence by respectable men of all parties. His amiable personal qualities were great auxiliaries to his sound judgment; he entered into the feelings of, and shewed respect for the Spaniards: he spoke and wrote their language well; his knowledge of every question connected with the history of past and passing events was conspicuous; and he evinced an earnest interest in the cause which the majority of the nation were defending.

Whilst worthily sustaining the honour, dignity, and interests of the country he represented, he was conciliatory towards the ministers of other powers resident at the Spanish court, while he discountenanced all those petty diplomatic jealousies which are always pernicious, but especially so in a small capital like Madrid. These qualities were invaluable at the period in question, when numberless circumstances were of daily occurrence, which designing parties made strenuous efforts to convert into needless causes of misunderstanding between the representatives of foreign nations.

When, after succeeding to the earldom of Clarendon, his lordship left Spain to take his place in the hereditary legislative assembly of his country, his departure was deeply regretted in every circle. He had completely won the hearts of the Spaniards; whilst our own countrymen who visited Madrid, either on business or otherwise, during the period Lord Clarendon was British Minister at that court, could not fail to be highly gratified, and to feel deeply obliged by his lordship's prompt and efficacious care for their interests, as well as attracted by his unaffected manners.

Here are pleasing traits of

ESPARTERO'S HUMANITY.

On the march I have constantly seen the Duke cause his own servants to lift some foot-sore or exhausted soldier on his spare horses. On one occasion, which just now occurs to me, a poor fellow was lying by the road-side on a hot day, quite unable to move on. Espartero halted, alighted, spoke to the fatigued soldier kindly, and then ordered him to be mounted on his own horse—a fine black charger. The poor man was abashed, and tried to excuse himself; but the general spoke to him with a soldier's frankness, and the man was hoisted on the horse. Espartero walked on alone. There was the dusty soldier, with haversack and tin canteen on his back, *shako* on his head, and trowsers drawn up to his knees, shewing his bare legs, riding solemnly on his general's charger at the head of the staff, while we were unable to suppress our smiles at the queer figure he appeared. He was weak, and therefore stooped; the shako seemed too heavy for his head, which lolled about from side to side; and although we could not see his face, one felt sure from the expression of his shako, back, and legs, that he felt out of his place, and wished himself with his regiment; even the tin canteen got loose somehow, and dangled all awry. At last, after riding about half a mile, he threw himself off—he could bear it no longer; he could not endure to see Espartero walking in the heat of the sun—he threw himself off, seized the horse's rein, ran on with him till he got up to the General, and held the stirrup for him to mount. The Duke gave him a piece of money and mounted. The poor soldier had really recovered some of his strength by the ride, and gratefully saluting his General, marched on in good spirits to join his battalion.

The people of Spain are not quite so attached to the bigotries of their faith as we have been accustomed to suppose. The low ebb to which the influence of the church has fallen will be apparent from this :—

With our preconceived notions of Spanish attachment to ancient institutions and usages, and of the influence exercised by the monks over the minds of a large portion of the population, one might have felt justified in supposing that this measure would have created much agitation among the *Madrilenos*, as the inhabitants of Madrid are styled: not at all—people shrugged their shoulders, a good deal of quizzing took place, and in a few days afterwards, I saw several carts laden with figures of saints and martyrs, fronts of altars, and other adornments of chapels and choirs, of little intrinsic value, all heaped together, and being removed to a general receptacle previously to a sale. One of the largest convents, I forget its name, was immediately converted into a depôt for military clothing and accoutrements, in the making of which great numbers of women and artisans were employed. The edifices and appurtenances were speedily put up for sale, by order of government, as national property, and there was no hanging back in point of bidders. The appearance of a friar in the streets of Madrid would no doubt excite almost as much astonishment now as a similar apparition would in those of London.

Poco Mas met with a ludicrous adventure in Biscay. The Carlists had impressed the inhabitants with a belief that it was the practice of the other party to *eat* children. One evening, at Bilboa, he presented his billet to a woman who had a child in her arms. She expressed the utmost horror

and alarm, to his infinite surprise. When he approached her, she shrank back, exclaiming—

"Quita usted!—quita!—Hands off, Sir! hands off!" Starting back with astonishment, I cried, "Qué es éso, Senora?—What's the matter, Senora?" "Ay, Senor! por Dios y por la Virgen Santissima! Mi nina! mi nina!—Ah, Senor! for the love of God and the most holy Virgin! my child! my child!" and she hugged it closer and closer. "What do you mean, Senora?" I cried, keeping at a respectful distance to shew that I had no evil intentions; and perceiving a low rush-bottomed chair at the other end of the room, I dropped down into it, and stared at the *patrona* with amazement. "No me mireis asi!—Don't look at me in that way!" she cried; and in a second added, "Usted no es Espanol!—You are not a Spaniard!" "No, Senora; yo soy Ynglés.—I am an Englishman." "Ynglés! Ay, de mi!—An Englishman! alas, for me!" exclaimed the poor woman in an agony, and then she kissed her infant repeatedly, the tears flowing from her eyes as she regarded it with maternal tenderness and anxiety. Seeing the distressed state of her feelings, and that I was the cause of her affliction and alarm, though I could not imagine why or wherefore, I entreated that she would compose herself, assuring her that as my presence appeared to be so painful to her, I would forthwith obtain another billet, and I rose to depart for that purpose. "Péro, Senor," said the agitated mother, drying her eyes with the corner of the cotton handkerchief which covered her head, and was tied in long ends under her chin. "But, Senor, *do* you eat babies?" "Eat babies, Senora? *Qui idéa!*—What a notion! Certainly not," and I laughed heartily. The *patrona* drew a long breath; her spirit was evidently relieved from a great weight. "Conqué. So, Senor, you don't devour babies! Ay! what a fright I have had!" "I assure you, Senora, I have no longing for babies' flesh, though no doubt it is very delicate; but I must go and exchange my billet." "No se vaya usted—don't go, Sir. I am no longer afraid. The Carlistas, Senor, who were lodged here, told me that Espartero had with him some *extrangéros*—foreigners, who ate children and smothered their mothers, Senor!—and as you were an *extrangéro*, I was frightened, especially when you looked so hard at me from that chair. But I see I have been deceived, and I b g your pardon."

Very amusing, too, is this characteristic anecdote of

THE CURATE AND THE DUKE OF WELLINGTON.

I was lodged in the house of a *Cura*, or clergyman. There were ten *Curas* in this small place, five of whom were of Carlist, and five of Constitutional principles. My worthy host happened to be of the latter persuasion. Nothing could exceed the kindness of this old gentleman; he came and sat with me, as did his nephew, a very superior young man, a student in the university of Zaragoza, and I had much interesting conversation with them. The old *Cura* did not profess to be very learned, for said he, "I was a captain under Mina in the war of independence, and of course had no time for study then. After peace, I managed to qualify myself for orders; and here I am, one of the liberal *Curas* of Ausejo." "How do you get on with the Carlist *Curas?*" "Oh! we never meddle with their politics, nor they with ours. As the numbers are equally divided, each party forms its own little counsel of state, and we leave our politics at the church-door." "I wish such were more generally the case in my country," said I. He then asked me if Lord Wellington were still living. The generality of Spaniards, of a certain time of life, thus designate our great Duke. Sometimes they speak of him as *El Lor*, the Lord, as a title *par excellence* indicating their exalted opinion of him, in the same manner as we ourselves say "the Duke." "Is Lord Wellington still living?" inquired the *Cura*. On my answering in the affirmative, he said, "He is a great man, a great general; but—" and here the *Cura* thrust his hand into the pocket of his rusty cassock, and searched for something; but not finding it, he said to his nephew, "be kind enough to fetch my *petaca*." The young gentleman brought it directly, but not in time to anticipate me presenting his reverence with a *puro*, or Havana cigar. Accepting it with that grace peculiar to the Spaniards, he politely handed me the little brazen vessel containing *lumbre*, or lighted wood-ashes that stood on the table; on my returning it to him after lighting my own cigar, he used it for the same purpose. Having drawn in the due quantity of smoke, and allowed it to escape slowly from his mouth and nose, he crossed one leg over the other, and looking at me significantly, smiling agreeably at the same time: "But," said the *Cura*, "*El Lor* is not a liberal." "Why do you say so, *Senor Cura?*" "I'll tell you. In the war of independence I happened to be with my squadron—I was a cavalry officer—in a village when Lord Wellington arrived unexpectedly at nightfall with his staff. This occasioned a great bustle, of course. Stabling was scant in the place, and some of the horses of my squadron were removed to make room for others belonging to the general's party. Complaints were made to me; I remonstrated with those who had so unceremoniously ejected my horses, but to no effect; I was then young and rather hot-headed, Senor; so off I went to Lord Wellington's quarters, and asked to speak to him. I was instantly admitted. I stated my case vehemently; and in the warmth of my complaint, spoke of our sacred cause, the constitution we were defending, &c. &c. *El Lor* heard me very patiently until I came to the word constitution, when he said sharply, "Never mind the constitution, let us see what can be done about the horses;" and he directed an aide-de-camp to go with me and see that every thing should be arranged to my satisfaction, which was the case. But,"—and two streams of smoke poured from the Cura's nostrils,—"but those four words about the constitution proved to me that *El Lor* is not a liberal." "Pardon me, *Senor Cura*, they only proved that he confined himself to the business before him; and be assured that *El Lor* was at that very moment as stanch a constitutionalist as yourself." The worthy *Cura* laughed, and nodding his head approvingly, said: "*Puede ser—puede ser;* perhaps so—perhaps so."

As a contrast to ESPARTERO's humanity, take this sketch of

CARLIST CRUELTIES.

Great numbers of the Queen's soldiers who were made prisoners by the Carlists in a disastrous action at Herrera, were confined in Cabrera's depôts at Orcajo and other places, where the deaths averaged between twenty and thirty daily, from starvation. The famishing survivors kept themselves alive by feeding upon the carcases of their late companions, parts of whose flesh they cooked, and after a first meal off this revolting food, preserved the remainder cold, for a day or two's subsequent supply! Ten of these poor fellows who had put by this wretched store were discovered to have done so by their inhuman keepers, and on that account were taken to Bezeite, and there shot.

My respectable landlord declared that he saw the human flesh taken from the haversacks in which the starving prisoners had deposited it, and that he also witnessed their execution at Bezeite.

Thus, Cabrera and his crew starved a large portion of their prisoners to death; left the remainder famishing; drove them to the adoption of the unnatural means just described for keeping life within their debilitated frames; and then shot them, under the plea that they were cannibals!

Horrible as this is, I could readily believe it from what I had myself witnessed.

The pressure of other claims at this busy season compels us to be content with these few extracts from a work which will be a desirable acquisition both to the book-club and the library.

FICTION.

Jeanne. Par GEORGE SAND. 1844.

AMONG the many virtues of our character as a people, we cannot boast of freedom from prejudice. Too many proofs of this may hourly be brought against us. Conventionalism, which is no other than prejudice in small things, and of no slight influence upon the mind, as been noted as the characteristic of an Englishman. But it is alleged that prejudice was stronger some centuries since than now, when civilization has spread far and wide, and opened the eyes of the many to their physical and mental wants. We are not sure of this: our intellectual and moral faculties are unquestionably more refined, and the better classes are wiser and happier; but the same amount of prejudice is still, we suspect, to be found in the masses. We discover the same absence of self-formed ideas, the same want of independent feeling upon almost all subjects, and the same blind submission to the dicta of self-elected leaders of opinion. But, thank Heaven, there is this consoling reflection, that in the great march of civilization now so manifest throughout Europe, spite of the many follies and stumblings from which, like all youthful things, it cannot hope to be exempt, this soul-numbing cause of ignorance must gradually melt away. Then, and then only, will the true and the beautiful, for they are one, find their altars on the earth, already worshipped in spirit by the noble-hearted few, who in all ages stand forth to shew their brethren the light of Heaven. Will this be thought irrelevant to the story of *Jeanne?* We trow not. Our remarks are caused by indignation, mingled with some compassion, which we cannot help feeling when we remember for how many years GEORGE SAND has been publishing her incomparable works, during a large portion of which our reading public were ignorant of her very name, and then when it became known, uttered it only to vilify. We do feel indignant that the voice of the unin-

formed many should so have influenced those able and willing to appreciate her, that hitherto but faint echoes of her powerful voice have fallen upon the English ear.

There is an idea prevalent that Madame DUDEVANT attacks the existing state of things, and England, essentially conservative, shrinks in terror from the thought, and refuses, or has hitherto refused, all intercourse with doctrines so dangerous. We will not, however, here undertake the defence of GEORGE SAND; independently of the length of such argument, it is rather a matter of feeling than of logic; and the fact of attempting a defence would imply an admission that there was something to defend.

Some months have elapsed since the appearance of *Jeanne*, a novel received with some murmurs of disapprobation from many an authoritative journal. Not only in the Parisian reviews, but in other continental influential organs of opinion, it was noted as bearing melancholy proof of GEORGE SAND'S declining powers. There is a propensity in the public, when an author has written much, and been much the object of attention, to excuse their growing weariness of his style or opinions, by pronouncing his powers to be failing. It has been said that every mind cherishes its one idea, its one belief or faith, from which all others take their tone. This one idea tempers every thought, word, and deed, and when he writes, it appears more vigorous, perhaps, than under any other manifestation, having less of external influence to obstruct its free delivery. We are all of us more or less slaves of an idea. Right or wrong, it works upon us like a gospel truth, compelling us to give it expression according to our ability. Once find this ruling idea, and we have the entire character of the man, his motives, his cares, his hopes and fears. When we say of a man that he has written himself out, do we mean that his idea is exhausted, melted away, incapable of further application, at least so far as he can apply it? If so it be, GEORGE SAND has not exhausted her idea, for every new book of hers is still redolent of beauty, and pregnant with deep truths, which are truths to all mankind, and we know not to which her enemies could point as evidencing the decay of her genius.

Her fictions have this remarkable characteristic; either they contain such succession of incident, such dramatic situations, as might furnish a circulating library with novels for a twelvemonth, or so few events to excite interest in ordinary readers, that none but herself could invest them with beauty and truth, seizing, as she does, the leisure moment to pour forth her eloquence, her passion, her strains of purest poetry. Poetry is in her every page; either the poetry of humanity, or the poetry of earth. Her coldest reader cannot but call to mind hundreds of passages evidencing her feeling for all that is sublime and tender in nature, passages which amply testify to the artistic beauty of her genius. She does not stand upon a hill and paint mankind as they toil and struggle beneath her; she is herself in the battle, the hard fight, and between every struggle she remembers well the lessons of the last. From this cause, all we read in her, every emotion she paints, is living; it has been felt by herself; she tells us what she has experienced. This is the grand key to her power, and we cannot but applaud the resolution she once avowed, never to attempt to depict any thing she had not in herself endured.

We hear much, so much that it degenerates into mere unmeaning cant, of the questionable morality of GEORGE SAND'S novels. But as we read more, our notions are enlarged, and we learn that, though our spectacles may be of different colours from our fellows', we all look at the same sun. French literature has ever been regarded as immoral in England, and the more so, perhaps, now, that it has manifested itself in the most extravagant forms yet witnessed in the history of literature. GEORGE SAND has been pronounced by some incomprehensible, by others extravagant, by many immoral. But it seems to us, these *soi-disant* moralists forget that French novelists do not confine themselves within the bounds of English notions of propriety. GEORGE SAND is not peculiar in France; she follows the fashions of her nation. The misfortune is, that we should make a difference of taste in this respect a matter of such importance as to blind us to indisputable excellences. Because we dislike the external covering, we disregard the beauty of the form beneath. And what, after all, is the meaning of morality? Can there be a higher morality than the love of all that is pure and noble, the veneration of all that is highminded and disinterested? If an author teach this; if, from his own aspirations, he breathes into the soul of his reader an ardent devotion to the cause of the good and the true; if he awake one slumbering thought of life's real purpose, and infuse a stronger power to struggle manfully with evils, he cannot have written in vain; and—he cannot be immoral.

What a remarkable instance is *Horace*. It is a book which, as was once observed to us, stabs at every word, not with a mortal stab, but with small wounds, gradually laying the heart bare and shewing its cankerworm, its many cankerworms, to the whole world. We doubt if any person could take up either of those two small volumes, and not feel himself deeply hurt somewhere. In strength of intellect, Madame DUDEVANT is the redeemer of her sex's weakness. It is a book analysing the very existence of a human being, laying bare his most secret motives and impulses, his best and noblest feelings. Few men could so completely comprehend one another; few women, with all their discrimination, could so investigate their own being. But for a woman so to describe the very complicated character of a man, seems to us the most wonderful specimen of grasp of mind and power of penetration, that the literature of any country has produced.

It were impossible, pleasant as it might be, to examine the respective merits of GEORGE SAND'S many works. Our limits, independently of our capabilities, would not admit of any such attempt. We have mentioned *Horace*, as we cannot deem the slightest remark relative to its author to be at all complete without a reference to that one phase of her extraordinary genius; and *Horace* is by no means, to us, one of her most interesting works. There are many containing more powerful passion, more of that poetry we have noted; even the *Lélia*, which, with justice, she has herself so severely ridiculed, is unmatched for the exquisite beauty of some of its passages, the mournful, almost heart-rending, truth of its reflections. It is the cry of a fallen angel for the lost worlds above.

In no writer is the progress of a great mind more to be seen than in her writings. The higher the mind, the longer perhaps is it in discovering its true destiny, the real ends and desires of its life. Here we perceive the struggles, the uncertainty, the painful groping in the dark, the many failures, the repeated efforts; for the spirit must rise, and who can walk steadily over rough stones? The gradual dawn of the coming day is shewn, the day of moral brightness, when the darkness shall turn to light, and the world be clear before us. It is a chaos through which all must pass; the higher the mind, the denser the mist into which it must plunge; but so again the brighter are the beams which greet its victory. This moral history seems to us written, plainly as man can desire, in the purpose of her novels, the characters of her heroines. It seems to us that time has purified and exalted them, giving them singleness of purpose, more generosity of feeling, more nobleness of heart. Compare, for instance, the heroines of *Mauprat* and *Genivieve* with *Consuelo* and *Gabriel*—all are independent in thought and action, but unquestionably the latter are a higher order of beings. And *Jeanne*, the poetical, gentle Jeanne, nursed amid dreams of the fairies, and the spirits of the upper world, with thoughts which no tongue can tell, nor herself comprehend, so simple is her peaceful soul—this last creation of a wonderful mind, bears no evidence of a decay of powers. In some respects it differs from many of GEORGE SAND'S former novels; it is more subdued in tone, more concentrated in effect, displaying, if possible, more command of materials, and having less of her general reflections. The story is related with extreme simplicity, having evidently but one object, the development of the character of Jeanne; and perhaps we cannot better give an idea of her, than in the words of the author:

Hers was truly a rustic organization, that is to say, a poetical soul without manifestation; one of those pure types even now found at times amidst the fields, wonderful and mysterious types, which seem formed for a golden age that does not exist, with whom perfectibility would be useless, because perfection is there already. These forms are not sufficiently known among us. Painting has often produced them materially, but poetry has always disfigured, by idealizing or translating them, forgetful that their very essence and originality consist in the impossibility of doing otherwise than divine them. We all acknowledge that the peasant must undergo great transformation before he can be made sensible of the benefits of a new religion, a new state of society; but what is not equally well known is, that at all

times nature produces certain beings among them who can learn nothing, because the *beau ideal* is within themselves, who have no need of progression to be at once the children of God, the sanctuaries of justice, of wisdom, charity, and sincerity. They are already prepared for the ideal society that human nature dreams of, seeks for, and announces at every step. Incapable of comprehending evil, they do not see it. They live, as in a state of primitive innocence, slumbering in the divine cycle of the Genesis. In a word, one would say that original sin had not polluted them, that they are of another race than the sons of Eve. Such was Jeanne, the Gallic Isis, as unconscious of the preoccupation of all around her as a daughter of the Druids suddenly transplanted into our age. Unable to cast blame on any thing, so much was her soul filled with gentleness and charity, she sought not to explain what blame alone could have explained. She vegetated like a beautiful lily in a dreamy ecstasy, her bosom open to the breezes of the night, to the soft greetings of the day, to every influence of earth and heaven, and finding no meaning in the language of men.

That the rare character of Jeanne should be divined, not described, was the object of the writer. The rarity of such a being has little or nothing to do with the beauty of its portraiture. Unlike any other character whom GEORGE SAND would paint at one stroke, it is only as we advance in the book that we become really acquainted with her beautiful nature—only as we see her extreme simplicity of mind, and unbending honesty of purpose in every word and deed, that we begin to know and love her. We have heard objections against the story as improbable. This must ever be a matter of opinion. The probability of a narrative depends not so much on the external facts, for of their likelihood it is impossible to establish any law, but on the degree of truth and nature with which the persons are made to act under their influence. But we must now, without further delay, introduce our readers to some passages which may give them a faint idea of a story that has deeply moved us.

The centre of France, in the department of Bourbonnais, and the district of Combraille, is the most melancholy, the most desolate, and most miserable part of France, and almost unknown, too, to artists and mechanics. If ever chance should lead you there, you may observe a high naked hill, crowned with a few rocks, which perhaps would never arrest your attention without the information I am giving you. Mount this hill, your horse will carry you to the very summit without effort, and then examine the rocks, arranged in a certain mysterious order; enormous masses resting upon the smallest stones, where for more than thirty centuries they have rested in one unchanging equilibrium; one rock alone has fallen beneath the blows of the first Christian population, or beneath the untiring efforts of the winter winds that howl unceasingly around these hills, now robbed of their antique forests. Their prophetic vales have disappeared for ever—no Druidess would here find a branch of the sacred plant to deck the altar of Hésus.

There is one group of these stones more formidable than the rest, inclosing a narrow space. Here perhaps was the sanctuary of the oracle—here the mysterious dwelling of the priest. To-day it appears, at the first glance, but as one of nature's freaks—one of those sheltering spots that rocks often afford to the traveller or the shepherd. Long grass now covers the traces of the ancient sacrifice; beautiful wild flowers from the heath surround the base of these mournful altars. At some distance a clear little fountain, cold as ice and of briny taste, like most springs in the Marchois country, runs half-hidden beneath the shrubs eaten by the passing roebuck. This mournful spot, without grandeur, without beauty, filled only with a sentiment of desolation and solitude—this spot is called *Les Pierres Jomâtres* (The Jomâtres Stones). In the last days of August 1816, three young men were hunting at the foot of the Stone Mountain, as it is called in the neighbourhood. "Friends," said the youngest, "I am dying with thirst, and I know there is a fountain about here; my dog is hunting for it as after an old acquaintance. If you will follow me, Sir Arthur will be, perhaps, pleased to see these Druidical monuments a little nearer; although I dare say he has met many much more curious in Scotland and Ireland."

"Certainly, I should like to see them," answered Sir Arthur with a very marked English accent; and he proceeded to mount the hill on the very steepest side, that he might reach the 'pierres jomâtres' all the sooner. He had a way of walking, of scraping along the ground, which looked neither active nor *dégagé*, but in the end gained in speed double that of his young companions. He was the very model of a hunter, never hungry nor thirsty; and the young men, while they followed him with the greatest emulation, often inwardly cursed his indefatigable perseverance.

Although Guillaume de Boussac and Léon Marsillat did nothing but run on and get out of breath, the Englishman, like the fabled tortoise, had been inspecting the position and mineralogical qualities of the "pierres jomâtres" for the last quarter of an hour.

"A very devil of a fountain," said De Boussac, "tasting all copper, which doesn't give one any good idea of the treasure."

"These cursed goats," said Marsillat, "haven't a drop of milk; instead of browsing, they seem to think of nothing but licking the stones. Have they, too, a taste for gold?"

"Gold?—Treasure?" echoed Sir Arthur, looking from one to the other with an air of surprise.

"We must tell him," said Guillaume, "that there is a tradition, a legend connected with this spot. According to Marsillat, you won't get it out of the heads of the peasants here, but that there is a treasure buried somewhere underground."

"Yes; this belief makes them perfectly mad," said Marsillat. "Some suppose it is beneath the druidical stones; others that it is further up in the mountains of Toull Saint Croix, which lies yonder, down there, within an hour's walk of this."

The Englishman looked at the arid, rocky soil, the stunted heath that seemed to stifle all herbage, the lean goats wandering at a little distance, "There is a treasure in all uncultivated land," said he, "but there must be another treasure to bring it forth."

"Yes, capital;" said Marsillat.

"And peasants," added Guillaume; "this country is quite unpeopled."

"Men, and again men," observed the Englishman.

"I don't understand," said Guillaume, smiling at Marsillat.

"Not masters and slaves, but men and men," repeated Sir Arthur, surprised that he was not understood; he, who imagined he spoke so plainly.

"There are slaves in France, are there?" asked Marsillat, shrugging his shoulders.

"Yes, and in England too," answered the Englishman without being disconcerted.

"Philosophy wearies me," said Marsillat, half aloud to his young countryman; "your Englishman would disgust me with liberality. How much will you wager, Guillaume," added he aloud, "that I don't reach the top of the highest and smoothest stone there?" * * * * "Listen, Léon," cried out young De Boussac to him, "if you find the Druidess Velléda up there, just tell us, will you!" Marsillat continued singing, running over the platform of the Dolmen, leaping from one block to another, when all at once he stopped, and the song was interrupted by a cry of surprise.

"What is it?" cried Guillaume, "a hare or a serpent?"

"Velléda?" asked Sir Authur, with a slight smile.

"No, Lisette," said Marsillat, "not at all ugly; but is she dead or alive?" And he disappeared in the ring formed by the two large stones. Guillaume do Boussac finding he answered no longer to his questions, and urged by the curiosity of an adventurer, began himself to climb the rock; but Sir Arthur, less eager, and by no means excited, pointed to him, that by making the circuit of the rocks, and in joining Marsillat by the interior, he would gain his end all the quicker. It was the work of few moments, and the three found themselves together by the sleeping Druidess.

"It is a little child," said Sir Arthur.

"That is," answered Marsillat, "she is fourteen or fifteen years old, if not more!"

"I shouldn't have thought it," said Guillaume.

"The people about her are all like that," continued Marsillat; "the girls up to sixteen, and the boys up to twenty, are all small, and have the features of infancy; they develope all of a sudden, and become large and strong when you would believe them stunted for ever. It is the same with cattle and poultry."

"Oh; it is not the same," said Sir Arthur, scandalized to hear humanity so slightly spoken of.

"How she sleeps," said de Boussac; "the sound of a gun wouldn't wake her."

"I've half a mind to try," said Marsillat, attempting to take the piece from Sir Arthur, who firmly refused it, thinking the joke dangerous and cruel. * * * She made a movement as if brushing away a troublesome fly, and turned round with that deep sigh, without effort, without sorrow, peculiar to young sleeping children, which has a certain harmony and purity, inspiring I know not what emotion. Then, without opening her eyes, she fell unconsciously into a most beautiful attitude. Her arm was thrown above her head, her hand small and delicate, though brown, threw back the grey cloth cap, and rested half-open on her magnificent fair hair. It was indeed the freshest face that ever, without veil or shade, braved the ardour of a mid-day sun. There are certain cantons of Berry and the neighbouring provinces, where, spite of the absence of trees, and a life exposed to the effects of temperature, the complexion of the peasants is as pure and delicate as that of the Venetians, or the mountaineers of the Grazien Alps. In the places where this character is not general, it is produced and perpetuated in certain

families, and it is the common opinion that these families are of English origin, the English having, as is well known, occupied our central provinces quite long enough to mix their blood with that of the natives. But I rather believe that the pure blood of the primitive Gallic race has been preserved without intermixture among some rustic tribes of our central provinces.

The sleeper there was fair as the aster of the meadows, and rosy as the flower of the eglantine. But her beauty could have done without this charm, more peculiar to the race of the idle; her features were admirable, the brow low, and firm like an antique statue. The pure lines, and the angelic calm of her countenance, gave her a striking resemblance to those fine forms immortalized by Grecian art. Her figure was not yet developed; but it nevertheless announced strength and flexibility, and the picturesque disorder and ragged dress by no means lessened her charms. The naked feet reposed in the grass, and the half-opened mouth displayed her magnificent teeth. True beauty is always chaste, and inspires involuntary respect. The Englishman was not of a disposition to feel otherwise, and his two hot-headed companions soon yielded to its irresistible influence.

"Heavens!—it is not Lisette; it is Velléda!" said Marsillat, instinctively lowering his voice.

"And why should not Lisette be as beautiful as Velléda?" asked Sir Arthur.

"If I were a painter," said Marsillat, "I'd sketch the divine creature, and if I were alone," added he, returning to himself, "I would soon know if the little goat had any spirit in her."

"Mr. Marsillat," said Sir Arthur, in a solemn tone; "let us go."

"Yes, yes, let's go," said Marsillat, laughing at the virtuous solicitude of the Englishman. * * * * *

"I do not understand," said Sir Arthur, warming himself gradually at the fire of his imagination, "how such ideas can come into your heads at the sight of a child. Gentlemen, you are not worthy to contemplate beauty."

"Yes, yes, my lord only is worthy to contemplate beauty," said Marsillat, mimicking the comic accent of Sir Arthur.

But Sir Arthur perceived nothing of it. The words sounded to him exactly as he pronounced them, and he smiled with an air of paternal pity when the young man treated him as "my lord," with the intention of laughing at him.

Before leaving the "sleeping beauty," each placed a coin in her hand. "And now," said Guillaume, "as we are acting the faëries here, and we're three, the legitimate number for all marvellous tales, it's my advice that we each make her a wish."

"Ah, yes," rejoined Marsillat, and extending his hand over the child's head, "My beauty," said he, "I wish you a merry fellow for your lover."

"My charmer, I wish you a rich and generous protector," said De Boussac, smiling.

"My child, I wish you a good husband, who may love you and help you in your troubles," said the Englishman, in his turn seriously, and with a tone of earnestness, which for a moment arrested the gaiety of his friends.

And all three left the "pierres jomâtres," each believing to have given some pleasure to the child, and doubting nothing that their alms would become in her little hand the instrument of their destinies.

The Fortunes of Roger de Flor; or the Almugavars. In 3 vols. London, Bentley. 1845.

THE eager applicant for "the last new novel" will soundly rate the circulating library keeper who may chance to send *The Fortunes of Roger de Flor* to appease the "hungry edge of appetite." It is indeed a romance in name only, wanting all the characteristics of a genuine fiction. But then, on the other hand, it is not a good history, for it departs too much from fact to deserve that title. It is rather a history spoiled in an endeavour to convert it into a novel by one who does not possess the requisite ability for the undertaking. The author is a very common-place, matter-of-fact sort of gentleman, without a spark of imagination or inventive faculty, with no poetry in him, and no nice perceptions of character. He is an antiquary turned novelist for the nonce, who, with an eye to the marketable quality of the article, has changed a decent history into a bad romance, calculating that the latter may attract the larger circle of buyers. Throughout there is nothing natural and life-like. The *dramatis personæ* are puppets; the dialogues are tame and prosy; the incidents are ill-planned; the plot ill-constructed. Its only excellence is found in its descriptions, especially of battles and "*skrimmages*," which are always spirited. But these would equally have adorned a formal history, and their aid, combined with his undoubted learning and familiarity with the events, men, and manners of the time at which the story is laid, might have secured for him a high place among historians, and honour for which he will strive in vain as a novelist.

The Almagavars were a band of freebooters who infested the Byzantine Empire in the middle ages, selling their services to any purchaser, and fighting on any side at any time. The writer of this romance is of opinion that they came from Spain, and were a portion of its original inhabitants. At the commencement of the 14th century they hired themselves to the Emperor of the East, to protect him against the Turks, their leader being Roger de Flor, of whom GIBBON informs us that he was "the offspring of a marriage between a German gentleman of the court of Frederick the Second, and a damsel of Brindisi," and that he was "successively a Templar, an apostate, a pirate, and at length the richest and most powerful admiral of the Mediterranean." He succeeded in the service for which he was retained; but his troops were a greater curse to the inhabitants than the invaders they had expelled. Ultimately Roger was assassinated at Adrianople, in the presence and at the instigation of the Emperor and the Empress.

This is the history which the author has taken for the subject of his romance, and he has mingled with it the love adventures of Fernan Ximenes, one of his captains, whose passion for a beautiful Greek girl, and the consequences thereof, together with the crosses occasioned by the hopeless love felt for him by Aline, the daughter of Roger de Flor, whose devotion is the only interesting portion of the tale, form together the necessary frame-work for a romance, and a very flimsy one it is.

Being such, we cannot recommend to any library or any borrower, unless very hard driven for "something new."

The Smuggler; a Tale. By G. P. R. JAMES, Esq. Author of "Darnley," &c. In 3 vols. London, 1845. Smith and Elder.

ANOTHER from Mr. JAMES's wholesale novel manufactory. If it be a subject of astonishment how he can write with such railroad speed, it is equally astonishing where he finds readers not absolutely wearied by the tedium of his twice-told tales, spun out by a sort of penny-a-line process to the prescribed length of three volumes. The truth is, Mr. JAMES has fairly written himself out. Good plots do not offer themselves at will, and even character and incident will be exhausted in all savé minds of the highest order. Accordingly, for plots Mr. JAMES has lately substituted scenes, which by much practice he is enabled to extend to any required number of pages, and lo! that which should have been a magazine article, under his skilled hands, grows into a novel. *The Smuggler* is a dull, heavy book, which none but an inveterate romance reader will wade through. The story is said to be founded on facts. At Romney Marsh, about a century since, lived one Mr. Radford, a wealthy magistrate, of good repute to the public, but privately an extensive smuggler, his son being the medium of communication between him and the gang. The King's troops seize a cargo of smuggled goods; there is a fight; the smugglers are beaten, some are killed, others taken prisoners and lodged in Goudhurst Church. A rescue is attempted, but in vain, and in this attack on the church the young Radford is shot by a comrade.

The story is eked out by the introduction of the family of Sir Robert Croyland, who has two daughters in love with two dragoon officers, but thwarted by the promise of the hand of one of them, Edith, to young Radford, as the price of secrecy for a homicide committed by her father in a fit of passion—or at least as he believed; for it turns out afterwards to have been an "accidental death."

Heavy as it is, we suppose there is yet so much of past repute attaching to the name of JAMES, that the libraries must have it. But it is a sad waste of money and time.

Thiodolf the Icelander. From the German of DE LA MOTTE FOUQUE. London, 1845. Burns.

THIS is another of Mr. BURNS's beautiful publications, which unite, to a degree never before attempted, literary excellence with typographical elegance. Such paper, such printing, such engravings, were never seen before save in the costly annuals. Here they are placed within the reach of persons of moderate means; and the child sets upon his shelf in the nursery a book which not long since the man would have deposited in

his library as a treasure, or exhibited in his drawing-room as a gem.

The romance of La Motte Fouque, now, we believe, for the first time presented in an English dress, is the best, though not the most popular, of that author's productions. Certainly it is the most carefully written, the most artistically designed and executed. *Thiodolf* was a favourite with Sir Walter Scott, who doubtless took from it the idea, and perhaps rather more than the idea, of *Count Robert of Paris*. It is observed in the preface, that "the contrast of the luxurious Byzantine court with the rough and self-denying northman forms in each the leading feature of the tale." The superiority, however, will be at once assigned to Fouque, both for the interest of the story, and the graphic pictures of the people and manners of the time. This is just the sort of work which might advantageously be ordered in the book-club, for it will interest every reader; and the member who orders it will be well pleased if at the sale he should not be outbidden.

POETRY AND THE DRAMA.

Œuvres choisies de Scribe, de l'Académie Française. Tome premier. Paris et Londres, 1845. Didot.

This selection from the dramatic works of M. Scribe is a valuable contribution to the library. The name of the wit is, we suspect, much better known than his works. To our countrymen, especially, they are not so familiar as they ought to be. The lively dialogue, the sparkling wit, the fertile invention, the strokes of character, the quiet houmour, will surprise those who have not enjoyed the opportunity or felt the inclination to peruse his plays. The edition before us is a selection from his voluminous works, made with excellent taste, and more elegantly printed and got up than is usual with French publications. Cordially do we commend it to the notice of all our readers who study the French language. They will find their knowledge of it considerably enlarged by the perusal of these dramas.

EDUCATION.

A System of English Grammar, founded on the Philosophy of Language and the Practice of the best Authors: with copious Exercises. By Charles Walker Connon, M.A. Edinburgh, 1845. Oliver and Boyd.

Mr. Connon's system cannot be described within any space we can devote to such a theme; and indeed the volume is so small and accessible in price, that they who are desirous of seeing a really rational grammar may readily procure it. The striking features of this work are, the accuracy of the definitions, and the philosophical construction and arrangement of the rules by which the structure of our language is regulated. To every part of it copious exercises are appended, by which the student may apply the rules he has committed to memory, and ascertain that he thoroughly understands them. These exercises are of various degrees of difficulty, some of them merely testing the pupil's apprehension of what he has been taught, while others require reflection, and are intended to enlarge his acquaintance with the principles of English grammar. It is admirably adapted to schools and families.

POLITICS AND POLITICAL ECONOMY.

The Christian Commonwealth. By John Winter Morgan. London, 1845. Chapman and Hall.

The scheme developed in this handsome volume is a sort of Christian Owenism. It is one of the many propounded by benevolent men earnestly seeking the improvement of society, who have measured other men's hearts by their own, and, forgetful of the selfishness of human nature, have proposed elaborate plans for making happy and prosperous communities upon the co-operative principle.

Mr. Morgan, rightly enough, describes the present state of society in this country as full of evils, and fraught with danger. He complains, as we have done, of the too exclusive tendencies of modern civilization towards material, rather than mental, advancement. He thinks, with us, that happiness has been unduly sacrificed to wealth, and the duties of legislation directed to the preservation of property, neglecting man, who should be the statesman's chiefest care.

But the remedy which he suggests, though plausible in sound, is based upon assumptions which all experience has proved to be false. Mr. Owen tried parallelograms, and common bakehouses, and produce shared among the producers, and he failed, not, as some suppose, because he omitted religion from his scheme, although this hastened the catastrophe; but because he did not take into account the principles of the human mind. He omitted from his calculation such universal faculties as the love of possession of property, ambition, vanity to excel one's fellows, the jealousies and rivalries of neighbours, and the scheme exploded.

Mr. Morgan's plan is substantially the same, but having some improvements. He proposes to form, in the centre of a thousand acres of land, an establishment by which 300 families may support themselves by their labour and provide an efficient church pastoral supervision.

We cannot detail the calculations upon which he erects the superstructure, nor describe the management; but this differs in small degree from all like projects. It is a beautiful and plausible theory; but we do not see in what manner it designs to avoid the rock upon which all its predecessors have split. It is painful to be compelled thus to speak of a project so manifestly instigated by motives of the purest benevolence, and framed with so much ingenuity; but experience has taught a severe lesson to philanthropists, which, if they are wise, they will keep ever before them, and not waste their energies on plans which that experience has proved to be impracticable.

RELIGION.

Letters addressed to the Bishops, Clergy, and Laity of the Protestant Episcopal Church. By J. H. Hopkins, D.D. Bishop of the Diocese of Vermont. Philadelphia: Campbell and Co.

"Novelties which disturb our Peace" is the other title of these letters describing the cause and object of the work. It is much more directly controversial than the sixteen Lectures we have before noticed, and contains nothing very striking; for the Bishop of Vermont is not fitted for a great leader in the regular war of controversy, where abundant learning and high dialectic skill are alike necessary.

What he terms Novelties are four in number. 1. The practical denial of the efficacy of lay baptism, given by the frequent rebaptizing of persons already baptized by non-episcopalian ministers. 2. The refusal of the term Church to the non-episcopalians. 3. The sacramental theology, set forth in Dr. Pusey's famous Sermon. 4. The supposition that the tenets of the Council of Trent can be reconciled to sound Catholic (or orthodox and primitive) doctrine. There are two curious passages, however, which demand a short observation. One is, that the worthy bishop has been so shocked and disgusted by the unbridled license of the *anonymous* press, that he thinks a censorship of the press within the circle of the Church might and ought to be established. This, from an American, is not a little startling. The other is his proposition for a system of internal discipline. In consequence of the various interpretations put by the different bishops, he says, that no bishop has sufficient respect paid to his opinion. As these differences also exist in England, we present his plan for the consideration of those who are deeply desirous of appeasing the present war within the Church, that she may offer a more systematic resistance to all attacks from without, and be a more effective instrument for the spread of true religion among all classes.

First, that we should have but *one code of canon law*, enacted by the whole Church in General Convention, and superseding, of course, all diocesan legislation.

Secondly, that this code should be administered, in each diocese, by the Bishop, acting as judge, with the assistance of a certain number of his Presbyters, as assessors.

Thirdly, that from the judgment of each bishop, an appeal should lie, under proper regulations in every case, to a Board or Council, consisting of not less than seven bishops, with from four to six laymen, in the capacity of advisers and assistants, all of whom should be elected by joint ballot at each General Convention, and should hold their sessions at such time and place as the President of the Council should appoint; the necessary

expenses of such meeting being provided for by the Church at large, in the same manner as is now done for the meetings of the General Convention.

Until there is some such system Bishop HOPKINS considers that the Church which we require to see here, used in its real meaning—the clergy and the laity, the Christian community—has a right to know the sentiments of every bishop, and he has therefore published this expression of his own; an example it would be well for all our own bishops to follow.

ART.

EXHIBITION OF THE ROYAL ACADEMY.

WEST ROOM.

459. *The Bandit Mother.* W. D. KENNEDY.—The highly-hazardous position of the wounded bandit and his wife, on a lofty ledge of rock scarcely wide enough to sustain them, detracts largely from a work which, but for this, would have been a successful one. There is a quiet and harmonious tone of colour throughout, and due attention has been bestowed on the details.

460. *The Judgment of Adam and Eve*, and 610, *The Fall of Man.* J. MARTIN.—These large and prominent pictures display Mr. MARTIN'S singularities both of excellence and defect in no inconsiderable degree. The grandeur of conception, the poetic feeling, and the power of expressing space, which mostly characterize his productions, are everywhere visible here; so too are his extravagances of colour, his ill-drawing, his spottiness and want of decision in the throwing in of his effects.

464. *Portrait of the Earl of Ilchester.* J. LINNELL.—A small but exquisitely-painted portrait. The head is marked with character; the attitude and arrangement of accessories are unaffected, and the colouring is pure and of a warm tone.

471. *The Maréchal Duc de Biron exasperated by the ungrateful conduct of his sovereign, Henry IV. is about to break with him for ever.* G. LANCE.—We have here an imposing and charming picture. The artist has boldly and clearly conceived his subject, and his embodiment of it on canvas is most successful. The figure of the Duke, in his splendid suit of mail inlaid with gold, is manful and dignified, and the expression stamped on his countenance is legibly that of sudden and violent anger. His lovely sister too, the Countess de Roussin (who urges the most eloquent of dissuasions when she reminds him that the very sword which in resentment he is seizing was that by which the King had formerly saved the Maréchal's life), is equally perfect, both in expression and position. The composition of this picture, which abounds in appropriate accessories, is well governed and picturesque; and the distribution of light and shade, the clearness and truth of colour, and the attention bestowed on the finish, are beyond mere praise to reward.

473. *Evening after a Sea-fight.* C. R. LESLIE.—There is astonishing force in this work. The sun has gone down behind the dark waste of waters, as if glad to quit the view of so terrible a scene. His rays illuminate the thin edges of cloud with a bloody hue, and are reflected in the shattered vessels and the billows below. On the right, dismantled by the action, lies a heavy ship; and against the strong light in the west is seen projected the masts of a sinking frigate, with sailors clinging to the shrouds, as the hull settles hopelessly down in the water. For vividness of light, depth of atmosphere, and for the melancholy sentiment which prevail throughout this sea-piece, there are few works in the exhibition to compare with this.

475. *Scene from De Foe's Robinson Crusoe.* A. FRASER.—The interesting sailor is here represented attended by his dog, his goat, his cats, and his parrot. He has sat down to his meal, and is in the act of thanksgiving. There is too much of brown in the colour, which otherwise would be meritorious, since it is transparent, and laid on with a full pencil.

485. *Landscape and Cattle.* R. HILDER.—A naturally composed landscape. The tints are in some places too violent, but the effects are artistically laid. Relative distances, too, are well expressed.

486. *Portrait of the late John Thomas, Esq.* S. COLE.—This is a clever cabinet three-quarter-length portrait. The figure stands erect, yet easy; the head is impressed with life and *mind*, the colour warm and pure, the composition unaffected, and the finish exquisite. A few such works as this (for with the well-informed they carry an irresistible self-recommendation) must add equally to the emolument and the distinction which Mr. COLE has already earned.

488. *An old View on the Thames.* S. R. PERCY.—This landscape, from its simple truth to nature, will well repay inspection. It effectually carries the mind from the noisy hum, the close atmosphere of the metropolis, to one of those calm, fresh, and pure scenes in which the soul delights, because they minister to her holy pleasures. In the composition there is no sacrifice of truth to mere picturesqueness of line; the handling is characteristic of the objects which it intends to convey; and the colouring is that of simple Nature herself. We have rarely seen water more finely painted; the reflection on the pool reminds us of CUYP.

498. *The Village Pastor.* W. P. FRITH.—This is a work to which, though we spoke highly of it in the summary which prefaced this criticism, two numbers back, we did not award that high distinction to which it is justly entitled. Every examination of it since has raised our estimate of this clever picture. It represents a clergyman, yet in the grave-yard, returning from church on the Sabbath. His parishioners surround him, and a playful forward little girl is laying hold of the good man's gown, for which her mother hastily reproves her, though she has the beneficent regard and caress of the pastor himself. Behind is the time-hallowed house of God, and on the left a glimpse is afforded of the village. Seated on a tomb in front is a lovely girl perishing of consumption, and leaning fondly on a widowed mother, who affectionately supports her while she claims the attention of the approaching minister. There is a pathos in this group that would move a heart of stone. The expression of the dying girl—her arm and attenuated fingers languidly extended on her lap—and that too of tearful anxiety and sympathy in the already bereaved mother, may not be witnessed without emotion. Rarely have we seen throughout a work in which so many figures are introduced, the story so unmistakably told. The colouring is happy, and the variety of figures becoming. Here and there the artist has sinned against proportion, and in his drawing he is not always correct. These, however, are blemishes which painstaking will remove. The higher requisites of a great artist he undoubtedly possesses. The creative might of conception, the mastery of expression, the power of conveying his intention, of grouping, and other combinations evinced by Mr. FRITH in this work, set all doubts at rest of his future eminence; we shall henceforward look with interest for his productions.

501. *Scene on the Lynn, North Devon.* H. J. BODDINGTON.—A veritable reflection of nature. It abounds in fresh atmosphere and light. Perhaps the handling is a little too careless to satisfy a censorious critic, who might also object to some parts as being over-green.

515. *View near Ournelo Contrada di Sora, Kingdom of Naples.* W. LEITCH.—It is the fault of most artists, who at home paint pictures of foreign scenes, that though they may give correctly the physical features and other accessories of the prospect they describe, their skies and atmosphere are our own. Here this objection has no place. It is a just compliment to say of this work, that it is thoroughly *foreign*. The town on the rocky height, running through the middle ground, and casting its shawdow across the valley, produces a happy effect. There is here no straining after picturesqueness of line; the artist has obviously relied almost entirely on the simple combinations of nature; hence the force that marks this work. The figures are appropriate both in costume and position; there is throughout a silvery homogeneous colour, and much pains have been devoted to the finish.

522. *Females at a Fountain.* J. GILBERT.—With striking force, there is a stiffness in the draperies, and a hardness of line, that remind one of the works of FRANCIA. The combinations are original and clever, and the colour is admirable.

539. *Scene from Hamlet.* F. STONE.—In this work, Ophelia is represented kneeling beside the feet of the Queen, and singing the sorrowful lines, "White his shroud as the mountain snow," &c. The expression of distress in her beautiful countenance is finely represented. The figure of the Queen has too much the semblance of an academy model, into whose features the artist has thrown a sympathy that the heart does not participate. The contrasts are feeble, but the flesh-tones are happy.

540. *The United Service.* A. MORTON.—Character is well expressed in the veterans here assembled. A trait of nature has been given by the artist where he represents George Copestick, the old Life-Guardsman, with his hand to his ear, stooping to listen to the remark of the fair young girl seated on the bench beside him. The light and shade are judiciously distributed, but there is a rawness in the colouring which it is to be hoped time will subdue if not remove.

547. *Portrait of his Royal Highness the Duke of Cambridge.* W. FISHER.—A cleverly-painted head, of a low, sweet tone, accurately drawn, and most carefully painted.

546. *Dr. Tillotson administering the Sacrament to Lord and Lady Russell the day before Lord Russell suffered.* A. JOHNSTONE.—This is a finely conceived, and as ably executed historical picture. In the centre of the composition kneels Lord RUSSELL, with the chalice in his hand, and on his right the lady RACHEL. On the left, with upraised eyes, imploring the sanctification of God upon the Sacrament, stands Dr. TILLOTSON; and beside him, in a black gown, Dr. BURNET. The attitudes and expression of the principal actors are appropriate, and convey powerfully the intention of the painter. The light is so led through the picture as to display with happy effect, and to the best ad-

vantage, all that is necessary should be prominent. Though the colour is low, it has a force quite startling; one only material drawback is there, and that is in BURNET, who has a sinister expression of the eyes, that, as it was doubtless intended, we are at a loss to comprehend. He looks askance at Lord and Lady RUSSELL, in a manner that would at any time be remarkable, but on so solemn an occasion, is highly indecorous and censurable. We are curious to learn the artist's motive for this peculiarity.

554. *A Cave near Ashburton, Devon.* A. W. WILLIAMS.—A charmingly-painted landscape—one that justly deserves praise. The effects are skilfully disposed, and the colour is natural. The trees, though not without merit for the freedom with which the foliage has been painted, want better massing, and are not as round as they should be.

572. *The Pirates of the Archipelago.* H. MONTFORT.—A gloomy air of reality distinguishes this work. The pirates are skirmishing from a height; and the bustle and action of the figures well convey the exciting idea of an engagement of such a nature.

578. *Jochebed, the Mother of Moses, and Miriam, his eldest Sister, about to deposit him in the Ark of Bulrushes.* E. U. EDDIS.—This impressive picture shews Jochebed imploring the protection and blessing of God for her son before she commits him to his fate upon the waters. It was a happy thought of the artist to represent the mother holding the child to the breast up to the latest moment before she parts with him. For grandeur of composition, and breadth of parts; for moving and truthful expression; for forcible oppositions and harmonious colouring, and for the dominancy of one appropriate sentiment throughout, this work is admirable, and certainly not surpassed by any in the gallery.

579. *The Origin of the Guelph and Ghibelline Quarrel.* A. ELMORE.—This picture is more recommended by its colour than by any other quality. It wholly lacks that first essential to a work of art—intelligibility of the story.

586. *Portrait of the Marchioness of Ailesbury in a Spanish Costume.* A. E. CHALON, R.A.—Had not the name of this artist been affixed opposite the number of this work in the catalogue, we should never have believed it was his. He has utterly marred by his treatment of it a beautiful face. A head and face and hand worse drawn, we hardly remember to have seen; the colouring too is smeared and impure.

587. *The Frightened Flock. A Scene on the Coast of Calabria.* E. VERBOCKHOVEN.—Remarkable for its strength and closeness to nature. A shepherd and his flock assailed by a storm, retire from the surge-beaten coast to a refuge among the cliffs. The sheep, goats, and dogs are finely painted, the textures being imitated with singular fidelity.

605. *Uriel and Satan.* B. R. HAYDON.—With all its extravagance, its heaviness, and strange colouring, there is merit in this picture; for it conveys to the mind at least *an idea*, which every work of art does not. The figure of the archangel is unspiritual and heavy, but the descending Satan is clever; it is original in line; he seems to rush down earthwards through space, on his cruel mission, with eagerness and joy. Mr. HAYDON has indulged in the flattering imagination of comets whirling along their paths, and of nebulæ resolving themselves into systems, with no common satisfaction. Before he undertook this, however, he should have acquired TURNER'S art of giving *distance* to these bodies; as here painted, they look more like mottled soap-balls, or globes filled with coloured sand, than the self-luminous bodies they are intended to represent.

We now pass into

THE OCTAGON ROOM,

Not inappropriately named "The Condemned Cell;" but which offers at least one advantage, that if it veils merits, it hides defects; and as the latter predominate, perhaps the arrangement is a merciful one. It must be confessed that the "hanging committee" (how aptly called!) for the most part display a sound judgment in their sentences condemnatory of spoiled canvas to this black-hole; but sometimes they err, and send thither pictures that really deserve respectable places, where light can come to them. A few of such are to be found even among the crowd of sign-boards that cover the walls.

No. 620, *Sir Roger de Coverley, Will Honeycomb, Sukey, &c. in the Temple Cloisters*, by W. FISK, is a clever picture, full of character and expression, and with some traces of originality, especially in the conception of such well-worn subjects. It is a work of promise.

No. 625. *A Road Scene, Devon*, by G. A. FERRIERA, is an abstract of nature. The colouring is rich and good, and there is a harmony of hue upon which the eye reposes with pleasure.

No. 626 is one of the best pictures in this room; *An Illicit Still in Glenfort*, by J. P. PHILLIP, a work of uncommon power, singularly real, and telling its story perfectly. It is a fabulous composition, finely drawn and coloured, and certainly ought not to have been thrust into such a place.

No. 637, *A Scene from the Wandering Jew*, where Morok looses the panther upon the old horse Jovial, is from the easel of A. CORBOULD, and the subject has been handled with very considerable ability. The posture of the panther preparing for the fatal spring is most truthful, and the terror of the horse is admirably expressed. The accessories too are good. With study, the artist must obtain eminence as an animal painter.

No. 647, *A Scene near the Thames, Oxfordshire*, is a landscape of no trifling merit; the composition is clever, and the colouring remarkably good; there is a coolness and clearness in the tints, which all were surprised to see in an artist whose name is so little known, and still more surprised to find in this room. Artistically viewed, and the painting in some parts is woolly, but its merits in other respects mark the hand of a master. The artist's name is H. B. WILLIS.

No. 656, *The Image Dealer*, by F. W. EDWARDS, is another creditable production. The visitor should not quite pass it by unnoticed. There are worse pictures in the better rooms.

No. 661. *The Itinerant Musician.* By G. A. WILLIAMS. A landscape in fact, the figures being only accessories, and as such, a pleasing and interesting composition. The artist has an eye for the picturesque, and masses well.

No. 667, *The Song of the Olden Time*, by J. C. HOOK, is beyond comparison the best picture in the room, and it is among the best in the exhibition. It is, indeed, a high-class work. The form, the expression, the colouring, especially of the lady, are beautiful. Why it was thrust into this hole will excite the surprise of all who can appreciate art. The painter who could produce such a work cannot long remain unknown. His merits must force themselves into a better position hereafter.

No. 673, *Watt's first experiment on Steam*, by R. W. BUSS, will reward inspection. The boy busily engaged with the kettle, and watching the steam coming from the spout, while his aunt looks on with a mixture of anger and affection upon her face, are portrayed with no small ability, and record vividly an incident which Arago notes in his memoir of WATT, as "the great engineer preluding to the discoveries which were to immortalize him."

No. 674, *The Morning Sport*, by W. S. P. HENDERSON, is a good subject well handled. There is a freedom of brush which gives promise of better things than either this or its companion, *Genevra* (675), by the same artist.

These are all worth noting in the Octagon room; the rest are either mediocre or positively bad, and the artists being for the most part beginners, there is no call for fault-finding, especially as our business is rather to play the part of guide than of censor.

SCULPTURE.

1324. *Marble Statue of Sir Sidney Smith to be erected in Greenwich Hospital by order of Government.* T. KIRK.—It will be fresh in the memory of our readers that a loud and violent outcry was raised by English artists, and much censure heaped upon the government for their employing Mr. KIRK (who, we believe, is a Scotchman) to execute this statue. The result, however, has vindicated the judgment of the authorities, and a work has been produced which we greatly fear no English sculptor could have rivalled—certainly there is nothing of equal merit to it in this year's exhibition. Sir SIDNEY is represented standing on a shattered rampart in the act of command. Embedded in the stone beneath his feet is a cannon-ball—a happy idea—and beside lie the fragments of an exploded mortar. His attitude is characteristic; his countenance marked by a self-possession and an interest in what is passing before him. The difficulty presented by the formal cut of the uniform dress is ably surmounted. The whole forms one of the most animated and spirited statues we have seen for many a year.

1325. *Marble Statue of the Marquis of Wellesley for the Board-room of the Honourable East India Company.* H. WEEKES.—This, too, though differing altogether in sentiment from the foregoing, is a good statue. The marquis holds a scroll in the left hand, while the right is raised, as if in the act of addressing an assembly. Over his shoulder is a cloak, the folds of which are skilfully disposed, and add greatly to the grace and breadth of the effect.

1327. *Statue in marble of a Nymph preparing for the Bath.* E. H. BAILEY, R. A.—This is a sweetly-conceived work. The pose of the figure is unhackneyed, though natural. The hips are, perhaps a trifle too narrow. The delicacy of chiselling and general finish are perfection.

1328. *A Gladiator.* COSTOLI.—This small statue of a dying gladiator deserves attention for the novelty of its attitude, the exactness of its anatomy, and truth of expression.

1329. *Paul and Virginia.* W. C. MARSHALL, A.—A winning, delicately-executed group. The attitude of Paul under his fair burden is correct, while the confident expression of his countenance, and that of timidity on Virginia's, are legibly expressed.

1330. *Marble Statue of her Majesty Queen Victoria, for the Royal Exchange.* S. G. LOUGH.—What we said of this heroic statue in our summary we have since been confirmed in by re-

peated examinations. It is heavy, and undignified in an offensive degree.

1331. *Marble Statue of a Dancing Nymph.* J. GOTT.—A work that does great credit to the artist, whose name is new to us. The proportions are good, the line is graceful, and there is actual motion—rare merit in the figure. The artist has tinged with brown the armlets and the fillet which binds up the robe, by which, in this case at least, a good effect has been produced.

1333. *The first Whisper of Love.*—A clever group. The expression of delighted surprise in the face of the nymph is happily given.

1337. *Marble Statue of the late Colonel Conway, for Madras Cathedral.* J. TERNOUTH.—The figure stands well, but the attitude is a worn-out one. The line is incorrect in its drawing in more points than one. Take, for instance, the left shoulder, which is obviously out of drawing.

1338. *Marble Statue of the late Dr. Goodall, Provost of Eton.* H. WEEKES.—A fine, well-composed, recumbent statue. The head abounds with intelligence, and is strongly marked with character. The cast of the draperies is flowing and novel.

1363. *The Child's Attitude.* J. BELL.—We have in this a most delightful and expressive statue. The attitude is new, yet evidently that of nature; the legs are closed, and the hands doubled and turned inwards to the armpits, and the head inclines slightly forward. The countenance is a lovely one, and full of a sweet expression. Altogether this forms a highly fascinating work.

There is the usual number of busts; few, however, possess such striking merit as to deserve detached notice. Among the best are, 1374, *Bust of Professor Wilson*, J. FILLAMS; 1398, *Bust of the first Lord Clive*, J. E. THOMAS; 1453, *Bust of Dr. Watson*, T. BUTLER. All of these are marked with character and thought, and are delicately finished.

CHIT-CHAT ON ART.

BRONZE WORKS OF ART.—By an order, dated January 5, 1839, the Lords Commissioners of the Treasury directed, on an application praying that certain metal figures made of bronze might be admitted to entry at the rated duty of 1*l.* per cwt. payable on works of art made of bronze, in lieu of the *ad valorem* duty of 30 per cent. which had been demanded thereon, as manufactures of brass; that all works of art, whether of bronze, brass, or of any other metal, were to be admitted to entry on payment of the same duty as on articles made of bronze, viz. 1*l.* per cwt. as requested. A question has recently been made with respect to a number of bronze figures, similar to those which have been passed as bronze works of art, being figures composed of a compound metal, known as bronze, and of no other use than as ornamental specimens of art, which the officers detained as not coming within the meaning of the resolutions of the House of Commons, admitting "bronze works of art" free of duty. And it being considered that, as all works of art, of whatever metal they may be composed, were admitted at the same rate of duty as "bronze" by the treasury order above quoted, the articles should continue to be governed by the principle of that order. It has been decided that all works of art, whether composed of bronze or other metal, are to be delivered free of duty. It appears that the only works of art charged with duty under class 6 of the tariff are bronze, and, therefore, it would account for the cause of their only being inserted in the list of articles admitted free by the recent resolutions of Parliament.

CARDINAL FESCH'S SALE OF PICTURES.—By a letter received from Rome, May 15, we learn that this vast and important sale of pictures has been brought to a conclusion. The following are the prices of the principal pictures sold since our last notice of this sale:—Watteau, a pair of fine landscapes, with fêtes champêtres, freely painted, 28,245f. to M. George; Perin del Vaga, the Adoration of the Shepherds, a fine gallery picture, a little too red in tone, 9,179f. the same; Wouvermans, a large battle piece, full of expression, and finely painted, 25,420f. Thibaut; Rubens, the Adoration of the Magi, a gallery picture, not entirely by Rubens, 14,122f. the same; Teniers, Christ Crowned by Thorns, of the finest execution of the master, 25,420f. the same; Guido, the Assumption of the Virgin, 9,038f.; Berghem, a cattle piece, cabinet size, 6,880f. Walsh; A. V. Velde, Jacob's Journey, an extremely fine picture, having upwards of sixty animals, 50,840f. Marquis of Hertford; Greuse, La Prière à l'Amour, engraved in the Choiseul Cabinet, 34,797f. the same; Raphael, the Crucifixion, an early production, partaking of the qualities of Pietro Perugino, 56,490f. Prince Canino; Rembrandt, St. John Preaching, *en grisaille*, may fairly be called an etching done with the brush in colour instead of the needle, of the finest character, upwards of seventy figures, 75,320f. the same; Greuse, a lovely little flower-girl, 10,224f. Rothschild.—*Galignani.*

THE DRAMA.

THE complaints so rife two or three years ago, as to the decline of theatrical matters in this country, by reason of insufficient patronage, could hardly be advanced now. Go to what theatre you will, where any thing worth seeing is to be seen, whether in opera, or play, or farce, or melodrama, or ballet, and you find a full attendance in all cases; in some, an absolutely oppressive crowd. At the Opera, notwithstanding the highly proper strictness with which Mr. LUMLEY enforces the regulations, so long set aside, as to dress, the visitor who is but a quarter of an hour or so behind his time is fortunate if he find standing-room. At the French Plays, every seat is occupied; the Haymarket is equally blessed; at Drury Lane, now that *The Enchantress* has resumed her wand, the same pleasant circumstance may fairly be stated. Mrs. KEELEY is thoroughly satisfied. From Mrs. WARNER it would need no peculiarly skilful cross-examination to elicit that she is doing "pretty well"—a large admission in such cases. The Adelphi, as a matter of course, is full, and the Princess's rejoices in the combined attractions of Mrs. STIRLING, Miss CUSHMAN, and Mr. WALLACK. Thus far have we ascertained the state of things; and it is our intention, as soon as possible, to see what is going on at the other theatres, which we have not as yet found time to visit, and where we hope to find entertainments, in their various classes and degrees, not less worthy of public support than those which are enriching the establishments we have just specified.

At the OPERA, *Don Giovanni* has been received with thorough appreciation of its own unsurpassed merits, and of the great artists to whom its execution is assigned. FORNASARI is unquestionably the best *Don Giovanni* we ever saw; and we say this with a full recollection of his admirable predecessor, AMBROGETTI: he acts the part fully as well, and his voice is of a quality to which the latter did not even pretend. We have, by the way, often wondered, musing thereon somewhat sorrowfully, how AMBROGETTI got on at *La Trappe*, in which living sepulchre, it may be remembered, he and ANGRISANI, another opera star of that period, on some sudden determination, as it seemed, shut themselves up. Did the penitent become a statue, less animated than his theretofore marble guest? or did he, ever and anon in his lonely cell, turning his voice inwards, that so none might hear,—hideous contrast to all he so late remembered,—murmur, "La ci darem;" or, with a fearful joy recall "Vivan le femmine," *viva il vino*! themes delicious in themselves, and glowing with all the lustre of past triumphs. Poor fellow! *Lindo di Chamouni*, after two years' repose, has been revived at this theatre with excellent effect, CASTELLAN taking the part formerly filled by PERSIANI, and MORIANI succeeding MARIO as the *Visconte de Serval*, a part, however, which was originally written for MORIANI, and which he fills in a manner thoroughly justifying the composer's selection. Greatly as we admire PERSIANI, and much as we regret her loss, we are bound to admit that CASTELLAN has shewn that, as to this opera at least, the loss is not irreparable. When we say we are bound to admit this, we should rather say we most gladly find it to be the case, and for this reason mainly, that it is highly important for all parties, public, performers and managers, to have ascertained by actual experience that there is more than one competent artist available for leading characters in opera, as in the drama generally. The arrogance, the iniquities of self-attributed *uniquity* absolutely require a check of this effectual character. *La Esmeralda* has been produced, with CARLOTTA GRISI as the charming *Truandaise*, a part which she performs with excellent judgment.

Under the head Opera, we may mention, which we do with much pleasure, that Mr. TRAVERS, the tenor, who made his *début* some years ago at Covent Garden, is now singing with great success at the *Teatro Carcano*, at Milan.

The only novelty to be recorded this week as to the little theatre in the Haymarket, where JERROLD'S play continues in full vogue, is the reappearance, for the first time these twelve years, of Mr. HACKETT, the American comedian, who, by royal desire, enacted the principal character in *Monsieur Mallet* on Monday evening; and enacted it with the most truthful and touching effect. The Queen and her Royal Consort were highly gratified, and manifested that gratification by frequent and cordial applause, setting herein a good example to the morbid genteel, who have a notion it is not "the thing" to seem pleased, however much you are so.

At the ST. JAMES'S THEATRE, the *Mariage de Figaro*, which was to have been produced some weeks ago, on the occasion of CARTIGNY'S benefit, but was then necessarily postponed, in consequence of the illness of a principal performer, was presented on Friday night, with PLESSY as *Suzanne*, REGNIER as *Figaro*, from whose lips the wit of BEAUMARCHAIS sparkled with full effect, in all its freshness (and fresh it will ever be, while mankind continues what mankind is,—a longer tenure than any known in law), in all its poignancy. As to PLESSY, we are certain that BEAUMARCHAIS was not only a long-sighted, bu

moreover a second-sighted man, and that he had her in his eye as he chuckled over each cutting epigram that he put into the mouth of his roguish soubrette. Her easy self-possession is delicious; and, as a contemporary well remarks, her enjoyment of *Cherubin's* gallantries, to say nothing of her reception of the *Count's*, is a lecture to a prude. REGNIER hit off the barber to a sarcasm; his conception of the character manifesting a thorough knowledge, not only of his profession, but of his author. CARTIGNY was exactly the *Bridoison* that BEAUMARCHAIS drew.

Mademoiselle PLESSY took her benefit on Wednesday. The only novelty on this occasion was her enacting *Lady Freelove*, in the farce of *The Day after the Wedding*, one of the pieces represented by her and Mr. MITCHELL'S English company at the Tuileries, before Louis Philippe. Mademoiselle PLESSY'S command of our vernacular is sufficient to relieve her from any embarrassment in this respect, and in all others her excellence is now well known; her charming ease, her graceful animation, her perfect truth to nature.

DRURY LANE, after remaining closed for several nights, in consequence of Madame THILLON'S illness, opened again on Monday, *The Enchantress* having recovered her powers, though she seemed, we regretted to observe, to exercise them with considerable pain to herself. The *opera*, certainly a most triumphant one, is now performed every evening.

At the ADELPHI, we have a new farce from the pleasant and practised pen of Mr. SELBY, entitled *The Irish Dragoon;* the jest of which turns upon the delinquencies of an eminently improper wine-dealer, nefarious alike as man and as merchant, who, in his wife's supposed absence, is running after a veiled damsel that has thrown herself in his way; and the moral retribution which awaits him, in finding out that the veiled one is no other than the neglected wife herself, who has taken this mode of *satisfying* herself as to her husband's infidelities. SELBY is exceedingly amusing as *Mr. Brown Sherry*, the Lothario of the piece, and he is very pleasantly supported.

At COVENT GARDEN, we perceive by the advertisements, a series of twenty French operas are about to be presented by the company of the grand French opera at Brussels. The *Repertoire*, announced as an extremely promising one, comprising *Guillaume Tell, La Favorite, La Muette di Portici, Robert le Diable, La Reine de Chypre, Les Huguenots, La Juive, Les Diamans de la Couronne, La Part du Diable, Le Postillon du Longjumeau, Le Maçon, Le Domino Noir, La Sirène, Le Cheval de Bronze, Le Pré aux Clercs, Polichinel*, &c. &c. The series commences next week, and we are disposed to anticipate will be highly agreeable to the public, and, as a matter of consequence, profitable to the speculators.

PRINCESS'S THEATRE. — This elegant and always interesting theatre has introduced a very promising "*young lady*, her first appearance on any stage;" such was the announcement in the bills. In the clever and amusing farce of *The Wedding Day*, she played her part with so much genuine nature, such an entire absence of affectation, so much ease, and so much truth, that the audience were charmed into breathless silence while she was upon the stage, and gave vent to their delight in rapturous applause when she quitted it. At the fall of the curtain she was called for to receive the congratulations of a crowded house upon that which must be pronounced an entirely successful *début*. She possesses, moreover, the advantages of a fine person, a pleasing face, and a very merry twinkle of the eye. Her faults are few, and such as practice will cure. The manager of the PRINCESS'S has, if we are not greatly mistaken in our estimate of her talents, found a prize in her. But while we add our hearty congratulations to those of the audience upon what she has done, let us exhort her to receive the praise she has already earned only as an incentive to study, by which alone she can win that high position in the drama for which she has the natural abilities, if they be but industriously cultivated, with the resolution, at every onward step, to do better still.

SADLER'S WELLS.—The second original play Mr. PHELPS has produced since the commencement of his excellent management of this former stronghold of melodrame and pantomime, was performed for the first time on Wednesday se'nnight. The first experiment, *The Priest's Daughter*, although written by so fortunate and practical a playwright as Mr. SERLE, had but a doubtful success; whether a better fate awaits the second, time only will shew.

The *King's Friend* is our old acquaintance, the *Duc de Sully*, who, revisiting this habitable world, exhibits his devotion to the cause of his king and country in a most extraordinary manner. We, in our ignorance, have been accustomed to think of *Sully* as one of the most sedate and ceremonious of ministers; judge then of our surprise to see him laying aside all diplomatic gravity and discreetness, unable to conceal his uneasiness, and talking incoherently in the presence of ladies; now scaling garden walls, then fighting at the rate of ten to one, involving himself and others in most ridiculous scrapes, out of which he only escapes at the fall of the curtain.

Some authors have informed us of *De Rosni's* love of state, and the solemnity observed in his household; also of the number and discipline of his servants. In his later days, we are told, he never promenaded for an hour without his attendants being marshalled by roll of drum. Yet here, in his own house, we meet with only his amanuensis, *Muignan*, who goes about with the manuscript of his master's memoirs in his pocket, ready to add thereto the earliest particular of any new incidents that may occur in the history of the noble marquis. *De Rosni*, too, is both garrulous and noisy, walking or rather limping about, and flourishing a large stick, like the old uncles in ancient, and, we believe, modern farces.

Truly, if *Muignan* had properly performed his duty, and recorded the curious events here represented, the world would have formed a very different opinion of the wisdom of the famous marquis; but the amanuensis, following the recommendation of King Henry, wisely left out these additional particulars as unworthy a place in history, and more fitted for romance and five-act plays.

The scene of the play is Nantes, and the action commences shortly after the great battle of Ivrai, which we afterwards learn was solely gained through the spontaneous loyalty of *Madame Chateaupers* (Mrs. WARNER), who magnanimously parts with her immense wealth to save the distresses of the king, whose army, under *Sully's* command, refused to fight without some arrears being paid. At the opening of the play we recognise the great minister and historian, he being busily engaged in confidentially unfolding the affairs of the king's party to the before-mentioned secretary, *Muignan;* his chief difficulty, like ministers of more recent times, is to consider the ways and means to raise supplies to quiet the still turbulent Swiss mercenaries. It is his endeavour to replenish the empty treasury, and the misadventures arising therefrom, not a little augmented by the unexpected presence and inconsiderate conduct of his most Christian majesty, that furnish the subject-matter of the play. Of course, all ends happily; the king gets possession of his good city of Nantes again, confounding the machinations of the *Seigneur de Fresne* (G. BENNETT), a worthy who, as superintendent of the city, had sold it to the League, and would have betrayed his king. *Henri* pays a compliment to the devotion of his friend, unites the lovers, and prepares to enter, as king and conqueror, into Paris.

The King's Friend was received throughout most favourably, and much credit is due to the dramatist, who has certainly written an amusing and clever piece, though he must be content to see it take rank as a melodrama. Great care, too, has been used in its production. All the actors were perfect in their parts. The scenery was excellent, a view of the superintendent's gardens especially. PHELPS, as the king, was admirable; he was, perhaps, a little too bluff for the polished *Henri*, but he looked the good-hearted, enterprising, and gallant monarch. Mr. MARSTON made the *Marquis de Rosni* more the rough soldier than the reflecting minister, but probably he satisfied the author. Mrs. WARNER, as *Madame Chateaupers*, was handsome enough to secure her lover the marquis; and Miss COOPER looked interesting—she could do no more. At the close of the performance all the principal performers were called for; there was also a call for the author, to which he did not respond.

ORIGINAL CONTRIBUTIONS.

My wife and child, come close to me,
The world to us is a stormy sea:
With your hands in mine, if your eyes but shine,
I care not how wild the storm may be.

For the fiercest wind that ever blew
Is nothing to me, so I shelter you;
No warmth do I lack, for the howl at my back
Sings down to my heart, "Man, bold and true."

A pleasant sail, my child! my wife!
O'er a pleasant sea, to many is life;
The wind blows warm, and they dread no storm,
And wherever they go, kind friends are rife.

But, wife and child! the love, the love,
That lifteth us to the saints above,
Could only have grown, where storms have blown,
The truth and strength of the heart to prove.

EBENEZER JONES.

NECROLOGY.

WILLIAM LAIDLAW, ESQ.

We have to record with genuine sorrow and regret the death of Mr. William Laidlaw, author of the exquisitely simple and pathetic Scottish ballad, "Lucy's Flittin'," and various contributions to natural history and general literature, besides being peculiarly distinguished for his long and confidential intercourse with Sir Walter Scott at Abbotsford. Mr. Laidlaw died on Sunday, the 18th inst. at Contin, in the county of Ross.—*Inverness Courier.*

MRS. KEMBLE.

This lady, whose death took place a few days since at Leamington, was the widow of the great tragedian, John Philip Kemble. Like the widow of Mr. Garrick, she very long survived the celebrated actor to whom she had been united, her life having been prolonged to the age of almost ninety. She was probably the oldest member of the theatrical profession, upon which she had entered in very early youth, while Mr. Garrick was yet at its head. She was first married to Mr. Brereton, an actor of fine person and some talent. Not many years after his decease she became the wife of Mr. Kemble, to whom she remained fondly and proudly attached. He died about twenty years ago at Lausanne, and left her in easy circumstances and without family. Returning to England, she took up her abode at Leamington. Until the last year, when her frame began to decay, her hospitable residence was the resort of all the eminent persons who visited Leamington. The charities and the poor of that place had a liberal friend in her; and her lively conversation, her long knowledge of the world, and her well-stored memory (which, like her other faculties, remained unimpaired by her great age), made her, to the last, a highly agreeable and popular member of society. A great part of her income ceased with her life. Of the property which she has left, the larger portion goes to Mr. Charles Kemble and his children, and the residue chiefly to nieces, friends, and servants. The piece of plate which was presented to Mr. Kemble on his retirement from the stage is given to Mr. George Siddons, the only surviving son of the great heroine of the drama; and Sir Thomas Lawrence's admired picture of Mr. Kemble in plain clothes is a legacy to the Earl of Aberdeen.

SIR ARTHUR BROOKE FALKNER, M.D.

We deeply regret having to announce the death of Sir Arthur Brooke Falkner, M.D. which took place most suddenly on the evening of the 23rd inst. at his villa, Evington, near Cheltenham. Sir Arthur had retired for some years from medical practice, in which he had been eminent at Cheltenham. He had very considerable literary talent and professional acquirements, and his evidence before Parliament on the question of the plague contagion was considered both interesting and instructive. His loss will long be mourned by his numerous friends and acquaintance. He distinguished himself greatly in the Peninsula and elsewhere.

GLEANINGS,

ORIGINAL AND SELECT.

Singular Fact in Natural History.—If all the accidental or eccentric deviations from the laws of nature which happen among the feathered tribes were recorded, it would form a pleasing addition to the studies of the ornithologist. The following remarkable occurrence (similar to the mysterious practice of the cuckoo of Great Britain, and the cow bunting of America) was discovered lately, within eighty yards of the residence of Mr. Bruce, gamekeeper to Lord Lovat, at Beaufort Castle. A nest was found, in which there were a woodcock's and bantum hen's eggs. The first possessor of the "local habitation" cannot be ascertained; but, at all events, there the woodcock sits close, and so tame that she remains undisturbed by visitors, who are anxious to notice the coming out of the brood. Should all the eggs produce birds, the movements of the young pullets will be watched, in order to observe whether they remain with their foster parents, or join the first party of chickens they meet with. —*Ross-shire Advertiser.*

Mortality in the Colonies.—At a late meeting of the Statistical Society an interesting paper was read by Assistant-surgeon Balfour, on the mortality of the army, in the course of which the following tabular result was given in regard to the colonial establishments: Annual mortality per 1,000—New South Wales, 14.1; Cape of Good Hope, 15.5; Nova Scotia and New Brunswick, 18; Malta, 18.7; Canada (Upper and Lower), 20; Gibraltar, 22.1; Ionian Islands, 28.3; Mauritius, 30.5; Bermuda, 32.3; St. Helena, 35; Tennaserim Provinces, 50; Madras Presidency, 52; Bombay Presidency, 55; Ceylon, 57.2; Bengal Presidency, 63; Windward and Leeward command, 85; Jamaica, 143; Bahamas, 200; Sierra Leone, 483.

The Woodcock at Beaufort.—We lately stated the singular circumstance of a woodcock having her own and a common hen's eggs in one nest, near the keeper's house, at Beaufort Castle. Some days since, Mr. Bruce, the gamekeeper, paid a visit to the spot, when he discovered a chicken peeping from under the woodcock's wings. The old bird fluttered out, and flew round, anxiously watching the fate of her chance youngling. On returning to the place a few minutes after, both birds were gone, the chicken having been carried off (as is the custom of woodcocks with their own young), both for safety and for food. She returned no more to the nest, and the eggs were removed and put under a bantam hen. They were hatched in due course, but from her inability to give the adopted family proper food, they all died. The woodcock is occasionally seen, but where she has hidden the chicken has not been discovered.

Magnificent Present.—The friendly deportment of the Pasha of Egypt towards our country is about to be acknowledged by the Court of Directors of the East India Company in a manner worthy of the greatest political and military power of the East. A silver fountain of extraordinary magnitude and exquisite workmanship, intended as a present to Mehemet Ali from the Company, has just been completed by Mr. Smith, of Duke-street, Lincoln's-inn-fields. It is upwards of 10 feet high, and contains 10,400 ounces of silver. It is richly ornamented with fruits and flowers, the likeness of beast, bird, or fish being scrupulously avoided, in deference to the feelings of good Mahomedans, among whom its permanent resting-place is cast. We believe that nothing of the kind has been attempted before, and but that the thing is done, it must have been regarded as impracticable. The fountain has an inscription on each of the four sides, simply, and in excellent taste, recording the titles of the givers and the receiver without any addition. The language on each side varies; the four languages employed are English, Latin, Arabic, and Persian.—*Allen's Indian Mail*, May 7.

It is but three or four weeks since that we gave an account of the extraordinary age of Mr. and Mrs. Plaisance, then living in Redmoor Fen, in the Isle of Ely, the husband of the age of 107, the wife 105!—a case without parallel perhaps in England or in the world. On Wednesday, strange to relate, after a short affliction, both expired on the same day; their united ages 212. The greater part of their lives was passed when agues were so prevalent in the Fens that very few escaped the disorder, yet their lives were prolonged to this extraordinary period; and Providence seems to have ordained that as they had lived so long together, in death they were not divided. They have left one daughter, who lived with them, of the age of 84.—*Bury Post.*

An immense brass mortar, brought from China by the *Cornwallis*, has arrived at Woolwich. It weighs eight tons seventeen hundredweight, having a diameter of bore of two feet three inches, and a chamber of twenty inches; the depth of the whole being about five feet. The mortar was found in the bush in China, and partly concealed underground. It is composed of apparently very fine metal; and the trunnions being corroded to a considerable extent, afford evidence that the mortar is of great age. It appears also as if the part where the vent is, which is very perfect and little worn, had been cast again, and inserted in its present position. Some guns recently made for Mehemet Ali in this country, with a bore of only fifteen inches diameter, took shot weighing 400 lbs.

CRITIC OF INVENTIONS, ETC.

[Ingenious inventors of articles of use or ornament are as deserving of critical notice as is an ingenious author, and a knowledge of the true merits of inventions is equally interesting to the public. We purpose to supply an existing defect in critical journalism by devoting a division of The Critic to a fair description of, and honest judgment upon, any article seeking public patronage that may be submitted for notice.]

Seal Engraving.—Although most persons have examined seals and gems cut on cornelian stones and other hard fossil substances, yet a great deal of ignorance prevails as to the method employed in cutting devices and legends upon their surfaces; this ignorance can be easily removed, by going to the Polytechnic Institution, and seeing the process of seal engraving, and listening to the explanation given by Mr. Gifford, the artist, who attends there. In the first place, the iron instrument, or graver, made use of, which those not acquainted with the art suppose to have been hardened and made into steel, is heated in a way diametrically opposite. It is made as soft as possible, and is then placed on a small lathe, and turned to whichever pattern may be required for cutting the stone, and being from its softness porous, receives the diamond dust, ground very fine in a mortar, which adheres to it, and forms a cutting tool of irresistible power, temper, and hardness, and, with the assistance of an

upper and lower wheel, produces so great a velocity, that no further power is required but the hand of the artist, to guide and direct its motions according to the nature of the device to be cut on the stone. This very ingenious process is in daily operation at the institution above mentioned, from eleven o'clock to four. It may be as well to mention, that a likeness of her Majesty has been cut in this way, and also a splendid portrait of a lion on cornelian.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and nove phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

The Seeress of Prevorst, &c. Communicated by JUSTINUS KERNER, Chief Physician at Weinsburg. From the German. By Mrs. CREWE, Author of "Susan Hopley." London, 1845. Moore.

WE must confess to great regret at the publication of this volume, for it will, we fear, materially strengthen the prejudice existing in the public mind against the truths of Mesmerism. Already they who believe are taunted by the incredulous with the marvels asserted for it by some of its ill-judging friends. But if they have laughed before, what will they now say when they see a book seriously sent forth to the public under the authority of an eminent German physician, and having the sanction of a lady of great and deserved eminence in the literary world, the contents of which are so mystical, and its assertions so monstrous, that it will find credence in no rational mind?

At first we were inclined to account it a fiction. But as we proceeded, so many signs were given of sober earnestness in the writer, that we were compelled reluctantly to abandon the hypothesis, and to frame the less charitable but unavoidable conclusion that the German doctor who has recorded the case of the *Seeress of Prevorst* was either a credulous old fool, or one of those overwise men who have involved themselves in a maze of mysticism, until all common sense has been fairly stifled within them. It is at least clear that Dr. KERNER had certain preconceived notions, learned in the wildest school of German mysticism, and that he seized upon the Seeress as a proof of his theory, doing, as it is human nature to do, namely, twisting every thing to aid his own foregone conclusions, and even biased in his very senses by the force of the same impulse.

The *Seeress of Prevorst* was a certain Mrs. H.——, who lived at a small town in Germany of that name. She was early remarkable for excessive nervous sensibility, was a natural somnambule, and very subject to the mesmeric influence.

In this state she exhibited all the usual phenomena of *clairvoyance*, but a great deal more, which we scarcely like to name, lest it should excite ridicule. She saw ghosts, dreamed dreams, held converse with the spirit world, and could foretell future events. The Doctor indulges in conjecture as to the *rationale* of these phenomena, and he launches into such a sea of mysticism about the nerve-image, and the seven spheres of existence, and the seat of the mind, and the shape of the soul, and so forth, that a sober Englishman will be sure to throw down the book in disgust and dismay, and it will be well if the same feelings be not extended towards all who look into the very curious branch of physiological science which has been thus caricatured.

The simple explanation of the whole affair is, that the patient was insane, and the Doctor a *gobe-mouche;* and such being our conviction, we think the most becoming method of treating the volume that describes her case, is to close it with an emphatic protest against all or any part of its extravagant contents being received as an exposition of Mesmerism and disclaiming on the part of the rational and sober inquirers now engaged in its investigation, the very slightest admission of the facts, or assent to or approval of the absurd and extravagant doctrines, so solemnly sent forth by Dr. KERNER.

MR. BRAID, MR. SPENCER T. HALL, AND MESMERISM.

TO THE EDITOR OF THE CRITIC.

SIR,—Being myself deeply engaged in Mesmerism, having in fact been many times mesmerised, and having mesmerised many others, I feel sure you will not refuse insertion to a few remarks from me, induced by the letter of Mr. Braid, in the last number of THE CRITIC, since the cause is quite as dear to me as it can be to him.

To nearly all Mesmerists Mr. Braid is known as a pertinacious theorist. His first connection with the question was as an opponent, *denying the facts* of Mesmerism. When, however, these were placed before him by M. La Fontaine, in a light too strong and clear to be longer resisted, he endeavoured to qualify his previous opposition by contriving a new mode of accounting for the phenomena; and since then, he has ever gone on as though he understood a subject of which he would have us believe all others are comparatively ignorant.

What is the general tenour of Mr. Braid's letter to you? From beginning to end it is dogmatical and egotistical in a remarkable degree, giving old explanations of various mesmeric states, as though they were solely his own; disputing clairvoyance and all besides that his hypothesis fails to comprehend; and at length, when coming to speak of Mr. Spencer Hall's experiments upon vigilant patients (which, if they do not explode his own theory altogether, at all events prove its insufficiency), he tells us, that in another publication he has "entered *his* protest" against such experiments, for reasons of his own!

The truth is here: in a letter to Mr. Hall, inserted at p. 25 of the *Phreno-Magnet*, Mr. Braid says, "My phenomena, I consider, arise *entirely* from the patient keeping the eyes fixed in one position (*and the greater the* STRAIN *on them the better*), and the mind riveted to one idea. By this means some peculiar impression is made on the nervous system, which induces a state of somnolency, and a capability of being acted on in a manner so extraordinary that no one could credit who did not witness the phenomena."

Mr. Hall (whose experiments, as well as Mr. Braid's, I have often seen) has, on the contrary, proved that without ever *fixing*, or *straining*, or *appealing* to the *eye* at all, the striking effects alluded to by Mr. Braid may generally be induced in the fullest degree, with the greatest ease and comfort to the patients, who not unfrequently complain most bitterly of the results of Mr. Braid's mode of *straining* the eye, as indicative of a tendency to congestion of the brain. But as Mr. Hall is about to bring out a new work on Mesmerism, we may, perhaps, soon be favoured with his own views on this branch of the subject, as well as on clairvoyance, which, it is important to remember, Mr. Braid confesses he has *never* induced by *his* mode of operating, although the state is by no means uncommon.

Let it be clearly understood, that I would not for a moment underrate Mr. Braid's usefulness. No doubt, important cures have been performed by him. It is his egotism and his unfair manner of treating other experimenters, who have done quite as much for Mesmerism as he has, that compels one to speak out in justice to the question.

I am, Sir, yours respectfully,

WILLIAM HOLBROOK.

London, May 25, 1845.

BASINGSTOKE.—(*From a Correspondent.*)—Among the various conditions of mind which (although not always essential) render the body more susceptible of mesmeric influence, one appears to be that it is convinced of the reality of the power, and has some knowledge of its effects. It has been remarked, that in small towns where Mesmerism is little known, its practical advocates have much difficulty in finding persons susceptible of their influence; but that, after a public lecture and exhibitions on the subject, many are found on whom the usual phenomena can be easily produced, and even among those who, a short time before, appeared insensible to its operation. Hence, some have contended against the genuineness of the effects; but, while in the first case the facts may be true, the argument appears to me neither fair nor legitimate.

I have long thought that the result of mesmerising a person for the first time would in *some measure* depend on what they had seen, heard, or experienced relative to Mesmerism, and I have been struck with the uniformity of character presented in the series of phenomena resulting from the efforts of any one individual on a number of patients who have all witnessed pretty much the same amount of mesmeric experiments.

In one case I observe Phreno-mesmerism more perfectly manifested than any other phenomena; in another, the most remarkable effect will be catalepsy, of the rigid or perhaps pliant kind. Among the patients of a third Mesmeriser, the greater number shew manifestation of the mind corresponding with the cerebral organs excited. A fourth always succeeds in shewing attraction during the mesmeric sleep, but probably fails in some of the before-mentioned points; and another will produce a series of remarkable effects from volition on his patients in the vigilant state. Neither am I an exception to this rule; there is a peculiar character in my experiments, which stamps them with a distinctness of their own. The following case, among others, has convinced me that Mesmerism affects soonest those who are sensible of its real power. Being desirous of producing mesmeric sleep in a person who had long suffered under one of the many forms of hysteria, and having good reasons for believing that he knew

nothing of Mesmerism, nor of my intention, except that I had a desire to benefit him, I requested him to be seated, to endeavour to attain a passive state of mind, to think of nothing, and to regard steadfastly the pupil of my eye. I then proceeded, as usual for twenty or thirty minutes, and repeated this every day for two weeks, without perceiving any of the desired effects. On the 15th day, while my patient was waiting my leisure, two young persons entered the room for the same purpose; so I took them first, and, in the presence of the former, put them to sleep in a few minutes; and then, without saying any thing in explanation, I proceeded with him. I soon observed symptoms of incipient coma, and found it complete in less than two minutes, apparently in a great measure resulting from his first experience of mesmeric influence just before. His susceptibility continued, and the cure went on satisfactorily.

I am aware that when the object is the development of genuine mesmeric phenomena, Phreno-mesmerism for instance, it is desirable that the patient should not have witnessed any thing of the kind, lest in the exalted state of the faculties under mesmeric influence, they should act from imitation, or a recurrence to impressions made on the mind in the normal state. Where, however, the object is a remedial one, by means of mesmeric sleep it is worth consideration whether the end might not be promoted by means which I found accidentally to be successful.

ALTON. — (*From a Correspondent.*) — EXTRACTION OF A TOOTH WITHOUT PAIN.—In the present sceptical state of the public mind in regard to the subject of Mesmerism, an important fact, and that bearing on its most valuable feature—the relief of human misery—must be worthy of record.

On Tuesday, the 4th of February last, before a numerous company assembled to witness the operation, I extracted a large and firm molar-tooth without the knowledge of the patient, whilst in a state of mesmeric sleep. The patient is a girl, in the employ of Messrs. Spicer and Poulton, paper-manufacturers, in this town. She had previously being mesmerised, only a few times, by Mr. Poulton, for the sake of trying a few of the ordinary experiments, and for the relief of tooth-ache. Her employers are gentlemen who have no interest in supporting or refuting the phenomena of Mesmerism—they are as anxious to arrive at truth as any reasonable men should be—and would be equally happy to expose any attempt to deceive.

I am perfectly convinced, and so were all present, that she was not in the slightest degree conscious of the operation; and it can scarcely be imagined that a simple, and comparatively ignorant mill-girl, could have any motive to deceive, sufficiently strong to induce her to bear so painful an operation, not with *extreme firmness* merely, but with a countenance indicative of *no consciousness or emotion whatever*.

I am yours respectfully,

Alton, May 21, 1845. WM. CURTIS, jun. Surgeon.

Signed also by the following gentlemen, who were present:—

WM. NEWHAM, Surgeon, Farnham.
JOHN EDW. SPICER, Alton.
CORNELIUS POULTON, Alton.
W. F. POULTON, Architect, Reading.

LITERARY INTELLIGENCE.

THE LITERARY FUND.—On Wednesday se'nnight, the 56th anniversary of the Literary Fund was celebrated by a public dinner in the Freemasons' Tavern, Great Queen-street, Lincoln's-inn-fields. The Right Hon. the Earl of Ellenborough officiated as chairman, and was supported on the right by the Archbishop of Dublin, Chevalier Bunsen, Lord Colchester, Lord Mahon, Major-General Pasley, and Mr. James, and on the left by Lord Brougham, Mr. Murchison, Mr. M. Milnes, Sir H. Ellis, Mr. Serjeant Talfourd, the Rev. Dr. Russell, Mr. Walter, Mr. B. B. Cabbell, &c. The company, which comprised some of the leading literary characters of the day, numbered about 100. The Rev. Dr. Russell, the treasurer of the fund, read a list of the grants awarded in 1844, and stated that the sum distributed between 19 men and 12 women, six of the latter being authors and six the widows of authors, amounted to nearly 1,000*l*. He also read the new list of contributions, from which it appeared that the noble chairman, in addition to his annual contribution of 10*l*. 10s., had added a second subscription of 25*l*. (cheers); Lord Brougham, 25*l*. (cheers); Chevalier Bunsen, 5*l*.; Lord Mahon, a third donation of 10*l*. 10s. (cheers); Sir P. Shelley, 10*l*; Lord Colchester, 5*l*.; Mr. Macready, 5*l*. (cheers); Mr. Twiss, 5*l*.; the Bishop of Ely, 5*l*.; Mr. Macaulay, 10*l*.; Mr. Hallam, 5*l*.; Mr. Disraeli, 10*l*.; Mr. B. B. Cabbell, 10*l*.; Mr. Walter, 10*l*.; Mr. J. Walter, jun. 10*l*. &c. The meeting was successively addressed by the noble chairman, the Archbishop of Dublin, the Chevalier Bunsen, Mr. Milnes, Lord Brougham, Lord Mahon, Mr. Murchison, Mr. Serjeant Talfourd, Mr. James, Mr. Kemble, and Mr. Walter, in responding to appropriate toasts.

THE LATE THOMAS HOOD AND THE PREMIER.—The following is abridged from a notice by Mrs. S. C. Hall, written for the *Art Union*:—"Mr. Hood's existence was a long disease rather than a life; yet his temper, unembittered by continual pain, remained ever cheerful and kindly, turning, to the very last, his own sad sufferings into jest, and forcing those who wept over his agony, fierce as it was (till he was overtaken by the last dull sleep, that continued for three days preceding his death), to smile at the wittiness of his conceits, however strangely mingled with the consciousness of his situation, and his solemn forecast of the rapidly approaching hereafter. Nor were such terrible contrasts reserved for his death-bed only. Even when the 'Song of a Shirt' was knocking at every heart in Great Britain, its author was panting for breath; and soon after he was confined to his bed, and literally propped up by pillows to write wit. And so he struggled on, through successive paroxysms of illness, till the last few months found him working amidst the very crises and beatings of heart disease (more than once even in the intervals of delirium), at the monthly chapters of his last novel—doomed to remain, like his life, a great fragment. But it is all over with him now. He is released from labours, never remunerated in proportion to the pleasure they gave, and to the enormous profit they produced others, seldom perhaps thought of by those whose hearts they opened, and whose care they served to beguile. Latterly his friends had been agonised by his terrible lament—'I cannot die, I cannot die!' and they could not but be thankful to lay him, on the 10th of May, in a calm grave at Kensall-green. It will not, we are sure, be long before a monument is raised to his memory; and there are hearts enough in England to remember that his widow and children have but a small pension bestowed by Sir R. Peel, whose letter, in words that did equal honour to the minister and the poet, conveyed his regret that the grant was necessarily so scanty, and a request that he might be permitted to make the personal acquaintance of one with whose works he was intimately acquainted, and whose talents and character he had long appreciated and admired."

THE LATE MR. HOOD.—Sir R. Peel has sent the munificent contribution of 50*l*. to the fund now in progress of collection in memory of the genius of the late Thomas Hood, and in aid of his bereaved family.

THE LATE THOMAS HOOD.—The subscription of 30*l*. was yesterday paid in by an anonymous contributor to the fund now in progress of collection in honour of this eminent poet, and in aid of his bereaved family.

MR. DOUGLAS JERROLD.—On a recent visit of this gentleman to Birmingham, the working jewellers presented him with an elegant gold ring, with an onyx stone in the centre; and in an address expressed their admiration of his talents, and their gratitude for his literary advocacy of their own class. This scene took place in the Polytechnic Institution.

BANIM'S WIDOW.—We have great pleasure in being able to state that Sir R. Peel has granted to the widow of the late John Banim 50*l*. from the Royal Bounty Fund, and has further engaged to place her name on the pension list when a vacancy occurs. This relief has been granted on the application of a body of Irish members of Parliament, at the head of whom was Mr. E. B. Roche, the member for Cork.—*Kilkenny Journal.*

FALSE HERALDRY ON THE NEW HOUSES OF PARLIAMENT.—A writer in the *Art Union* of the present month has drawn attention to a number of asserted heraldic blunders which appear on the exterior of the new Houses of Parliament. He states that many of the shields are charged with devices copied from coins of various sovereigns which were never intended to represent arms, and that it would be as reasonable to take St. George and the Dragon for the arms of George IV. as to adopt those devices for the arms of the monarch on whose coinage they appear. He points out, too, amongst other objections, that supporters have been assigned to every sovereign, beginning with the Conqueror, though it is known that supporters were not used by the kings of England till the reign of Richard II., three hundred years after the Conquest.—*The Builder.*

THE FRENCH NEWSPAPER PRESS.—A new era in journalism appears to have arrived in France. The *Journal des Débats* has assumed, and on the 1st of July *La Presse*—already nearly as large—will assume, the (single) form of the *Times*, being about eight times the size of the Paris journals of 1820. This increase of dimensions has been necessitated partly by the appetite of the public for *feuilletons*, in which are given series of tales by the first writers of the day, including Victor Hugo, Alexander Dumas, Eugéne Sue, Méry, the Viscount de Launay (Madame Emile de Girardin, formerly Mademoiselle Delphine Gay), Frederic Soulié, &c. and partly by the rage for advertising lately created in France, which latter fact has suggested a speculation developed in the *Journal des Débats, Presse*, and *Constitutionnel* of Wednesday, and which for its novelty at least merits notice.

A M. Duveyrier proposed some time since to the proprietors of the *Journal des Débats, La Presse*, and *Le Constitutionnel* to farm the advertisements of those journals, and the right to increase them indefinitely for fifteen years, at the rate of 300,000*f*.

(12,000*l.* British) per annum each—in all 900,000*f.* (36,000*l.*) This proposition the articles in the papers above alluded to announce has been carried into effect. The lease is to run from the 1st of July next.

LONDON LIBRARY.—On Saturday se'nnight, the fourth annual meeting of the members of the above institution was held in the large room of the establishment, Pall-mall, the Right Hon. the Earl of Clarendon, late lord privy seal, in the chair, supported by Lord Lyttleton and several members. After some congratulatory remarks on the progress of the society from the noble president, the report was read. It stated that the progress of the library had been satisfactory during the past year. One hundred and eighteen new members had been admitted, being an increase of 32 on the number of the preceding year, making the total 676. Of these, 85 are life, and 591 contributing members. Various additions had been made to the books, which now, as nearly as can be estimated, comprise about 24,000 volumes. The circulation, however, during the year was 26,210 volumes. The report next stated that in consequence of the increase in the number of books and members, the committee have determined to take a lease of more spacious premises, being the house No. 12, St. James's-square, late Beauchamp House, on the occupation of which they expect to enter in the autumn of the present year. According to the financial statement, the total receipts were 2,460*l.* 6s. 6d. including a previous balance of 292*l.* 9s. 2d. annual subscription, &c. being a large increase compared to those of last year. The expenditure amounted to 2,180*l.* 5s. 7d. and there remained a balance with the treasurer of 280*l.* The report was agreed to. Lord Mahon and Mr. H. Twiss were elected members of the committee, in the room of Mr. Macaulay, M.P. and Mr. Pemberton Leigh, retiring. After the usual formal votes, the meeting was dissolved.

We understand a new edition of the *Specimens of Early English Poetry, with an Historical Sketch of the Rise and Progress of the English Poetry and Language*, by George Ellis, Esq. F.R.S., F.S.A., in 3 vols. sm. 8vo. is printing by Messrs. Gilbert and Rivington, uniform with the new edition of *Percy's Reliques*, and to form a second series of the *Percy Library of Early English Poetry, &c.*

Enormous as the sum stipulated may appear in a country in which advertising may be said to be only in its infancy, it seems to be deemed by the public far below the amount likely to be realized by the speculation. The article in question informs us that M. Deveyrier has converted the property so created into a joint-stock company, with a capital of 200,000*f.* (80,000*l.*) divided into 8,000 shares of 10*l.* each. Of these a small portion have found their way into the money market, "and have already," says a private letter, "reached a premium of 100*f.* (4*l.*) each, although a supplementary article of the treaty with the proprietors of the journals named stipulates that they shall receive respectively over and above the annual sum of 300,000*f.* a clear moiety of the profits."

BOOKSELLERS' CIRCULAR.

WE request attention to two letters subjoined, one of great interest to publishers, librarians, and booksellers; the other, of special interest to THE CRITIC.

The letter of Mr. PROCTOR is the first, and we hope it will prove but the precursor of many, received in response to a request preferred some time since, that country booksellers and circulating library keepers would furnish us with the results of their experience as to the classes of books chiefly patronized by their customers or subscribers. We believe that such information, gathered from an extensive circle,—from cities and towns, and even from the remote parts of the country,—will be of incalculable value to authors, publishers, booksellers, and librarians, besides being extremely interesting to the public; and a curious, because quite novel, addition to the literary history of our times. May we, then, refer our subscribers among the trade to this excellent letter of Mr. PROCTOR, and entreat them to favour the readers of THE CRITIC with their several experiences in like manner? They may even extend the range of inquiry, and inform us what works of all kinds are most in demand in their localities, and especially what has been the effect of cheap literature upon the book-trade.

The second letter is transmitted in accordance with a request preferred last week, that the Booksellers would oblige us by stating what is the repute of THE CRITIC among their customers. The object of this request is, that we might be enabled to prove to the publishers and advertisers in London, who are extremely suspicious of new periodicals (and not without cause, seeing how often they have been duped) that THE CRITIC is really adopted as a *Booksellers' Circular*, and largely read in the country. A hundred such testimonials will carry more weight than any assertion unbacked by proofs. Two lines will be sufficient, if leisure or inclination be wanting to write more. When a sufficient number are collected, they will be appended to the prospectus and largely circulated. We repeat, therefore, that we shall be very greatly obliged by a candid statement, however brief, from each of our bookseller friends of the character THE CRITIC bears in his neighbourhood.

The last fortnight has been unusually dull in the literary world. No new books of worth have made their appearance. We have received but few in number, and these of no particular interest.

A packet of apparently amusing American books has just been transmitted by Messrs. WILEY and PUTNAM, and we shall take the earliest opportunity to give our readers an account of them.

It is with pleasure we announce that another new, and, we trust, attractive feature, is to be added to THE CRITIC. Arrangements have been completed by which we shall receive from an author of high repute, intimately versed in the French language, a regular weekly record of the progress of French literature.

A similar arrangement is in progress for a like record of the literature of Germany.

We hope ere long to be enabled to extend the plan to other countries.

This will be the first systematic attempt to give to the British public an accurate knowledge of the progress of literature *abroad* as well as at home. We are induced to adopt the design from a confidence we entertain that the taste for foreign literature is both great and growing among our countryfolk, and that the time has arrived when they will need a more complete and prompt, and a cheaper guide to its riches, than Great Britain has yet possessed.

A LIBRARY-KEEPER'S EXPERIENCES.

TO THE EDITOR OF THE CRITIC.

SIR,—According to your request I made an attempt to furnish you with a classified return of books lent out, together with a list of authors, for one quarter. But after wading through a week, I found the task much more tedious than I had expected, or than my time would allow me to perform. I can, however, acquaint you with the result of my experience in brief. In the first place, it is necessary to state that my readers are pretty fairly divided between the poorest and the respectable classes.

Naval, military, chivalric, and humorous works, when spiritedly written, attract the great body of readers, and are always popular. The writings of Marryatt and James, for instance, are especial favourites. Fashionable novels are sad bores, and I always avoid them: political or religious tales are worse; and satirical narratives are barely readable. The *deep* romances of the Lewis and Radcliffe school have still their myriad of admirers; and the wild effusions issued by Lloyd and others in penny weekly numbers have a prodigious run. The domestic stories of Mesdames Jones, Ward, Helme, and Roche are in daily demand, and rise rather than decline in public estimation. The muses, I regret to add, have comparatively few devotees; still, the standard dramatic works are in constant use.

Will you allow me, Sir, to depart in some measure from your proposed scheme of publication? I am not aware how circulating libraries are conducted in France, but I feel certain if original works were published here at 1s. 6d. per volume, readers would buy instead of borrow, and of course "Othello's occupation" would be gone. I agree with you, Sir, that 1*l.* 11s. 6d. is much too high for three volumes; but I think you err in stating it must either remain at that figure or be reduced so low that the public at large would purchase. You seem to have overlooked the important fact that the leading libraries of Great Britain form a graduated scale, like steps in a ladder. Thirty-one-and-six takes only the very top; but as the publishers descend the ladder with their prices, step by step, so will they command the libraries, until, arriving at the bottom, they embrace the whole. But let them not take one stride below the judicious resting-place, or down go all the libraries, ladder and all!

If Messrs. Chapman and Hall would issue their monthly series *in boards*, instead of paper covers, they would find a rapid increase of sale. In their present form I doubt they will never become popular with "the trade;" but with the slight improvement I have suggested, they could not fail to be so.

The *Novel Times* is a venture well deserving general support. Still it has disappointed me so far; for though the fiction is first-

rate, and the letters of travel excellent and pleasing, the parts will not circulate with my readers, which proves that the mixture is injudicious. When the proprietor publishes each work separately, the series must be largely patronized.

Yours respectfully,
R. W. PROCTOR.

136, Long Millgate, Manchester, May 26th, 1845.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—I am happy to bear testimony to the high opinion entertained here amongst the subscribers to THE CRITIC as a periodical. I have often heard it quoted in comparison with similar publications, especially with the *Athenæum;* and I am sure you will be gratified to learn that its *regular* readers (who alone are qualified to judge of its merits) consider it superior in talent to any of its contemporaries. In that opinion I heartily concur. I am a constant reader of its pages, and, in my opinion, there is in its articles a candour—a manliness—an *impartiality*, which is creditable to its criticisms. When I first became a reader of THE CRITIC, I thought it was characterized by a stinginess ill-suited to its position as a literary journal; but experience has taught me to see that the castigation, when applied, has, after all, been most judiciously inflicted, as, in this book-making age, there are too many who assume the author's chair that ought to be content to sit upon the scholar's form. On the whole, I regard it as a talented publication, and from which, after a perusal of its pages, it is impossible to rise without experiencing both pleasure and profit. As an advertising medium in the book department, I consider it fully adapted, and I feel persuaded the trade would find their interest in availing themselves of the advantages offered by its columns. I would not, as a bookseller or newspaper proprietor, recommend to others what I would not practise myself, for it is my intention to shew that I entertain a sense of its usefulness by forwarding an advertisement in connection with some branch of my establishment as soon as I have carried out certain arrangements now in progress. The contemplated, or rather the actual, reduction of charges for the insertion of advertisements must induce an increase of advertising favours, and which I shall be happy to see realized.

I am your obedient servant,
Advertiser Office, Lynn, May 26, 1845. JOHN THEW.

REGISTER OF NEW PUBLICATIONS,

From May 24 to May 31.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded by letter will be duly inserted.*

22, Ludgate-street, May 26, 1845.

LORD ELDON'S PILLS.—"Habitual costiveness," said the late Mr. Abernethy, "I have no hesitation in stating, is the foundation of all diseases." These Pills are from the prescription of a celebrated Court Physician, and were used by the late Lord Eldon, and are put forth as calculated to remove two complaints, to both of which gentlemen of the learned Professions are more or less subject (viz. costiveness and indigestion), and are patronized by the highest officers of the State. Sold in boxes at 1s. 1½d. 2s. 9d. and silvered at 4s. 6d. by all respectable Druggists and Medicine Venders in the Kingdom, and wholesale at 13, Great St. Thomas Apostle, London.

THE CRITIC,
And Journal of Literature.

SATURDAY, JUNE 7, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

LITERATURE.

HISTORY.

L'Europe depuis l'Avénement du Roi Louis-Philippe. Par M. CAPEFIGUE. (*Europe since the Accession of Louis Philippe.*) Vols. I. and II. London, 1845, Dulau.

THE French regarded the second restoration of the Bourbons with feelings very different from those with which they had welcomed their first return. They came at first as the messengers of peace; they reassumed a government from which they had been expelled, with old hatreds mollified and modified by the fearful reaction of the Revolution. But at the latter period, upon the downfal of NAPOLEON, events had greatly changed the relationship of parties. The French army had been routed at Waterloo, its hero had been exiled to St. Helena, the troops of the allies held Paris. The Bourbons came, accompanied by the enemies of France, as the conquerors of her people. Every act of retribution, every exercise of the rights of conquest, the disgrace of defeat, the oppression of victory, the death of NEY, the restoration of the trophies of the Louvre, and the limitation of territory; all were associated with the Bourbons, or attributed to them. Accordingly, from its very origin, the restoration was disliked. Parties were soon formed, which, whilst upholding the wildest opposition of opinions, yet united in asserting,—"the charter must be maintained, and the Bourbons will not maintain it!" And they were right; the ministers of LOUIS XVIII. carried on against the charter a war of petty thefts and paltry evasions, and left to his successor a government hateful in its origin and now viewed with both suspicion and contempt. The military still cherished the memory of the Empire; its partisans were numerous, and the death of its great chief had powerfully re-organized opinion in its favour. Of the higher classes, some maintained the doctrine of hereditary right, but the majority were constitutionalists, who desired a modification of the government, and its re-establishment upon the basis of that of England in 1688. To these might be added the religious party, which incessantly clamoured for concessions, dangerous even to consider, impossible to grant. The vast mass of the population was prepared for any change, but desired chiefly a war and a republic. The doctrines of the church were despised, and a species of religious philosophy prevailed—a fusion of the systems of St. SIMON and FOUVIER. CHARLES X. might yet have reigned, but for one power he had provoked—the press. It was against this his *coups d'état* were levelled, and it was by this he fell. So great was its importance, that Prince METTERNICH considered it as the actual government of France, and said, "If I were not the prime minister of Austria, I would be a journalist at Paris." Such was the political and social condition of France in 1830, which it is necessary to review before considering the events which led to the accession of LOUIS PHILIPPE. We shall now select such passages from this work as are likely to interest our readers, observing that M. CAPEFIGUE'S sympathies seem rather to linger with the former dynasty than to belong to the present; but this has in no degree lessened our estimation of the value of his volumes, or his merits as an author, since they have not led him, like THIERS, to neglect evidence, or to indulge in that party spirit which pervades the otherwise valuable history of the same period by LOUIS BLANC.

CHARLES X.

No king ever maintained a higher opinion of the rights of the throne, and the feeling of French nationality, than Charles the Tenth. His character for frankness and generous confidence was incontestable; but he was governed by two ideas,—tenacity in resolution, and the most exaggerated conception of his own capacity. The active duties which the emigration had enjoined, and the position he had occupied as leader of a party against Louis XVIII. had perhaps created and strengthened this desire of doing every thing himself, and of governing solely by the direction of his own will. He has been described as a prince controlled by a Camarilla; this was to mistake him; he alone directed his ministers, even to the extent of ridiculing the inefficiency of his most intimate favourites, the Prince Polignac, the Dukes of Rivière and Fitzjames. He had counsellors indeed; but on this condition, that he was always to exercise over them the most supreme control—as one better acquainted with the political state of France, and all its most fitting method of government. Since the appointment of Prince Polignac, the real premier of the administration was, in fact, the king. If his knowledge was limited, that deficiency was supplied by a naturally good understanding; his religion was enlightened, and had less of the *parti prêtre* about it than has been stated. He possessed the art of governing men to an extreme degree, not alone by his opinions, but by the indescribable charm of his method of expression; and the heart readily yielded to persuasions, from which it was difficult to escape, when impressed at once by the supremacy of his position and the graceful dignity of his person. The ministers who signed the Ordinances were rather induced to do so by the king, than his instigators to that act. Yet, with all this, he sought popularity! desired the applause of the multitude! and his heart was saddened and constrained when he passed amid the silence, or felt himself unnoticed in the presence of, his people. Singular contradiction;—he wished to be popular, and marched armed with *coups d'état* to war against popular rights.

THE DAUPHINESS.

Maria Theresa Charlotte, Dauphiness of France (whom Napoleon considered as the only man of her family), was in every respect superior to her husband. The qualities of the dauphin were rather sound than brilliant; he had good sense, was of a generous disposition, had studied the spirit of the age, and understood the concessions which were due; but he cherished the doctrine that the heir of the throne should be the first to evince the most implicit obedience to the king; and thus allowed the adoption of measures he wanted the courage to oppose. The dauphiness was of a character more firm. She evinced no longer, or but feebly, that haughty expression of feeling with which she had been reproached at the first Restoration. The necessity of concession had already wrought many changes in her mind. Without any liberal tendencies, she saw that when once a revolution has pervaded a nation it has scattered the seeds of both good and evil; and that to rule, we must learn how to respect not only commonly-acquired rights, but conquests the most opposed to our own convictions, even as Henry IV. had done. All opinions, then so prevalent upon her character, were erroneous. It was said she was excessively religious; true; but her piety was real and enlightened, and sought not to be distinguished by a courtly train of bishops and of priests. As her misfortunes had been infinite, so had they left their impression; she could not abandon herself to a careless gaiety of life, and for this she was reproached; but yet there was still mingled with this an asperity both of manner and of speech, and when excited, and reassuming then all the ancient pride of her house, her opinions were imperatively expressed. Nevertheless, her firm and correct understanding, and the recollections of her misfortunes ever exercised a great influence over the king.

The sketch of the early career of LOUIS-PHILLIPE we must pass, as too generally known; but we would particularly direct attention to M. CAPEFIGUE'S narrative of a conversation with M. DE SALVANDY, at a ball given by the present King of the French, shortly before the Revolution of July, and at which CHARLES X. was present. That the *then* Duke of ORLEANS arranged the plot of the drama it is impossible to assert, since that was the construction of the ministry and the court; but that he foresaw his future position; that he had long studied the characters of the performers, and that he knew how to guide them, felt his necessity in the state, and was prepared for the reverse or victory of popular resistance to the king's measures, none, we apprehend, can doubt. He had with him the majority of the upper, the entire middle, class of France; the Imperialists were opposed to the king; the Royalists were divided; the influence of the clergy was prejudicial. At this moment M. CAPEFIGUE thus describes the

MORAL CONDITION OF THE PEOPLE.

The education of the lower classes was conducted upon the system of mutual instruction, a dry and technical method, which taught them to read and to write, without any discipline of the mind or feelings. Thus once capable of reading, they abandoned themselves to the guidance of newspapers and party writings; the events of 1793 became a hallowed recollection, and what they could spare from their hard-earned wages was subscribed to

a celebrated "History of the Revolution," and the works of Dulaure; from thence their hatred of kings, of the clergy, and aristocracy. For them France had, prior to 1789, no political existence; beyond that period all was fanaticism and imbecility; as if any fanaticism could exceed that of the Jacobins, any imbecility that of the dreamers of 1794! Contempt was lavished upon the crown and the clergy; the busts of Voltaire and Rousseau were in every room, and the worst works of the former were circulated from hand to hand. Revolutionary terms were yet popular among them; the harangues of Camille Desmoulins or of Père Duchene, and the traditions of the clubs, were cited and recalled; the priest was still nicknamed the *calotin;* the wealthy, *aristocrats;* the noble, *muscadin;* and their leaders sought but an opportunity to destroy those whom they had taught the masses to detest by passions inherited from the assemblies of 1792. In a great city, moreover, there is always a class lower than the low; a class ever fluctuating and impossible to define; the offspring of the assize courts and the streets; bold, hardy, enterprising, because habituated every day to risk their liberty and their life for bread, and the more anxious for a revolution, since it offered a fairer chance of plunder.

What follows is of great importance, considering certain recent indications of the newspaper press, and the opinions these have elicited:—

This class, thus so fatally the sport of every wind of faction, was still more mischievously influenced by much recent popular literature. They were by this taught and became accustomed to the use of the slang of the galleys and the prisons; crime was palliated, or elevated into importance; the accused was proud of his honours; his career was traced with interest, and the daily press gave publicity to the most shameless practices and the most horrible details. Then appeared the memoirs of Vidocq, those also of the hangman—the whole (Newgate) calendar of crime.

If honest and industrious workmen were found, they dwelt for the most part in the faubourgs *pêle-mêle*, in the same room, like droves of cattle. Of their children, few were baptized; and if some feeling of piety yet lingered in the mind of the mother—if with a mere mechanical compliance with forms, the rite of the first communion was subsequently performed, it was of no greater moment than a change of clothes. No external sign marked the recipient's adhesion to the church. Sunday was a day of labour; churches were empty, and the theatres were full; and at every barrier the eye traced numbers forgetful, in drunken abandonment, of every law of decency, and surrounded by crowds of young girls, exposed to seductions of the grossest kind.

We would here willingly extend our extracts. The opinions of M. Capefigue may be possibly overstrained, but they are ably and eloquently expressed; and the portion of his work, "Sur les classes diverses en 1830," is deserving of particular attention. Of the value of what Mr. Disraeli would call a "party cry," the following is an amusing sketch:—

The son of a soldier, an old soldier, perhaps himself the workman, walks to combat by a species of blind instinct. Ask him not why he fires; he has no reason to give you. A party colour, a word, a man, inflame his pride or render him delirious with enthusiasm and joy. For fourteen years they have incessantly in his hearing dwelt on the benefits of liberty and the innumerable advantages of a revolution; there are names he is accustomed to cherish with respect, and the journals have made these famous. As he must have a "party cry," he is as ready to shout out "Vive Lafayette!" as formerly "Vive le Roi!" or "Vive l'Empereur!" To the result he is indifferent, be it a monarchy, a republic, or the empire—this is of no moment; his mission is to destroy, be it church or palace, for the lower class has an instinct in this respect—it loves to try its power, like a strong but passionate child, and yet withal never does so, but with a changed mood of generous feelings and passions not always associated with evil purpose.

We need not dwell on the conduct of the ministry, resolved to war with such a population; it was the incarnation of incapacity. The king, convinced of the justice of his cause, was persuaded that his subjects felt as he did; the minister, mastered by the etiquette of a court which tolerated no opposition to that king's will, was fain to believe all Paris equally subservient. The king hunted, and was only more loquacious than usual, as men are wont to be who feel the necessity of justifying to others acts which they are conscious to be disapproved. The ministry, who had the courage to rouse rebellion, had not exercised the commonest caution for its repression. Marmont hated his mission, and the troops were disheartened. Paris in three days dethroned for a second time the Bourbons. Here is a scene often painted, part of the "Pictorial History of Versailles," but which has never been better described:—

THE PROCESSION TO THE HOTEL DE VILLE.

The deputies struggled along on foot, amidst the shouting populace. There was the Duke of Orleans, every feature of his face indicative of vexation and distress, surrounded and followed by a ragged crowd, and, mixed together, hackney coaches, sedan chairs, the crutches of Benjamin Constant, scowling combatants, here and there some citizen in the the uniform of the National Guard, and on reaching the Place de Grève, a vast mass undulating on all sides, whose arms glistened in the sun. M. de Lafayette had the courtesy to point out the principal heroes, some of whom insulted the prince by their gestures as he passed. As they advanced, the scene became more painful—men were seen in the wildest excitement, whose shouts re-echoed through the halls of the hotel "Down with the Bourbons!" "No more kings!" "Death to Charles X.!" And here the high courage of the duke was shewn. As the clamour for a moment subsided, his voice was heard defending the king—"You deceive yourselves;" and, moving his hand as if to obtain silence, he added, "the king never sought to violate the charter." As they circled around him, to render outrage more easy, Lafayette took him by the hand and led him away; and then took place that scene the artist has so often selected—the sudden appearance of the duke on the balcony, leaning on Lafayette, and waving the tricolor, which denoted the alliance of the lieutenant-general and the Hôtel de Ville.

Let us contrast this accession to the throne with the following of "the abdication." Charles X. was quitting France, and thus bade adieu to the few who had not yet abandoned him. It is by an eye-witness, M. Damas:—

THE ABDICATION.

The column of the guards occupied the narrow passage which led to the principal staircase, and mounted slowly in the strictest order. The noise of their footsteps alone was heard as they fell heavily on the steps. They were ranged in two large rooms, into the second only of which I was able to enter; but mounting a chair, I saw distinctly the grey discrowned king. He no longer wore his accustomed uniform, but a plain blue coat without star or decoration, and led by the hand the young Duke de Bordeaux, of whom I could just obtain a glimpse. The dauphiness was on his right. The other members of the royal family I could not see, but they were present. The deputation of the guards did not approach the king in the manner which for fifteen years we have been instructed to believe. As they stood in his presence there was a momentary silence; yet it seemed an eternity. I held my breath, lest I should mar its solemnity. It was broken by sounds of grief from the men, who rushed from their ranks and grasped the hands of their fallen master, and whose spirit was subdued even unto tears. The sight of so many soldiers thus bowing down before one old man, and the children of his race, so affected me, that I staggered from my place, ashamed to be erect when all around me were thus prostrate in respect. "Come, come, my friends," said the king, "calm yourselves; must I then be the consoler?" This appeal was felt; silence was restored, the ranks were again formed, the ensigns of each battalion advanced, and placed in the king's hands the colours of the regiment. The king touched the silk of each as a captain upheld the four, and then elevating his voice, he said, "Soldiers, I take these colours; you have known how to guard them with honour, I trust one day my grandson will have the happiness to restore them to you."

Such was the last act, such the last words of the king, whilst he yet lingered on a land he had stained with civil war. The character of Charles X. of France may be compared in some respects with that of our first Charles of England. Both were brave and fond of government; alike educated and protectors of the arts; personally attractive by their manners; of a generous and affable nature; but equally ignorant of the condition of their country and the temper of their people. Charles X. had more firmness; Charles I. greater activity; but both fell by the unreasoning conviction of their rights, and an appeal to the sword for their assertion.

To conclude; if this work be continued in the spirit with which it is commenced, it cannot fail to interest. M. Capefigue has evidently studied the history of the period he describes. His views of European politics, his opinions upon the leading men of France, and the causes and consequences of the revolution of July, will naturally be accepted or disapproved according to the political bias of the reader. It is impossible to write the history of our own time with impartiality, as it is impossible for a strong mind, or one susceptible of impressions, to be indifferent to its action. As

we stand in relation to our contemporaries, so we are interested in their course of life; they reflect our opinions and by their public conduct the future will estimate our own. No man is so humble as to believe his own utter unimportance; every one conceives he has his type, and the worship of great names is often the adulation of ourselves. M. CAPEFIGUE condenses ably, writes eloquently, is moderate in his opinions, and evidently seeks to produce a work useful as a contribution towards the history of party, and not valueless as a guide to those who may hereafter, when events can be more dispassionately traced, become the historians of the reign of LOUIS PHILIPPE.

BIOGRAPHY.

A Memoir of the Honourable and most Reverend Power le Poer Trench, last Archbishop of Tuam. By the Rev. JOSEPH D'ARCY SIRR, D.D. 1845. Dublin, Curry; London, Longman and Co.

THE life of the late Archbishop of TUAM, written by Dr. SIRR, will be read with great interest by the members and admirers of the Protestant Association. It is compiled evidently with a view to the special edification and delight of this particular class of the religionists of the present day. Each of the many divisions of our Church has certain set forms and expressions, modes of speech and modes of thought, by which it may be immediately recognised. Let which may be in the right, each has its *shibboleth*, marking its peculiar and distinctive character. Accordingly, the memoir of Dr. TRENCH will command the greatest applause and commendation from the Exeter-hall section: the champions which its author delights to honour are Exeter-hall champions; her oracles are his oracles—his prophetess is her Charlotte Elizabeth. A burning and unmitigated hatred of Romanism; a somewhat coy and unwilling scolding of dissent; an assiduous introduction of scripture phrases wheresoever they can be made applicable to the narrative; a thorough disregard for the dignity of rank or station, explained by a critical discrimination between the spiritual and the non-spiritual among bishops, priests, deacons, and laymen; a constant shrinking from any thing like a tendency to sacramentarian errors—these are among the leading characteristics of the school to which, as it seems, the biographer and the subject of the biography both belong. Now, for a saint of this school, Dr. TRENCH was really a man of no ordinary stamp. But then, the *liber sanctorum* of this school contains not a few false prophets; and about its very best and grandest specimens there hangs a familiar and domestic air, keeping down that veneration and awful regard which, by elevating our conceptions of holy and faithful men, in some measure enlarges the mind and purifies the heart. The saints of the Protestant Association are every-day, fire-side, common-place confessors. They have, indeed, at times, as in the instance before us, "angelic voices," "commanding mien," and "dignified deportment;" but then they are too much of arm-in-arm acquaintances to be revered, and they pass into the mouths of their best wishers under the appellations of "dear men," "the dear archbishops," and "the dear old gentlemen."

POWER LE POER TRENCH, third son of the Earl of CLANCARTY, was descended from an ancient French family which migrated into England to escape the persecutions of Popery in the year 1574. Of his early days in school or college, but little is remembered; and, but for the purposes of this memoir, that little would, in all probability, very soon have become nothing. If reliance can be placed upon such recollections as we are furnished with, the benevolence and philanthropy, which formed the brightest feature in his after character, developed themselves at an early period. Like A'BECKET, he was at first a good horseman, and more of the cavalier than the priest; but, like the same example, he dropped this in due course, and devoted himself to more sacerdotal employments. A priest at twenty-two years of age, a bishop at thirty-two—promoted successively to the sees of Waterford, Elphin, and then to the archbishopric of Tuam, eventually uniting in his own person the bishoprics of Ardagh, Killala, Achonry, and Tuam—he was a sign, not only of the value of noble birth and family connections in the attainment of ecclesiastical preferment, but also of the gradual inroads which time and spoliation have made upon the Church of Ireland. According to his biographer, the archbishop did not adopt the religious views which have earned him this literary monument until long after he had tasted many of the sweets of political patronage. We are informed that at certain clerical meetings, held for the purposes of religious discussion, at Elphin, in 1818, "the bishop (as it need not now be denied) had most to learn;" that up to that time, "in spite of his natural tenderness of disposition, benevolence of mind, and unwearied activity in relieving distress, he had little experience of the nature of vital goodness." "He had rather admired spiritual religion in its effects at a distance, than experienced it in his own bosom." The praise of this wonderful conversion is attributed mainly to the Archdeacon of Elphin, the Rev. WILLIAM DIGBY, whose somewhat prolix letters, statements, and arguments are set down in the volume before us. And we may here take notice at once of the unconscionable length to which the accounts of every little piece of preferment given away by the archbishop, and every little business letter which he wrote, are suffered to run. Three or four hundred pages, explaining to whom was offered the curacy of this or that unpronounceable Irish village, with a full statement of its actual value, population, and requirements, might be very interesting to a new bishop inquiring into the extent of patronage at his disposal, but are very uninteresting to the general reader. This long catalogue, however, long as HOMER'S list of the ships in the Greek armament—is made an introduction to a sketch of the personal character of the different objects of the archbishop's patronge. As might be expected, there is no great variety in the descriptions of them, and they are almost, without exception, persons holding in religion the peculiar views of the archbishop and his biographer.

The brightest events in the archbishop's life are those connected with his indefatigable zeal in the relief of the distressed. In the famine which raged in Ireland in the year 1822, Dr. TRENCH appears, like another FENELON, to descend from archiepiscopal state to the performance of the most menial offices in behalf of his poorer brethren. The account of this matter, given by Dr. SIRR, contains the following:—

> The harvest of 1821 having been very defective in Ireland, and the potato crop an entire failure, extreme distress set in early in the spring of 1822, and a direful famine pervaded almost the whole province of Connaught. The compassion and sisterly commiseration of benevolent England was immediately aroused, and immense contributions were raised for the relief of the distressed districts. The archbishop was not left, therefore, as on a preceding occasion of a similar nature at Elphin, to meet so calamitous a crisis without any other aid than that which his own private resources could command. Yet had his foresight provided against the approaching destitution by the purchase of a vast stock of meal, and his hand largely and extensively contributed to the removal of actual want in his own vicinity, before the charity of the nation had expanded itself in one wide overflowing stream.
>
> He allowed no public funds to be applied to the relief of distress in the town of Tuam itself, taking the whole responsibility of meeting it on his own shoulders. The soup-kitchen which he opened continued to be supplied from the same private source. At the distribution of the soup and bread to the famishing, his whole family assisted, and he was present almost every day himself. On Fridays, when, notwithstanding the distress, the poor creatures were not suffered by their priests to partake of the soup thus generously prepared for them, his grace ordered them to be supplied with milk. Fever, the usual concomitant of starvation, spread rapidly in the suburbs of Tuam. Some poor creatures, suffering under this grievous malady, lay in the fields adjoining the Ballygaddy road. When this information reached his grace, he proceeded with a cart and horse, straw being placed in it for a bed, to the place where they were lying, and helped them with his own hands into the vehicle, and had them conveyed into a house adjoining, which he hired as a temporary hospital, fitting it up with beds, employing nurse-tenders, providing necessaries, and watching over them with the utmost anxiety. On the recovery of any of the patients, he supplied them with clothes and money.
>
> The Irish peasantry, with characteristic warmth and impetuosity, exhibited their gratitude by assembling *en masse* at the time of the next harvest, and insisting upon reaping his grace's corn-fields, as a voluntary and unpaid offering of their labour to his service. With similarly characteristic national pride, they refused to partake of so much as a mug of ale at the archbishop's expense, lest the disinterested act should seem soiled by any thing like remuneration. A still more im-

portant, though temporary effect, produced by his grace's conduct upon this occasion, was the respect which was won from the Roman Catholics. We subjoin a specimen of the florid oratory in which one of their priests sounded forth his praises. Forgetting all the fearful anathemas of Trent and the Lateran, in a charity sermon preached for the relief of the sick poor, the Rev. T. E. GILL addressed his Roman Catholic auditors thus :—

"I call on them to co-operate with the wise appropriation already begun, in favour of the distressed and sickly of the community by his *grace* of *Tuam*, with that PIETY and zeal, with that ardent and indefatigable industry, that ever *characterize his efforts*, and *breathe on his actions* AN UNEARTHLY LUSTRE." In like manner he extolled and pressed on his congregation the brilliant example of the most illustrious people on earth—the example of the English nation! "When," he added, "the sunglow of prosperity shall have brightened the verdure of our island—when the disastrous gloom, that hangs heavily on our horizon, shall have melted away beneath the warm ray of British liberality—oh! we shall fondly entwine the loved *shamrock* of our valley with the fostering *rose*. They shall grow lovingly together. Their fragrances shall mingle like the incense of love—the dew-drops, that will glisten on their leaves, shall be like the tears of some celestial sympathy. We shall plant them in the sunniest beds of our gardens, as a grateful memorial of this generous people. . . . Mutual misunderstandings are verging to a close. *Religious* and political differences no longer remembered, our misfortunes have, at length, providentially accomplished what our brighter hours could never effect. No longer eyeing each other with distrust, the Irishman shall strain his English neighbour to his heart. *Both shall kneel at the same shrine*—yes, both shall worship *at the same burning altar of charity!* Beautiful feeling of heaven! blessed indeed is thine impulse, awakened as it has been by the cries of a distracted people, sanctified by the most lovely virtue, and forming, in its consequences, *one sacred identification* of interests."

Again, in 1831, and in 1835, similar seasons of distress, though to a less fearful extent, prevailed; and again the archbishop manifested in bright colours this noblest attribute of his nature. It was for such seasons that the virtues of his kind heart were adapted, and though they occupy but a small space in his long life, these are the times when he stands before us as a really great man. Whilst we read of them, we entertain none of those doubts and fears which press upon us in other parts of the narrative, and incline us to the opinion that the archbishop was one of the great number of those "who to party give up what was meant for mankind." To this failing we attribute the unvarying reservation which he made in the disposal of the livings in his gift, viz. that he should have the nomination of the curates in his own power. Hence, too, it was that he was constantly embroiled in some contest with libellers or persecutors, whose ire was excited by the zeal and impetuosity with which the archbishop gave in to the proselyting or anathematizing views of the Digbys, the Simeons, and the Greggs of his day. Riotous bible meetings, anniversaries of the Hibernian Society, interrupted by O'CONNELL, his partisans, or the Roman Catholic priests; tumultuous public discussions between Popish and Protestant, commencing for the most part in mutual recrimination, and ending in the forcible ejection of the party whose physical powers were the more feeble; antagonist courses of controversial sermons, newspaper squabbles, and religious polemics in every shape and form; these are stimulating doses for a spiritual life, and of these Dr. TRENCH appears to have had a most abundant experience. Of course they are represented as "trials of his faith," and tests of his constancy, and undoubtedly they may have been so. Still they were trials not altogether inevitable, and in many cases seem to have been like the rebellion which Falstaff says "lay in Hotspur's way and he found it." The fact is, that for the most part the Irish religious character delights in strong and intoxicating draughts. A calm, sober, sedate Irish preacher is a rarity as great almost as a black swan. Orangemen or Papists, toasters of the "great, glorious, and immortal memory," &c. and "the battle of the diamond," or disciples of Father MATHEW, and enthusiastic followers of HIGGINS and M'HALE, both parties alike are more violent in their hatred, and in their love, than any other set of men in the world. They are any thing for a fight. A broken head at Donnybrook, or a booted disputant at the Rotunda, is an acceptable offering to the pervading love of combativeness and disturbance. Outrageous metaphors, outrageous devotion, outrageous penitence, and outrageous crime—these are all essentially national. Our author records innumerable instances, with an apparent conviction of their ordinary character, which points him out as a real native. Take an incident that occurred in the curacy of Athenry :—

In the year 1829 an unpopular priest, who had the reputation of being very severe in the exaction of *fees*, called *dues*, was appointed over it by the Romish bishop. The chapel was barricaded against him, and the people being resolved not to acknowledge him, and being exasperated against Dr. Kelly for sending him there, they thronged to the parish church. Dense crowds filled the aisles and surrounded the building from Sunday to Sunday. Nothing could equal their surprise at hearing the glad sounds of eternal life through a crucified Saviour preached to them with simplicity and power. Frequently were the discourses of the minister interrupted by sobs and reverend cries—"Glory be to God"—"It's true for you"—"Blessed be his holy name." But the poor creatures were not long to be allowed so favourable an opportunity of hearing the Gospel in its simplicity. Galway friars were sent occasionally to *serve mass* in the open air, where old habits and prejudices induced their attendance. Once Dr. Kelly himself drove over from Tuam, demanded admittance to the chapel, and was peremptorily refused. He celebrated mass outside, and had a wrangling discussion with the congregation. In vain alike were his hard words and his entreaties: they refused to surrender the keys or to receive his nominee. He drove from the town followed by groans and hisses. The next Sabbath found his incorrigible vassals listening with devout attention to the true testimony of God, that "the blood of Jesus Christ, his Son, cleanseth us from all sin." The results of this memorable commotion will only be known in the day when the secrets of all hearts shall be disclosed. The magisterial authority of the Protestant landlord finally caused the chapel, at the instigation of Dr. Kelly, to be surrendered to the custody of the disrelished priest, and the rupture was at an end. The reward this liberal gentleman received was his rejection as a legislator by the very party whom he served. During the period these proceedings were going forward, the archbishop required a weekly report from Mr. Eyre, the curate, and sent him the assistance of a gentleman who spoke Irish.

We have adverted already to the deep-seated benevolence of the late prelate. His liberality and charity, in regard to the physical necessities of the poor Irish, knew no distinctions of race or religion. Nor was this universal sympathy peculiar to his earlier years. In the year 1835, four years only before his death, we find him conducting the assistant commissioner, employed by the Government for the purposes of the Poor Law inquiry, from street to street and from cabin to cabin, in Tuam, detailing the occupation and peculiar misery of almost each separate family. From his manner and deportment, it was evident at that time to the commissioner, that he was well and personally known among the poor as a friend and benefactor. We find him, moreover, furnishing the Government with practical advice of the very best kind for improving the condition of the lower orders. Upon matters of this nature the archbishop was a sound authority, and an invaluable assistant. The sphere best adapted for his character was that of the active philanthropist. Upon the other hand, we do not find, as the archbishop increased in years, an increasing liberality in his religious opinions. Little by little, the influence of the most violent among the Protestant clergy acted upon his natural sentiments; and of all his sermons and charges, the last delivered is probably the most bitter in its hostility towards, and its invectives against, the Romanists. And this, too, was the case, in spite of repeated experience of the tendency to dissent existing among many of his own clergy. Methodism, Irvingism, and the other forms of secession appear continually to have drawn aside those of whom his hopes were the most sanguine, and who seemed to promise the most abundant benefits to the Church. We do not say, that the inroads made by dissent among the archbishop's clergy were directly owing to the religious views generally entertained by them; but we regard it as somewhat strange that so little animosity against this more insidious foe should have consisted with such bitter hatred against error in the other extreme. Perhaps the cause of such sentiments and its nature cannot be better explained than by a statement made by the same Rev. WM. DIGBY, whom we have previously mentioned. The insinuation against the character of the English clergy contained in it is somewhat singular.

On one occasion, the archbishop had been in England for a longer time than usual, attending his parliamentary duties, which

of course, when in London, brought him much into contact with the higher ranks of the English clergy. And when he next met me after his return to Ireland, he gave utterance to a sentiment which of course he had imbibed in the atmosphere he had been lately breathing, and the unsoundness of which he had not perceived—that "dissent was a worse enemy of ours than popery!" to which I replied—"My lord, I am far from being the apologist of dissent—my principle being to embrace and live in that outward communion, which possesses the two marks of *orthodoxy* and *extension* (or nationality); but be the demerits of dissent what they may, dissent is not THE WOMAN DRUNK WITH THE BLOOD OF SAINTS, AND OF THE MARTYRS OF JESUS." "True," replied the archbishop, with much humility and gentleness, at being found fault with by me, "and I never will express myself so again," AND HE NEVER DID.

Connected still more with the archbishop's rage for proselytism were the missions to Achill and Connemara, both of doubtful utility and doubtful success. Whatever may be the course proper to be pursued towards the Papists by the Church of Ireland, it should seem that isolated missionary exertions by individuals, however earnest or however able, are neither desirable nor particularly fruitful.

The interference of Archbishop TRENCH in the ordinary and more general politics of the day was very rare, so that the part taken by him in the Upper House of the Legislature was exceedingly small. Perhaps the most memorable speech which he ever made was his indignant protest against the divorce clause in the Bill of pains and penalties introduced by the ministry at the time of the trial of Queen CAROLINE. The opinion of the prelate was founded upon that verse in the New Testament which declares, that "whosoever shall put away his wife, saving for the cause of fornication, causeth her to commit adultery;" his argument being, that the abandonment of the Queen by her husband amounted to such "a putting away," and that, therefore, her adultery was merely the result of his own unrighteous actions. This occasion and two others, the one connected with the Irish Church Bill, the other with the establishment of the Irish national board of education, were the only instances in which the archbishop came prominently before the English House of Parliament. His heart and soul were occupied with the cares of his diocese, and with those more congenial spirits whom he numbered among his dearest and most intimate friends.

From what has been said, something like an idea may be formed of the nature of the book under review. With reference to the peculiar object and sentiments of the writer, it is a successful production, and will doubtless be very warmly received by the friends and admirers of the late archbishop. Whether the general reader, if unimbued with similar views and feelings, will find any thing more than very ordinary satisfaction in it, is a different question, but one to which we should fear a favourable answer cannot be given. Religious biography is slippery ground to tread upon, and, while human nature remains what it is, it will be very difficult for the most admired sanctity of one class of men to be the ideal of holiness with another. We conclude with the conclusion of the author, as affording a fair specimen alike of his style and of the degree of his impartiality.

It has been said familiarly of some one, "he was every inch a gentleman;" but of our godly prelate it may be said, that he was not only every inch a gentleman, and that of the highest order, but that he was every inch a Christian, and every inch a bishop—a primitive bishop. He was the highest style of man, and to paint his portrait the limner must be permitted "to dip his brush in dyes of heaven." Softness and vigour, suavity and energy, a love that ever yearned, and a firmness that never yielded, were never more happily combined; and this combination it was that renders it so impossible a task to portray him to the life. Yet it was this very combination that qualified him so essentially for his post of rule. The curb was seldom, if ever, felt when he held the reins. Yet beyond most men he knew how to direct, and how to slacken them. Long may the force of his example be felt, the remembrance of his virtues excite to emulation. In the early days of our bereavement, for his loss his mourning clergy, I can bear them witness, offered many a united prayer, that with his mantle might descend a double portion of his spirit on his immediate and future successors; and still those prayers, I doubt not, ascend from many a heart in which his name is enshrined. Those prayers are registered in heaven; it were a want of faith to doubt that they will abundantly be answered. May they be fulfilled beyond their utmost desires, up to that hour when all derived episcopacy shall merge in its direct exercise by the Great Bishop and Shepherd of our Souls.

The Life of the Rev. Joseph Blanco White.

(CONCLUDING NOTICE.)

THE second and third volumes continue the extracts from his journal and correspondence. As these do not afford materials for continuous narrative, we shall extract some of the passages most likely to interest the reader, and conclude with a brief report of his latter days.

His journals contain many just reflections, which appear to have been thrown off rudely as they occurred to him. Here is one on

PATRIOTISM.

When any natural propensity is consecrated into a virtue, the greatest evils ensue. *Patriotism* is an instance of this. We are naturally led to give undue importance to ourselves—this, when the individual is clearly the object of his own feeling, is called *selfishness*. But when, under the name of patriotism, each individual indulges himself in vanity, in pride, in ambition, in cruelty—and yet does it as an *Englishman*, as a *Frenchman*, as a *Spaniard*—all these vices are reckoned virtues.

And further on he illustrates this remark.

We are Englishmen, and they are Frenchmen—a set of rascally beggars.
We are Frenchmen and they are Englishmen—*Sacre!*
We are Spaniards and they are Americans.
We are Mexicans and they are Spaniards.
We are Russians and they are Poles.
We are Poles and they are Muscovites.

"Is it not curious that words so very different in meaning as Englishman, Frenchman, Spaniard, Pole, &c. have the same effect on the passions and feelings of mankind?"

"You are mistaken.—You attribute the effects in question to the wrong word. It is the word WE that produces them."

FASHION.

He that wishes to leap over the stream of fashion and habits along which the world proceeds, must take a pretty long run from out of the crowd. To attempt the leap on the border of the stream, and as one of those who are resolved to follow its course, can only insure a plunge, with a laugh on the part of the spectators.

SHAKSPEARE.

It is curious that my admiration of the great poets has regularly increased with age. This especially happens to me in regard to Shakspeare. When I came to England, though to a certain degree I had spoken the language of the country from childhood, I did not understand it sufficiently to enter into the spirit of Shakspeare's Plays. Nevertheless there were in them characters, and passages, which I admired, and which by their peculiar attraction, brought me constantly back to those compositions. Without making his dramatic works a peculiar study, at any time, I have never dropt them for any considerable period. The marks in my old little copy prove this. Unfortunately I had it originally only stitched; and upon getting it bound, many of those marks were pared off with part of the margins; else I could shew the progress of my approbation by the gradual addition of the parallel lines, which I have long used as a sign of liking a passage.

A SCRAP OF CRITICISM.

Last night, just before going to bed, I opened Hamlet, and, reading on for a while, came to one of the most beautifully tender, as well as original illustrations, which can be met with in any poet. It had never struck me in the same degree that it did this time. The genius of Shakspeare seems here to have dropt a simile of the greatest beauty almost unconsciously, as the Queen of the Fairies would drop a pearl of immense value, without much thinking where, when, or how. It is in the beginning of Laertes' leave-taking speech to Ophelia.

> For Hamlet, and the trifling of his favour,
> Hold it a fashion, and a toy in blood;
> *A violet in the youth of primy nature,*
> *Forward, not permanent; sweet, not lasting;*
> *The perfume and suppliance of a minute;*
> No more.

The *simile* is so appropriate, and yet so novel; it is so full of tenderness and life, that I cannot well express all I feel in its presence. But I was offended by the word *suppliance*, which the verse, as it is generally printed, requires to have the accent on the *i*, as coming from the verb to *supply*. Here a rash ingenuity, to which I confess that I am not a stranger in similar cases, fully possessed my mind, making me rejoice exceedingly in a conjectural reading, which I immediately wrote at the bottom of the page.

> The pérfume and (the) súppliance of a minute.

GOOD SOCIETY.

Good society is a representation of what society at large should

be. I do not know how a young person might better be told what truly good society means, than by saying, that it is a meeting of people where every one forgets himself for the sake of the rest.

Under the date of August 28, 1837, we find these

LINES FOR AN ALBUM.

To write in an album!—a difficult task,
Though the paper be glazed, and though beauty may ask.
For ink, you must use the first tints of the spring;
Your pen, you should take from a butterfly's wing;
Of gossamer words all your lines shall be wrought,
Then beware lest you crush the whole work—with a thought.
For my goose-quill, believe me, such books are too thin;
Wait till albums are bound in deal-boards and calf-skin.

WAR.

From a letter by Dr. Channing.

I wish you sympathised with me more on the subject of war. I have no faith in the virtues which grow out of war. The courage of soldiers ranks little higher than brute force. It abounds among the lowest and most profligate men; and the sense of honour is almost synonymous with the want of moral independence. When I think of the spirit of duelling and war in the Christian world, and then of the superiority to the world and the unbounded love and forbearance which characterize our religion, I am struck with the little progress which Christianity has as yet made. Has not Mahometanism acted more powerfully on the Mahometan mind? This slow progress of Christianity is to be explained by its uncompromising hostility to all the selfish and sensual principles, and by the grandeur of its moral purpose, and thus attests its divine origin.

FROM ANOTHER LETTER BY DR. CHANNING.

I do not know that I ever suggested to you a fancy which has sometimes come into my head. I have thought, that by analysing a pain, I have been able to find an element of pleasure it it. I have thought, too, that by looking a pain fully in the face and comprehending it, I have diminished its intensity. Distinct perception, instead of aggravating, decreases evil. This I have found when reading accounts of terrible accidents which have at first made me shudder. By taking them to pieces, and conceiving each part distinctly, I have been able to think of them calmly, and to feel that I too could pass through them. Sympathy increases by the process, but not fear. The sympathy weakens the personal fear; but this is not the whole explanation. The soul, by resisting the first shudder, and by placing itself near the terrible through an act of the will, puts forth energies which reveal it to itself, and make it conscious of something within, mightier than suffering. The power of distinct knowledge in giving courage, I have never seen insisted on, and yet it is a part of my experience. The unknown, the vague, the dark, what imagination invests with infinity—this terrifies—and the remark applies not to physical evils, but to all others.

You speak in your letter of the relief you have found in music. Have you met a very curious book, "The Correspondence of a Child with Goethe?" Her name was Bettini. I fell in with the work on a journey, and ran through it, omitting a good deal. It interested me as a psychologist, for it gives quite a new specimen of mind. A good deal in it relates to music, much of which I could not understand, and much more sounded like extravagance,—but I felt that there was a truth at bottom, and I wanted to understand more. I am no musician, and want a good ear; and yet I am conscious of a power in music which I want words to describe. It touches chords, reaches depths, in the soul, which lie beyond all other influences,—extends my consciousness, and has sometimes given me a pleasure which I may have found in nothing else. Nothing in my experience is more mysterious, more inexplicable. An instinct has always led men to transfer it to heaven, and I suspect the Christian under its power has often attained to a singular consciousness of his immortality. Facts of this nature make me feel what an infinite mystery our nature is, and how little our books of science reveal it to us.

The journal during the last years of his life is an almost unvaried record of bodily torture endured with heroism. Life lingered in him for many days after he had lost the use of all his bodily organs save the power of speech. "Who," says Mr. THOM, "can describe the torture of a frame with no unwounded part to sustain its own weight, and yet make the reader subordinate the physical impression, whilst he feels full upon him the large, patient eye, the only member that could be freely moved—or sees it lifted in love, calmness, and supplication? He remained in a state of stupor for some days, until the morning of the 20th of May, 1841, when he suddenly woke up, and, with a firm voice and great solemnity of manner, spoke only these words: "Now I die." He sat as one in the attitude of expectation, and about two hours afterwards—it was as he had said. It was remarked that, in the act of dying, "a sudden darkness beneath the surface, like the clouding of a pure liquid from within, the immediate shadow of Death, was seen passing from the forehead downwards, and leaving all clear again behind it as it moved along."

The memoir most fitly closes with the following eloquent elegy, addressed by Dr. CHANNING to the editor:—

Perhaps there was not a man in your country whom I wanted so much to see. I felt that no mind could open to me so interesting and instructive a history. I know by experience some of the conflicts of spirit through which he passed, and I longed to put a thousand questions to him, about the processes through which he arrived at this and another conviction. I venerated the rare heroism with which he sought truth.—But he is gone, and I am to know him only in another world. The account you give me of his trust and patience has done me good. I am little moved by passionate piety in death; but how grand is the entire submission of so calm, reflecting a man, in such deep suffering. My own trust seems to have gained strength. I rejoice that he has committed his manuscripts to *you*, for you understand him better than anybody. I shall wait impatiently for his autobiography. I besought him again and again to leave some record of his inward history—and I expect from it singular benefits. Not that I shall agree with him in all his speculations: I differed from him a good deal; but I do not know that I ever read any thing from his pen which I did not find instructive. He understood the controversy between Romanism and Protestantism as few do. Very few of us get to the heart of this quarrel. Most Protestants fight Romanism under its own standard.—I have sometimes observed on the beach, which I am in the habit of visiting, a solemn unceasing under-tone, quite distinct from the dashings of the separate successive waves—and so in certain minds, I observe a deep under-tone of truth, even when they express particular views which seem to me discordant or false. I had always this feeling about Mr. White. I could not always agree with him, but I felt that he never lost his grasp of the greatest truths. I sympathize sincerely with you in your loss. How much have you lost! The daily privilege of communion with a great and good mind is a daily light shed over our path. I know something of your affliction, for in the short space of two years, God has taken from me two friends, Dr. Follen and Dr. Tuckerman, who were knit to me in true Christian brotherhood. But we will not say we have lost such friends. They live within us in sweet and tender remembrances. They live around us in the fruits of their holy labours. They live above us, and call us in the tones of a friendship which Heaven has refined, to strengthen our union with them by sharing their progress in truth and virtue.

SCIENCE.

Phreno-Mnemotechny; or, the Art of Memory. The Series of Lectures explanatory of the Principles of the System, delivered in New York and Philadelphia in the beginning of the year 1844. By FRANCIS FAUVEL-GOURAUD, D. E. S. London, 1845. Wiley and Putnam.

PROFESSOR GOURAUD has made "a sensation," in America by the announcement of a new system of Mnemonics, by which, in ten lessons, of an hour each, he promises that his pupils shall acquire the faculty of fixing indelibly upon the memory, and reproducing at will, all the facts within range of human knowledge.

The huge volume before us contains the course of lectures in which he has developed to the astounded Americans the principles of his system; and, further to engage attention and mingle amusement with learning, he has entered copiously upon the subject of memory in general, collecting all the anecdotes relating to it which history and medical records could supply.

It appears that the discovery of the system was due to the very defective memory given by nature to the discoverer. This he sought to remedy by various of the artificial processes that have been invented by the ingenious, but all failed to help him to his object. While inquiring into the causes of these failures, he lighted upon the scheme which he has now matured, and of which he speaks with all the partiality of a parent, and more than the permitted exaggeration of an inventor. An introduction is devoted to an historical sketch of celebrated natural memories, of artificial memory, its origin and progress, and to a review of the more famous of the systems which at various times

have been put forth with promises equally confident with his own.

The lecturer cites ADAM as an instance of great natural memory, because he remembered the names of all the animals. But this is a blunder of the Professor. The names were *given* or invented by ADAM, not remembered.

CYRUS knew the name of every soldier in his army. CYNEAS, an ambassador from King PYRRHUS to the Romans, was introduced to each member of the senate on the day of his arrival, and on the following morning saluted every one of them by his proper name and surname. (Query, may he not have obtained the list and learned it?) The Emperor OTHO is also reported to have known the name of every soldier in the army; MITHRIDATES and the Emperor ADRIAN had the same faculty. SCIPIO, as it is said, could call every Roman citizen by name, although their number was 243,704, and THEMISTOCLES is asserted to have shewn a like power at Athens, whose citizens numbered 30,000.

The recorded instances of extraordinary memories for isolated words are probably more authentic. SENECA says of himself that he could repeat as many as 2,000 words, although entirely unconnected. A French Jesuit, named Father MENESTRIER, repeated to CHRISTINA, Queen of Sweden, 300 words, the most uncouth she could imagine, first in the order they had been written, and then in any order asked of him. It is related of the celebrated PICUS DE MIRANDOLA that he could repeat a column of 2,000 words, after one hearing or a single perusal.

A memory of languages is more common. MITHRIDATES had twenty-two different nations in his dominions, and could address each in its own tongue. CÆSAR dictated to six secretaries at once in so many languages. But he was eclipsed by an officer of LOUIS XV. of France, named MARIET, who could dictate to ten persons at the same time, in ten different tongues, without an error. And his memory was equally powerful in other ways. Sometimes he would amuse himself, and his friends by making a whole battalion of soldiers strangers to him, defile in his presence, each soldier pronouncing his own name as he passed, and when they repassed, he would call each one by his proper name. Cardinal MEZZAFONTI, now living, we believe, speaks *fifty-two* different languages, and to this natural gift he is indebted for his clerical dignity, and the office of post-master at Rome. His account of the origin, or rather the discovery, of this faculty is very curious. Being called upon to confess two foreigners condemned to be executed on the following day, he was grieved to find that he was unable to make himself intelligible to them. He retired to his cell resolved to acquire the language before the morning. And he succeeded in learning enough to confess them in their own tongue. Thenceforth he mastered languages with ease. He says his secret is simply that he never forgets a word he once hears.

Calculating memories are sufficiently familiar not to need notice.

Of a memory for prose there are some remarkable instances. SENECA tells us that his friend PORTIUS LATRO remembered all the speeches he had ever heard from the public orators of Rome, and could repeat them without missing or changing a word. HORTENSIUS the orator, committed his own speeches to memory, which never failed him, and he could repeat whatever had been said by his opponent in the pleading of any case. Once he repeated the articles, bidders, and prices through a whole day's sale, without a mistake. JUSTUS LEPOUS, a Flemish writer, knew by heart the whole of *Tacitus*. AVICENNA, the famous Arabian physician, could repeat word for word the whole book of ARISTOTLE'S *Metaphysics*. It is said that JOSEPH SCALIGER acquired line by line, in the Greek, botb the *Iliad* and *Odyssey* of HOMER in the short space of twenty-one days. CREBILLON never wrote a line of his many tragedies while composing them, and his corrections were made by help of the memory alone. BARON BEYTS, a Belgian nobleman, who died in 1832, could recite all the tragedies of SOPHOCLES and EURIPIDES; he could name the date of almost every event in history or literature.

VOLTAIRE was made the subject of a practical joke by FREDERICK of Prussia, by means of a like faculty possessed by one of his officers. The wit had appointed to read to the King the MS. of a new poem. The company assembled, he produced his vellum, and recited the work amid great applause. When he had concluded, the King smilingly asked him how he could read as *new* a poem which one of his officers had written and submitted to him for criticism some months since. The poet in great wrath challenged the monarch to proof. An order was issued, and a young officer entered the room. The King asked him if he had found his lost manuscript. He replied that he had not, but that fortunately he had learned it by heart, and immediately repeated word for word the poem just read by VOLTAIRE. After a short enjoyment of the wit's perplexity, the secret was revealed. The young officer had been stationed behind a curtain, heard the reading of the manuscript, and repeated it from memory.

It is related of Pope CLEMENT VI. that in a riot he was knocked down by a blow upon the back of the head from a club. Before this accident, his memory was very bad; after his recovery, it became so excellent that he could remember whole books after a single reading.

The lecturer next considers the definition of memory, which he divides into natural and artificial; the latter being simply the power of recalling facts by means of *conditional associations*.

Natural memory he distributes into,—1. Recollection, or memory *at will*; 2. Remembrance, or spontaneous memory; 3. Reminiscence, or *accidental* memory; and 4. Conception, or the power of forming images from the remembrance of things we know, and which is equivalent to invention.

The origin of memory being the reproduction of impressions left on the mind through the medium of the senses, the lecturer makes a five-fold division accordingly, and he concludes by classing all memory under three heads, which he terms the *mechanical*, *rational*, and *intus-susceptive* memory.

So far we have been enabled to advance assentingly with Mr. GOURAUD, but at this point he commences the lectures that develope his system, and we must confess that, if we have read it aright, it by no means deserves the extravagant praises of its author.

The *principle* of the system is not new; indeed, all systems of artificial memory must be based upon one common principle. Memory is suggestion of one idea by the presence of another with which it is associated, and every scheme of Mnemonics must proceed upon the principle of substituting a sign more readily associated with the object sought to be remembered than is the ordinary sign. Letters and words to symbolize figures were obvious means to the end, and have been frequently recommended. It seems to us that Mr. GOURAUD'S scheme is but an improvement upon this; and that whereas his predecessors were content with letters as disconnected as the figures they represented, or words as difficult to be associated with the object as the bald date, he proposes words that have something like an association with the event.

Now this we admit to be an improvement; but so far from making his system as omnipotent as he asserts it to be, it adds only one more to the multitude of ingenious failures. Practically, it will not serve its purpose, however plausible in theory, and for this reason, that, like its fellows, it proceeds upon a false conception of the faculty of memory. It assumes that memory is an act of the whole mind, and that a good or bad memory means a readiness or inability to recal every kind of impression. But, in truth, each faculty has its own memory, and one may be excellent while others are vile. One person enjoys a ready recollection of dates, another of words, a third of events, a fourth of times, a fifth of places, a sixth of colours, and so forth; and some have more, some less of these, in endless combination. Moreover, each memory has its own train of associations, and each mind is more readily moved by some suggestions than by others. It follows from this, that there cannot be a system of Mnemonics; for that which would prove a ready association with one mind, would be no link in another mind. Mr. GOURAUD'S plan will be useful to those to whom nature has given a quick memory for words, for he addresses himself precisely to their capacities; but it must fail utterly to serve those whose associations are with places, or persons, or events, or sounds, and therefore, as a general system, it is unavailable.

But if he have failed, it is from the absolute impracticability of his aim, not from want of industry, ingenuity, or zeal. The volume before us attests the research and thought he has devoted to his theme; it abounds in curious and entertaining matter; he has collected facts from a wide range of reading, and introduces reflections which lead to thought, and will tend

to direct attention to one of the most interesting of the phenomena of mind. For these Mr. GOURAUD's lectures may be read with pleasure and profit, although the system they introduce must, we fear, be consigned to the limbo of vanities, among the myriad plausible projects that every age brings forth, promising royal roads to knowledge, but leaving mankind much as it found them, compelled to toil up the old steep path, and to acquire their wisdom by slow degrees. Many are the endeavours to cheat nature of her toll; but it may not be. The penalty of our mortality must be paid; so long as we are in time and space, we must obey their laws; perhaps, hereafter, when the soul is emancipated from their bondage, it may be a portion of its promised heaven to receive all knowledge at once.

FICTION.

Tales from the "Phantasus" of Ludwig Tieck. London, 1845. James Burns.

THE deep religious spirit that pervades the fictions of TIECK, not shewn in phrases and texts and preachments, but felt in the solemn tones it wakens in the mind of the reader, is only now beginning to be appreciated in England, the translations published by Mr. BURNS having been mainly instrumental in introducing him to a public but just entering upon the better state of intellectual existence necessary for the proper enjoyment of such a soul as his.

A Roman Catholic by birth, he learned nothing of religion save the forms. Against these his spirit revolted, and infidelity was the *first* result of *doubt*. But that no more satisfied the demands of his earnest nature than did the hollow formulas he had abandoned. With brave resolve he entered upon the awful task of seeking the truth and the light by the investigations of his own great intellect, guided by an honest purpose, and confident in the power of the mind over itself. The questions that have ever engaged the thoughtful and startled the thoughtless,—"of reason and foreknowledge, will and fate"—Where am I?—what am I?—why am I?—these, and such as these, were bravely met and vigorously grappled with; and though he confessed himself unable to solve them entirely, he obtained enough of insight into the mysteries of existence to be assured that there is a God, a religion, a business to be done here, a futurity to be sought hereafter; and thenceforth the light that had streamed into his soul was reflected in his writings, and the mighty harmonies that revolved there ran in low under-tones through whatever came in words from his gorgeous imagination. In all that he utters there is a meaning below the surface, to be gleaned only by study. Hence it is, that superficial readers, who take up his tales for amusement alone, and glide over them as over the pages of a fashionable novel, are often disappointed, and wonder what can have recommended TIECK to the popularity he enjoys among his countrymen. But they who would taste his beauties must read with another purpose, and in more sober mood. They must remember that every tale illustrates a principle of our nature, or conveys some grand moral lesson, or teaches philosophy by example. "The true poet of any time," remarks the translator in his preface, "is he who can make that time transparent,—who can let his readers in behind the curtain of their own souls, and that of the society in which they live, and shew them what they are all doing, hoping, fearing; clear up their cloudy perceptions, and say for them, what they would say for themselves, if they could. This is exactly what TIECK does. His Emelius's Egberts, Ludwigs,—what are they all, but the very men of whom every day he walked into the street he saw thousands? No matter what the conditions be under which he pictures them working, his men are real men, not fantastic; and that is all we have any right to require."

The tales collected in this elegant volume are taken from *Phantasus*, the device of which is simply this. A literary society assembles to discourse of literature and art, and the different members read aloud tales or dramas of their own composition. These are introduced by a dialogue so full of truth and beauty, that we must extract it.

"It is not at every moment, nor every time we choose to turn to her," said Antony, "that Nature will unfold her secrets to us; or rather, it is not always that we are in the mood to feel her sacredness. There must first be a harmony in ourselves, if we are to find what surrounds us harmonious; otherwise we do but cheat ourselves with empty phrases, without ever rising to a true enjoyment of beauty. It may be, perhaps, that there are times when unexpectedly some blessed influence descends out of Heaven upon our hearts, and unlocks the door of inspiration; but towards this we can add nothing. We have no right, no means of looking for it; it is a revelation within us we know not how. So much is certain, that it is not above twice, or at most three times, in a man's life that he has the fortune, in any true sense, to see a sunrise. When we do see it, it does not pass away like a summer cloud before our minds; rather, it forms one of the great epochs in our lives. From such ecstatic feelings as we receive then it is long and long ere we recover; by the side of these exalted moments years dwindle into nothingness. But it is only in the calmness of solitude that these high gifts can descend upon us. A party collecting itself to see it as a sight on the top of a mountain, is only standing as it were before an exhibition at a theatre, and can bring from it nothing but the same kind of empty pleasure and foolish criticisms."

"Still stranger is it," said Ernest, "that the great majority of men are so dead to that awe and wonder, that fearful amazement with which Nature often fills some minds. If they can feel it, it is only as an obscure bewildered sensation of they know not what."

"It is not only on the dreary peaks of the St. Gothard that we can feel the terribleness of Nature. There are times when the most beautiful scene is full of spectres that fly shrieking and screaming across our hearts. Such strange shadowy forms, such wild forebodings, go often hunting up and down our fancy, that we are fain to fly from them in terror, and rid ourselves of our phantom rider, by plunging into the dissipations of the world. While under such influences, wild poems and stories often rise up in us to people the dreary chaos of desolation, and adorn it with creations of art; and these forms and figures will be unconscious betrayers of the tone and temper of the mind in which they spring. In these kind of stories the beautiful mingles itself with the terrible, the sublime with the childish, goading our fancy into a kind of poetic madness, and then turning it to roam at will through the entire fabric of our souls."

"Are the stories you are going to read to us of this kind?" asked Clara.

"Perhaps," replied Ernest.

"And not allegorical?"

"As you please to call them. There is not, and there cannot be, any creation of art which has not some kind of allegory at the bottom of it, however little it may let itself be seen. The two forms of good and evil appear in every poem; they meet us at every turn, in every thing man produces, as the one eternal riddle in an endless multiplicity of forms, which he is for ever struggling to resolve. As there are particular aspects in which the most every-day life appears like a myth, so it is possible to feel oneself in as close connection with, as much at home in the middle of the wildest wonders as the ordinary incidents of life. One may go so far as to say, that the commonest, simplest, pleasantest things, as well as the most marvellous, can only be said to be true, can only exert an influence on our minds, in so far as they contain some allegory as their groundwork, as the link which connects them with the system of the universe. This is why Dante's allegories come so home to us, because they pierce through and through to the very heart and centre of reality. Novalis says, there is no real history, except what might be fable. Of course, there are many weak and sickly poems of this kind, which merely drag wearily on to the moral, without taking the imagination along with them; and these of all the different sorts of instruction or entertainment are the most tiresome. But it is time to proceed to our tales."

The translator has selected ten of the tales for the present volume, each bearing a different moral, all full of the profoundest philosophy, the richest poetry, with just so much of the mystical as serves to enhance the interest with which we read. "The Love Charm," especially, is a master-piece, and truly is it termed a tragedy, whose spirit approaches as near as modern thought can be made to approach to the fatalism of the Greek drama.

"The Elves," under the disguise of a fanciful fairy-tale, teaches momentous truths. Man as he is, man as he should be, and might be; the different aspect the world offers to those who look upon it from above, and to those who view it from its surface; the contrast between the perfections of nature and the imperfections of art: the eternal beauty of truth and virtue, and the deformity and perishing unsubstantiality of whatever is based upon falsehood and wrong, are displayed with an impressiveness which cannot fail to write the lesson on the heart of every reader, and especially of the young.

Such being the character of these tales, they will need no direct recommendation. The translators have done them am-

ple justice, and the best assurance that can be given of typographical excellence is to state that they are published by Mr. Burns.

Tales from the Eastern Land. Being a second series of Eastern Romance. London, 1845. James Burns.

We had not the good fortune to see the first volume of these tales, and therefore we are unable to describe the origin and design, which doubtless were there duly set forth by the translator or editor.

This second volume, however, contains eleven tales, some of them the most favourite of the gorgeous romances of the *Arabian Nights' Entertainments*, slightly remodelled, to adapt them for family reading. The others are translations, the first ever made into the English tongue, from the German of Grimm; and really, this seen side by side, the reader will be in doubt whether most to admire, the rich fancy of the unknown Arabian poet, or the fertile fancy of the glorious old German, to whom the wild and the wonderful were so familiar that he was enabled to treat them with the earnestness of truths, and charm his readers into temporary faith in fairies, goblins, demons, genii, and all those "millions of spiritual creatures" with which the poets have peopled the earth.

And here is a volume which carries us back to the trustful days of youth, when dreams were realities, and fables facts, and which we have ill-exchanged for the half-truths and imperfect knowledge that have been substituted for them by the utilitarian tendencies of our age. Heartily do we welcome all publications of this class, in earnest hope that they will help to advance that object for which The Critic is established—the substitution of a more spiritual philosophy for the materialism which has of late years held such undisputed sway.

POETRY.

The Waif a Collection of Poems. Third edition. 1845. Cambridge, U. S. Owen; London. Wiley and Putnam.

The rarest book in our language is a collection of *good* poetry. The most valuable contribution to our literature would be a volume comprising the gems—and the gems only—of British song. The defect of all the many gatherings that have been submitted to the public lies, not so much in the absence of the excellent, as in the presence of the worthless. Selections have been made with too much liberality. The gatherer of a wreath of poems cannot be too choice and exclusive. His rule should be to reject wherever a doubt arises as to the title to admission. Yet has not the failure arisen from want of the aid of persons apparently peculiarly competent for the task. Poets, such as Campbell, and Hazlitt, and Leigh Hunt, have tried, but have proved no better judges of merit than they who never attempted verse. A collection of the beauties of the British Poets is yet, and we fear will long continue to be, a desideratum in our literature.

The Waif is certainly the best we have yet seen, and it comes to us from across the Atlantic. The demand for a third edition in a few months indicates that the public have discovered its worth, and shews with what cordial welcome a yet more complete and tasteful collection would be received. Although no name of editor appears upon the title-page of *The Waif*, there can be little doubt, from the place of its publication, and the Proem, which he has avowed, that Longfellow's mind presided over the choice. The poems are not numerous, but, without exception, they have claims upon our notice for their originality or their beauty. The printer has partaken the spirit of the editor and the typography is worthy of the thoughts to which it gives a local habitation. It is a volume which the lover of poetry will be sure to look upon as a treasure.

Most of the poems are already familiar to our readers. But Longfellow's Proem was written for the occasion so lately as December last, and possessing much novelty of thought, and not a little true poetry, while it is certain to be new to everybody, we extract it:—

PROEM TO A VOLUME OF SELECTED POEMS.

The day is done, and the darkness
Falls from the wings of Night,
As a feather is wafted downward
From an eagle in his flight.

I see the lights of the village
Gleam through the rain and the mist,
And a feeling of sadness comes o'er me,
That my soul cannot resist;

A feeling of sadness and longing,
That is not akin to pain,
And resembles sorrow only
As the mist resembles the rain.

Come, read to me some poem,
Some simple and heartfelt lay,
That shall soothe this restless feeling,
And banish the thoughts of day.

Not from the grand old masters,
Not from the bards sublime,
Whose distant footsteps echo
Through the corridors of time.

For, like strains of martial music,
Their mighty thoughts suggest
Life's endless toil and endeavour;
And to-night I long for rest.

Read from some humbler poet,
Whose songs gushed from his heart,
As showers from the clouds of summer,
Or tears from the eyelids start;

Who through long days of labour,
And nights devoid of ease,
Still heard in his soul the music
Of wonderful melodies.

Such songs have power to quiet
The restless pulse of care,
And come like the benediction
That follows after prayer.

Then read from the treasured volume
The poem of thy choice,
And lend to the rhyme of the poet
The beauty of thy voice.

And the night shall be filled with music,
And the cares, that infest the day,
Shall fold their tents, like the Arabs,
And as silently steal away

England Won a Poem. By John G. H. Bourne. London, 1845. Longman and Co.

English and Norman knights of fair renown,
The fate of Harold and the questioned crown,
On Hastings' field the deeds by William done,
My verse relates the fight, and *England won.*

Such, as set forth in the opening lines, is the subject of this epic,—an excellent theme for a poet; but ill-chosen for such a mere rhymester as Mr. Bourne, who, with natural misgivings of his own capacities for soaring to "the height of his great argument," proceeds to say, that it

May well appear a task too high and hard,
A flight too daring for an unproved bard.

Undoubtedly it is; but why, then, attempt it? Why, conscious of his infirmity, venture a flight so lofty? Why was not Mr. Bourne content to try an humbler theme? But, having sought to soar, and called upon the public to look at him and pronounce a judgment upon his performance, he must not be surprised if, finding his wings of wax, they laugh to see them melting in the radiance amid which he has presumed to plunge.

Mr. Bourne is one of that vast company of scribblers who mistake words for thoughts, and rhyme for poetry. Blessed, or it may be cursed, by nature with a flow of words and a tuneful ear, they string together some hundreds of metrical lines, and imagine themselves poets, forgetting, or, not choosing to remember, that metre and rhyme are only the graceful garments in which Poetry is pleased to clothe herself, and that of themselves they make only a scarecrow image of her, which, on a near approach, is found to be nothing but a brainless skull and dry bones. And here is Mr. Bourne, doubtless in all other matters a sensible man, taking the pains to write, and incurring the cost of publishing, some two hundred pages of words, arranged in hexameters, throughout which we have looked in vain for a single passage of true poetry. Destroy the metre and rhyme by disarranging the order of the words, and the volume would be a narrative in very flat prose, in which nobody would guess the hand of a poet.

Let Mr. Bourne but take the page he deems the worthiest, and try it by this test, and, in spite of the partiality of an author, he will confess that *England Won* has no title to the name of a poem.

PERIODICALS AND SERIALS.

Since our last notice, we have received many numbers of various serials and periodicals, which we are compelled to dismiss summarily at this season, but which claim the courtesy of a passing comment.

Of *Dr. Young's Lectures in Natural Philosophy and the Mechanical Arts*, two more parts have come to hand. They treat of the history of mechanics, of hydrostatics, of the theory of hydraulics, of hydraulic pressure, of hydraulic machines, of pneumatic machines, of the propagation of sound, of the sources and effects of sound, and of harmonics. The style of the lecturer is popular, but strictly *correct*, and the text is illustrated by numerous engravings on steel.

The fifth part of *Knight's Political Dictionary* carries on the work to the word "Copyright." The articles appear to be ably written, carefully compiled, and when completed, it will be a very valuable addition to the library of reference.

Three more parts, namely, III. IV. and V. of W. J. FOX's *Lectures addressed chiefly to the Working Classes*, continue to handle divers popular topics with a philosophical spirit and rare power of eloquence. "Wordsworth," "The Parliament," "The Burial of the Dead," "On Impulse," "The Labour-market," "Ebenezer Elliott," "Alfred Tennyson," "The Political Influence of Church Establishments," "Thomas Moore and the Maynooth Grant," which are handled in the lectures before us, will indicate the variety of subjects selected for discourse, and we regret that pressure of other claims forbids extracts that would shew the manner of their treating. They will richly reward perusal.

HARRY LORREQUER'S *O'Donoghue* is continued with growing interest, and delighting its readers each month with a world of Irish humour and pathos.

The second part of the *Illustrated Family Journal* more than sustains the character we gave to the first. The editor exhibits equal taste in the choice of his materials, and the engravings improve with every number. They are really fine specimens of art.

The *Novel Times* has commenced a new romance from the pen of Mr. JAMES. The sixth and seventh parts of *Mores Catholici* present all the characteristics we noticed as marking their predecessors, and *Dolman's Magazine* for May and June must be an acceptable addition to the Roman Catholic periodicals.

George Cruikshank's Table Book, for June, contains one of his inimitable engravings, "Heads at the Table," full of character and spirit, and of itself sufficient to make the fortune of the periodical in which it appears. But many more wood-cuts are scattered over its pages, some clever, others unworthy of their position, and we think we perceive something like improvement in the literary matter, of which hitherto complaint has with justice been made.

Douglas Jerrold's Shilling Magazine, for June, continues the editor's admirable "History of St. Giles's and St. James's;" and among other topics of present interest it attacks "the Mummery of Medicine," exposes some of the absurdities of "the Law of the Land," and in a powerful article entitled "Man and the Criminal," indignantly and truthfully denounces the system by which criminals are made and punished. The wholesome spirit of this magazine entitles it to the support of every friend of humanity.

The American Journal of Insanity, No. IV. for April, has been forwarded to us from Utica. It is edited by the officers of the New York State Lunatic Asylum, and besides a regular report of the experiences of that noble establishment, it contains contributions on the subject of insanity, and facts and cases occurring in all parts of the United States. The utility of such a publication will be apparent, and we hasten to make it known to our readers, in the hope that it will find a circulation in England among those who feel an interest in the subject to which it is devoted. Some idea of its value may be formed from the titles of a few of the papers in the number before us. The Rev. JOHN BARLOW has treated of man's power over himself to prevent or control insanity: the importance of sleep in preventing insanity is the subject of a second article. The influence of the weather upon the disposition and the mental faculties, schools in lunatic asylums, and the homicidal impulse, are severally considered, and some curious facts are stated, and many practical suggestions offered, the results of experience, and which for the sake of humanity cannot be too widely diffused. When more of the numbers of this periodical shall have reached us, we propose formally to submit to our readers the results of their investigations.

The Lives of Illustrious Lord Mayors and Aldermen of London, from the earliest to the present time, is addressed to the vanity of the Cits. The first part contains the lives of Sir WILLIAM WALWORTH and Sir RICHARD WHITTINGTON, written very respectably, and got up with some labour of research. It is embellished with splendidly illuminated arms of two of the City companies.

The Phrenological Journal and Magazine of Moral Science, for April, although dedicated to the advancement of phrenology, has much that is calculated to interest and instruct those who may not admit the truths of the science itself. The first essay, for instance, is a philosophical review of the question of Penal Colonies, and the treatment of criminals there, and forms a valuable contribution to criminal jurisprudence. The relative liability of the sexes to insanity is examined by Dr. THURNAM, and exhibits some curious results. The average of thirty-two asylums shews an excess of males of 13 per cent.; Dorset being the only county in which the female lunatics are more numerous than the males. But the advantage on the side of the ladies does not end here: of those who become insane, a far greater proportion recover. The third paper is an essay by Mr. CULL, "On the Organ of Language and its Functions." Mr. GEORGE COMBE has contributed a very interesting account of his visit to Dr. FERRARESE, the famous phrenologist of Naples. There is a large collection of facts and cases, and a number of reviews of books bearing on the subjects to which this periodical is devoted.

MISCELLANEOUS.

Letters from New York. Second Series. By L. MARIA CHILD. London and New York, 1845. Wiley and Putnam.

THE first book THE CRITIC was called upon to review after its establishment, now about two years since, was that delightful volume of letters of which the present is a continuation. It was with cordial welcome that we then hailed the appearance in the United States of a writer possessing undoubted genius, and, above all, having the courage to be original—to think for herself, and to proclaim her thoughts. In many particulars, and especially in this of moral bravery, Mrs. CHILD resembles our own Miss MARTINEAU. But the former possesses also some gifts which the latter wants. She has more of the poetical in her nature; her imagination is loftier in its flights and larger in its capacities. Whatever comes to her from without, whether through the eye or the ear, whether in nature or art, is reflected in her writings with a halo of beauty thrown about it by her own fancy, and thus presented, it appeals to our sympathies and awakens an interest which carves it upon the memory in letters of gold.

But Mrs. CHILD has yet loftier claims to respect than a poetical nature. She is a philosopher, and, better still, a religious philosopher. Every page presents to us scraps of wisdom, not pedantically put forth, as if to attract admiration, but thrown out by the way, in seeming unconsciousness, and as part of her ordinary thoughts. In honesty, THE CRITIC must confess to a want of faith in female philosophers; but certainly Mrs. CHILD is an exception to the general rule. Few men have thought so deeply, and fewer still have put their thoughts into such graceful language. Her manner, indeed, is as pleasing as her matter is excellent, and there are few who read the first series of her letters, or the extracts from them which appeared in our columns and in other journals, who will not eagerly turn to this new volume in hope to repeat the pleasure.

Nor will they be disappointed beyond that disappointment which attends all continuations, the consequence, probably, of the absence of the interest produced by mere novelty. The same vigorous description, the same vein of Christian philosophy, runs through these letters. They are equally miscellaneous in the topics of which they treat. Essay, criticism, description, anecdote, attract the reader by turns. In the thirty-one letters here collected, at least a hundred diverse subjects are treated of, just as events chanced to direct the writer's reflections. Some short tales even are introduced with telling effect. We observe that the eloquent criticism on OLE BULL'S *Niagara*, cited in THE CRITIC from the *Broadway Journal*, some two or three weeks since, forms a part of this very miscellaneous collection of discourses.

Such a work does not admit of formal review, for it is amenable to no canons of art; nor is it capable of analysis, for it is framed upon no plan. It can be exhibited only by extract, which may shew the writer's turn of thought and style of writing. But even in this are we puzzled—from the very profusion of passages that tempt the pencil by their beauty or their wisdom. We see that we have thus scored sufficient to fill two CRITICS at the very least, and, therefore, the still more difficult duty devolves upon us of selecting again from the select; and, unfortunately, in that we must be guided by other considerations than mere intrinsic worth—we must study variety and brevity. But the regret with which we exclude so much that would well reward perusal, is relieved by the consideration that the book is easily procured, and that it is precisely the sort of publication for the book-clubs.

But we will not longer delay to gratify the impatience of our readers for a peep at the authoress herself. Take first,

AN ANECDOTE OF WAR.

I have somewhere read of a regiment ordered to march into a small town and take it. I think it was in the Tyrol; but wherever it was, it chanced that the place was settled by a colony who believed the Gospel of Christ, and proved their faith by works. A courier from a neighbouring village informed them that troops were advancing to take the town. They quietly answered, "If they *will* take it, they must." Soldiers soon came riding in, with colours flying, and fifes piping their shrill defiance. They looked round for an enemy, and saw the farmer at his plough, the blacksmith at his anvil, and the women at their churns and spinning-wheels. Babies crowded to hear the music, and the boys ran out to see the pretty trainers, with feathers and bright buttons, "the harlequins of the nineteenth century." Of course none of these were in a proper position to be shot at. "Where are your soldiers?" they asked. "We have none," was the brief reply. "But we have come to take the town." "Well, friends, it lies before you." "But is there nobody here to fight?" "No; we are all Christians."

Here was an emergency altogether unprovided for; a sort of resistance which no bullet could hit; a fortress perfectly bomb-proof. The commander was perplexed. "If there is nobody to fight with, of course we cannot fight," said he. "It is impossible to take such a town as this." So he ordered the horses' heads to be turned about, and they carried the human animals out of the village, as guiltless as they entered, and perchance somewhat wiser.

This experiment on a small scale indicates how easy it would be to dispense with armies and navies, if men only had faith in the religion they profess to believe. When France lately reduced her army, England immediately did the same; for the existence of one army creates the necessity for another, unless men are safely ensconced in the bomb-proof fortress above mentioned.

The following is one of hundreds of instances of charity kindled in bosoms long dead to the emotion, by—

DICKENS'S CHRISTMAS CAROL.

About this Carol, I will tell you "a merry toy," as Jeremy Taylor was wont to say. Two friends of mine proposed to give me a New-Year's present, and asked me to choose what it should be. I had certain projects in my head for the benefit of another person, and I answered that the most acceptable gift would be a donation to carry out my plans. One of the friends whom I addressed was ill pleased with my request. She either did not like the object, or she thought I had no right thus to change the appropriation of their intended bounty. She at once said, in a manner extremely laconic and decided, "I won't give one cent." Her sister remonstrated, and represented that the person in question had been very unfortunate. "There is no use in talking to me," she replied: "I won't give one cent."

Soon after, a neighbour sent in Dickens's Christmas Carol, saying it was a new work, and perhaps the ladies would like to read it. When the story was carried home, the neighbour asked, "How did you like it?" "I have not much reason to thank you for it," said she, "for it has cost me three dollars." "And pray how is that?" "I was called upon to contribute toward a charitable object, which did not in all respects meet my approbation. I said I wouldn't give one cent. Sister tried to coax me; but I told her it was of no use, for I wouldn't give one cent. But I have read the Christmas Carol, and now I am *obliged* to give three dollars."

It is indeed a blessed mission to write books which abate prejudices, unlock the human heart, and make the kindly sympathies flow freely.

Here is the most intelligible and satisfactory definition we have ever seen of

TRANSCENDENTALISM.

If you wish to know the origin of the word transcendentalism, I will explain it, briefly and simply, as I understand it.

All who know anything of the different schools of metaphysics, are aware that the philosophy of John Locke was based on the proposition that all knowledge is received into the soul through the medium of the senses; and thence passes to be judged of and analysed by the understanding.

The German school of metaphysics, with the celebrated Kant at its head, rejects this proposition as false; it denies that all knowledge is received through the senses, and maintains that the highest, and therefore most universal truths, are revealed within the soul, to a faculty *transcending* the understanding. This faculty they call pure Reason; it being peculiar to them to use that word in contradistinction to the Understanding. To this pure Reason, which some of their writers call "the God within," they believe that all perceptions of the Good, the True, and the Beautiful are revealed, in its unconscious quietude; and that the province of the Understanding, with its five handmaids, the Senses, is confined merely to external things, such as facts, scientific laws, &c.

Mrs. CHILD vouches for the authenticity of the following curious incident in Natural History:—

THE TWO FOXES.

He (the narrator) was one day in the fields, near a stream where several geese were swimming. Presently, he observed one disappear under the water, with a sudden jerk. While he looked for her to rise again, he saw a fox emerge from the water, and trot off to the woods with the unfortunate goose in his mouth. He chanced to go in a direction where it was easy for the man to watch his movements. He carried his burden to a recess under an overhanging rock. Here he scratched away a mass of dry leaves, scooped a hole, hid his treasure within, and covered it up very carefully. Then off he went to the stream again, entered some distance behind the flock of geese, and floated noiselessly along, with merely the tip of his nose visible above the surface. But this time, he was not so fortunate in his manœuvres. The geese, by some accident, took the alarm, and flew away with loud cackling. The fox, finding himself defeated, walked off in a direction opposite to the place where his victim was buried. The man uncovered the hole, put the goose in his basket, replaced the leaves carefully, and stood patiently at a distance, to watch further proceedings. The sly thief was soon seen returning with another fox, that he had invited to dine with him. They trotted along right merrily, swinging their tails, snuffing the air, and smacking their lips, in anticipation of a rich repast. When they arrived under the rock, Reynard eagerly scratched away the leaves; but lo, his dinner had disappeared! He looked at his companion, and plainly saw by his countenance, that he more than misdoubted whether any goose was ever there, as pretended. He evidently considered his friend's hospitality a sham, and himself insulted. His contemptuous expression was more than the mortified fox could bear. Though conscious of generous intentions, he felt that all assurances to that effect would be regarded as lies. Appearances were certainly very much against him; for his tail slunk between his legs, and he held his head down, looking sideways, with a sneaking glance at his disappointed companion. Indignant at what he supposed to be an attempt to get up a character for generosity on false pretences, the offended guest seized his unfortunate host, and cuffed him most unmercifully. Poor Reynard bore the infliction with the utmost patience, and sneaked off, as if conscious that he had received no more than might naturally be expected, under the circumstances.

Excellent is the recommendation to parents and teachers with which she concludes these

THOUGHTS ON CEMETERIES.

I revisited Greenwood Cemetery a few days ago, and found many new monuments; one of which particularly interested me, from the cheerful simplicity of its epitaph. The body of a mother and child rested beneath the marble, and on it was inscribed the words, "Is it well with thee? Is it well with the child? And she answered, It is well."—2 Kings iv. 26. This gives pleasant indication of real faith in immortality; like the Moravians, who never inscribe on their tombs the day when a man was born and when he died, but simply "the day he came hither, and the day he *went home*." Why Christians should have chosen a skull and cross-bones for their emblem of death seems incomprehensible. The Greeks, notwithstanding their shadowy faith in a future existence, represented death as a gentle and beautiful youth; sometimes as a sleeping winged child, with an inverted torch resting on a wreath of flowers. Even Samael, the awful death-angel of the Hebrews, resembling our popular ideas of the devil, was always said to take away the souls of the young by a kiss.

If we really believed that those who are gone from us were as truly alive as ourselves, we could not invest the subject with such awful depth of gloom as we do. If we would imbue our children with distinct faith in immortality, we should never speak of people as dead, but as passed into another world. We should speak of the body as a cast-off garment, which the wearer had outgrown; consecrated indeed by the beloved being that used it for a season, but of no value within itself.

An extraordinary incident that occurred in the family of the authoress, when the yellow fever prevailed like a plague at Boston, will so powerfully interest the reader, that though somewhat long, we must extract it.

A ROMANCE OF REAL LIFE.

One of my father's brothers, residing in Boston at that time, became a victim to the pestilence. When the first symptoms appeared, his wife sent the children into the country, and herself remained to attend upon him. Her friends warned her

against such rashness. They told her it would be death to her, and no benefit to him; for he would soon be too ill to know who attended upon him. These arguments made no impression on her affectionate heart. She felt that it would be a life-long satisfaction to *her* to know who attended upon him, if *he* did not. She accordingly staid and watched him with unremitting care. This, however, did not avail to save him. He grew worse and worse, and finally died. Those who went round with the death-carts had visited the chamber, and seen that the end was near. They now came to take the body. His wife refused to let it go. She told me that she never knew how to account for it, but though he was perfectly cold and rigid, and to every appearance quite dead, there was a powerful impression on her mind that life was not extinct. The men were overborne by the strength of her conviction, though their own reason was opposed to it. The half-hour again came round, and again was heard the solemn words, "Bring out your dead." The wife again resisted their importunities; but this time the men were more resolute. They said the duty assigned to them was a painful one; but the health of the city required punctual obedience to the orders they received; if they ever expected the pestilence to abate, it must be by a prompt removal of the dead, and immediate fumigation of the infected apartments. She pleaded and pleaded, and even knelt to them in an agony of tears, continually saying, "I am sure he is not dead." The men represented the utter absurdity of such an idea; but finally, overcome by her tears, again departed. With trembling haste she renewed her efforts to restore life. She raised his head, rolled his limbs in hot flannel, and placed hot onions on his feet. The dreaded half-hour again came round, and found him as cold and rigid as ever. She renewed her entreaties so desperately, that the messengers began to think a little gentle force would be necessary. They accordingly attempted to remove the body against her will; but she threw herself upon it, and clung to it with such frantic strength, that they could not easily loosen her grasp. Impressed by the remarkable energy of her will, they relaxed their efforts. To all their remonstrances she answered, "If you bury him, you shall bury me with him." At last, by dint of reasoning on the necessity of the case, they obtained from her a promise, that, if he shewed no signs of life before they again came round, she would make no further opposition to the removal. Having gained this respite, she hung the watch up on the bedpost, and renewed her efforts with redoubled zeal. She placed kegs of hot water about him, forced brandy between his teeth, breathed into his nostrils, and held hartshorn to his nose; but still the body lay motionless and cold. She looked anxiously at the watch; in five minutes the promised half-hour would expire, and those dreadful voices would be heard, passing through the street. Hopelessness came over her; she dropped the head she had been sustaining; her hand trembled violently; and the hartshorn she had been holding was spilled on the pallid face. Accidentally, the position of the head had become slightly tipped backward, and the powerful liquid flowed into his nostrils. Instantly there was a short, quick gasp—a struggle—his eyes opened; and when the death-men came again, they found him sitting up in the bed. He is still alive, and has enjoyed unusually good health.

There is beauty and truth in the reflections on

MUSIC.

Love or good is the inmost universal essence of all things. Music, being disembodied tone, is the expression of love or the affections, in a general sense. Hence, it glides like a pervading soul into all things of literature and art, giving painting its tone, architecture its harmony, and poetry its rhythm. It has been beautifully said that "Music is the *voice* of God and poetry his *language*."

And again:

And all this complexity of creation, this infinite variety flowing from unity, is in the soul of man; and if it were *not* there, it could not be in creation. If there were not hope and memory in the human soul, there would be no major and minor mode in music; for the major and minor modes are the hope and memory of sound.

The Industrial Resources of Ireland. By ROBERT KANE M.D. Second edition. Dublin, Hodges and Smith, Grafton street; London, Longman and Co. and Simpkin and Co.

IRELAND is a country to which the statesman, the philosopher, and the religionist will always look with interest. Perhaps in no land have political feuds and religious animosities so effectually stayed the march of civilization, and dislocated society. Fierce party strifes have been the bane, and rival creeds the curse of Ireland. Still the storms of passion are not hushed; the calm which reason alone can produce has not passed with its healing influences over the community. But there is hope,—a hope "bright as the morning's dawn of better days." Agitation will cease as soon as honest employment for his hands, and the respect due to his humanity, are provided for the Irishman. These have been until lately systematically denied, and the Irishman has been treated as a brute, when the voice of God and nature command us to treat him as a man.

The contents of the work before us were first delivered to the members of the Royal Dublin Society, in the shape of lectures. The important facts which they contained, and the practical bearing which they had on the position, prospects, advantages, and disadvantages of Ireland, were so great, that, at the urgent request of his auditors, Dr. KANE was induced to publish his discourses.

The author has executed the task of developing the resources of his country with great ability. He has introduced a multitude of facts, and a mass of matter respecting Ireland, which, acted on, cannot fail to lead to beneficial results.

It is surprising to note the many natural advantages with which Ireland is provided, and it must be humiliating to the national pride of an Irishman that comparatively so little use has been made of them by the inhabitants of the country. In times past industry and public spirit seem to have been paralysed, giving place to a lawless feeling of resistance to order and government. According to Dr. KANE, things even now do not present a very flourishing aspect. There are large mines of copper, lead, sulphur, slate, and marble, scattered about the country; but such is the want of spirit and lack of capital, that but few of them are in working condition. A century ago there were several iron manufactories, furnishing employment for a large number of hands, but gradually they were extinguished by the spirit of the age. There seemed no mind to direct, and no power to guide these works. The gold and silver mines, too, deserve attention. The supply of these two important ores is said to be exhausted, but Dr. KANE more than intimates that by perseverance and enterprise the mines would be still found productive. Humbling as the reflection must be to the intelligent Irishman, that the resources of his country are so undeveloped, and, where developed, so unsuccessfully tested, we must not forget the night of ignorance which has fettered for years every movement and natural impulse of the people; that education has never had fair play in that country; that in the battles of the two antagonist parties in the state, the interests of the population have been forgotten. And who can wonder at the impoverished state of Ireland, after reading the following remarks from this work? "Mere industry has been in Ireland, for many generations, connected with the idea of a vulgar and depressed caste;" and the Doctor afterwards gives as his opinion, "that the mere possession of land by the Irish induces to a state of perfect idleness by the owner." This is a reproach we pray God may be speedily wiped out. Thanks to the Temperance movement, there are some signs of prosperity, signs of hope and happiness. The chief need is for men of capital, men of intelligence, to come among the Irish, and infuse into them a taste for improvement and speculation. The manufactures seem to be in a most deplorable state. There are but few linen manufactures in Ulster, and their importance is limited; in Belfast, too, the cotton manufacture has been in a declining condition for many years. How this is to be accounted for we cannot say; perhaps the cheapness and superiority of the workmanship of our Leeds and Manchester artisans may have produced this result. In a work on the Woollen Trade, published by Mr. SMITH, a gentleman whose practical experience and attainments have well qualified him for the task, whilst speaking of the Irish woollen manufactures, it is said, they had taken a prominent position in the country some eighty years ago, but in consequence of the legislative enactments of the Government, brought about by the influence of the late Sir ROBERT PEEL and the English manufacturers, they received a blow which crushed them for a time. Since then, however, they have again taken root, but they are not carried on with the spirit which alone can lead to success.

The natural water resources of Ireland are unprecedented. The finest and most capacious harbours are found on her coasts; canals she has noted for their convenience and cheapness of transit, and deep rivers which can accommodate ships of heavy burden. The facilities for steam navigation are great, as steam power may be obtained at a less expense than in England. Although good coal is not to be found in the country, the

deficiency may be supplied by a recently-invented process, by which peat can be so prepared as to answer the purposes of coal, and this fuel has the recommendation of being much cheaper.

The soil of Ireland is such as, by proper attention and care, would produce the finest crops. Flax, hemp, wheat, oats, and potatoes, when planted in proper localities, flourish in abundance; but Paddy, in the spirit of his nation, will take little trouble in the matter. The imports of British goods into Ireland are great, while the exports of grain, potatoes, and pigs are yearly increasing. The number of shipping belonging to the Irish ports is large, and meets with active employment.

Dr. KANE has executed his task in a superior manner, and his work will be valuable to all who wish to know the precise position in which Ireland stands as to its industrial resources. We are glad to find the volume divested of political partisanship, and that there is a vein of *home* feeling running through in its pages.

Irishmen, we believe, will retrieve their country from its degraded position; but they must look more to themselves and less to their priests; energetic habits of business must be cultivated; the mind must be more alive to the practical and useful, instead of wasting its powers upon party feuds and idle dreams of nationality.

Lectures delivered at Literary and Scientific Institutions. By WILLIAM HENRY LEATHAM. London, 1845. Longman and Co.

SEVEN Lectures on various topics calculated to attract the attention of a miscellaneous audience. They embrace such themes as "The Beauties and Defects of the Human Form;" "The Life and Character of Cromwell;" "Hernando Cortes;" "The Works of T. B. Macauley," &c. The lecturer's style is popular, but he has not, of course, entered very deeply into his subjects. They who heard them will doubtless be glad to refresh themselves by perusal, and they who did not hear might profit somewhat by reading them.

Knight's Weekly Volumes for all Readers. Volumes XXXVII. to XLIX. London, 1845. C. Knight and Co.

SOME months have elapsed since we last noticed the progress of this cheap and excellent series of publications. Another pile of them has accumulated upon our table, and a glance at their contents will shew how much valuable information is thus being diffused among the community by the enterprise of Mr. KNIGHT.

Vols. XXXVII. and XL. continue the series of *Sketches of the History of Literature and Learning in England*, by Mr. CRAIK, which THE CRITIC has already noticed at considerable length. They consist of biographies criticisms upon and specimens of the principal writers this country has produced, the fifth volume coming down as far as BURKE. It is well fitted for popular reading. Vol. XXXVIII. is another of the treatises on *British Manufactures*, by Mr. G. DODD, the present giving a succinct and very intelligible description of the processes in the various *Manufactures in Metal*, the text being profusely illustrated with well-executed woodcuts. Vols. XXXIX. and XL. are a reprint of the delightful work on *Insect Architecture*, by Mr. RENNIE, which formed one of the most attractive contributions to the "Library of Entertaining Knowledge." *The Lost Senses—Deafness*, is the title of the next volume, and it details the experiences of the author, Dr. KITTO, well known as the editor of the *Pictorial Bible*, who lost his hearing by an accident, and who here describes his feelings, and the means he adopted to alleviate his misfortune. The narrative excites a profound personal interest for the man. Vol. XLII. is the first of a series by Mr. W. WITTICH, on the *Curiosities of Physical Geography*, and gives an account of glaciers, icebergs, the gulf-stream, the trade-winds, the monsoon, the pampas, and so forth. It is peculiarly adapted to excite and gratify the curiosity of the young. *The Dutch in the Medway* is another old England romance, by the clever author of *The Camp of Refuge*. It seeks to convey in the form of a fiction an accurate picture of men and manners in the olden periods of our history, and great ability is shewn in the execution of this design. Even as a romance, it is full of merits, graphic, spirited, and eloquent. The 44th volume is devoted to the *History of the Dog*, which is penned by Mr. W. C. L. MARTIN, who has collected a mass of amusing anecdotes of animal biography, with which he entwines the details of natural history. This also is profusely illustrated. Vols. XLV. and XLVI. commence a *Biographical History of Philosophy*, from the pen of Mr. G. H. LEWES; the philosophy of the ancients occupying those already published. They profess to be an account of the various systems that were put forth by the wise men of the ancient world, and which have served for so many centuries to divert the wise men of the modern world from the pursuit of truth in the paths where only it can be found. The next is a curious collection of *Arabian Tales and Anecdotes*, by Mr. LANE, whose familiarity with Eastern manners and people peculiarly fits him for such a theme. The last volume we have received, the 48th, is a second of Mr. JAMES THORNE'S *Rambles by Rivers;* the Avon being on this occasion the subject of the author's research. It is embellished with many woodcuts, and is written in a pleasant gossiping style, and preserves and *popularizes* many local features and traditions of old England.

Such works as these, at such a price, cannot but find their way into every family that can afford to make a library at the cost of a shilling a week.

The Medical Directory for 1845. Office, 274, Strand.

THIS is the first attempt to supply the medical profession with a complete directory, and it has proved entirely successful. It has been very laboriously got up. Besides the names of all the *regular* practitioners, it contains a valuable summary of the laws relating to the practice of medicine; the unions and their medical officers the lunatic; asylums; the medical officers of the army and navy; coroners, and indeed every kind of information useful to the profession.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve their fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

LETTERS FROM THE CONTINENT.—No. I.

WE have pleasure in laying before our readers part of a letter from a friend now making the tour of Europe, which, though written without the remotest idea of publication, as it presents, in an unassuming and condensed form, some instructive information on Holland and Hanover, and is in more places than one highly graphic in its descriptions, we unhesitatingly transfer to our columns. We shall at once communicate with him, and hope that, on seeing the liberty we have taken with his letter, and the worth at which we value it, he will, as he advances on his route, from time to time furnish us with condensed remarks on the countries he visits, of a nature similar to those here submitted, the recommendation of which lies in their entire freedom from affectation or straining after effect, and in the self-evidence they afford of their being the spontaneous outpourings of an observative and vivacious mind.

Within the last ten days I have seen some of the most important parts of Holland. After staying two days at Antwerp, which were quite sufficient to enable us to see every thing there, we left for Rotterdam: it is a day's journey, and Breda, immortalized equally by the military operations of the British and the reminiscences of "my Uncle Toby," is about midway. In the villages on the frontiers, some peculiarities offer, which attract the attention. The most remarkable are the cleanliness and order, and the abundance of space in the dwellings. I allude to the height of the upper apartments, not only of the better class houses, but of cottages; even the domicile of a common blacksmith at Rotterdam is a grand place. The Meuse flows in front of the town. Only imagine vessels of the dimensions of East Indiamen riding within a stone's throw of your hotel, whilst the opposite shore has as rustic an appearance as Battersea, and you will form some idea of this interesting place. In addition to this, the town is intersected with canals like Venice, but much larger.

From Rotterdam I started for the Hague. Delft, the parent of crockery, is about half way, and is chiefly remarkable as being the town where the Prince of Orange, the opponent of Philip the Second, was assassinated. In other respects it is, like most Dutch towns, very clean and very formal. The Hague, from being the residence of the Court, is a very lively place. There are plenty of good pictures, elegant carriages, and very well-dressed soldiers; but what made it particularly gay was the Kermes, or Whitsuntide fair. I had a lodging on the ground floor, and thought that I should never get to sleep, so noisily were the Dutchmen dancing about with their women. Of the towns in Holland, certainly Amsterdam presents the most im-

portant appearance. Families do not reside on floors, as in Edinburgh and Paris, but occupy separate mansions, with handsome doorways and windows, which are kept remarkably clean; but there are still the same canals, docks, and bridges as at Rotterdam, but on a much larger scale.

Now, after this poor sketch of Holland, let me tell you something of Hanover, where I spent the last Sunday. What will you say to the fact of the king being decidedly popular? He is always at work for some improvement; several large buildings have been commenced since his accession; he has purchased a very great number of pictures and other works of art, which are now in the palace; and he is very accessible. The Prince of Oldenburg arrived at our (the British) hotel on Sunday evening, and the king came in his carriage on Monday, and returned to his own palace on foot. On Sunday I attended church in the royal residence. The room was well fitted for a dining-room; in front were three large chairs, and in a corner opposite a piece of furniture which served as a reading-desk. First of all the king entered; his dress was a very short blue frock-coat, with gold lace at most of the seams. Then an elegant young man, taller even than the king, and of the same complexion as our Prince Albert, but with a straight Grecian nose, was led into the room by an officer in uniform; this was Prince George. He wore a blue coat, with white collar and large silver epaulettes. The service was very well performed, and the responses of the king and of the crown prince were heard above all the others. Both the eyelids of the prince are closed, and the globe of one seems to have given way. There is an expression of mildness and of melancholy on his countenance; but it is everywhere reported that he is not of an unhappy disposition, and that he is an excellent musician. Let Mrs. V—— hear about poor Prince George. He has been married now two years, but has no children. The late report that the princess was likely to have one is not to be relied on.

JOURNAL OF FRENCH LITERATURE.

It is sufficiently singular that while the French press teems, not only with cheap pirated editions of modern English literature and with translations of many of our popular novelists, but even with criticisms of our current productions, no attempt has been made on this side of the Channel (if the rage of Sue-ism be excepted) to afford to the reading public a similar opportunity of estimating the taste and talent of our continental brothers of the pen; nor has any literary journal as yet devoted a portion of its space to so desirable a purpose.

It is true that some few names have become familiar to English ears; such as those of Victor Hugo, Madame Dudevant, Sue, Paul de Kock, and Balsac; and the effect of most of these has been to mislead many into the belief that all the modern French writers are inadmissible to a lady's drawing-room. One has rioted through the coarse, but clever pages of Paul de Kock, about whom no one affects, even in France, to know any thing, and whom every one of course reads—pages in which the vices and follies of the human heart, and essentially of the *French* human heart, are as skilfully anatomized and laid bare, as the sinews and arteries of a subject upon the dissecting-table, and, like them, exhibited in all their unmitigated and revolting nakedness, defying scrutiny, and by their very accuracy of display and detail, forcing painfully upon the mind the reluctant certainty of their hideousness, when unveiled, in the one case, by the softening and shrouding effect of their fleshy covering, and in the other, of the no less flattering cloak thrown around them by civilization, by social conventions, and by established rule. Another has been led on, fascinated and absorbed, through the metaphysical mysticisms of Balsac, than whom no man ever understood more perfectly the analysis of that profound and intricate enigma—woman;—not, perhaps, as we should wish our sons and nephews to read it, but as the experience of our own past years has taught it, in some degree, to ourselves. A third has heard the personal history of Madame George Sand, and has, perhaps, glanced over her *Spiridion*, and so on, down to *Les Mémoires du Diable*, by Frederic Soulie, and, having so done, each imagines that *ab uno disce omnes*, and condemns the whole French school of fiction as vicious and valueless.

All things considered, this is probably by no means surprising, and yet that the English public, in their admiration of genius, can occasionally compromise with a little freedom both in style and action, is sufficiently evinced by the eagerness with they have welcomed the *Mysteries of Paris*, and by the avidity with which every edition that has been "done into English," miserable as some of them are, has been purchased by all classes, and by the necessity which was discovered of publishing a "people's edition," in weekly numbers at three-halfpence each. We should be the last to deny either the *virus* or the genius of M. Eugene Sue; but we do nevertheless aver that France at this moment boasts of many writers, both male and female, whose works appear to us to be far better fitted for popularity in moral England than those of this eminent and successful writer.

M. Sue owes his favour in this country, beyond all doubt, to the perfectly French style of his mind. Works of fiction produced across the Channel are so utterly dissimilar to those which are popular among ourselves, that we should perhaps look in vain elsewhere for so perfect a specimen of the discrepancy, both of taste and feeling, which exists between the two nations.

An attempt was made some few years back to naturalize the works of Victor Hugo among us, and what was the result? A total failure: and this failure, which assuredly arose from no want of power or talent in that extraordinary man, may be readily traced to the fact that his style (we are now, of course, alluding only to his novels) assimilated so closely to our own, with some slight exceptions (which exceptions, not being traced to his nationality, were at once decried as offensive), that the reader was not startled into that vague and unreasoning admiration and astonishment, which the abrupt, vigorous, and *staccato* manner of M. Sue at once elicited. The name of De Lamartine may be objected to us, perhaps, because his work on the East, ably translated, obtained some vogue in England; but he is, in fact, only another witness to the truth of our argument. Had one of our own writers produced that work, a cry of exaggeration and extravagance would have been raised; our critics would at once have discovered the thousand and one inaccuracies which disfigure the composition; they would have declaimed against the palpable oiling which it betrays; against the glare and glitter which, like over-varnish, destroyed the more natural tints of the picture; they would have been at no loss to discover that he had painted as a poet and enthusiast, rather than written as a traveller and a man earnest for truth. As it was, critic and public alike forgot, in the charm of his foreign and fearless style, all these little discrepancies; but, nevertheless, he has made no further progress amongst us. That such should be the case in the one instance, or in the other, is by no means the fault of either writer; it exists solely in the comparative ignorance of the English reader of the social habits and modes of feeling of the people for whom French fiction is written. To comprehend these, the sojourn of a few months in such a country as France will not suffice. It is permanent inhabitation only which can develope them in all their familiar detail; and the task of the translator is rendered difficult, and frequently onerous, from the very fact that, even should he have been by chance enabled so to study them, it is rarely indeed that he can succeed in making them intelligible, or even in giving to them a semblance of verisimilitude, so thoroughly do they jar the preconceived notions and prejudices of their new readers.

Vivid imagination, and a fertility of invention, scarcely dreamed of by our own novelists, are the leading characteristics of the French school of fiction. In one of their thin octavos, plot enough may usually be discovered to supply half-a-dozen of our modern tale-writers; but it is not the wild and frequently sublime imagination of the German, searching, and soaring, and making earth and air tributary to the yearnings of genius; nor the mechanical invention which renders it a duty to observe the relative fitness of every incident and of every portrait, so as to secure the perfect oneness of the fabric on its completion. It is a bold, reckless, confident outpouring of feeling and fancy; a random, episodical, vagrant, gushing forth of words and ideas, whose politics, both social and theological, are reduced to epigram; and where the current of the fiction is abandoned, without hesitation, to make way for every passing impulse. No subject is left untouched by the French novelist. His work appears to be a recognised arena, where he is free, not only to challenge, but even to scoff at and to defy, all worldly authorities and all social institutions. Take a French novel into your hand, and you can by no means calculate upon the subject to which you are about to give your attention. Let your interest in the tale be great as it may, you must make up your mind to lose sight of it a

score of times in some philosophical pasquinade, or some political *persiflage*; and herein precisely exists the great and peculiar charm of nine-tenths of the French writers; for you find yourself unable to regret the thread of the story as often as you fall upon these extraneous passages. Be the subject what it may, it is never made the text of a sermon. All is bright, sparkling, effervescent.

Feeling convinced as we do, that, when thoroughly appreciated, the fiction-literature of France cannot fail to obtain extensive popularity in a country like our own, where genius and originality are sure to elicit attention and to command regard, we have deemed it expedient to devote a section of our journal to the insertion of notices of, and extracts from, such of the new works which may henceforward issue from the French press as may be most worthy of comment; but as our space is limited, so necessarily must such notices be brief and limited. We, nevertheless, anticipate favour and welcome for this new feature in THE CRITIC; and the rather, as we believe that ours is the first weekly periodical which has afforded any opportunity to its readers of keeping themselves *au courant* of modern French literature.

ART.

EXHIBITION OF THE ROYAL ACADEMY.

DRAWINGS AND MINIATURES.

Of the latter of these there is, as usual, a large assemblage, singularly uniform in style, so that without the aid of the catalogue it would be difficult for the most critical eye to discover the workmanship of the various artists. The most striking, for their power and originality, are the productions of Mr. G. RICHMOND, whose freedom of brush is far more effective than the delicate prettinesses of his many rivals, male and female. 830, *Miss Minchin*, by C. DURHAM, exhibits a more masterly hand than its neighbours. 820, *The Marchioness of Ormonde*, by R. THORBURN, is another noteworthy work; the colour is beautiful, pure, and true, and the drawing very correct. In passing, we must mention as clever, a *Portrait of R. Muir* (720), by W. BOOTH. Among the half-dozen *Portraits of Lady Sale*, which occupy different stations in this gallery, and of all sizes, one of the most faithful is the miniature by Mrs. H. MOSELEY (875). Miss FANNY CORBAUX keeps her place among the crowd of competitors, and her *Portrait of Miss Hamilton* (1009) proves her to be worthy of her reputation. There is colour and expression in the *Portrait of the Viscountess Pollington, in a Fancy Dress* (1040), by F. TATHAM.

The drawings are not numerous, but some of them will reward inspection. 678, *An Indiaman scudding in a Nor' Wester, off the Cape of Good Hope*, by W. J. LEATHAM, though hung almost out of sight, is a picture of power and promise. The waves are real, and the atmosphere is full of storm. There is motion in the tossing ship. 683, *The Aspen*, is a remarkably clever pencilling by G. W. SHEPHERD; the foliage is perfect, and the effects are masterly.

754, *The First Lesson*, by J. BATEMAN, is full of character. A terrier has laid her paw upon a rat, whose squeak and terror are admirably portrayed. Her pups are gathering round, afraid, but led by instinct to attack the vermin. The expression which the artist has thrown into the group would not discredit Landseer. Near it is

757, *A Fishing Party*, by A. R. VENABLES. Some children are gathered round a bowl of gold fish, watching an elder one, who is trying to catch one of its scaly tenants. His earnest intentness upon his occupation, and the interest which the rest take in his proceedings are cleverly depicted.

806 is a good picture, but hung so high that few will see it unless their attention be specially drawn to it; it is a *Moorland Scene by Twilight*, by W. J. ROFFE. A fine effect and exquisitely natural, both as to the hue of the sunset sky and the cold gloom of the bleak moor, with which its glow is finely contrasted.

The name of H. O'NEIL will attract the eye to 809, *Martha and Mary informing Christ of the Death of Lazarus*. It is emphatically his own, having all his mannerisms, both good and bad. The grouping is good, and the colouring probably correctly Eastern; but beyond this there is little to be said in its praise.

Because it is the centre of attraction, we must notice 825, the *Christening of H. R. H. the Prince of Wales*, painted on ivory by Sir W. J. NEWTON. It is a magnificent display of rich colour, and the Queen's purple velvet robe is certainly a triumph of art, *so velvety* is it. The baby, too, is truthfully painted. But, like all such subjects, there is a stiffness about it which gives it a doll-like or puppet-show character.

Miss FANNY ROSENBERG has offered a beautiful cluster of *Hollyhocks* (927), and near it is a speaking portrait of *Mr. C. Knight*, by B. R. GREEN (936), so ably done that it is difficult to believe that it is the production of the same brush as the stiff wooden *Portrait of a Child* (937).

There is a bold and effective portrait of *The Hon. F. Walpole*, by T. TATHAM (978), at which the visitor might pause for a moment. 999 also will attract attention, both for its subject and handling. It is a *Portrait of Mrs. Fry*, by G. RICHMOND (998), in which the composition is as much to be admired as the painting. There is a quietness of tone very appropriate to the personage depicted, and the figure stands out with lifelike clearness and substantiality.

Another of G. RICHMOND'S clever portraits is that of the late *Baron Gurney* (1058), an excellent likeness and a good picture.

A delightful little bit of landscape is the *View on the Canton River* (1060), by W. WESTALL. The finish, the delicate colour, the drawing of this small sketch require close examination, and then it will be found to be one of the most meritorious productions in the room.

Here we must pause. We shall have occasion yet again to return to the exhibition, whose architectural rooms and sculpture-gallery have yet to be examined, besides many works which, passed over at first, grow upon us by acquaintance, and will claim some notice when we walk round again.

THE DIORAMA.

THE new feature of attraction offered at this most entertaining exhibition for the season is a dioramic view of the Castle and Town of Heidelberg, formerly the residence of the Electors Palatine of the Rhine. The first effect shewn is that of noonday in winter. Snow covers the castle, town, and plain, and is seen falling for a considerable time. In the foreground, stretched over the snow, her arms clasping the trunk of a fallen tree, is the figure of a woman who has perished in the storm. The black Neckar flows through the whited valley; the Castle, the house-tops, and the rocky slopes covered with snow, and the dense sky which hangs overhead, and pours down its feathery products, are painted with surprising accuracy. Presently sunbeams illuminate the west, light up the most prominent features of the landscape, and gradually increase into the intensity of a glowing sunset. The snow melts and disappears, and is succeeded by as lovely a summer prospect as the eye could desire. The trees are clothed with a luxuriant foliage, and verdure clothes the plains, through which flows the fertilizing stream of the Neckar, down to the foreground, where it washes the walls of the picturesquely-seated town.

The other picture is our old favourite, the Cathedral of Notre Dame at Paris. This striking work has received some alterations at the hands of the artist, which, excellent as it formerly was, have improved it. The effects are managed in much the same manner as before. The first represents sunset, and the last midnight; but the cathedral services which peal through the taper-lit aisles are different: they are two charming compositions by SPOHR.

It is impossible to speak in terms too flattering of these admirable pictures. They do the highest credit to their ingenious inventor and painter, the Chevalier RENOUX. Not only has he shewn great judgment in the disposition of the *effects*, and great ability in adapting them so as closely to imitate nature; but there is a propriety in every accessory introduced—something which adds either to the sentiment or verisimilitude of the scene; and the care bestowed throughout on the finish of the minuter particulars challenges attention and commands our praise. Such of our readers as have not this season visited the Diorama, we do most conscientiously recommend not to suffer the opportunity to pass without their doing so. The subjects are equally interesting for their historic associations, their picturesqueness, and the perfection of the illusion which they present; and, we confidently venture to assert, will give the greatest satisfaction.

New Publications.

Finden's Beauties of the Poets. Part II. Chapman and Hall.

THE selection of subjects for the second number of this beautiful work is happier than was the first. *The Sleeping Beauty*, by FRITH, is a delicious picture. The face expresses the calmest slumber; the very hands are asleep; the eye almost looks for the regular heaving of the fair bosom, from which the veil has partially fallen. She is a lovely creature as ever ar-

tist dreamed. The next, *Young Jessica*, from the pencil of WARD, cannot claim so much applause. She is not a beauty, but rather the reverse. But as a portrait, it is certainly clever. FRITH'S *Morning of Life* has better pretensions to a place among the beauties of the poets. It is an expressive, intellectual countenance. Mind speaks upon that brow, and gives a charm which the mere features may not perhaps be deemed to possess. The pose of the figure is striking, and engraver and artist are equally entitled to praise for the ability they have displayed in the production of this charming work. *Love's Summer-cloud* does not so approve itself to our taste. The face is not pretty, and very uninteresting, and the left arm is considerably out of drawing. FRITH has not shewn his usual skill in this. All the portraits are set in frames, exhibiting equal elegance and exuberance of fancy with those which we had occasion specially to mention when noticing the first number of this graceful contribution to the drawing-room table.

The Committee of the Devon and Exeter Society for the Study and Encouragement of Art have announced their intention to have an exhibition of paintings, drawings, &c. in that city, in the course of the month of July.

MUSIC.

The Maniac, a descriptive Ballad. Music by G. S. D. SAUNDERS. Duncombe.

The Wandering Jew Quadrilles. By the Same.

WE have a great dislike to that which is called "descriptive music." Sentiment, not description, is the legitimate province of music. If a man has a story to tell, it will be better told in plain prose than by supposed resemblances of sounds to objects. Only the power of genius can successfully grapple with the difficulties thus self-imposed; and with genius it is more of a freak than a serious impulse. In ordinary hands it is always unpleasing; and therefore, although Mr. SAUNDERS has shewn himself to possess some taste and knowledge of his art, he has wasted his efforts upon a theme which he could not hope to render attractive. Let him keep to the sentimental ballad for the future.

The Quadrilles are more within the compass of his ability, and therefore will more please than the song. They are spirited, and mark time well, the two essential ingredients of music for the dance.

THE DRAMA AND PUBLIC AMUSEMENTS.

HER MAJESTY'S THEATRE.—*Don Pasquale*, in our opinion, Mr. BALFE'S *chef d'œuvre*, has been twice performed during the past week, with undiminished effect, and *Linda di Chamouni*, on its repetition, continued, by its reception on the part of an enormous house, to justify its revival. The feature of the week, however, has been the production of a new ballet, entitled *Rosida; ou, les Mines de Syracuse*, composed by CERITO, and productive of triumph to her alike as *authoress* and as dancer. The materials of the story are derived from a German tale of *diablerie;* the plot, however, in these cases, is fortunately of the slightest possible importance; the dances are all CERITO'S own, and very charming things they are, disposed with infinite taste, and with original touches here and there, which, considering the thousand and one ballets that are already in existence, one would imagine these combinations of movements to be hardly susceptible of. We may refer with especial approbation to the *Sicilienne*, executed by CERITO and ST. LEON in the first *tableau;* to the *pas de Mineurs*, another *pas de deux* by the same artists in the third, and to a *pas seul* by CERITO in the fifth *tableau*. The character she has to impersonate is that of a Sicilian maiden, who follows her lover into the mines, and rescues him and herself, by the aid of a wondrous talisman, from the *Queen of the Mines*, a supernatural of great beauty and exceedingly irregular tendencies, and from *Torbern*, an evil genius, who seeks at once to destroy *Rosida's* lover, and replace the youth in her affections. In the delineation of the character she has here created, the fair CERITO is quite unrivalled. Her expression of joy and bounding happiness is perfectly enchanting. Mr. MARSHALL'S scenery is alone worth going to see, and the music more than answers the purpose. The *Barbiere di Seviglia* was produced on Thursday, with a variety of dances, for the benefit of the Viennese children, who are about to take their departure.

HAYMARKET.—A new farce was produced at this theatre on Wednesday evening, entitled *The King and I*. It is a very amusing affair, very agreeably acted. Its plot turns upon the misadventures of *Mr. Perkin Pyefinch*, a little *parvenu*, filled with mean ambition, who mistakes *Sir William Melrose*, unjustly suspected of Jacobitism, for the great anti-jacobite William III. and under this delusion gives him up the use of his house, and lends him a sum of money, which, in the very nick of time, enables the baronet to pay off a mortgage upon his estate, the mortgagee being no other than the unconscious *Perkin* himself, who, moreover, with equal unconsciousness, places within the reach of *Sir William* papers which clear him from the treasonable imputations which had been hanging over him, and restore him to the society of his friends, and, more especially agreeable, to that of his mistress, to whose hand poor *Perkin* had been vainly aspiring. BUCKSTONE'S impersonation of the chief character may readily be imagined by our readers; it is exceedingly amusing, as this actor always is. The piece will doubtless have a run. We may observe, under the present head, that Mr. TILBURY has taken poor STRICKLAND'S part in *Time Works Wonders*, and fills it most efficiently. We are, in fact, inclined to award him in this character the greater merit of the two, as he throws into it throughout, very accurately, an air of foppishness which completes what we imagine to have been the author's conception of the part.

SADLER'S WELLS.—Mrs. WARNER is determined not only to obtain success, but to deserve it. We last week recorded the production of a new play under her direction, and we have a similar duty to perform on the present occasion. The newest new play, a tragedy, was brought out on Monday, and we are happy to add, with general applause. It is entitled *The Florentines;* its plot is almost entirely identical with the story of *Fair Rosamond*, the fate of the heroine in both cases being the same. The only noticeable difference is, that, probably for the supposed sake of heightening the romantic interest, the *locus in quo* is transferred from Woodstock to Florence, whose duke it is that *Biancha*—for so the Italian frail one is named—"loves not wisely, but too well." The tragedy is effectively cast; Mr. PHELPS, unquestionably one of the very best of our very few good actors, enacted the part of *Biancha's* father, whom the obliging dramatist and the skilled player have combined to make a very prominent character. The deadly *Duchess* met with a forcible representative in Mrs. WARNER; indeed the wife, as in the case of *Dame Eleanor* herself, is here so particularly awful, that we do not feel so fierce as we otherwise might at the *Duke's* seeking "to lure some gentler tassel" for a mistress. Miss COOPER, who impersonated *Biancha*, is greatly improving, as might be expected from a clever and docile pupil under the direction of so accomplished a teacher as Mrs. WARNER. Mr. MARSTON had the part of the *Duke* assigned him, and filled it with judgment and discretion. On the fall of the curtain, the principal actors were called for—a practice of which we entirely disapprove. Nothing can be more preposterous, more absurd in its anti-climax, more destructive to all that continuity of illusion which, to a certain extent, should accompany to their homes the spectators of a fine play, than to drag on the stage, in bowing and courtesying array, the *Romeos* and *Juliets*, the *Lears* and *Cordelias*, whose story has in its progress wound itself round your heart, and engaged your highest and most refined feelings—to be patted on the head by a bawling audience, whose tears and whose silence should be the fitting tribute to the words they have heard, and to the men and women who have worthily delivered those words. Mrs. WARNER and the other principal performers obeyed the call; the author, who was also summoned, did not make his appearance, which we considered an additional circumstance in his favour.

NEW STRAND THEATRE.—We looked in here on Tuesday, and were pleased to find a numerous audience assembled to witness LEMAN REDE'S new drama, *The Saloon and the Cellar; or, Ups and Downs of Life*. The hero of the piece, who in the first act is the unconscious usurper of a large fortune, and in the second has descended to his true position, a coal-shed, is impersonated by Mr. H. HALL, an actor with a highly comic face, and considerable comic power, whom we had not previously seen for several years, but whose recollection was pleasant to us in association with that of Mr. W. HAMMOND and his immortal *Buzzbottle*. By the way, what has become of the latter excellent comedian? If he be available, we much desire to renew his acquaintance here, on the scene of his former triumphs, or elsewhere. The supply of good actors is by no means such as to render it indifferent that so much merit should be hid. The general company is far from ineffective. Among the actors we may mention, with approbation, besides Mr. HALL, Messrs. CORENO, R. ROMER, RICHARDSON, and COCKRILL; and of the ladies, Misses FITZJAMES, BROMLEY, HAMILTON, and WALCOTT. The popular burlesque of *Othello*, a rather amusing farce, and a ballet, were all included in the evening's entertainment. DOUGLAS JERROLD'S *Story of a Feather*, we observe, has been dramatized for this theatre, and is to be produced on Monday. If possible, we will be there to see.

ASTLEY'S AMPHITHEATRE.—This old favourite, in a renovated form, preserves, under its new management, all its old attractions. The equestrian spectacle of *Godolphin Arabian; or, the Horse Race of the Desert*, is magnificently got up, and must delight the eyes of the young people as well as of the old who love to feel young again for a few hours. The feats of M. and Madame DUMOS are truly wonderful, and unsurpassed by any former performances at this theatre; and Madame LOUISE'S *Leaping Act* deserves to be recorded with those of DUCROW.

FRENCH PLAYS.—The last appearance of PLESSY and REGNIER, at the St. James's Theatre, on Friday, was honoured by the presence of Royalty, and of a full and distinguished audience. The entertainments consisted of MARIVAUX'S comedy, *Les fausses Confidences*, and the capital play, *Le Mari à la Campagne*, which would do well cleverly adapted to the English stage, if, indeed, it have not already been *conveyed* in some form which has not as yet come under our observation. The departure of PLESSY is with us a subject of deep regret, assured as we are, that "we shall not look upon her like again," until she herself is restored to us next year. Mr. MITCHELL has provided us with the best compensation in his power, in the person of ACHARD, who made his first appearance this season, on Monday, in the two deservedly popular pieces, *La Famille du Fumiste*, and *Trianon;* the latter of which we may identify to our readers by reminding them that it is the original of *Who's your Friend? or the Queensbury Fête*, produced at the Haymarket a season or two ago, with so much success, though it reflected but a feeble image of its prototype. The theatre on this occasion was absolutely crammed, stalls and private boxes being all of them occupied with illustrious, noble, and right honourable personages of either sex, anxious at once to give deserved welcome to a favourite actor, and to study the costumes of the characters in *Trianon*, which are of the period the Queen has selected for her ball, and which, being known, had all been newly prepared for the representation with the utmost attention to accuracy, and an entire disregard of expense. The attendance on Wednesday, when both pieces were repeated, was equally satisfactory.

M. PHILIPPE'S *Soirées Mystérieuses* continue to attract a full house at the St. James's Theatre, alternately with the French plays. He is decidedly the most amazing of all the professors of natural magic that have come under our observation; and there is this very pleasant and practical feature in his entertainments, that he distributes among boxes, pit, and gallery, in great profusion, and with a laudable equity of division, all the sweetmeats, and liqueurs, and toys, which by his so potent art he creates out of nothing. The things themselves are real, and very good of their kind, as we can ourselves attest from actual experience, having on Saturday night realized, for our own share, a cup of coffee, flavorous and sweet, a glass of Curaçoa, fifteen cakelets and bon-bons loose, and a paper of bon-bons elaborately packed, two Union-Jacks, one little straw hat, one do. do. bonnet, one do. do. basket, and two wooden whistles, of an effective kind. Go, then, fathers and mothers of families, with your families, to the St. James's Theatre; you will save all the money, receive your children's blessing, and have a capital evening's entertainment into the bargain. A word to the wise.

The SURREY ZOOLOGICAL GARDENS have substituted for Old London a fine modelled representation of Auld Reekie, and the illusion is perfect. Mr. DANSON in this last has surpassed any of his former achievements. But that is not the only attraction. Great improvements have been made in the gardens by the addition of statuary and new rooms for the animals, the collection of which has been considerably enlarged. The entertainments consist as usual of Promenade Concerts, and at dusk a magnificent display of fireworks. The proprietors seem resolved to maintain the popularity which the Surrey Gardens have deservedly enjoyed for so many years.

POLYTECHNIC INSTITUTION.—It is now some time since Professor RYAN commenced a series of lectures on the economy and management of steam-engines, particularly adapted for the instruction of naval men who might be appointed as steam officers by her Majesty. When these lectures were commenced, we took the opportunity of attending, and were exceedingly gratified at the manner in which the learned doctor explains the uses to which steam power may be applied, and the illustrations, by means of models on a very large scale, of the whole apparatus employed in steam navigation. A great number of officers in the Royal Navy, some of them of high rank and reputation, have been among Dr. RYAN'S auditors, and have expressed their entire satisfaction at the manner in which the instruction has been imparted. This testimonial, coming as it does from such a quarter, is highly honourable to the learned Professor, shewing that his efforts have been appreciated. We cannot pass over in silence the admirable lectures on Natural Philosophy, by Professor BACHHOFFNER, which he gives with such force and feeling, simple though learned, so that the most ignorant in these matters must fully comprehend all they hear, and derive at the same time great pleasure and knowledge.

CRITIC OF INVENTIONS, ETC.

[Ingenious inventors of articles of use or ornament are as deserving of critical notice as is an ingenious author, and a knowledge of the true merits of inventions is equally interesting to the public. We purpose to supply an existing defect in critical journalism by devoting a division of THE CRITIC to a fair description of, and honest judgment upon, any article seeking public patronage that may be submitted for notice.]

SUBSOILING OF CLAY LAND.—Mr. H. Hudson, jun. of Wick, near Pershore, has sent the following answer to questions put to him respecting the experiment of subsoiling a retentive clay:—"The part of the field to which I alluded in my former communication was ploughed in the autumn of 1843, about five inches deep, and the subsoil plough moved the under part of the furrow about the same depth. I thus obtained about ten inches of soil. After so doing, I cross-ploughed it with a double mould-board plough, throwing up the furrows similarly to a celery-mound. I imagined the frosts would then pulverize the same, and in the spring it would only require the cultivator to reduce it to a good seed-bed. To my disappointment, I found the raised furrow fine on the surface, aad wet and stiff at the bottom. I therefore harrowed it as level as possible, and ploughed it with a common plough. The stiff furrows hardened in a few days, and required the spike roller to break the clods. The weather continuing dry, I burnt the whole of the surface in heaps (of about half a cart-load in each), at an expense of three guineas per acre, including coal and spreading, and planted it with Swedes to draw off in the autumn. The plants looked well the first two months, but afterwards turned blue in the top, and were not so good as those in a field adjoining that was cross-ploughed, but not sub-soiled. After removing the Swedes I planted the part of the field with wheat, and now that the burnt soil is thoroughly incorporated with the natural earth, the plants grow away vigorously, and the appearance is promising. To those who think the experiment an unfair one, as the cross-ploughing might have injured the land, I would suggest a trial without it, and should be happy to hear the result was favourable. My own private opinion is opposed to subsoiling retentive clays. I have subsoiled sixty or seventy acres of sand and deep loam with great advantage; in fact, nothing can be better than occasionally shaking the under part of the turnip soils. The same should be done when under fallow, and invariably dressed with lime afterwards."

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

THE USES AND OBJECTS OF MESMERISM.

(BY THE EDITOR.)

OFTEN has the question been asked of us, by correspondents and by personal friends, *why* we have introduced the subject of Mesmerism into the columns of THE CRITIC? *Why* we do not follow the more worldly-wise example of the other journals, and shun a subject which has not yet become popular? Even if Mesmerism be true, in whole or in part, of what *use* is it? What are its *objects*, and whither does it *tend?* What are its *claims to the consideration* of the intellectual? Whom does it concern save the physician? How does it present itself to the contemplations of the philosopher and the general reader, and thus fall within the legitimate purview of a journal dedicated to literature, philosophy, art, and science?

To these questions, so often propounded, we propose to offer an explicit reply. For that purpose we design, in a series of articles, to submit to our readers the reasons which have weighed with us in the adoption of the design to furnish in the pages of THE CRITIC a journal of Mesmerism in which the facts noted by observers throughout the empire, and the thoughts of the reflective, might be contributed, for rapid and extensive diffusion and for preservation, where they may be found in after-years, when the time shall have arrived for deducing a rational theory from the facts so accumulated.

The design was adopted with a profound conviction that, whether true or false, the pretensions of Mesmerism ought to

be systematically examined. If true, it was evident that a new world of knowledge was opened to mankind, and in the very quarter where hitherto it had been most defective—the physiology of mind and body. If true, it must inevitably conduct to results of incalculable moment to human happiness, to human progress, to religion, to ethics, to governments and laws, to philosophy, to literature, to science, to art, to society. If false, a delusion so widely spread, so long subsisting, not merely demanded exposure, but was a new phenomenon in the history of mind, and of itself was a curious subject for inquiry. In either case, it was due to the cause of truth that a subject so momentous should be taken out of the hands of quacks and charlatans, and treated calmly and philosophically, with no prejudices either in its favour or against it, with an open eye to acknowledge truth as well as to detect falsehood, and an open ear for argument and reason, on which side soever advanced.

It was with such honest intents that THE CRITIC resolved to open its columns to a topic excluded from every other journal in the British empire; and if its introduction has offended some, it has interested so many others, whose attention was first drawn to the subject by the facts and reasons that have been here advanced, that as yet we have seen no cause to regret the course pursued. But inasmuch as some still question its propriety, as others dispute the worth of the subject, and many who in their hearts feel both, are unable to give reasons for the faith that is in them, perhaps it may be excused as an act of self-justification, even if it be not of wider interest, which we hope to make it, if we devote a few lines to a calm review of the results which have been already elicited by the investigations into the facts of Mesmerism, so far as it has yet proceeded, and what are the uses and advantages to be anticipated from the knowledge hitherto gained, and the prospects of further knowledge that are opening on every side in dim and interminable vistas as yet, but gradually coming out of the darkness more distinctly to the mind's eye, and promising results which never yet have entered even into the dreams of the most ambitious philosopher.

At the very outset of our task, let us avow that the most important use we have found in Mesmerism is that which, when entering upon it, we had least expected—namely, the vast aid it brings to the cause of RELIGION.

Hitherto, the immortality of the soul, the existence of a future state, has been the point upon which the most triumph. ant stand has been made by the opponents of religion. "Where," said they, "are your proofs?—Nature gives no sign; nay, her facts are all against you. We know that the body of man dies and decays, like that of the horse or the tree. After a while nothing remains of him unchanged. The undying spirit of which you speak, what and where is it? Have you seen it,—heard it? Have you any single proof of its being?—Is not it conjecture all? You say that mind, being immaterial, must be immortal. But how do you shew its immateriality? The evidence here also is against you. By a blow on the brain, we can destroy that mind; by inflaming the brain, we can madden that mind; without a sufficiency of brain, that mind is idiotical. If facts are to afford any presumption at all, it is that they are as they appear, and that there is no other mind save that which we can destroy or render insane at pleasure."

And such reasoning had more weight than was made appear. It shook the faith of thousands, who dared not avow their doubts even to themselves. Accustomed to look to nature for proofs, they were satisfied with nothing less; and her silence upon this subject, of all others the most important to man, shook them to the heart with the sad conclusion, "It may be that I am immortal, but there is no *proof* of the fact."

Mesmerism affords this proof. Mesmerism supplies the missing link in the chain of evidence that was required to satisfy the reasoner that mind is immaterial, and therefore immortal. It has given certainty to what before was merely conjecture; it has crushed scepticism under a load of testimony which the most sceptical will not dispute; it has established the immortality of the soul as a truth in natural science.

How it has effected this glorious work, and advanced so mightily the cause of religion, will be best explained when we have reviewed the facts it has elicited. In the meanwhile, let it be proclaimed as the first-fruits of Mesmerism, as one of its many uses, that it proves as satisfactorily as any other fact in nature can be proved, the IMMORTALITY of the SOUL of MAN.

SEERESS OF PREVORST.

TO THE EDITOR OF THE CRITIC.

SIR,—It is not from personal motives that I address you these few lines, in your character of impartial critic; a letter prompted by such motives it would neither become me to write nor you to receive; added to which I have, personally, nothing to complain of in your notice of the work I have just presented to the public. But allow me to suggest the question, whether you are not exactly rendering to Dr. Kerner the treatment that yourself and other believers and inquirers into the mysteries of Mesmerism, very justly complain of? You have never seen any phenomena in the slightest degree resembling those described by him, and you therefore declare them impossible; pronouncing the physician an incredulous fool, and his patient a madwoman.

As to the degree in which Dr. Kerner's views on the subject of these phenomena are deserving of consideration, I cannot myself venture an opinion; but I can assure you that, so far from being universally received in Germany with the contempt you seem to think they merit, they have met with very considerable attention from some of the most cultivated, pious, and enlightened amongst the eminent men of that country; I have also found some minds of a very high order in this, who, if not prepared to adopt, are quite as little prepared to scoff at them.

I must also take leave to observe, that in the most remarkable case of clairvoyance I have yet witnessed, one far surpassing in interest any of those recorded in your journal, there *was* some approach to the sort of revelations made by the Seeress; and these proceeded from a person who had most assuredly never heard of Mrs. H. nor of any of the German theories on this subject.

But I have always remarked, that with this (so called) Mesmerism, as with religion, every man thinks himself entitled to laugh at his neighbour, who believes something more than himself. One person admits (frequently after long denying it) that he believes in the sleep, but pronounces all the other phenomena gross impostures: another has got as far as the phrenological manifestations, but affirms that clairvoyance is both absurd and impossible; whilst those who have seen good reason to believe in clairvoyance, denounce Dr. Kerner as a *gobe-mouche* for believing what he carefully investigated for years, and what Exhenmayer, and many other eminent persons, also investigated, and have given their sanction to.

I was quite prepared to see the phenomena recorded in the *Seeress* received with very general incredulity in this country, and have said as much in my preface; but I cannot but think the book, nevertheless, a highly interesting and curious work; and so, I assure you, it has been found by those who have perused it in the original, otherwise I should not have undertaken to translate it; and you must, at least, acknowledge that it forms a most decisive answer to that large class of persons who oppose Mesmerism on religious grounds; since, were the contents of that book believed, I am persuaded there must be a very beneficial effect produced on the minds of the believers.

Requesting that you will do me the favour to insert these few lines in your your journal, I remain, yours, &c.

June 2nd. CATHERINE CROWE.

SOMNAMBULISM.—A rather singular occurrence lately took place to a respectable cowkeeper living in the neighbourhood of Chesterfield. The servant boy got up between four and five o'clock with the view of going to milk. On going into the kitchen he was much surprised in not finding the milk-cans. The lad then went to the stable to see if the pony was there, but it was also missing. He then proceeded to the field some distance from home, when he was agreeably surprised at finding his master in the act of driving all his cows into a corner, as he supposed, for the purpose of milking, the pony standing at a distance, with the cans and other missing articles on its back. On approaching his master, the lad thought he looked "very queer," which terrified him so much that he was afraid to go near; but, having at length got the better of his fears, he seized his master by the arm, and so awoke him from sleep, for in that state he had been busying himself as before stated. The same individual, some years ago, when in the service of a gentleman, got up in his sleep, harnessed the horse, and put it to the carriage, and drove to the front door before he awoke.—*Derby Mercury.*

BOOKSELLERS' CIRCULAR.

THE past week has produced but few works of importance. From Mr. DOLMAN we have received a *Collection of the Letters of Mary Queen of Scots*, a costly work in many volumes, the review of which must be a labour of time. Messrs. HODGES and SMITH, of Dublin, have transmitted a *Military*

History of the Irish Nation, by the late M. O'Conor. It is a strange subject for a distinct volume. Mr. Clarke, of Pall Mall East, has sent a volume of seemingly very clever letters on Spain and Tangier, published under the anonymous of "X. Y. Z." From Messrs. Rivington has come the first volume of a *History of the Church of England*, by the Rev. S. M. Anderson, the preacher of Lincoln's Inn. Messrs. Wiley and Putnam have forwarded the first volume of an American work, entitled, *Sketches of Brazil*, by the Rev. D. P. Kidder; and Mr. Cunningham, a valuable work on *Vital Statistics*, by T. G. P. Neison. These are all of the more important new publications that have come to hand during the week, and we purpose thus to acknowledge their receipt in future, that our readers may have the earliest intelligence what works of value are produced, for some time must necessarily elapse before they can be read and reviewed with the attention necessary to the passing of a just judgment upon their merits.

The present number of The Critic contains the commencement of the "*Journal of French Literature*," to which we hope soon to add a similar one of the literature of Germany and Italy. As this is the first attempt that has been made to furnish to the English reader a systematic record of foreign literature, we must pray patience while a fair trial is being given to the experiment.

Again we are compelled to omit many articles that were in type.

TO THE EDITOR OF THE CRITIC.

Sir,—In your number for Saturday last is a letter from Mr. Proctor, of Manchester, in the last paragraph of which he says: "The *Novel Times* is a venture well deserving general support. Still it has disappointed me so far; for though the fiction is first-rate, and the letters of travel excellent and pleasing, the parts will not circulate with my readers, which proves that the mixture is injudicious. When the proprietor publishes each work separately, the series must be largely patronized."

In reference to this, I beg to be permitted to say, that, in compliance with a similar suggestion from other quarters, and agreeably to advertisement in The Critic of both the 17th and 24th May, I announced the publication on Saturday last of each of the works contained in the *Novel Times* separately in monthly parts and weekly numbers, so that those who wish to have one work only will not be compelled to take another or go without that which they want. For particulars, I beg to refer your readers to my advertisement in this day's number.—I am, Sir, yours, &c.

12, Wellington-street North, The Publisher.
June 3, 1845.

IMPOSITIONS UPON AUTHORS AND PUBLISHERS.

We have been favoured with a copy of the following letter, addressed to a gentleman whose work has been lately published, but has not hitherto been noticed in *The Times*:—

"52, Threadneedle-street, May 26, 1845.

"Sir,—Having read your work lately published, entitled ———, and having it in my power, from my connexion with the press, more particularly with *The Times*, I shall be happy to assist you in getting favourable notices being taken of it, on your forwarding me a copy, with an intimation of the style, &c. you prefer. Waiting your reply,

"I have the honour to be, Sir,
"Your most obedient servant,
"Smith Evans."

The practice of extorting money by thus professing to be able to obtain favourable notices either of new publications, of public exhibitions, or of the performances of actors, public singers, and musicians, is, we are informed, by no means uncommon; and the unwary, especially foreigners, are thus, we are told, frequently imposed upon. To the public generally we need offer no assurance that such practices are wholly unauthorized by us; but it may, perhaps, be necessary to caution strangers to whom such applications may be made, that the authors of them are merely swindlers, with no power of procuring the insertion of a single line in *The Times*, and that they will do best either to give such persons at once into charge of the police as common cheats, or to acquaint us with the names and particulars of their demand, that they may, at any rate, be exposed, and, if possible, made amenable to the law.

Of the writer of the letter given above we have no knowledge. He has not, nor never had, any employment upon our establishment, or any influence by which he could procure what he professes himself able to obtain. His application is therefore fraudulent; and if it had been successful, he might have been fairly prosecuted for obtaining goods under false pretences.—*Times*.

Sir,—In compliance with your request that booksellers would favour you with their opinions of the Critic, and also the opinions of other *readers* with whom they may come in contact, I beg to state that I so highly approve of it, as a publisher's circular, that I have discontinued taking *The Publisher's Circular*, and refer to The Critic only, as a literary production. I reap more mental and moral pleasure from the perusal of its pages than I do from the pages of any other periodical which I read, and would readily forego the privilege of reading any magazine or newspaper now published, except the *Phonographic and Phonotypic Journal*, rather than be debarred from reading The Critic. My customers who read your paper speak of it in high terms.

I am Sir, yours, &c.
T. P. Barkas.

26, Grainger-street, Newcastle-on-Tyne.
June 3, 1845.

The Scotch papers are publishing what they call the late Mr. Thomas Hood's last note, which was addressed to Dr. Moir, of Musselburg. "13th March.

"Dear Moir,—God bless you and yours, and good-by. I drop these few last lines, as in a bottle from a ship water-logged, and on the brink of foundering—being in the last stage of dropsical debility; but, though suffering in body, serene in mind. So, without reversing my union-jack, I await my last lurch. Till which, believe me, dear Moir, yours most truly,

"Thomas Hood."

An autograph of Shakspere has recently been discovered on the vellum cover of a little Italian book of the sixteenth century, and has been the subject of dispute at Marlborough-street Police-office this week. The work is entitled *I Quattro Libri della Filosofia Naturale*, by Giovan Saravia, published in 1565. Mr. Howard, a bookseller, recently purchased the volume, with several others, of a dealer in books living at Hoxton, for a few shillings; having detected the signature, which is very faint, on the cover. This discovery having been made, the book is now valued at 100*l.* or more. Mr. Howard placed it in the hands of Mr. Fletcher, the auctioneer, for sale; whereupon a Mr. Taylor claimed it as his property, declaring that it had been stolen from his library. He was not aware of the existence of the autograph on the cover of the volume, which he bought for sixpence fifty years ago. Mr. Alexander, the Hoxton bookseller who sold it to Mr. Howard, said he bought it with others at an auction. Mr. Howard refused to yield up his prize; and as the matter had not been brought before the magistrate by way of summons, no decision was pronounced. At the suggestion, however, of Mr. Fletcher, the disputants, to avoid a lawsuit, agreed to divide the proceeds of the sale of the book.

REGISTER OF NEW PUBLICATIONS,

From May 31 to June 7.

NOTICE TO BOOKSELLERS.

A Register lies at The CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* The Critic, *and no charge will be made either for registration or for publication in* The Critic. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Anderson's (Christopher) Annals of the English Bible, 2 vols. 8vo. 1*l.* 8s. cl.—Arnold's (Dr.) Sermons, Vols. I. and II. new edit. 8vo. 12s. each, cl.—Arnold's (Rev. T. K.) Epitome Historiæ Antiquæ, 3rd edit. 12mo. 4s. cl.

Balmer's (late Robert, D.D.) Academical Lectures and Pulpit Discourses, 2 vols. 8vo. 14s. cl.—Barrow's Naval Worthies of the Reign of Elizabeth, demy 8vo. 14s. cl.—Bray's Novels and Romances, Vol. II. "De Foix," fc. 8vo. 6s. cl.

Chapters on National Education, by the Rev. R. M. M'Brian, M.A. 8vo. 3s. cl.—Child's (Mrs.) Letters from New York, second Series, 12mo. 6s. cl.—College Chums, a Novel, by C. Lister, Esq. 2 vols. post 8vo. 21s. bds.—Contributions of QQ, by Jane Taylor, 4th edit. fc. 8vo. 7s. cl.—Course of Lectures to Young Men, delivered in Dundee, 2nd edit. 18mo. 2s. cl.

Days and Nights in the East, from original Notes of a recent Traveller through Egypt, Arabia Petræa, &c. 1 vol. post 8vo. 10s. 6d. cl.—Dickinson's (Bishop) Remains, 8vo. 16s. cl.—Disputed Inheritance, a Novel, by Grace Webster, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.—Dog, The, by W. BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

Wanderings on the Rhine. By Leigh Ritchie. 8vo.

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisements adopted by THE CRITIC.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrapper, price 1s. 6d. each.*

GLEANINGS,

ORIGINAL AND SELECT.

DECREASE OF MARRIAGES.—It is a curious fact, that the number of marriages in England and Wales has greatly decreased of late years, though the population is annually increasing. Thus, in 1833, there were 120,127 marriages in England and Wales; in 1834, 121,884; in 1835, the number fell more than 2,000, being 119,598; in 1836 they rose again to 120,849; but in the following year decreased more than 8,000, being only 112,727; in 1838 there were 113,123 marriages; in 1839, 116,677; and in 1840, 115,548. The number of burials in 1837 was 336,994; in 1838, 292,650; in 1839, 286,855; and in 1840, 304,407. The number of baptisms in the latter year was 364,440, some 5,000 fewer than in 1823.—*Globe.*

The meeting of the British Association, at Cambridge, is likely to prove of considerable interest, from the number of distinguished scientific foreigners expected. Prof. Struve, of Dörpat, Profs. Dove, Kreil, Kupfer, and others will be present, for the purpose of taking part in the Magnetic congress. Prof. Foggi, of Pisa, Prof. Schönbein, of Basle, and Sir Robert Schomburgh, have also expressed their intention of attending the meeting; and it is hoped that M. Quetelet, Prof. Agassiz, and others, will be able to appear. The arrangements at Cambridge will admit of a model-room, for the reception of works of art of all kinds,—forming an extremely interesting feature of the meeting. It is greatly to be desired that all who would assist in rendering this as complete as possible, by sending objects of interest for exhibition, would communicate their intentions to the local secretaries as soon as possible.

BOTANICAL SOCIETY.—May 2.—E. Doubleday, esq. V.P. in the chair.—Dr. Lloyd and J. Coppin, esq. were elected members. Read "Remarks on some specimens of *Rubi* (new to the British Flora)," by Dr. T. B. Salter. Specimens were presented, and respectively named by Dr. Salter, *Rubus tenuis*, *Rubus Borreri*, and *Rubus Babingtonii*.

ON DR. WALKER, THE AUTHOR OF A BOOK ON THE "LATIN AND ENGLISH PARTICLES."

Here lie Dr. Walker's particles.

IN THE CHURCHYARD OF HYTHE.

His net old fisher George long drew,
Shoals upon shoals he caught,
'Till Death came hauling for his due,
And made poor George his draught.
Death fishes on through various shapes;
In vain it is to fret;
Nor fish or fisherman escapes
Death's all-inclosing net.

ST. BENET'S, PAUL'S WHARF, LONDON.

Here lies *one More*, and *no More* than he:
One More, and *no More!* how can that be;
Why *one More* and *no More* may well lie here alone,
But here lies *one More*, and that's *More* than *one*.

Lines written on a block of ice brought from America without melting, and exhibited in a window in the Strand, London:—

"Ice placed within a shop or room
Will turn to water, we presume;
For, 'tis a solvent, all agree;
But here IN-solvent ice we see.

Yet, though we cannot solve the ice,
We solve the riddle in a trice;
It comes from Pennsylvania's State,
And therefore will not liquidate."

To Readers and Correspondents.

E. J.—*Simpson's. Price 8s.*

BROWN.—*Mr. Hall's Book will appear in a few days: price not known yet. We are unable to answer the other query.*

FROONANT.—*We regret that we are unable to answer the first query. To the second we reply, Simpson's.*

ADVERTISEMENTS.

ROWLAND'S ODONTO, OR PEARL DENTIFRICE.

PATRONIZED BY

"THE QUEEN,"

AND THE ROYAL FAMILY OF GREAT BRITAIN,

AND THE SEVERAL

SOVEREIGNS AND COURTS OF EUROPE.

A FRAGRANT WHITE POWDER, *prepared from Oriental Herbs* of inestimable virtue for *preserving* and *beautifying the TEETH and strengthening the GUMS.* It eradicates tartar from the teeth, and thus lends a *salutary growth and freshness to the gums.* It removes from the surface of the Teeth the spots of incipient decay, polishes and preserves the *enamel*, imparting the *most pure and pearl-like whiteness;* while, from its salubrious and disinfecting qualities, it gives *sweetness and perfume to the breath.* Being an anti-scorbutic, the *gums* also share in its corrective powers; scurvy is eradicated from them, and a healthy action and redness are induced, so that the teeth (if loose) are thus rendered firm in their sockets. As the most efficient and fragrant aromatic TOOTH POWDER ever known, ROWLAND'S ODONTO has for a long series of years occupied a distinguished place at the *toilets* of the SOVEREIGNS and the NOBILITY throughout Europe, while the general demand for it at once announces the favour in which it is universally held.

Price 2s. 9d. per box.

CAUTION.—To protect the Public from Fraud, *The Hon. Commissioners of Stamps* have directed the Proprietors' Name and Address to be engraved on the Government Stamp, thus

A. ROWLAND & SON, 20, Hatton Garden,

Which is affixed on each box.

Sold by the Proprietors, and by Chemists and Perfumers.

*** All other ODONTO'S are FRAUDULENT IMITATIONS!!!

THE CRITIC,
And Journal of Literature.

SATURDAY, JUNE 14, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

ADVERTISING.

THE *Morning Chronicle* has this advantage as an advertising medium, that it is the single organ of a great party, and therefore is read not only by that party but by the other parties, curious always to learn what are the designs and doings of their opponents. The *Chronicle* is not nearly so crowded with advertisements as is the *Times*, and therefore those that appear there are more certain to be seen; while it possesses this important further recommendation, that it publishes no supplements wherein to hide the larger portion of its advertisements from human eye. The conclusion to which we have arrived, therefore, from a review of the circumstances, is, that all those classes of advertisements which may be termed *general*, or addressed to the world at large; as distinguished from those addressed to particular persons—in other words, for announcements intended to catch the eye, the *Chronicle* is a better medium than the *Times*: the latter deserves the preference for such as persons are likely to seek; and for this reason, that nobody would find an advertisement in the *Times* by accident, but everybody goes to the *Times* to *look* for an advertisement.

The same remark applies to the *Morning Herald* and the *Morning Post*. But the latter, being the especial journal of fashion, is peculiarly fitted for certain classes of advertisements addressed to the fashionable, and is ill-fitted for *general* announcements. Tradesmen appealing to the *beau monde*, and publishers, will find the *Post* one of their best journals; but for all matters of business, or announcements addressed to men of business, it is worthless.

Of the evening papers, the best medium for advertising is unquestionably the *Sun*. In London, there is a very absurd prejudice against the evening papers. Here everybody reads the morning papers, and few look into an evening one. The inhabitant of London appears to consider that London is all the world; he forgets that the evening papers, though not patronized here, are very largely read in the country, and therefore are really very excellent localities for an advertisement, particularly as the number is small, and each one is sure to take the eye of the reader.

Of all the evening papers the *Sun* is the best, not only as having the largest circulation, but as being much consulted throughout the provinces for its early information. This characteristic has given to the *Sun*, although a party paper, a less exclusive circle of readers than any of its contemporaries, save the *Times*, and an announcement there thus finds its way to all parties, sects, and ranks in the country. It is seen in every newsroom, and read at almost every inn. The *Sun*, therefore, is good for advertisements of *all* kinds. The *Standard* enjoys a highly respectable circulation, and is well adapted for advertisements directed to the higher classes. The *Globe* is especially patronized at the inns, and by the commercial classes, and is therefore a good medium for *business* advertisements.

This completes the review of the daily journals. We shall next turn to the Weekly newspapers.

NEW SERIES.—No. 24, VOL. II.

LITERATURE.

PHILOSOPHY.

A Biographical History of Philosophy. By G. H. LEWES. *Series I. Ancient Philosophy. Knight's Weekly Volume.* Nos. XLV. and XLVI.

WHEN the police constable espies a member of the swell mob who, by dint of impudence and fine clothes, has contrived to slip into decent company, he at once takes the intruder into custody. The critic is frequently called upon to pursue the same course with respect to literary impostors; and albeit a disagreeable, it is nevertheless a very necessary and useful part of his duty. Mr. KNIGHT'S *Weekly Volume* is deservedly popular; it professes to be "for all readers;" and as that is a *rather* miscellaneous class, it may be of service to warn some of them as to what sort of an instructor they are likely to find in Mr. LEWES. That he is but a mere smatterer in Greek, though he has undertaken to write the history of Greek philosophy, might be shewn by numerous, and some of them very gross examples; but considering the class for which his work is intended, it will, perhaps, be more useful to expose his pretensions to philosophy.

We have had *polite* philosophers, *minute* philosophers, and others of all possible kinds; Mr. LEWES is the *contradictory* philosopher. To give a few examples:—

In the life of ANAXAGORAS (Vol. I. p. 118) we find:—"The senses are accurate in their reports, but their reports are not accurate. They reflect objects, but they reflect them as these objects appear to them. Reason has to control their impressions. Reason has to verify their reports."

Mr. LEWES considers that this doctrine may be applied to "the explanation of some of those *apparently* contradictory statements which have puzzled all the critics," but which do not puzzle him.

But, before we "apply" the doctrine, may it not be as well to understand it? For here, we must confess that we are at some loss as to the following points: 1st. How can any thing *appear* to the senses, which are the mere channels of perception? 2. How can their reports be *accurate*, if reason has to *verify* (*i. e.* we suppose *correct*) them? 3. How can they be accurate and inaccurate at the same time?

Mr. LEWES has elucidated the last little difficulty by the terms *subjective* and *objective*, recently imported from Germany, and the sum and substance of the elucidation is contained in the following note:—"In the above passage, 'the reports of the senses being subjectively true,' means, that the senses truly inform us of their *impressions*; but these impressions are *not at all* like the actual *objects* (as may be shewn by the *broken appearance* of a stick half of which is dipped in water); and *therefore the* reports are 'objectively false.'"

What an admirable specimen of logic! The *universal* conclusion, that the impression of the senses are "not at all" like the objects of them, is drawn from the *particular* and hackneyed instance of a stick dipped in water—an instance for which our poor senses have been very roundly, and perhaps undeservedly abused, since they, at all events, inform us that the stick is immersed, and how far. But supposing the stick out of the water, is it not a stick of a certain size and colour? Does not Mr. LEWES regard it as such? Nay, does he not adopt its *appearance* then as a *true datum*, from which he infers the *falseness* of its appearance in the water? If he does not, there is an end of the matter; we cannot reason any longer if Mr. L. maintains the *universal* delusion of the senses; but he does not do so.

In the life of ZENO of Elea we find the following flat contradiction in the space of less than four pages. VICTOR COUSIN, in his life of ZENO, in the *Biographie Universelle*, has shewn that his arguments concerning motion, of which a well-known one is the problem of Achilles and the tortoise, are nothing but methods of reducing *ad absurdum* the doctrine of the divisibility of space and time. Now how does Mr. LEWES proceed? At page 96 he seems to agree with COUSIN, since he tells us that ZENO'S *Dialectics* were "a refutation of error by the *reductio ad absurdum*," and that "we must not, therefore, seek in his arguments for *any thing beyond the mere exercise of dialectical subtlety.*" Yet at page 100 he tells us—"The other arguments of Zeno against the possibility of motion are given by Aristotle; but they *seem more*

like the ingenious puzzles of dialectical subtlety than the real arguments of an *earnest* man!" And, to complete the absurdity, he maintains that the third problem, viz. that motion and rest are identical, as illustrated by the flight of the arrow, which, at every *successive instant*, being contained in a certain space, is therefore *at rest* in that space, is *a truth!*

His *facts* are frequently as contradictory as his arguments. Thus we are told in the life of PYTHAGORAS (Vol. I. p. 60), that "he taught only in secret;" whilst fifteen pages further on we learn that "he had two sorts of doctrine; one for a few disciples whom he chose with extreme caution; the other *for such as pleased to listen!*"

In the life of EMPEDOCLES (p. 139) he puts the most illogical reasoning into the mouth of the philosopher, which (p. 144) he calls "a syllogism;" and informs us in a note—"We are here *thinking for* Empedocles; that is, we have no other authority for this statement than that *something of the kind* is wanting to make out a *plausible* explanation of what is only implied in the fragments extant." Truly the shade of EMPEDOCLES must feel highly indebted to Mr. LEWES.

Mr. LEWES has not much occasion to shew his knowledge of physics, but we suspect that it is almost equal to his metaphysics; since he states NEWTON'S law of attraction in the following clear and correct manner (Introd. p. 17): "Attraction is the square of the distance!"

In parting with Mr. LEWES we will venture to offer him two pieces of advice. First, not to write about what he does not understand. Second, not to treat with flippancy and abuse men who are infinitely his superiors; as BRUCKER, RITTER, TAYLOR, ENFIELD, &c.

SCIENCE.

Photogenic Manipulation. By G. T. FISHER, jun. 2nd edition. George Knight and Sons.

THE purpose of this little volume is to convey practical instruction for the use of the Daguerreotype, the Calotype, the Chrysotype, the Cyanotype, the Chromatype, the Energeotype, the Anthotype, and the Amphitype. It is very intelligibly written, and, with the aid of the numerous woodcuts, the most unlearned might readily attain to the use of the instruments named.

VOYAGES AND TRAVELS.

Spain, Tangier, &c. visited in 1840 *and* 1841. By X. Y. Z. London, 1845. S. Clarke.

THESE letters have at least one recommendation—they were never intended for publication. They are not elaborated impromptus—there is no affectation of ease—they do not borrow learning from the guide-book, in the hope that it may be mistaken for the researches of the writer. They are *real* letters, addressed to a near relative by one of a family party during a tour of some three or four years, intended for the eye of that relative only, therefore written with the freedom and liveliness that are the charm of such outpourings of the mind in its undress, when it speaks as it feels, and tells of its impressions rather than of its thoughts.

The editor advises his readers that he has exercised the prerogatives of his office, and erased divers passages relating to family affairs, as well as some personalities, the publication of which would appear to violate the sanctity of private life, and he apologizes by anticipation for inaccuracies, as the writer is not now in this country, and could not correct his MS. But of these there are very few.

The first letter is dated from Biaritz, after divers excursions into the Pyrenees, between which and the Alps a comparison is drawn. The former want the vastness, the icy peaks and broad blue lakes of the latter; nor have they the picturesque Swiss cottages and costume. The Pyrenees, on the other hand, rejoice in greener and more various foliage, their valleys are more luxuriant, and the colouring is richer.

From Madrid, the writer transmits intelligence of the extreme disappointment he had experienced, and the overthrow by the sad vision of the reality of all his romance relative to Spain and the Spaniards. No serenades, no guitars, no inquisition, no monks, no assassinations! And as for the costume, somebody, he says, ought to be indicted for fraudulent practices in bringing people great distances under false pretences. Hats, trousers, and swallow-tails are as plentiful as in Regent-street. Occasionally a muleteer or water-carrier passes with a conical hat, light jacket, gay ribands, and sandalled soles, but he looks as if he were ashamed to be seen so out of fashion. The very mantilla is abjured by the ladies, who borrow the latest style from Paris. Nay, the writer affirms that the brilliant beauty whose glances were once so destructive from behind the covert of the mantilla has vanished also.

In Spain there are three classes of travellers; those who go in the *diligencias;* those who go on mule-back, paying so much a day for their mule; and those who go *as luggage* on a mule, paying *by weight!* The diligence seems to be similar in its appointments to those which are familiar to every tourist. It was in the coupée of this vehicle that our "correspondent" took his place, and thus enjoying an extensive view of the country, he was astonished at its apparent poverty, and the entire absence of gentlemen's seats, even in the neighbourhood of such a city as Madrid, and of branch roads in some two or three days' journey he counted but two. The travellers they passed were unfrequent, but instead of them they met parties of ruffian-looking, peaked-hat fellows, armed to the teeth, the guards of the road, and who are reported to be retired banditti, kept honest by the calculation that their pay is more than they could hope to gain by plunder.

Travelling accommodations are not the best in Europe. A specimen is thus pleasantly described:—

As it was, however, we enjoyed a specimen of something not far removed from the true, comfortless Spanish Posada; with its dark staircase rising from the rambling mule stable; its bare, dirty, furnitureless rooms, and its wretched truckle bedsteads, bedecked with a single cotton blanket, and solitary wool mattress. Mattress, indeed, I am wrong to call it: it is a *sack*, containing a due number of *lumps* of wool, which you may commodiously arrange through a slit in the upper surface, *left for the purpose;* and on which—*if* you can sleep on a bag of potatoes—you may get as much of a night's rest as the battalions of *voltigeurs* in attendance upon your couch will permit. After a night spent as mine was at Fresnillo, under the discipline of these same light troops, I could readily understand how the united efforts of the myriads of Lilliputians could succeed in chaining great Gulliver on his back; though, indeed, the united efforts of my voltigeurs had a very opposite, but an equally powerful effect upon me; their reiterated and persevering attacks, first on one spot, then on another, exciting me to the performance of a succession of gymnastic exercises, such as I never went through before, and hope never to execute again.

The fare was wretched; vegetables swimming in oil; animal messes redolent of garlic, and very tough fowls, composed the daily dinner. The oil, in this land of olives, was invariably rancid, and the reason alleged is characteristic of the people. There are not presses enough, and the olives lie together till they ferment.

The first impression of Madrid is that of poorness and dirt in its suburbs, and considerable splendour in its finest parts, marred, however, by the custom of guarding all the lower windows with thick iron bars, like a prison.

The inhabitants of this city convey to me the notion of a people having nothing to do; such myriads of all kinds and classes (except the more fashionable dames, who rarely at any season go out till late) lounging incessantly backwards and forwards, not walking as if they had somewhere to walk *to;* not men with earnest faces, hurrying to business, but figures moving slow and stately, as if intent on nothing but enjoying the sun. The only palpable exceptions are the poor blind song and pamphlet criers, bawling "*á dos cuartos*" everywhere in your ear; and the military with their brass bands, playing admirably, and indeed really pretty music, but unfortunately often with instruments out of tune.

Our author agrees with every other visitor in the opinion that the power of priestcraft has passed away for ever from Spain. He affirms that the idea entertained in England of the immoral lives of the monks falls very far short of the reality. The middle classes of Spain entertain the deepest abhorrence of despotism, whether spiritual or political, and their will must ultimately prevail in any country having a constitutional form of government.

Shall we call it improvement or degeneracy that has humanized somewhat

THE MODERN BULL-FIGHT?

I considered myself fortunate in having hit upon a day when the greater part of the "sport" consisted, not in the regular bull-fight, but in a sort of play with young bulls (*Novillos*, as they are called), which had balls on their horns, so that they could not seriously injure either man or beast; and which were themselves led off after a given time, also unhurt. The manner of their retreat was curious. A small drove of tamed, educated bulls were let in; these immediately made a circle about the wild animal, who was glad enough to get back to his kind; and then off they all trotted together. During part of this more harmless species of entertainment the populace were admitted into the arena, and some hundreds of them ran about with the amazed beast, while he dashed in all directions through them, "fluttering them like an eagle in a dovecote;" or, to adopt a humbler comparison, playing a capital game of blind-man's-buff with them. This is more literally accurate than you perhaps think; as the creature, when he makes a rush, closes his eyes; a fact in which chiefly consists the safety of those at whom he aims. It was by no means unentertaining to see him—now dart at one—now burst off to another—here throw down a whole string at once of the most venturesome—there give a slight and graceful toss to some other who had come inopportunely within his reach—yet apparently never hurting anybody; unless indeed these brother wild-beasts have nine lives like a cat, for they all got up when struck, and ran as nimbly as Paddy does after his head is broken.

His judgment of Spanish music is that it is deficient in soul; but little of it is national; most of the songs are in a vulgar, jaunty style; the few pretty airs that exist are already familiar in England. The hunt after good books was almost equally unsuccessful. In the *useful* departments of literature there is nothing; the drama alone flourishes. The general character of recent writings is described as "jejune, possessed of but little depth of thought, their wit often forced, their style wordy, and sometimes not a little conceited." Translations from foreign literature have been recently attempted with success. Among them, Miss MARTINEAU's Tales on Political Economy have been very popular. This is the

CHARACTER OF CHRISTINA.

As for Chistina, she seems to meet with little commendation or respect; and to deserve less. I have rarely known any one so generally ill-spoken of. Her own immediate partisans seek to justify her of course; but by everybody else, she is represented as an ill-conducted, selfish, and rapacious woman. Her insatiable love of money is a general subject of conversation. She is said to have sent incalculable sums out of the country, and to have done so for years before she quitted it. It is even asserted she stripped the royal palaces of their ornaments, &c.; an example which has, they say, been copied by various minor fry.

An amusing instance of her stinginess in small matters, has been related to us on what we cannot but consider as excellent authority. On the occasion of some disturbance in Madrid, all the ministers suddenly repaired to the palace and remained there three days and nights. The hour of refreshment on the first day came: they called for dinner;—there was none. Astonished, they asked for a little cold meat merely,—there was none:.... for *any thing* to allay their hunger,—there was *nothing*. The servants were on board wages, there was nothing! in the palace of the Queen of Spain! and the ministers actually lived during the three days on food procured from a neighbouring French shop!!

Our informant went on to say that the Queen would wear one gown almost all the year round; and had been known to mend the little Queen's shoes with her own hands. What absurd incongruity in such a person having her dwelling in the immense and splendid edifice here appropriated to royalty.

The equipages of the higher gentry are extremely handsome, differing from our own only in their greater showiness of decoration; the horses are covered with gay trappings. A better idea of the condition of this wretched country will be gathered from the brief but graphic sketch of

A ROYAL PROCESSION.

The day the little Queen made her entry into the town (on the 26th October) after her mother's abdication and desertion, the procession on the occasion would have made the veriest cynic smile. Our hotel is so situated, near the Calle de Alcalá, that I had a view of the triumphal procession from our balcony. First came an awfully fine carriage containing a couple of overdressed children; then a troop of half-naked bedizened dancing girls, performing their weary evolutions on the cold stones; next, the state coach with the little Queen and her sister, and two lady-attendants; then a troop of dragoons; and then some dozen or so of vehicles of a most beggarly and break-down description, drawn by garrons, short-eared and long-eared, that could hardly lift a leg, and driven by men in plain dirty clothes, more like paupers than coachmen. These *elegant* conveyances (which I conclude were hired articles, corresponding to what used in London to be called glass coaches) were stuffed full of officers and civil officials. A lengthy column of military, in patched and tattered uniforms, closed up the rear.

The climate of Madrid is cold, the air keen, and rendered even painful by the want of due provision for warming the houses. The natives preserve animal heat by coiling themselves up in cloaks, and lying about idle till the cold relaxes. Altogether our author considers Madrid the dearest and most uncomfortable of the capitals of Europe; the only good eatable being the game, which is abundant and well-flavoured.

Society in Madrid is any thing but attractive. The Spaniards are no entertainers. Dinner-parties are almost unknown, and balls are few, save at the carnival.

Genuine Spanish society, from what I have experienced or can learn of it, consists at all times rather in what we should call *visiting* morning or evening, than in the giving of parties.

The common *Tertulia* is usually nothing more than the meeting together in the evening, without any express invitation, of half-a-dozen or a dozen intimates, who chat or work, and now and then sing or play cards for a couple of hours or so. It is frequently the habit for a little coterie of eight or ten to arrange in this way to pass the evenings by turns at each other's houses; all collecting one day at one house, the next at another, and so on.

Our traveller was much struck with the absence of English in Madrid. Two years before, only twenty-five British residents were in Madrid; in three or four months, he met only half-a-dozen passing visitants.

Of the natives, some few of the ladies of high rank are beautiful; but in a given number there are not nearly so many handsome women as in England. The utmost profligacy prevails in the loftiest classes; the middle classes are a trifle better; but both are improving.

Education is at a low ebb, but that also is progressing. About eight years since, Madrid contained *two* libraries and *seventy-one* convents! Those who desire to have their daughters well taught are obliged to send them to England or France. At this moment many of the oldest grandees cannot write. This class is equally degenerate in body as in mind, and as mean in estate as in person. Bribery prevails universally; every official has his price. The very judges sell themselves to the best bidder. Still, with all their defects, our traveller noticed some

GOOD POINTS OF THE SPANISH CHARACTER.

There seems to me to be much more nature and simplicity about the Spaniards; much sincerity and frankness in their social relations; great kindness of disposition and amiability of temper; and an unaffected wish to oblige and serve strangers, in all things save in that which *we* are too often inclined to consider the touchstone of good-will—entertaining,! *i. e.* feasting; spending their money and health upon them—commonly *called* hospitality. I should say, too, that though, from deficient education, Spaniards, and especially Spanish women, are often common-place and trifling in conversation; they are far from being without natural talent.

We must take another peculiarity which we do not remember to have seen recorded by any other tourist:

ODD STREET NAMES AT MADRID.

Some of the names of the old streets are very odd and amusing, reminding one of the "Praise-God-Barebones" days in our own land. What think you of such as "*Aunque os pese*" ("Although it may distress you");—"*Noramala vayas*" (short for "*En hora mala vayas*" or, as we should express it, "Get along and be h———d to you")!—"*Valgame Dios*" (untranslateable; best rendered by "God bless us")!—"*Ancha* [or *Angosta*] *de los peligros*" ("Broad [or narrow] street of dangers");—"*Aguardiente*" ("Brandy");—"*Primavera y Damas*" ("Spring and the Ladies");—"*Subida de los Angeles*" ("Ascent of the Angels");—"*Sal si Puedes*" ("Get out if you can")!"

Conveniences for locomotion are very scanty; there are no hackney coaches, omnibuses, or conveyances for hire for short periods.

From Madrid our traveller proceeded to Seville, and on the way met with an adventure which well illustrates the character

of the country. A little after midnight the vehicle stuck in the mud, and produced a strange display of

SPANISH PHLEGM.

When the accident first happened there was a little hullaballo—a little talking and swearing for a minute or two, and then all was quiet. We sat quiet too, knowing *we* could do nothing, and expecting of course in a few minutes to find efforts making to extricate us from our ridiculous position. Time went on—yet not a stir! . . . "This stillness seems queer," said I to myself. "Have the fellows left us here all alone in the mud in the dead of the night? or are we put into this large hole on purpose to be the readier food for their friends the bandits? I'll know how the matter stands." So I wriggled myself out of the manifold wrappers which were making a mummy of me, and looked out. The *animals* had all *gone to sleep!* mayoral, muleteer, guards, passengers, MULES AND ALL! they apparently expected a miracle to draw us out. There they were (the men, not the mules), all packed up comfortably, their handkerchiefs tied over their heads—the guides inserted under the shelter of the luggage at the back of the carriage, snoring nineteen to the dozen. . . . The case was hopeless. . . . I drew my head back again into its shell and tried *to go to sleep too!* though being "badly habituated," as the shopman said in Madrid, I cannot affirm that I succeeded in the attempt. . . . "It is my first lesson, however," I whispered encouragingly to myself, —"I shall do better next time!"

For nine hours they thus remained, till oxen were procured and relieved them from their "fix."

Amid many annoyances, Spanish travelling has one luxury. Custom-house investigations are mere make-believes; the officer puts his hand into the bag, to the depth of some three inches, and drawing it out again, bows, and intimates that all is right. Query—Is there a fee for this?

Seville does not equal expectation. The town is far from handsome; the streets are wretchedly narrow; "the *silvery* Guadalquiver" is a muddy stream. But the houses are remarkable for cleanliness; they are whitewashed outside and in several times a year. No apartment escapes this purification; even the drawing-rooms are whitewashed! But cleanliness may be carried a little too far. The neighbourhood is by no means picturesque; and even the orange-groves, so charming in poetry, are beautiful evergreen orchards and no more; the trees do not equal fine laurels in height. If they were grown as are the shrubs in our parks, mingled with lofty trees and various foliage, they might deserve the epithets of the poets; but planted, as here, in long straight rows, as closely as they can stand together, they are extremely disappointing to the romantic ideas of the traveller.

But there is an arrangement which makes the interior of Seville houses more charming than aught that can be found out of them.

THE HOUSE-GARDENS OF SEVILLE.

Figure to yourself, in every gentleman's mansion, a large square inner court, paved beautifully with marble; surrounded by elegant marble pillars (behind which runs on all sides a broad, covered, and marble-floored corridor); and filled with every sort of lovely odorous shrub and flower—a graceful fountain playing in the midst. In the day-time, during hot weather, the sun is kept from this treasured spot by awnings spread overhead. Here, in this delicious, oriental sort of drawing-room, on seats and sofas placed in the encircling gallery, sit the family during the summer evenings, with their musical instruments and their friends about them, breathing the pure air of heaven to refresh them after the heats of the burning day.

Our traveller minutely describes the various *sights* of this city. Among other novelties, he witnessed a dance in the cathedral! He attended some private parties of the gentry, and notices the absence of ostentation which prevailed there. No other refreshments were provided than some water and sugar, and a little lemonade.

From Seville our tourist passed by Cadiz to Tangier; and thus graphically does he describe the

FIRST IMPRESSIONS OF BARBARY.

Every thing here is striking in place and people:—The Moorish woman in her enveloping *haik*, from under which one eye alone is allowed to see the day:—the stately, fine-countenanced Moor, much fairer than the southern Spaniard; with his red cap and white turban, his waistcoat and capacious shorts of blue or red cloth, his scarf round his waist, his white or coloured woollen mantle (father of the Spanish cloak), and his yellow slippers on his unstockinged feet:—the fierce, wild-looking, half-naked Reefian, with his bare shaved head, whence hangs but one long, wild look, by which the angel Gabriel is to pull him into Paradise: the sharp Algerine, in his brilliant, well-fitting body-clothes, embroidered jacket, loose short calico trousers, coloured stockings, and rich red sash: the long-nosed, black-capped, black-slippered, straight-gowned Jew; as ill-treated, as cunning, as industrious, and as rich proportionably, as he is everywhere else:—the Negro merry in his slavery!

Then the sheds which serve for shops! where kooskoosoo, walnuts, dates, butter (*what* butter!) soap (*what* funny soap!—in large, shapeless masses, looking like light-coloured treacle just solidified), currants, figs, &c. are all helped by the same five fingers, cleansed only, if at all, on the back of the never-failing cat, and leaving their prints deep clawed into the unctuous heaps:—the pottery, carrying you back in imagination to Herculaneum and Pompeii:—the huge, ungainly, gentle "ships of the desert" crowding into the *Soco*, from Fez on fair day; their bales of goods strewing the ground, and the little tents of their masters pitched about them:—the coffee-houses, where in one small room, matted on the floor, and on the walls as high as the head, as many men squat down as the space will hold, sipping coffee or tea, and chewing opium; to the music of a wretched two-stringed instrument (the original, doubtless, of the Spanish guitar)—a machine struck with sticks, a clapping of hands, and a cracked voice or two doling out at intervals one monotonous stave: . . . . But I must stop; for I should never have done if I were to go on enumerating all the strange things which distinguish this land of Barbary.

Life and property are represented as extremely insecure. No foreigner could venture to walk half a mile out of the town without a guard, and many instances are narrated of robberies and assassinations occurring under the very nose of the government. In Tangier there is no distinction of ranks, save as regards those who are of royal blood; no education, and scarcely perceptible differences of intelligence, manners, habits, or pursuits.

Among other introductions, admission was obtained into the sacred apartment of the wife of one of the wealthiest of the native merchants. The dame received her English visitors very civilly. She was, in the Moorish meaning of the term, beautiful, that is, very fat and very slovenly.

Having satisfied his curiosity, our traveller returned to Spain, and by a dangerous route, infested with brigands, proceeded to Granada. The roads were wretched, and the wayside inns bespoke the low ebb of civilization.

At these, travellers, instead of being met as elsewhere by the proprietors of the house or their servants, shewn into whatever room there may be at their service, and asked what they require, are left to shift for themselves as completely as if the inn did not belong to any one present, and as if it were a matter of the most perfect indifference to the owner whether they entered it or not, or whether they lived or died. You are met by nobody—conducted nowhere—asked nothing. You must find your own way in, and your way up stairs; and if you want a *cuarto* to sleep in, you must *take it*, and then it is only by dint of unceasing and vigorous efforts, that at the end of an hour perhaps, you can succeed in getting any thing whatever, even a chair, brought into the "abomination of desolation" you have chosen. Nay, for this miserable *cuarto* itself, if there be any scarcity of accommodation, you must fight. I use the word in the singular number advisedly; since it is the fact that no *one party* travelling by a diligencia is allowed, on common occasions, to occupy more than *one* sleeping-room,—no matter how numerous the members of the party may be, or how various their ages and sexes, provided it be within the limits of possibility to stretch beds for them all within the four walls.

The Alhambra was visited, of course, and is minutely described, as are other objects of interest in Granada. The morals of the people are represented as at the lowest ebb. Robberies are unblushingly committed in the very streets; the magistracy are as corrupt as those they are appointed to punish, and a striking instance is narrated.

A rich miller in the country was fixed upon by three persons as a fit object to be plucked. It so chanced that, shortly before the time appointed for the attack of his house, a party of travelling soldiers had requested lodging of him for the night, which he had granted; and these soldiers were sleeping above when the robbers arrived and demanded his money. The miller told them he would go up and fetch it. He woke the soldiers, and with their assistance killed the three thieves, and left them lying. The next day, as it was proper the authorities should be made acquainted with the circumstances, he went to the house of the Alcalde of his *pueblo*, or village, to call him to make his examinations. The Alcalde was not at home; on finding which he pro-

ceeded to the next in office, who was not at home either. He then went on to a third: neither was this one to be found, nor did anybody know any thing of either of the three. At last, therefore, he returned home, and prepared to bury the men himself, when on taking off the masks which had concealed their faces, lo! and behold—THERE LAY THE THREE ALCALDES!!!

The country round is extremely rich; the corn high, close, and fine, and the plain thickly planted with all kinds of fruit-trees, which produce luxurious crops. Further inland, the people appeared to be more civilized: the farms were neat and thriving, and the signs of plenty and comfort were visible everywhere.

It will be unnecessary to attend our traveller through the short remainder of his tour. From the notes we have made, as we have followed him so far, it will be apparent that he is an intelligent, cheerful, and agreeable companion, and that his letters may be advantageously introduced into the library and the book-club.

Economy; or, a Peep at our Neighbours. London, 1845. Ollivier.

A FAMILY, who have lived a little too fast in London, fly to Guernsey to practise economy and retrenchment, perhaps to be out of the reach of duns, bailiffs, *et id genus omne*. The lady of the household, who is evidently a lively, spirited chatter-pie, has set down her experiences of life in Guernsey, prefacing them with a vivid sketch of the miseries endured by those who, having lived beyond their incomes, see ruin stealing upon them month by month, but want the courage to strip the foe of his terrors by meeting him half-way, and grappling with him before he has grown to be invincible.

Our authoress is quite conscious of her propensity for gossip. "Women," she says, "must either write or talk." It might be supposed that *her* excuse for writing is that she is debarred from talking. No such thing. She both talks and writes, and if her tongue discourse as glibly as her pen, she must be a very pleasant companion for the drawing-room, where they who carry the lightest weight are the most esteemed. But she will not so readily be approved in the study, where her infinity of words may be voted a bore, and the discourse *de omnibus rebus*, save the subject she professes to treat, a tedious exercise of authorcraft.

We pass over the picture of the change of circumstances that compelled the change of abode, and at once accompany the family of the writer to their neat apartments in Guernsey, where the most surprising incident to them was the payment of ready money! The next business was "to look round on our new position, and find fault with every thing we see."

But time works wonders. As the memory of London luxury diminished, and familiarity rubbed off the feeling of strangeness, many objects began to excite interest and yield pleasure. Especially noted were

THE PEOPLE OF GUERNSEY.

The women are *very* pretty; their faces of more *classic* form and feature than we meet commonly in England; and they all dress well. The men are of a more clumsy material; the beau is fat and foppish; the family man very like the pictures of Mrs. Trollope's Americans. There is much beauty in the children; and an evident care is taken with their appearance, even among the lower orders; their hair is curled, and their clothes are in good taste; and one is puzzled to know when is this care given.

The country women dress in the old English style,—a costume with us nearly worn out. But here is still to be seen the black mode bonnet, most elaborate in its build, and under it the neatly plaited cap: the quilted short petticoat, the short linen jacket for hard work, and the chintz gown, open in front, and drawn through the pocket-holes, for best; they call it the Guernsey fashion; but we remember, some *hundred and fifty years ago*, when the old gude gran'dam of the farm-house wore this very self-same dress in England.

The market women are picturesque in the extreme—moving figures of Cuyp!—seated between their panniers on their rough punchy horses,—their saddles a plaited mat,—their bridle a halter; and when they speak French as they pass, it adds to the captivation of the picture. How little these people do with, in comparison to our market folks at home! And yet how poor we are, with our leather side-saddles, our upper skirts to look like a habit, and our artificial flowers withinside our bonnets, bringing out the blushes in our blowsy cheeks, with very shame at such folly. There is nothing of this here: and surely, after all, the grand secret of growing rich—the true philosopher's stone is—to do with this little.

House-rent is dear—that is, the same as in England; but there are no taxes. For 40*l.* a year can be procured "a good residence with two sitting-rooms and five bed-rooms, an excellent garden, full of fruit, and in a good situation." Upholsterers will furnish them for hire.

The country looks exactly like England, only the cattle are tethered. The farm-houses are the same; so are the roads and hedges.

The markets are abundantly supplied, with fish especially, but prices are high. Beef, 5d. to 8d.; mutton, 6d. to 8d.; pork, 6d. to 7d.; butter, 1s. 2d. to 1s. 6d.; potatoes, 1s. 3d. per bushel; turkeys, 4s. to 7s.; ducks, 3s. to 4s.; fowls, 2s. 6d. to 4s. So far, in the substantials of existence, Guernsey is at least as dear as an English country town.

Taxed articles of foreign produce are, of course, very much cheaper there than at home; and the list is instructive, as shewing practically the results of free trade. Lump sugar, 4d. to 6d.; moist sugar, 4d. to 5d.; tea, 3s. to 5s.; coffee, 1s. to 1s. 2d.; rice, 4d.; currants, 8d.; sherry, 26s. per dozen; claret, 26s.; champagne, 45s.; port, 20s.; Marsala, 12s.; cognac, 6s. per bottle; cigars, 10s. per hundred for best Havannahs.

There are no poor in Guernsey, consequently, no poor-rates. "Why," exclaims our authoress, "do not those who scarcely know how to live in England come here, where, with common prudence and a small family, three hundred pounds a year is an ample income? With this you might educate one or two sons, live sumptuously, and not lose caste. No one seems to spend more."

The climate is warmer than that of England. "We have seen orange-trees in the open air, against a sheltered wall, eight feet high."

Such is the *substance* of this volume of 375 pages. All the rest is the smallest of small-talk. Our authoress is an adept in the art of book-spinning. Never do we remember to have seen so many words containing so few thoughts. The manner, indeed, is graceful and winning, but the matter is the most frivolous and diluted we have lighted upon for many a month.

Kohl's Travels in England and Wales. Translated by THOMAS ROSCOE, Esq. London: Sherwood and Co.

THIS is the first of a series called the *Western Family Library*, issued in a cheap form by the *Great Western Advertiser*, a newspaper published at Bristol. The translation appears to have been executed with spirit and fidelity. The only fault we have to find is with the paper, which might be advantageously improved. The work itself is already too familiar to our countrymen to justify a formal review of it now. To those who were unable to read it in its costly form, we would heartily commend the perusal of this very cheap edition.

FICTION.

Margaret; or, the Gold Mine. From the French of ELIE BERTHET. Weir, Harley-street.

To the gentle sex we owe many thanks for our introduction to no inconsiderable portion of the lighter literature of modern Europe, and truly we may desire no better pilots. Mrs. HOWITT first revealed the rich stores of romance lying hidden among our northern friends the Swedes; and but a few months since she made the English reader acquainted with the most delightful tale of the season—*The Improvisatore*—the work of the Danish poet ANDERSEN.

The translator of *La Mine d'Or* owns to her sex; also to the present work being a first attempt; and as such it is most satisfactory, both as regards the execution of her task and the taste that dictated its choice. Indeed, it fairly entitles her to a place in the female corps so gallantly commanded by Mrs. HOWITT, and which has proved its courage in many a foreign service. *La Mine d'Or* is, we believe, the first of the works of the French romancist ELIE BERTHET that has yet appeared in an English dress, and is most deserving of the distinction, as well as fortunate in obtaining so agreeable an interpreter.

The tale is so completely French in its construction, and withal so cleverly managed, that we fear it will be much injured by an endeavour to epitomize it; but we hope that our readers will obtain the book for themselves, quite satisfied that they

will be pleased with us for the recommendation. The principal character in the story is a certain Martin Simon, who, retaining all the simplicity of a hardy mountaineer, has, by generous and noble qualities, an apparently exhaustless money-chest, and an equally large fund of justice, obtained so complete a mastery over his fellow-villagers, as to gain the title of King of Pelroux. Pelroux, it may be remembered, is the most stupendous mountain of the French Alps, comparatively unknown to tourists, though in size and grandeur not an unworthy rival of the majestic mountains of Switzerland and Savoy. Of course, notwithstanding the almost universal love with which Martin had inspired his subjects, reports touching the derivation of his enormous wealth were prevalent. The most general and most rational supposition was, that the King of Pelroux's father, who had visited the village when uninhabited, save by one or two shepherds, had discovered a gold mine. In consequence of this report many had come in search of the supposed treasure, but in vain; and Bout du Monde, under the watchful care and princely conduct of Martin and his only daughter, Margaret, increased in prosperity and happiness.

Near Mount Pelroux still remains the monastery of the Lautent, erected for the same charitable purposes as that of Mount St. Bernard. Here our hero, during one of the snow-storms so common to that region, meets with two young runaway lovers, noble citizens of Lyons, fleeing from their hard-hearted relations, and closely pursued by the officers of justice, headed by the lawyer of the young lady's father. In their distress they turn to the rich peasant for assistance, and the haughty Lyonese chevalier gladly receives the offer of a mountain home until Martin shall obtain, as he promises, the consent of Ernestine's father to her union with the young spendthrift noble. Every one that comes in contact with the King of Pelroux is drawn over to his views; even the shrewd old lawyer, who manages to overtake the fugitives ere they reach their protector's little sovereignty, foregoes his original intention, and actually proposes to mediate between the incensed parent and his daughter.

And now as the party amicably enters the village of Bout du Monde, let us leave the author to speak for himself.

BOUT DU MONDE.

They might have imagined it one of those brilliant panoramic views full of light and life, seen over heavy masses of drapery at the end of a corridor, constructed expressly to heighten the illusion. This valley had not the vast dimensions of the former which they had traversed, and that had so powerfully impressed them with its beauty; but it was fresher, greener, far more cheerful and striking in its appearance, as it contrasted so forcibly with the glaciers and the snowy peaks of the surrounding mountains with which it was environed. It was an enchanting English garden among granite rocks; a terrestrial paradise, where every thing appeared good, pleasant, and harmonious. Orchards filled with fruit-trees, fields of corn and rye, and green pastures, trenched on the dark barren sides and dazzling snow of the mountains. In the centre stood the village, where each house, white and gay, with its little garden and hedge-rows of fruit-trees, seemed a palace, compared with the miserable hovels of the adjoining valleys. The church raised its tapering slated spire at the foot of an enormous rock, which, overhanging the other buildings, defended them from the fall of the avalanches. But all were partially concealed by the thick foliage now gilded by the sun's rays, and the whole valley might not inaptly have been compared to a basket filled with evergreens and flowers.

Martin Simon, for one moment, enjoyed the astonishment and enthusiasm of his visitors.

"It is I who have created the little world that is before you," said he, with the greatest satisfaction in his voice; "it is I that have made these sterile rocks productive, that have peopled this dreary wilderness, that have rendered it a sure asylum for man, in this inhospitable climate—the day that my father first put his foot on this desolate corner of the world, a ragged shepherd and the chamois were its sole inhabitants."

He paused, as if fearful of having said too much. The two strangers gazed on him in admiration.

"You must have been very rich to have accomplished such wonders!" exclaimed the Procureur.

"And most courageous to dare the undertaking," said the Chevalier de Peyrus.

The King of Pelroux thoughtfully shook his head. "Both riches and courage were perhaps requisite," said he, "and perhaps something more. I have often been accused of sorcery, and truly I know not if there be not some foundation for the charge in the history of this country. But come, gentlemen," &c.

It is not our purpose, nor would space allow us, to follow closely the tale; suffice it to say, that the lawyer Michelot returns from his mediatory mission, and that gold does its spiriting. The father having given his permission to his daughter's marriage, an impediment arises in the inconstancy of De Peyrus, whose debts have been paid and estates freed from mortgages by his munificent benefactor, who now declares himself a De Peyrus, and his uncle. But the gay Marcellin is filled with the lust of gold, and would fain resign poor Ernestine, and receive in her stead the cold and beautiful Margaret, his host's daughter, and heiress to the coveted mine. An old grinder has discovered Simon and his daughter in the act of smelting some metal in a small laboratory, and demands an exorbitant sum as the price of his secrecy. The king, in the heat of the moment, and in the presence of his daughter, threatens the beggar's life, and shortly afterwards Rabrisson is found dead, fallen from a precipice. Through the artful machinations of the lawyer, whom the beggar had consulted, Simon is accused of the murder, and Margaret, in the bitterness of her soul, curses her father. The real murderer eventually discloses himself, and the accusation of course falls to the ground. The following scene between father and daughter is one of the most powerful in the book:—

"My father," vehemently urged the young girl, "let me recal that last mournful scene which you have so often related, when unhappy Bernard left this world for heaven. He was extended on his bed of death, you were on your knees by his side, shedding torrents of tears; before you lay the Cross and the Holy Bible. You swore by the most solemn oaths that never would you reveal to any indiscreet or wicked persons the existence of the treasure which he bequeathed to you."

"Neither son, nor wife, nor mother, nor father, nor friend, could be exempted from this command; on the day in which it passed into doubtful hands, on that day it was to be annihilated."

"After that sad scene the invalid became exhausted—his soul no longer belonged to earth; nevertheless, pre-occupied by the glorious mission with which you were charged, you demanded by what signs you and your descendants could tell when the treasure would become fatal to mankind. Upon this, the dying man raised himself in his bed, lifted his hand to heaven, and said; 'My son, when your child curses you; when your friend betrays you; when he who is laden with your benefits overwhelms you with abuse; when snares multiply beneath your feet; when passions rage like a tempest around you; when, in order to please you, the old man becomes vile, the husband betrays his wife, and the priest his God—recognise the signs of the appointed time.' My father, after Bernard had pronounced these words he fell back, his eyes closed, and he expired."

"Margaret, Margaret," interrupted Martin Simon, brushing away a tear, "why recal those sorrowful recollections?"

"Because, my father, the warning signs foretold by Bernard have been fulfilled; because, now that your secret is known, crime and treason inclose you in a circle which daily narrows around you; because already by your side the old man dishonours his gray hairs, the husband deserts his wife, the priest blasphemes his God, and even your own daughter has cursed you in her heart. Yes, yes, the appointed time is come! that fatal power, which every moment threatens destruction to this humble corner of the earth, must be destroyed. Besides, have you not found the distribution of this gold too heavy a charge for a good and simple man like you?—this gold, that produces so much good and evil on the earth, from which you only reap ingratitude! Father, you have done much good with this treasure—take heed, lest you now only do evil. . . . . .

"You are good, my father, and only benevolent and charitable thoughts find a resting-place in your mind. In studying man, you have yet preserved the simplicity of heart and candid bearing of a child. Around you, you only see friends and brothers; when, alas, enemies and traitors are among them. Well!" continued she, becoming animated, and drawing herself up to her full height, whilst her large black eyes sparkled with dazzling brilliancy, "I, who am a young inexperienced girl; I, half wild, half a savage, see clearly what escapes your experienced eye; souls, which to you appear dark as midnight, are to me transparent as crystal. I see their hearts agitated by desires so base and guilty, that you would shrink from them in horror! My father, delude not yourself; the origin of our fortune is known. Only for a few short hours has it been discovered, and already we have trembled for our wealth, our lives, our honour.

"My father, fear you not to unchain those hideous passions which already yell around you? Behold! everywhere rankling hatred, growing ambition, premeditated treachery; by turns we are cringed to and threatened; snares multiply in our path, which soon perhaps we shall not have the power to avoid. The

'Gold Mine' turns every head and agitates every heart. Murder has been committed to obtain it; for, deceive not yourself, my father, this Eusèh Noel, whose probity we deemed unimpeachable, fought with Rabrisson, in the first instance, to obtain possession of our secret. For it men like Michelot become calumniators, false witnesses, intriguers; for it the sacred character of priests is profaned, as in the Prior's case; for it men like your brilliant Chevalier de Peyrus turn deceivers, false witnesses, base plotters. And have not I, myself, my father, yielded to the malignant influences of the metal, which seems to taint all within its reach? Did I not doubt you? What more is necessary, my father? Do you wait for our happy valley to be deluged with blood and rife with murder, ere you comprehend our danger?"

It need hardly be said that the mine is destroyed; but our readers must be referred to the book itself for the concluding scenes of this veracious history. The interest is fully kept up to the end, and the characters well sustained throughout; that of the noble-minded Margaret deserves a more extended notice than we can afford to give.

Although the book is not free from the besetting sin of French writers—theatrical glare and glitter—it possesses a far healthier and more moral tone than the majority of modern French romances, and therefore we heartily welcome it.

The Sulamander; a Naval Romance. By EUGENE SUE. Bruce and Wild.

THIS translation of one of the earlier novels of the now famous EUGENE SUE is published in the *Novel Newspaper*. The translation is faithfully executed, but the novel itself, though clever in parts and interesting in its plot, has not the genius apparent in the *Mysteries of Paris* and the *Wandering Jew*.

POETRY.

The Beggar's Coin; and other Poems. By R. BESTE. London: Dolman.

ALMOST every man may boast some special gift of nature, and if we must refuse to Mr. BESTE the merit of writing good poetry, we cannot deny that he enjoys the faculty of "second sight." He is more of a seer than a poet, as he proves by his opinion of his craft. Thus he apostrophizes:—

> Perchance, condemned in mine own desk to stow 'em,
> I shall muse o'er my lines while critics plead,
> Like wise postilions that the stamp I shew 'em
> Is not like their own favourite Moloch's head;
> And thus these stanzas—all their worth unknown,—
> Refused by all, may charm their bard alone.

Other great men before Mr. BESTE have read the hieroglyphics of destiny. MILTON was conscious of his greatness, and prophesied that after he had let his wings grow, he should dare a flight of which the world should be proud. GALILEO knew that ignorance and bigotry must at last kneel before him, and *he* also prophesied of his fame. But Mr. BESTE prophesies only of his failure. He has no faith in the discrimination of his fellow-men. Believing in the philosophy that "coming events cast their shadows before," he peeps into his desk, and there beholds the shadows of a large pile of unsold copies. But why this doubt? Looks it not as if the poet felt some misgivings of the "*worth*" of his productions, and not merely of the soundness of the public judgment?

We have in the volume before us a number of critical notices of Mr. BESTE's former writings. Of course they are *all* favourable. These may be a *lift* to an author, but they are no guides to our judgment. When we measure a man, we do not measure him upon stilts. We are ready to give Mr. BESTE credit for what he has really done well. Some of his novels shew him to be a rich thinker, and a proficient scholar; but the novelist and the poet only approach each other in the resemblance of their imaginations: in the use of that imagination the difference is seen. The poet does not beat out a valuable thought into a multitude of words, as the goldbeater hammers a lump of gold into a volume of thinnest leaves, the extent of surface being the sole aim of his handicraft. The true poet aims at condensation, utters the whole lexicon of love and jealousy in a single page, and with one dash of his pen proves himself to be the historian of the human heart. Such the poet is, but such is not Mr. BESTE.

In the *Beggar's Coin* we are conducted through the most beautiful parts of Italy, on which the poet descants as he goes along. Of course no one travels now without taking some pains to inform the world of his doings. And quite as certain it is that no one could think of writing of such places as Florence, Milan, Naples, &c. without seasoning his stories with a dash of love. It would look like affectation in Mr. BESTE to be unlike the rest of the world, and therefore he has followed the fashion, and the sun of Italy is made to warm a few young hearts for the poet's especial purpose.

Will *The Beggar's Coin* add to Mr. BESTE's fame? We think it will not. Its descriptions are not full, fresh, and sparkling. The writer of prose leads us through the poem. We cannot get rid of his presence, not even while we stand by the lofty Alps or the dusky shrouded Jura.

There can be no doubt that Mr. BESTE manages with skill the verse in which ARIOSTO and BYRON wrote. There are tactics in verse-making as in military movements; but what are they but schoolboys' lessons, that, being once learned, are apt to be mistaken for knowledge.

We again repeat that we are not blind to the excellences of Mr. BESTE's former writings, and we advise him to quit the walk of poetry, and follow his more natural walk of plain prose, and we are sure he will reap an advantage by the exchange. He has not set his "life upon a cast," like the tyrant of Bosworth Field, and whatever be his decision, he will only "stand the hazard" of his *fame*.

Kilda's Bridal; and other Poems. By SAMUEL GASQUOINE. London, 1845. Bogue.

MR. GASQUOINE is evidently a young and inexperienced writer. He is far from being perfect in the machinery of verse-making. Versification is not poetry, but it is the threshold of poetry, and the poet must pass it in his road to success. Mr. GASQUOINE props himself with expletives, as "Oh!" "But, oh!" "And, oh!" "Oh, yes!" and innumerable other ohs and ahs, which are strikingly inelegant. He has also a fault of repeating a word under the misapprehension, we suppose, that repetition is strength, as in such lines as

> Upon the *dark, dark* past.
> *Think, think* how swelled thy father's hate.
> *Where, where* is the soul?

And many others of the same kind. A word of two syllables may be found much more suited to the poet's purpose. Still, the repetition of a word may be used with considerable effect, as when *Othello*, strong in his love, yet doubting his wife's faith, exclaims "Ha, *ha!* false to me—*to me?*" Here the agony of the heart is expressed by the repetition. True taste will always decide when a word or sentence should be doubled.

We deal mildly with Mr. GASQUOINE, although he has hurried into print too soon, because his book is not the worst that has appeared this year. Still we cannot see a poem, as a whole, worth extracting. We advise our author, if ever he again think of publishing, to be only the poet while he is writing, and the critic *after* he has written, so as to avoid such a verse as this, which is the extreme of childishness:—

> O mother! is it sinning?
> I do, I do love you,—
> But I will love you dearer,
> If I may love *him* too."

One more word with the poet who has asked for our opinion. In reading his *Kilda's Bride*, the ghosts of many departed poets came gibbering on our ears—BYRON and SCOTT especially. Every writer—and a young one in particular—should rely on himself. His strength lies in his own brain. It was only after *Richard* was "*himself again*" that he was ready to do the work before him. Mr. GASQUOINE will take the hint.

PERIODICALS AND SERIALS.

MR. BURNS is publishing a cheap but very interesting series of books for family reading, under the title of *Burns's Fireside Library*. They consist for the most part of original translations from the most popular of the German tales, thus opening to the English reader a new treasure in a mine of whose almost boundless wealth no adequate notion exists in this country, where a curiosity for continental literature is only of recent growth. The numerous publications of Mr. BURNS will much aid in the spreading of so desirable a taste, and we hope THE CRITIC has not altogether outrun the progress of the public mind in this direction by the arrangements it has made for supplying, for the first time, systematic information of the progress of literature in other countries. It is, however, encouraging to see the many translations published by Mr. BURNS, for the rapidity with which he produces them indicates that they find a welcome.

Seven numbers of the *Fireside Library* are now before us. The first is a translation of *Wallenstein and the Swedes in Prague*, one of the lively romances of CAROLINE PICHLER, whose reminiscences were some time since introduced to the readers of THE CRITIC. By the same prolific pen we are presented also with a tale of great eloquence, and abounding in *moral*, entitled *Quentin Matsys*. From the German of WILHELM HAUFF are taken two volumes, one of which contains his clever romance, *The Portrait of the Emperor*, and the other, *The Caravan, and other Stories*, which are delightfully German in their construction and manner of the telling. A fifth volume opens with a Russian tale, called *Prasca Leripouloff*, and comprises some six or eight more collected from various sources. The sixth volume is a gathering of *Northern Minstrelsy*, the choicest songs of Scotland. It is exquisitely printed, and lavishly illustrated with engravings. From this brief account of the parts of the series received, it will be apparent that Mr. BURNS has amply fulfilled his promise, and is furnishing to the fireside a library of entertainment which will delight old and young, not only without leaving a trace of evil, but with great profit to the heart, such admirable judgment is shewn in the selection.

A few periodicals received last week too late to be included in the notice then given of this numerous and useful class of publications must now be noticed, but necessarily with equal brevity.

The *Westminster Review*, No. LXXXV. for June, presents the aspect of a flourishing work, as we hope it is, for the ability with which it handles the original class of subjects it has taken to itself entitles it to an extensive circulation. Our readers are probably aware that for some time past the important topic of metropolitan abuses and improvements has occupied a prominent place in this review. In pursuance of this design, the first article in the present number treats both by pen and pencil of "Old and New London," a very curious, learned, and amusing paper, being profusely illustrated with wood-cuts and other engravings and maps, that make the descriptions plain to the eye. This is the gem of the number. Political and economical essays occupy the greater portion of the remaining pages; that on the "Claims of Labour" being especially worthy of perusal. There is a paper written in a fine classical spirit on "Homer's Iliad," and a very critical one on "Lord Brougham's Life of Voltaire," which will please everybody; besides many others of more than average merit. The *Westminster* is more *practical* in its tone than it used to be, and therefore calculated to be more extensively useful. Formerly it dealt too much in abstractions and theories.

The *Dublin University Magazine*, for June, has somewhat too much of review for a magazine, no less than four works being the subjects of elaborate articles. The original papers are not numerous, but they are very racy. In fiction we have a capital tale called "The Devil's Ladder," and a continuation, or rather a conclusion, of the "Nevilles of Garretstown." We would recommend the editor to consider well the propriety of introducing entire novels in this form; to us they are tedious. The second number of the "Personal Recollections of Thomas Campbell," from the first of which we made a few extracts, continues a theme which will not weary so long as there is a reminiscence of the poet to be recorded. *The* political article is on "Protestant Conversion in Ireland."

Wade's London Review, for June, should be called Wade's *Magazine*, for it is more of the latter than of the former. But the articles are written with uncommon vigour, and there is about them a large and liberal spirit, while they interest by dealing with topics of present importance, such as "The Woolwich Military Academy;" "Free Trade in Religion and Education;" "The Late Alterations in the Law of Debtor and Creditor;" "Hampton Court," "Irish Policy," and so forth.

The Family Herald, Vol. II. is the collected form of a periodical of astonishing cheapness, containing a large amount of really well-selected reading; such as essays, tales original and translated, biography, poetry, and miscellaneous matter for instruction, or food for laughter. The leading articles are very respectably written.

RELIGION.

A Prophecy respecting the Divinity of our Lord, &c. A Sermon preached in the Chapel of Trinity College, Dublin, on Sunday, May 25, 1845. By CHAS. WM. WALL, D.D. London, 1845. Whittaker.

ADMITTING that great and grievous corruptions had crept into the original Hebrew of the Scriptures, Dr. WALL deems it the wisest course to acknowledge the error, and seek a remedy. He conceives that he has discovered a clue to the correction of these errors; where the Hebrew and Greek disagree, he has sought how the former could, with the least variation, be brought to yield the same meaning as the latter. He finds that in by far the greater number of instances the change was effected in the vowels, from which he infers that the sacred text was originally written in consonants only, as short-hand is now, and that it was in supplying these that the errors crept in. For the proofs of this hypothesis we must refer the reader to the very learned and interesting sermon before us.

JOURNAL OF FRENCH LITERATURE.

The Count of Monte Christo. By ALEXANDER DUMAS. 1845.

WE have been much struck by the power of this tale, of which the two first volumes only have yet reached us. It is full of happy and wholesome interest, and its style is, moreover, less crude than that of some other works by the same writer. The historical portions of the tale (comprising the escape from Elba, the events of the hundred days, and the restoration of the BOURBONS to the throne) are, so far as we have yet seen it, very skilfully and unobtrusively blended with the main action of the fable, and are, indeed, necessary to its development, instead of appearing,—as it is too frequently the case where they are merely subordinate,—to be unconnected, and often impertinent episodes. The work commences with the arrival of a merchant vessel from the Levant, in the port of Marseilles, on the 28th of February, 1815, under the temporary command of the mate, a youth of nineteen, the captain having died of fever off Civita Vecchia. This youth, the hero of the tale, has unconsciously made two bitter enemies. One is the purser of the ship, who is jealous of his favour with the owner, and the other a young Cataline, who has, during his absence, been vainly endeavouring to seduce the affections of his mistress, a beautiful girl, belonging to the same singular colony.

We have, ourselves, during a long residence in the south of France, frequently passed a few hours in the little Catalan village, and can vouch for the accuracy of M. DUMAS's description, which forms a romantic framework to the luxuriant portraiture of female beauty which it incloses.

THE CATALAN VILLAGE AND THE CATALAN BEAUTY.

Behind a bare and rugged hillock, stripped of its vegetation alike by the scorching sun and the withering *mistral*, rose the little village of the Catalins.

One day a mysterious colony left Spain, and landed upon the jet of land which it still occupies; it came no one knew whence, and spoke an unknown language. One of the chiefs, who understood the Provençal tongue, requested the corporation of Marseilles to give them the bare and arid promontory upon which they had, like the mariners of the olden time, drawn their barks ashore. Their application was successful, and three months afterwards around the twelve or fifteen vessels which had contained these sea-gipseys, a little village was constructed.

This hamlet, built after a picturesque and whimsical fashion, half Moorish and half Spanish, is the same which is seen in the present day, inhabited by the descendants of these men, who speak the language of their fathers. For three or four centuries they have remained faithful to this little promontory, upon which they swooped down like a flight of sea-birds, without amalgamating in any way with the inhabitants of Marseilles; intermarrying among themselves; and having preserved the habits and costume of their mother country as they have retained her idiom.

Our readers must follow us through the only street of this little village, and enter with us one of those houses to whose exterior the sun gives that beautiful grey tint peculiar to the monuments of that country, while within a coat of plaster of Paris adds that dazzling whiteness which forms the only ornament of a Spanish cottage.

A beautiful young girl, with hair as black as jet, and eyes as velvety as those of the gazelle, was standing leaning against a partition, and bruising between her slight and exquisitely moulded fingers an innocent tuft of heather, from which she was tearing the flowers that lay scattered about the floor. Her arms, which were bare to the elbow and sunburnt, but which appeared as if modelled from those of the Venus of Arles, shook with a sort of agueish impatience, while she beat upon the ground with her small and elastic foot, and revealed the pure, bold, and rounded outline of her leg, covered by a red stocking with clocks of mingled blue and green.

This fair maiden, Mercédès by name, is the affianced bride of the young mariner Edmund Dantés, still faithful to her first affection, and writhing beneath the persecuting passion of his rival. The captain of the Pharaoh, just before his death, instructs his mate to make the island of Elba, and to deliver to

Marshal BERTRAND a sealed packet, which he confides to his care for that purpose. He obeys; exchanges a few words with the Emperor, who by chance enters the apartment at the moment, and receives a letter addressed to a certain M. Noirtier, which he is charged to deliver personally. Ignorant that he is compromising himself by these concessions, and blindly obeying the instructions of his deceased commander, Dantés relates the circumstance to his owner, in order to account for a delay of which he is accused by the purser, in his homeward voyage. The conference is overheard by this man (Danglars), who combines with an old friend of Edmund's, jealous of his prosperity, and with Fernand, the lover of Mercédès, to forward to the minister of police an anonymous accusation against Dantés, charging him with being a secret agent of BUONAPARTE, and of having lately held personal communication with him. The plan succeeds, and the gallant young sailor, to whom his owner had already promised the permanent command of the vessel, is arrested at table, surrounded by his friends, on the morning of his intended marriage, and dragged to the palace of justice to be examined before a certain M. De Villefort, deputy attorney to the Crown, whose father is a rabid Buonapartist, and obnoxious to the government, while he himself, devoured by ambition, and about to make a brilliant marriage with the daughter of one of the old royalist nobles, is a firm and zealous partisan of LOUIS XVIII. Dantés, anxious to be restored to liberty, and to the arms of his bride, once more, upon hearing the accusation against him, tells his simple tale, and Villefort is about to liberate him, when, on reading the address of the letter intrusted to Edmund to deliver in Paris, he perceives upon it the name of his father. Utter ruin stares him in the face. His father's participation in the fortunes of the exile is well known to the police. He opens the letter, and becomes desperate. Affecting commiseration for the prisoner, he throws the fatal letter upon the blazing hearth, and after having cautioned him never to mention the name of Noirtier as connected with his arrest, lest he should thereby injure himself hereafter, he leaves him with a promise that he shall be set at liberty after dark.

The confiding young man, ignorant that he holds in his power the future fortunes of the ambitious and uncompromising Villefort, relies upon the pledge, and a few hours subsequently finds himself a prisoner in the dungeons of the Chateau d'If.

The law-officer, profiting by the information contained in the letter so unceremoniously opened, and anxious to make demonstration of his loyalty to the king, obtains a note to M. de Blacas, which assures him an audience, thus characteristically described:—

A ROYAL AUDIENCE.

Let us penetrate through the two or three saloons which precede it, to the little cabinet of the Tuileries, with the arched window, so well known as having been the favourite cabinet of Napoleon and of Louis XVIII. and as being to-day that of the King Louis Philippe. There, in that cabinet, seated before a table of walnut-tree wood, which he had brought from Hartwell, and of which, by one of those strange whims common to great personages, he was extremely attached, the King, Louis XVIII. was listening listlessly to a man of 50 or 52 years of age, with grey hair, and a stern and noble countenance; at the same time marking on the margin of a volume of Horace, of the edition of Gryphius, which is incorrect enough, although esteemed, and which afforded good opportunity for the sagacious philosophical remarks of his majesty.

"You say then, Sir,——" said the king.

"That I am as uneasy as I can be, Sire."

* * * * * * *

"About what?"

"About Buonaparte, or at least his party."

"My dear Blacas," said the king, "you prevent my working with your terrors."

"Sire, I wish I could share the security of your majesty."

"Wait, my dear count, wait; I have a capital note on the *Pastor quum traheret;* wait an instant, and then you can continue what you are saying."

There was a momentary silence, during which Louis XVIII. wrote, in as small characters as he could accomplish, a new note on the margin of his Horace; then, having completed it, he said, as he raised his head with the satisfied air of a man who imagines that he has had an idea, when he has merely commented on that of another. "Continue, my dear count, continue, I listen."

"Sire," said M. de Blacas, "I am compelled to inform you that it is not a mere report without foundation, a mere piece of news coming no one knows whence, which alarms me; it is a thoughtful man, meriting all my confidence, and charged by me to keep a keen eye upon events in the south, who has arrived post to tell me that 'a great peril threatens the king.' It is that circumstance which brings me to your presence, Sire.

"*Mala ducis avi domum,*" continued Louis XVIII. noting his Horace.

"Does your majesty forbid me to pursue the subject?"

"No, my dear count. But stretch out your hand; there, to the left, you will find the report of the minister of police of yesterday's date. But see, here he is himself. Did you not say the minister of police?" interrupted Louis XVIII. addressing the door-keeper. "Enter, baron, and tell the count all your most recent news of M. de Buonaparte. Hide nothing, however serious it may be. Come, is the island of Elba a volcano, and are we about to see war issue thence, all armed and glittering —*bella, horrida bella?*"

"Has your majesty been pleased to consult yesterday's report?"

"Yes, yes; but tell the count himself, who cannot find it, what it contains. Detail to him what the usurper is doing in his island."

"Sir," said the baron to the count, "all the loyal subjects of his majesty must rejoice on hearing our last intelligence from Elba. Buonaparte——" The minister looked towards Louis XVIII. who, occupied in writing a note, did not even raise his head.

"Buonaparte," continued the baron, "is wretchedly *ennuié.* He passes whole days in watching the labours of his miners at Porto Longone. And, more than this, we are almost satisfied that the usurper will shortly become deranged."

"Deranged!"

"Aye, mad enough for a strait waistcoat. His head is giving way. Sometimes he weeps bitterly, and sometimes laughs to excess; at others he passes hours upon the shore, throwing pebbles into the water; and when the pebble makes five or six bounds, he appears as well satisfied as if he had gained another Marengo or a new Austerlitz. These are, as you will admit, symptoms of derangement."

"Or wisdom, baron, or wisdom?" said Louis XVIII. laughing. "The great captains of antiquity amused themselves by throwing stones into the sea. See Plutarch's *Life of Scipio Africanus.* Well, Blacas, what do you think of it?" said the king, quitting for an instant his compilation of the voluminous scholiast open before him.

"I say, Sire, that either the minister of police or myself must be mistaken. But as it is impossible that it should be the minister of police, since he it is who has in his care the safety and the honour of your majesty, it is probable that it is I who am in error. Nevertheless, Sire, were I in the position of your majesty, I would interrogate the person of whom I spoke; and I will again venture to counsel your majesty to do him that honour."

In the interim the minister of police is despatched to his bureaux, to ascertain whether more recent accounts have been received from Elba.

M. de Blacas ascended the staircase with the same haste as he had descended it; but in the antechamber he was obliged to invoke the king's authority. The dusty coat of Villefort, his costume, where nothing courtly could be distinguished, had excited the susceptibility of the master of the ceremonies, who was astonished to see that the young man had the assurance to appear in such a dress before the king; but the count overcame all difficulties by the words, "By the king's order;" and, despite the observations which the master of the ceremonies continued to make, for the honour of the principle, Villefort was introduced. The king was seated in the same place where the count had left him. When the door opened, Villefort found himself precisely opposite. The first impulse of the young magistrate was to stand still.

"Enter, M. de Villefort," said the king, "enter."

Villefort bowed low, advanced a few steps, and then waited for the king to question him.

"M. de Villefort," continued Louis XVIII. "here is the Count de Blacas, who asserts that you have something important to reveal to us."

"Sire, the count is right, as I trust that your majesty will yourself acknowledge."

"In the first place, and before all else, Sir, do you consider the evil so great as it has been represented to me?"

"Sire, I believe it to be urgent; but I trust that, thanks to the haste which I have made, it may not be irreparable."

"Speak openly, if you wish it, Sir," said the king, who began to participate in some degree in the emotion which was visible on the features of M. de Blacas, and which trembled in the voice of Villefort; "speak, and above all, begin with the beginning."

The king, relying upon the loyalty of the provinces, laughs at the idea of any attempt on the part of NAPOLEON to escape from Elba, and to venture himself once more among the French people. He admits the existence of Buonapartist clubs in the metropolis, but, relying on the vigilance of the police, asserts the utter impossibility of any design of evasion on the part of the exile, no whisper of the sort having reached the agents of the Minister.

At this moment the Minister of Police appeared at the threshold, pale and trembling. Villefort stepped aside in order to retire, but M. de Blacas held him back.

Louis XVIII. at sight of the agitated face before him, pushed away violently the table at which he was seated.

"How now, baron!" he exclaimed—"you appear agitated! Has this emotion any connection with the tidings of M. de Blacas, since confirmed by M. de Villefort?"

"Sire," stammered the baron.

"Well, what say you?" said Louis XVIII.

"Oh, Sire, how frightful a misfortune! Am I not painfully to pity? I shall never be able to console myself."

"Sir," said Louis XVIII. "I command you to speak."

"Then, Sire, the usurper left Elba on the 26th of February, and disembarked on the 1st of March."

"Where? In Italy?" asked the king eagerly.

"In France, Sire—in a little port near Antibes, in the Gulf of Juan."

"The usurper disembarked in France, near Antibes, in the Gulf of Juan, within 250 leagues of Paris, on the 1st of March, and you inform me of this event to-day only, on the 4th! Why, Sir, what you say is impossible; you have received false intelligence."

"Alas, Sire!" what I announce to you is only too true."

Louis XVIII. with an indescribable gesture of anger and alarm, drew himself up to his full height, as though this unexpected blow had reached him at the same time both in heart and countenance.

"In France!" he exclaimed, "the usurper in France! Did no one then watch this man? or, who knows? were they not in his interests?"

"Oh, Sire;" interposed the Count de Blacas, "the Minister of Police is not a man to accuse of treason. Sire, we have all been blind, and the baron like the rest."

"But—" said Villefort; then stopping suddenly, he added as he bowed profoundly to the king; "Pardon, pardon Sire; my zeal carries me away, may your majesty deign to excuse me."

"Speak, Sir; speak boldly;" said Louis XVIII. "you alone forewarned us of the evil, help us now to find a remedy."

"Sire," said Villefort, "the usurper is detested in the south; it appears to me that, should he venture himself there, Provence and Languedoc might easily be raised against him."

"Yes, doubtlessly," said the minister; "but he advances by Gap and Sisteron."

"He advances!—he advances!" cried Louis XVIII. "is he then marching upon Paris?"

The Minister of Police maintained a silence which amounted to the most frank avowal.

"And the Dauphiny, Sir?" asked the king of Villefort; "could that, think you, be raised against him also?"

"Sire, I am grieved to declare to your Majesty a cruel truth; but the feeling in Dauphiny is not loyal like that of Provence and Languedoc. The mountaineers are Buonapartists, Sire."

"At all events," murmured Louis XVIII. "he is competent to his mission. And how many men has he with him?"

"Sire, I know not," said the Minister of Police.

"How!—you know not! You have forgotten to make this inquiry?—It is true that it is of minor importance," he added, with a withering smile.

"Sire, the despatch simply announced the disembarkation, and the route taken by the usurper."

"And how did this despatch reach you?" asked the king.

The minister bent his head, and the blood rushed to his forehead.

"By the telegraph, Sire."

Louis XVIII. moved a step forward and crossed his arms as Napoleon would have done.

"So," said he, pale with passion; "seven coalesced armies have overthrown this man; a heavenly miracle has replaced me on the throne of my ancestors, after an exile of five-and-twenty years; I have, during those five-and-twenty years studied, probed, analysed the men and the affairs of that France which was promised to me; and all this only that when I had attained the summit of my hopes, a power which I held in my own grasp should explode and crush me."

"Sire—it is fate," murmured the minister, feeling that such a weight, though to be borne lightly by destiny, quite sufficed to annihilate an individual.

"To fall!" continued Louis XVIII. who, with one glance had sounded the depth of the precipice upon which the monarchy was tottering; "to fall, and to learn one's misfortune by the telegraph! Oh, I should prefer to mount the scaffold of my brother Louis XVI. than thus to descend the stairs of the Tuileries, hunted by ridicule. Ridicule, Sir, you do not know what it is in France!"

"Sire, Sire," stammered the minister; "for pity's sake—"

"Approach, M. de Villefort," continued the king, addressing the young man, who, upright and motionless in the back-ground, was watching the progress of the conversation upon which depended the destinies of a kingdom; "approach, and tell this gentleman that it was possible to know beforehand all of which he was ignorant."

"Sire, it was materially impossible to guess the projects which this man concealed from all the world," murmured the minister.

"Materially impossible! Yes, that is a great word, Sir. Unfortunately, it is with great words as with great men—I have measured them. Materially impossible to a minister who has an administration, offices, agents, and 1,500,000 francs of secret service money, to know what is passing at the distance of sixty leagues from the French coast! Look, then, at this gentleman, who had none of these resources: here is this gentleman, a simple magistrate, who knew more than you with all your police, and who would have saved my crown had he possessed, as you did, the right of directing a telegraph."

The look of the minister, full of profound mortification, rested for a moment upon Villefort, who bent his head in modest triumph.

"I do not say this for you, my dear Blacas," pursued Louis XVIII.; "for, even if you made no discovery, you at least had the good sense to persist in your suspicions. Another than yourself would probably have considered the revelation of M. de Villefort as insignificant, or suggested by a venal ambition, and would have awaited the tidings of the telegraph."

* * * * * *

"We shall not forget you, Sir; and in the meanwhile," continued the king (unfastening the cross of the Legion of Honour, which he always wore upon his blue coat, beside the cross of St. Louis, and giving it to Villefort)—"in the meanwhile, take this cross."

"Sire," said Villefort, "your majesty mistakes. This is the cross of an officer."

"By my faith, Sir," said Louis XVIII. "you must take it as it is. I have no time to send for another. Blacas, see that the brevet is forwarded to M. de Villefort."

The eyes of Villefort glistened with proud joy. He received the cross, and raised it to his lips.

* * * * * *

"Ah, Sir," said the Minister of Police to Villefort, as they left the Tuileries, "you have entered by the right gate, and your fortune is made."

JOURNAL OF GERMAN LITERATURE.

Kosmos. Entwurf einer Physischen Weltbeschreibung von Alexander Von Humboldt. (*Kosmos; a Sketch of a Physical Description of the World.*) By ALEXANDER VON HUMBOLDT. Vol. I. 8vo. London, 1845. Dulau.

TOWARDS the close of a life devoted to science, the personal observation of the grandest works of nature, and the most untiring investigation of her laws, ALEXANDER VON HUMBOLDT contributes this work, "the uncertain outline of whose form has for fifty years been present to his mind," to the literature of his fatherland. It is an offering worthy of both. It is strictly in accordance with what experience has shewn to be the most useful, because the most scientific method of conducting philosophical inquiry; for it is a record of facts, not of one age, but of all time, collected not merely from the "pilgrim fathers" of science, but by their more successful, as more largely instructed, descendants and disciples. And it is thus only that the history of creation can be written. The characteristic of ancient as compared with modern philosophy is this,—that the former disdained to be useful, was early lost in vague dogmatic theory, and perished by the very means which would otherwise have created and made it eternal,—the progress of the human mind. Philosophy, since BACON, has proceeded upon his maxim, "genus humanum novis operibus et potestatibus continuo dotare," and the result is,—wise deductions obtained from observation, analysis, experiment; and these conducted by men who did not labour to make fact subordinate or subservient to theory, but deduced theory from fact. We are free to admit, that in a history of the world, as regards its physical structure, speculation must precede know-

ledge. Not to write until we have results to guarantee the projection of philosophic system, is to exclude all general reasoning on the subject. And to write, however cleverly, the history of creation, with broken links in the chain of that general reasoning, is but to produce works of ingenious speculation. This work, therefore, will be henceforth the text-book of all who would learn how nature has herself unfolded the story of her birth, and how those she nourished by her truths have recorded what she taught. To man, one of the most interesting questions which the first awakened powers of his mind discuss, is that of origin. Whence came we? Whither do we progress? What is our comparative social condition in the scale of nations? These ideas, ever recurrent, ever disputed, seem yet destined to traverse the earth like angels who set forth in the morning, their flight at first buoyant through hope, but who return at eve, their wings wearied and weighed down by the oppressive atmosphere of ignorance and doubt. Opinion on this subject can hardly be more divided or discordant. Some argue for unity of descent from one pair; others that the first generation must have consisted of many pairs, different in external character. There are others, also, who uphold the doctrine of a designed higher and lower creation, who make one race the emanation of the Deity, and another the accidental perfection of the ape.

Under which king, Bezonian, speak or die?

Shall it be MONBODDO, MORTON, BLUMENBACH, W. VON HUMBOLDT, PRICHARD, or the author of *Kosmos?* And to all of these, except the first, how much respect is due. As to locality of origin, all seem to be united: scripture, tradition, historical investigation; the lines traced back in which the principal tribes appear to have migrated alike confirm each other, all place the land of the first-born, the cradle of the human family, in the east. To shew its general features, we shall limit our remarks to this question, premising, however, that the subject will be hereafter more largely discussed by the author; and that with the view to make the extract complete in itself, it has been in parts abridged from the original.

ON LANGUAGE AND THE ORIGIN OF MANKIND.

That general view of creation which I have undertaken to sketch would be imperfect were I not, however slightly, to attempt to trace the human race in its physical modifications, in the geographical extension of its contemporaneously existing types, and to note the influence natural circumstances have exercised upon social condition, and how it has re-acted upon these. Dependent, though possibly in a lesser degree than plants or beasts, upon the earth; less subject to atmospheric change; separated from them by the endowment of active intellectual faculties, and by a lofty progressive intelligence, man is yet essentially a part of all that Nature, in her wide exuberance of creative power, has endowed with life. Hence it is that the obscure, oft-disputed problem of a common origin comes, in a History of the Earth, within the limits it prescribes; for language is the mirror which reflects the historic progress of a people; it stands next in importance to affiliation of race; and what even but slight variations occasion in this latter respect, Greek history teaches in the highest period of Grecian civilization. The most important questions in the history of human progress are dependent upon our ideas of origin, community of language, and the continued government of the mind and feelings by impressions bearing a primordial character. So long as inquiry was limited to extremes of variation in colour, and yielded to the active sensibility of first impressions, we were taught to consider races, not as differing in degree, but as differing in origin. And the unchangeableness of certain types, amid external causes the most inimical, particularly those of climate, seemed to favour this opinion. But far more forcibly, on the other hand, it appears to me, do the various degrees of colour in the skin, analogous variations in wild and domestic animals, and the information recently obtained upon productive hybrids, attest the unity of the human race.

Many contrasts hitherto supposed to exist have disappeared, owing to the researches of Tiedemann upon the brains of Negroes and Europeans, to the anatomical investigations of Brolikk, and those of Weber upon the form of the pelvis. If we take a general view of the dark-coloured African nations over which Prichard's valuable work has shed so much information, and compare these with the races of the South Indian and West Australasian Archipelago, we see at once that dark skins, woolly hair, and negro-like features are not necessarily invariably connected with each other. Geographical inquiries as to the first country, the so-called cradle of the human race, are of a purely mythic character. "We know," says William Von Humboldt, in a yet unpublished work, "no period in which men were not found segregated in families." Whether this were originally so or not, we are unable to decide. In countries far distant from each other, some oft-repeated traditions, of very uncertain connection, support the first view, and infer the origin of all society from the first two created. And the wide extension of this tradition has given it all the credit of being one of the earliest memorials of the history of mankind. Yet, if any thing, it tenders rather negative evidence; it wants strict historical character, and seems to have its origin in that general method of describing an event, of which the conception was uniform, and the probability similarly apparent to the earliest settlers in a land. In fact, all these traditions betray invention; the origin of society ascribed to a period beyond all research, is brought within the range comparatively of one of modern experience; centuries pass over the human race, and then a waste island, or some remote valley was peopled. Men, in truth, are so fettered to their own race and time, that none willingly admit a generation or a period unconnected with antecedents or the past. Thought and experience alike fail, and inquiry into the origin of language cannot solve the question.

The membership of mankind is that of species, which we describe by the somewhat indefinite term race. We may accept the old classification of Blumenbach,—the Caucasian, Mongolian, American, and Maylayan, or adopt that of Prichard,—the Iranic, Turanic, American, Bushman, Negroes, Papuas, and Alfouras, but yet no typical exactness, no unvarying natural principle of division in either system can be traced. We set aside what extremes in form and colour equally establish, and races which cannot be included in the above are now called Scythic, and then Allophylic. Iranic is indeed a better term than Caucasian, but geographical nomenclature as the authority for the exode of nations is in general an uncertain guide; for the land which gives the name, for instance Turan, has at various times been inhabited by different tribes—Indo-Germanic and Finnish, but not of Mongolian origin. Language, indeed, when exhibiting a national form, is of great importance either to trace affinity or variation in race. But strict ethnographical study shews that great caution must in this respect be exercised; for conquest, social intercourse, the influence of a new religion, and the blending of races even but to a limited extent, have caused in both continents similar recurring phenomena; so that in languages entirely dissimilar, amid a people of widely different origin, idioms of the same derivatives have been found. And there are other disturbing causes; those, namely, of climate and descent. Whilst, however, we maintain the unity of the human race, we are met by the saddening opinion of a higher and lower order. But this may hardly be. A race more civilized, more susceptible of civilization, more ennobled by intellectual culture may exist, but no race is originally nobler than another. All are equally destined for freedom, whether in the rude condition of savage life, or through the protection of political institutions. If there be one idea of greater import than another which pervades all history, it is that of humanity and the progress of man. To remove the prejudices which selfish feelings have caused and encouraged between men, to consider them without reference to religion, nation, or colour, but as a great brotherhood destined to the same end,—the free development of intellectual power, is the lesson which all history teaches.

Well for society would it be, if this last sentence of lettered wisdom were to enjoy its practical effect. Better, far better, than the theology of controversial truths, is the theology of the human affections, to promote that happiness which flows from the brotherhood of man; and if these inquiries have no other result, they have in this their reward. With respect to the importance of language for their solution, it must, we feel assured, be subordinate, or at best be considered as simple, conjectural, accessory proof. The character of a people is, after all, of artificial formation, and their speech bears the mark of external impressions. Language in some conditions of life seems instinctively created. The tribes of Africa, separated from others, soon form a dialect of their own; and this is but a type of what has occurred in the history of great nations. We may trace descent by derivatives and systems of formatives, but we suspect that to the best proofs so many exceptional cases might be opposed, that to origin, at least to unity of origin, language is no guide. And this we believe to be equally true as regards physical structure. It is modified by natural laws and accidental circumstance. It is affected by calamity and blessing, conquest and civilization. Traces of the first race remain, but softened down and tempered into beauty, or debased till they approach the beast. Thus the origin of the human race is for inquiry, not decision. Most earnestly we recommend this book, and as anxiously await its completion.

(To be continued.)

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve their fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

Memoranda of a Continental Tour, Personal, Pictorial, and Political.

IN some of the early numbers of THE CRITIC, were notices of a MS. under the above title, submitted for this department of it. Many passages were extracted, which appeared much to interest readers, until the growing flood of new publications compelled their abrupt postponement to a time when enlarged space might permit their continuance. That time has now arrived; and we resume the MS. at the page where we last parted from it. For the information of the many new readers since that period introduced to THE CRITIC, it will be necessary to state that the Tour before us was through a well-worn track,—Belgium, the Rhine, the Baths, and Switzerland. Already we have traced the traveller to Lausanne, and up the Rhigi, and to St. Gothard, where we left him and his companions anxiously waiting the morning light. As the *impressions* of a stranger on his first visit to the mountains are really much more interesting than any mere pen-and-ink pictures of places no words *can* describe, and the Tour before us is rather a record of impressions, than, as tours are usually, transcripts of scenery and facts, we propose to give entire the lively chapter that narrates the author's first experiences of Alpine travelling.

AN ORATION—ALPINE TRAVELLING—ALPINE PASTURES—THE GLACIER OF THE RHONE—THE SOURCE OF THE RHONE—THE GRIMSEL.

Day was just dawning when the vigilant guide thundered at our chamber door, and would not be quiet until assured that we were fairly out of bed; a long daylight in prospect being essential to the safety of mountain wanderings. We were loath to leave our mattresses, though they were somewhat hard—(straw makes a delicious couch when one is tired); but there was no help for it, so we dressed in the dusk, and, descending, found our welcome breakfast spread, and we could hear the tramp of horses below, and the voices of their impatient conductors complaining of our delay. But our West Indian friend was not to be deterred by all the guides in Switzerland from paying honour due to the good things spread before him. Excellent coffee, the sweetest and most fragrant mountain honey, huge jugs of new milk, fresh butter, hot rolls, eggs, and a hash of chamois, were not to be despatched in a moment, so, when a remonstrance arrived from below that the sun was rising and that it was time to depart, the humorist thrust his long Scotch body out of the window, and, in his broadest northern accent, harangued the grumblers in the court-yard, who did not understand a word of English. "You d—d rascals," he began, while we were in convulsions of laughter, "the more you tease, the more we won't come; I won't cross one of those beggarly horses till I've eaten a good breakfast; you are hired for the day to wait upon us; we shall not wait upon you." Then, hearing our shouts of fun within, and recollecting that his audience did not understand him, he bethought himself of the only two German words he had learned, and which he continually applied with magical effect; "*Kein trinkgeld*, you blackguards." The charm did not fail now; we heard no more complaints; our friend's eloquence had prevailed. We breakfasted in peace, and leisurely.

The reader must understand, that the traveller who desires to explore the Alps with the aid of horse or mule is compelled to hire the owner with the beast, and, however numerous the party, each animal has its human attendant. The charge is fixed by the government at so much by the day, the traveller paying for return, so that the real cost is exactly double the apparent one, unless the traveller is lucky enough to meet on his way some other traveller taking the route over which he has passed, with whom he may exchange horse and guide, and so each will be saved the charge of return. In addition to their legal hire, it is usual, as a matter of favour where there has been civility and attention, and fidelity, to give an extra franc or two per day, under the title of *trinkgeld*, or *drink money*, and it was the threat of the loss of this "*kein trinkgeld*"—"no drink-money, you blackguards"—which had crowned with success the oration of our friend.

What ragged, raw-boned steeds are these before the door! What uncomfortable saddles, and no bridles, nothing but a halter of chain or rope tied about the neck! What civilized being ride thus, and over such rough ways, too. Imagine yourself, S——, thus parading the Park in the fulness of the season. What a figure would you cut, G——, were you so to meet your congregation at the Kirk. But complaint and remonstrance were vain. The guides were invincible; not a bridle would they give us, though the Planter thundered "*kein trinkgeld*" in their ears till he was hoarse. They knew better than we what was good for us. Our excellent host, hearing the noise, and probably accustomed to like scenes, explained to us that in the difficult and dangerous paths we were about to traverse, fear would be apt to get the better of discretion; a bridle in the hand would perchance be checked involuntarily, and horse and rider hurled down a precipice half a mile in depth. Consolatory news for novices at starting!

But there was an exhilaration in the mountain and morning breeze, in the scenery that surrounded us, in the anticipations of the day's wonders, that forbad annoyance or alarm. We were in the most exuberant spirits, and ready to snatch pleasure from every thing. My heart literally bounded with delight, to be, and breathe, and see, and feel, among the actual, palpable, visible Alps, no longer a dream or a picture, but a sublime reality. Precipices! pshaw!—I could hang over the darkest abyss without a shudder. Danger!—ha! I could face the most uncertain path without a tremor—for am I not in the Alps. Go on, then, guide, where you will.

Our path for a mile or two lay through a valley of no great width, and of scanty herbage, flanked on either side by a ridge of mountain, bare and barren, in crevices of which lay patches of snow that reflected the rising rays of the sun. It was seamed throughout by the tracks of torrents, that had brought down with them huge masses of rock, which they had thickly scattered over the plain, and around which our horses were compelled to pick their way, with repeated stumbles. Indeed the entire path was rough beyond any thing we in macadamized England could conceive as practicable for steed or man. It would give but a faint idea of it to compare it with a London street, in which the pavement has been torn up, and the stones scattered about in every conceivable posture, for the blocks that paved our path were five times as large and quite as numerous. An English horse would have broken his knees ere he had gone twenty yards; but our practised scare-crows threaded them with slow and cautious steps, now stumbling, now jumping, now slipping, yet never falling. It was a miracle of horsemanship and would have puzzled the most daring of our steeple-chasers.

At length we commenced a very gentle ascent, upon a path beaten in the turf. On our right there was an extensive range of table land, with swelling knolls all over it, on our left a precipice that descended almost perpendicularly to the bed of the stream that noisily rushed along at its foot. As we mounted, the path gradually grew more narrow, until it was a mere ledge cut in the side of the tremendous steep, of just sufficient breadth to admit the horse and his rider, but not enough to permit a passage to aught we might meet. The right foot touched the bank as I went along, the left hung dangling over the abyss. Moreover the path was worn, uneven, sometimes covered with huge stones, sometimes it had yielded to a torrent or a heavy tread, and the animal was obliged to cross the treacherous spot with a spring. It was interesting to mark the sagacity with which the horses moved, putting out the feet with caution, as if to feel the firmness of the spot before they threw their weight upon it. A rolling stone, a treacherous turf, an accidental trip or slip, would inevitably have hurled horse and rider over the precipice.

Still I did not, and *could* not, feel fear. I look back upon my sensations with surprise and perplexity. At home, nothing would have tempted me to cross such a path. There, a man who would dare such would be accounted mad. But upon that mountain side, never for a moment did my head grow giddy, or my cheek blanch, or my nerves quiver. Onward I went, as unconcernedly as if I had been travelling over the smoothest highway. Even then I tried to analyse my sensations and trace them to a cause. Was it the exhilaration of spirits produced by the fresh mountain breeze, or the soul-absorbing grandeur of the scene, or the novelty of the adventure, or the conviction that there was no help for it, and that, whatever the danger, it must be faced? To this hour I cannot tell. Perhaps it was a mixture of all these emotions. The excitement of Swiss scenery makes one almost mad with buoyancy of spirit and springiness of limb. The pure fresh air produces sensations very similar to those which, I should suppose, follow a draught of the laughing gas.

But what words can I find to convey to the reader any thing like a notion of the surpassing loveliness of the alpine pastures. You travel through a garden. Myriads of flowers of the brightest hues and richest fragrance cover the face of the country. Butterflies, small in size, but of the gayest colours, hover about in clouds! Bees and grasshoppers keep the air alive with their humming and chirruping. The latter are not like ours, but have brilliant wings of red and blue, which they spread as they

leap. The wild thyme, crushed at every footstep, sends up a delicious scent. The strawberry, now just ripe, peeps out from beneath its canopy of green leaves, and tempts your palate by its peculiarly fine aromatic flavour. The turf is mossy, and you long to lie down upon it amid this excess of flowret and insect life, and admire the compensating bounty of Providence, that has lavished upon the short summer of these high regions all the loveliness that is spread over months before the inhabitants of the plains. Yet here there is not a tree, or a shrub, or a bush; nothing but these wildernesses of flowers, and bees, and butterflies, ranging for miles upon the verge of the reign of eternal winter. My heart beats and my bosom heaves at the very remembrance of them, as they pass again before my mind's eye while scribbling these hurried memoranda of the *impressions* of those wanderings.

But anon this paradise is passed and the way grows more steep, and the rocks more rugged, and on the mountain sides are the tracks of avalanches, shewn in broad streams of rocks they had brought with them in their fall. Now the flowers had vanished, and the bee's hum was no more heard, and no bright butterfly was visible. The snows that lay between the peaks on our left, on the other side of the ravine, seemed almost on a level with our feet, and the glitter of the sun's rays upon them was distinct. Presently we turned an abrupt promontory of rock, and the next moment we trod upon the yet unmelted ice. We were in the region of eternal frost. Here we passed a numerous party of ladies and gentlemen, whom we had long seen in advance of us. Exchanging a hasty greeting as we went by, we discovered that they were our countryfolk.

A few minutes and a magnificent scene opened upon us, which made us halt with one accord, and stand staring in silent astonishment.

It was a gorge between the mountains whose range extended far as the eye could strain, all lifting their snowy heads into the sky, and having glaciers streaming down their sides. Below lay the glacier of the Rhone, to which our path wound down a precipitous descent, over which our guides would not permit us to ride. But who that had the free use of his limbs would desire to sit idly in such a region as this? We leapt, and jumped, and bounded down the steep. Even the old planter felt the influence of the place and was a boy again. We plucked the flowers, scrambled for the strawberries, hunted the butterflies and grasshoppers, and coming to a little spring sat down, and opening our flasks of cognac, deprived the water of its dangerous though tempting chillness, and, thus refreshed, went on again and reached the valley long before the horses.

Our excellent companion of the Kirk had lingered behind, hunting flowers as intently as if he had been a botanist; we shouted to him to come on; he would not hear, but continued his employment. Suspecting a purpose in this, I threw myself upon a bank of campanulas and gentianellas and wild thyme, and watched him.

I am not mistaken. Two of the ladies whom we had passed upon the snow are descending the mountain with steps as light as fawns. As they approach, our companion moves yet more slowly, and botanizes more intently. Now they pass; he takes off his hat; they stop; they talk; he joins them; he helps them to cross rough places. They are friends already. No more botany—no more lingering—Ah, Mr. G————g!

We join them, and their party follow; the place is our introduction. They are five ladies and three gentlemen, from Guernsey, descendants of a French family of rank there, with a decidedly French name. The senior is conducting his son, a widowed sister, with her two daughters and a son, and two other maiden sisters, through a summer tour. He is a pleasant man, of middle age, and gentlemanly aspect; the mother is like the mass of mothers. One of the girls is tall, and pale, and plain; the other short and rather pretty. The elder of the maiden sisters is the very personification of a kind-hearted single gentlewoman, tall, thin, of antique mould, but with a world of benevolence in her face. The other has considerable pretensions to be termed a handsome woman. Her features are finely carved, her eyes are black and keen, she rides with an air, like an accomplished horsewoman. The elder of the young men is a good-looking fellow, with a frank countenance, and a merry twinkle of the eye; the other has very much the aspect of a youth just released from school, and not quite emancipated from his mother; somewhat dubious whether he is a boy or a man. Such a reinforcement made our cavalcade a very formidable one.

It was not long before we reached the glacier, and there was a general resolution on the part of the younger men to cross it on foot, leaving the rest of the company to traverse its brink upon the horses.

Wading through a thick bed of rhododendrons in full flower, we were speedily upon the ice, and the difficulties and dangers of such a journey were soon apparent. The hot sun had melted the surface of the glacier, and made it exceedingly slippery. Here and there huge crevices gaped before us, in which, when we gazed, we could see no bottom, but only an atmosphere of the most lovely blue. Many of these were too broad to permit us to step across them, and we were obliged to jump, which, upon a glazed surface, was no easy or agreeable enterprise. My inclination was to move with bended body and cautious step; but the guide assured me that the safest posture was to stand bolt upright, with the arms pressed against the sides, so that they might not sway, with the knees and thighs stiff and straight, the feet thrown flatly and firmly forward, and the pace a slow trot. Higher up the mountain side, the glacier was an ocean of ice, wave piled upon wave, each one a little mountain. It was as if a sea, in the midst of the most tremendous hurricane that ever lashed it into fury, had been suddenly, with all its billows, transformed into ice. The hue was the most delicious azure, rivalling the heaven above.

The ice-sea is passed, and a roar of waters breaks upon our ears. We climb a ledge of loose rocks and look down on the other side. There is a fall of water bursting from the glacier, from out a cavern of the ice, and thundering over the crags, throwing up a cloud of spray that drenches our clothes in an instant. The mid-day sun is just now lying upon it in unclouded glory, and there—*there* is a perfect iris of the gaudiest hues spanning the fall. Can aught be more beautiful?

But we must not linger here, however tempting the picture; our friends are waiting in the chalet below. A path on the brink of the glacier will conduct us to them.

"Gentlemen," said our guide, "are you thirsty?" We replied in the affirmative. "Should you like some milk?" We thought him joking. "If you please we will rest under this tree and drink some." Before we could answer, he had seized one of a multitude of goats that were feeding near, and began to milk her. We comprehended him now, and being assured that it would not be deemed larceny by the owner, we drank successively. Having satisfied us, the rogue set himself to supply his own wants. But he disdained the formality of a cup; he applied his lips to the fullest udder he could find, nor quitted it till it was drained. "Ah!" said he, wiping his mouth, "you don't know what goat's milk is till you take it from the teat."

Our path to the chalet was upon the shore of the ocean of ice, and here we witnessed one of the strangest of Alpine wonders. On the very margin of the ice, and even forcing their way from under it, the summer flowers were basking in the sun, burthening the air with fragrance; the blue butterflies brushed the snow with their wings as they flew from sweet to sweet, bewildered among the charms that tempted them to rest and sip. Two climes, two seasons, stood side by side in startling contrast. One hand was numbed in the domains of winter; the other plucked the fruits and blossoms of summer. While one foot was imbedded in the region of eternal frost, the other sunk into a sunny bank that breathed of the warm south. A few minutes since and we could see nothing but a waste of snow: now there was the excess of life, and the rich verdure of the tropics.

Our friends, new and old, were waiting for us at the chalet; having taken some refreshment there, and paid an exorbitant price for it, we resumed our journey. Now we climbed a mountain side so steep that our horses rather scrambled than walked. For the first time I felt something like terror, for the path was much worn, very narrow, very rough, and at almost every step the animals slipped backwards, and with difficulty saved themselves from a fall, which would have been destruction to those behind them, as well as to themselves. I dismounted, and some of the rest followed the example; but a few, more venturous, kept their seats. On foot we had considerably the advantage of the riders, and reached the mountain top long before them. An entire change of scene here burst upon us. It was one of utter desolation. The rocks were scattered about confusedly, and heaps of stones were piled here and there, as if it had been the ruins of some stupendous castle. In the midst of them was a little lake, whose waters were clear as crystal. Throwing myself upon a smooth crag in the warm rays of the sun, I waited the coming up of my companions. What a solitude was that! The flat water below unruffled by motion of any living thing, not so much as a gnat to wrinkle its cold, repulsive face. Around me, nothing visible but distant mountain tops capped with snow, lying against the red evening sky. No wind stirring, no sound; but silence itself a presence and a portion of the scene. No living thing near, no bird, nor even an insect in the air. No motion; the very lake looked like solid crystal, and every other object around me was hard stone, and over all the cloudless canopy of heaven. This stillness and solitude were oppressive, almost terrible, and I was glad when the coming voices of the party dissipated the sensations that were stealing over me.

A descent literally of steps cut in the rock, so slippery that we could with difficulty preserve our footing, conducted us to the Hospice of the GRIMSEL. It lies in a valley, on the borders of a small lake, walled round with barren rocks, so bare of herbage that the goats, to glean their day's meal, are compelled to take a

circuit of twelve miles, returning in the evening to be milked. There they were gathered now, patient creatures, waiting their turn to be relieved of their burdens. A few had strayed, but when the musical *U-loo-loo* of the goatherd echoed among the heights, we could see them leaping from crag to crag in their descent to join their companions, and in a wonderfully short space of time they had thrown themselves from the steep, and were crossing the stream that separated them from the fold. In this wild spot a single habitation has been erected by benevolence for the accommodation of travellers. It is kept by a man and his daughter, whose beauty is famous throughout Europe. I must confess my disappointment in this particular, for it is a very milkmaidish sort of beauty, and would scarcely have attracted notice but for being found shut up in one of the most desolate regions in the world. No charge is made for the abundant accommodations provided for the tourist, and the poor are always entertained without the acceptance of any thing from them. But the wealthy, of course, offer as a gift as much as elsewhere would have been made a charge, and a little more. In this wilderness we found good tea, excellent wine, and comfortable beds, and we enjoyed them all!

MUSIC.

New Publications.

Good Night! Canzonet. Poetry by SHELLEY; Music by G. J. O. ALLMAN. London: Prowse.

MR. ALLMAN perseveres in the plan for which we have more than once commended him—that of selecting for his music the best compositions of our best poets, in preference to the nonsense-verses of a friend, or the namby-pamby of a professional song-writer. On this occasion he has resorted to the boundless treasures of SHELLEY, and, lighting upon the exquisite lyric, "Good Night!" has set himself, with a spirit inspired by his subject, to breathe it in music.

It is no serious reflection upon Mr. ALLMAN'S genius to say that he has not *quite* succeeded in his endeavour. His "Good Night" is not exactly *the* "Good Night" contemplated by the poet. Mr. ALLMAN has erred—in common, we admit, with many greater men—in the repetition of lines and parts of lines, thus murdering the poetry in obedience to some supposed necessities of the music. But, in truth, there is no such necessity. Genius will adapt itself to any measure. The sentiment of a song may be quite as perfectly expressed in three bars as in six. This is the one fault of a composition otherwise having considerable merit. We hope it will be the last time Mr. ALLMAN will so err. He can afford to follow the bent of his own genius, and set conventionalisms at defiance; and the more he dares to do so, the more certainly will he secure the position at which he aims, and for which he has natural qualifications that need but self-reliance, industry, and incessant practice of "the art of blotting."

MADAME DULCKEN'S CONCERT

On Friday last attracted as usual a brilliant and crowded audience, who flooded the saloon of the Opera Concert with their beauty and elegance. The programme of the occasion called into action nearly all the array of musical excellence with which London at present abounds. We need do little more than enumerate the names of Mesdames Castellan, Dorus Gras, Thillon, Schloss, Shaw, Birch, and Rainforth; of Messrs. Pischek, Staudigl, Lablache (2), Moriani, Mario, Corelli, J. Parry, Sivori, L. de Meyer, in addition to that of the amiable and accomplished *beneficiaire*, to give assurance of the rich treat which she had provided on the occasion. The playing of Madame Dulcken, whether in the severe school of Beethoven, in the lighter conceptions of Bertini, the laborious (physically) productions of *de Meyer* (with whom she played a duetto crowded with difficulty), was equally admirable and appropriate.

When the *Times* next condescends to give a notice of a concert, it would perhaps be as well to abstain from assertion of particulars, and keep within the trenches of generality. For instance, it might have been as well not to have asserted that *Miss Birch was absent on this occasion*, or that *Madame Hasselt Barth made a first appearance, and promised to be a favourite*, inasmuch as neither of these assertions adds to the value of the *Times*, either as regards its trustworthiness, or extent of acquaintance with the matters treated of. Miss Birch did sing—and charmingly; and perhaps *Madame Schloss* was taken to be Madame H. Barth.

MUSICAL CHIT-CHAT.

Miss Bassano has just made another brilliant step in her profession by the performance of *Romeo*, to a delighted audience at Venice. This talented young artist, on whom the eyes of musical England are now turning, although a native of this country, is Italian by her paternal parent, who was a tradesman in London. By the early loss of her father, she was at the age of 15 years compelled to begin her career in the very humblest walk of the profession; that is, as a chorus singer at the Italian Opera. She was soon removed to the Royal Academy, where she was remarkable for her excellent sight-singing. She will return to England next autumn twelvemonth. If we are to believe the accounts in the Italian papers, she is likely to take the lead at once in her profession. Her style of singing was always decidedly dramatic, and her taste pure and elevated.

MILAN.—The newspapers here are in raptures with a new tenor, Signor Traversi (Mr. Travers), who has played at several towns in the vicinity with immense success. Signor Traversi is an Englishman by birth, and has been four years in Italy, studying with equal ardour and success.

Thalberg is about to leave Paris for Ems on the Rhine, for the benefit of his wife's health. He has engagements to play at eight different philharmonic societies between Paris and Strasburgh.

Signor Cavallo, the celebrated extempore pianist, has just arrived in London from Paris.—*Musical World.*

THE DRAMA AND PUBLIC AMUSEMENTS.

HER MAJESTY'S THEATRE.—*Lucrezia Borgia* was presented for the first time this season on Tuesday; *Don Giovanni*, to our infinite regret, for the last, on Thursday. There was a crowded house on both occasions, a circumstance, however, which has become so much a matter of course here as hardly to require mention.

FRENCH PLAYS.—These refined and most delightful entertainments are, much to our sorrow, drawing towards a close. ACHARD will give but four more representations, and the eminent actor who succeeds him, ARNAL, is the last name of the series announced in Mr. MITCHELL'S programme at the commencement of the season—a programme, we may observe, by the way, the honourable adherence to which exhibits a striking contrast to the flourish-of-trumpets-and-enter-Tom-Thumb principle acted upon by managers of inferior character. M. ACHARD has, in the course of the past week, appeared in two new pieces—*Le Petit Homme Gris* and *Babiole et Joblot*, both of them, but more especially the latter, amusing affairs. The moral of *Babiole et Joblot*—for French plays have their moral quite as much as our English dramas—is summed up in the concluding words of the piece—"*Les grands avec les grands, les petits avec les petits, et Babiole avec Joblot*," or, in other words, that it is best for the happiness of the various classes of society to marry within their own sphere. *Joblot* is a good-hearted journeyman cabinet-maker, who takes a fancy into his head that a lady of rank has fallen in love with him, and, while this delusion lasts—the phases of which give rise to some ludicrous *qui pro quos*—he neglects the love of a charming and virtuous grisette—for there are virtuous as well as charming grisettes—to whom he had previously been all but affianced. However, he finds out his mistake, and himself marrying *Babiole*, enables the young lady, his supposed *innamorata*, to wed the real object of her affections, by discovering in an old escritoir a will which removes the objection of her parents to the match. On Wednesday M. ACHARD appeared in no fewer than four pieces, without a bit of sulking: *Le Petit Homme Gris; Le Brasseur des Champs Elysées* (a laughable monopologue); *Trianon;* and *L'Aumônier du Régiment*, one of the most charming of comedies. As to *Trianon*, it is, from all we can hear, infinitely better worth seeing than the Queen's late *bal costumè;* the dresses being as accurate and as rich, and carried moreover with far more ease and consequent grace, and there being at the same time something extremely amusing going on, which we understand was by no means the case at the palace.

FRENCH OPERA, COVENT GARDEN THEATRE.—The transferrence of an entire and a most efficient operatic company from Brussels to London, and that in one day, per steam on sea and railway, is one of those circumstances which make the wonders of the Arabian Nights seem less wondrous to the present generation. To them, the agency which, in *Scharazade's* story, conveys the princess from furthest Ind to nether Arabia is no longer a delightful, but incomprehensible mystery: the wooden horse was a *cheval à vapeur;* the black man a mere engineer at two pounds per week. Thus, one by one disappear all the charming delusions of our youth, before the dull realities which now surround us. Not that the French Opera Company is a

dull reality; on the contrary, it is a most decided accession to our sources of intellectual entertainment; and we sincerely hope that the reception given to M. HANNSEN's *troupe* will be such as to induce them to pay us an annual visit. The experiment itself is flattering to us as a nation, evincing on the part of its undertakers a strong reliance upon an advanced civilization. The company to which we refer, comprises not only the entire *troupe* of the Grand French Opera at Brussels, but, moreover, its orchestra, choruses, and all the subsidiary personages engaged in the establishment. Their performances commenced on Friday with *Guillaume Tell*, and we do but re-echo the universal critical decision of the metropolis in saying that never, even in Paris, has that admirable opera been done greater justice to. The *Mathilde* of the evening was Madame LABORDE, a pretty woman, with a high soprano voice, great skill in the management of her vocal resources, faultless intonation, good science, and a considerable amount of dramatic power and capability. Her execution of the *scena* "Sombre forêt" was a perfect model of purity of style and excellence of musical manner. There was the clear rendering of the score, unmixed with any capricious interpolation on the part of the singer; and before she came to a close there was but one opinion as to her position in art in the minds of the best judges present. That position is among the first, as a histrionic vocalist; the "mode" of the French school, in which she has evidently studied, and with which she is quite endued—the modern French school of music—being taken into consideration in arriving at this decision. Monsieur LABORDE, a distinguished pupil of the Académie Royale at Paris, was the *Arnold;* and with a full recollection of even DUPREZ in our minds, we do not hesitate in saying that a better representative of the character is not known to the European public. His voice is a high tenor, full of sweetness and flowing with tenderness, with a fund of feeling in its execution, and great energy and distinctness in the enunciation—a most important feature. He is, moreover, an excellent actor. The two principal vocalists were admirably supported by M. LAURENT QUILLEVERI, as *Tell;* M. ZELZAR, as *Walter Furst;* and Madam QUILLEVERI, as the son of *Tell.* Great, however, as were the individual merits of these artists, the distinguishing beauty of the performance consisted in its perfection as a whole. It was a complete and entire model of unity without any let or impediment. From the soprano chorus singer to the soprano solo singer, every one was in his place; and all laboured there to one end—that of producing a complete opera. The parts were in subordination to the whole; and the result was a noble development of a great idea. An amusing vaudeville, in which M. CONDERE, a comic tenor of great merit appeared, preceded the opera. *La Favorite* was performed on Monday, and *Les Diamans de la Couronne* on Wednesday, but we have not space to enter into particulars respecting these admirable representations on the present occasion. If the French opera of Covent Garden is not eminently successful, it will be an utter disgrace to the public.

LYCEUM.—A new comedietta, by Mr. TAYLOR, was produced here on Monday evening, under the title of *Friends at Court.* It was successful, owing, mainly, to Mrs. KEELEY impersonating a Gascon adventurer, who comes to the Court of LOUIS XIV. in search of employment, and is married by the merry monarch of France to a lady whom the merry monarch designs for his mistress. There is a good deal of lively action, exhibiting the tantalizing state wherein the King and the Duc de Lauzun, also in love with the lady, and the poor Gascon, are kept for a time, each watching an opportunity of carrying off the fair one; but, in the end, morality is triumphant. The King desists from his illicit pursuit, persuaded thereto by the Countess d'Ossona and her mistress the Queen; the Duc de Lauzun is discomfited; and the Gascon, now a baron and *superintendant* of a province, by royal favour, departs with his bride to the provinces. We have observed that the piece is mainly indebted for its success to Mrs. KEELEY, but it would be unfair not to add that she is ably supported by Miss VILLARS and Mr. WIGAN.

SURREY.—We had fully intended to visit this theatre, and report upon the new piece produced on Monday; but we have not been able to fulfil the intention this week. Both the Surrey, however, and Astley's shall receive due attention in our next publication.

VAUXHALL GARDENS.—The summer wind, which has thinned the benches of the theatres, has crowded the out-of-door entertainments, and among them the Gardens at Vauxhall take the foremost place, not only for their ancient fame, but their present splendour. The *coup d'œil* on entering is magnificent, the promenade and the building in the centre, outlined in coloured lamps, producing a most brilliant effect. The leafy walks are arranged much as they used to be, but some new *tableaux* are stationed about that come suddenly upon the eye and are singularly effective. The amusements of the evening are various. MUSARD presides over a most efficient band, and a concert of vocal and instrumental music is a prominent portion of the entertainment. There are moreover a ballet, an eruption of Mount Ætna, a fire-work on a large scale; the descent of Joel on a wire, around a blaze of pyrotechny, and at the conclusion a magnificent burst of fireworks in the Waterloo Ground. The Vauxhall slices and prices alone are no longer what they were. A substantial ham, chickens, wine, and stout are supplied at the regular tavern charges, so that visitors may feed without fear of an extravagant bill. At this season it is certainly the most attractive spot in the metropolis.

ORIGINAL CONTRIBUTIONS.

SONG.

Hush! a spirit from afar
Quits its heavenly throne—
Glorious as the evening star
In the sky alone.

Hush! it is a spirit laden
With a balm for pain;
And this snowy phantom, maiden,
Is called *Hope* by men.

See, its wings are shadowing thee!
Softly!—let it come;
Prophet 'tis to thee and me
Of a happy home.

Softly! or its wings will close—
Now approaching near it;
Like a storm-sign to a rose,
Stalks another spirit.

Ebon-plumed as moonless night,
With no lights about;
Maiden, drive it from thy sight,
For its name is *Doubt.*

See its wings are shadowing thee,
Never let it come;
Prophet 'tis to thee and me
Of a troubled home.

Doubt the fallen seraph is,
Hope is gloomy never;
Then the better angel kiss,
And hope on for ever.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

OBJECTS AND USES OF THE STUDY OF MESMERISM.

(BY THE EDITOR.)

IF Mesmerism accomplish no more than to supply demonstrative proof of the IMMORTALITY OF THE SOUL OF MAN, and overthrow entirely the doctrines of materialism, *we* should be satisfied that it was a subject demanding the most respectful attention, the most eager and scrutinizing investigation. But there are many, it may be a majority, of the busy world to whom this fact alone would give to it no interest, inasmuch as they have never thought about the matter at all, and are content to take even their immortality upon trust. To them some more obvious benefit, more visible, palpable profit, must be shewn, ere they can be induced to pause amid the cares and pleasures of their daily existence to regard with observant eye and thoughtful brow an unaccustomed phenomenon freshly brought into open day from the great storehouse of nature's myriad mysteries.

Our province will be to address to each the arguments most calculated to win them to incline the ear to listen, and thus to waken the mind to curiosity. Hence, in asserting the claims of Mesmerism to the consideration of the world at large, we

shall be obliged to state them all from the loftiest to the lowest. But in doing so we will endeavour to avoid needless prolixity.

The reader must bear in mind that in treating of this, as of all kindred subjects in science, two questions present themselves, entirely distinct, but which opponents are fond of mingling and confusing for obvious purposes. Is Mesmerism a fact in nature? is one question. What are its uses and advantages if true? is another. For the design of *these* commentaries it is necessary that we assume Mesmerism to be an existing fact in nature, and on that assumption we proceed to shew that, if a fact, it is one of incalculable value and importance to mankind.

In proof of its existence, another and distinct series of papers would be necessary, and indeed every individual who will not believe what other persons of credibility assert, can only be satisfied by personal inquiry and trial. The fact must be proved like any other fact, by evidence; and that evidence it is the object of this journal to collect and diffuse. But our present purpose is simply to shew by argument that, if Mesmerism *be* true, it is fraught with certain mighty benefits to society, and therefore that it is *the interest* of society, and of every individual, to investigate it with care, in order to ascertain if it be true, in the whole or in part, or how far its pretensions are to be sustained.

We propose to descend by steps from the loftiest uses of Mesmerism, to the consideration of its lowest uses. The first and grandest we have already asserted, the evidence it affords of *the immortality of the soul:* but we did not shew in what manner Mesmerism proves this great fact. That, then, will be our first duty.

In the mesmeric state the mind receives impressions from other minds, and from external matter, through other than the ordinary media of the senses; so much is certain, if there be any truth in it at all. The patient (if such a term can properly be applied to an *exalted* state of being) perceives objects without the help of his eyes, tastes without the aid of his tongue, hears far beyond the reach of the waves of sound —feels without touch. We ask the patients *how* they accomplish this—do they see, or hear, or feel? The answer of all is the same in substance. "I do not see you," said the young lady whose case, as it occurred in our own household, we have already recorded in THE CRITIC, "I am *conscious* that you are standing there, and what you are doing. That is all I can tell you. It comes into my mind I can't tell how, but I do not see you." ADOLPHE gave much the same reply to the inquiry if he *saw* the words inclosed in the nine times folded paper. "They arose into my mind." Another clairvoyant described it as though the letters were cast on a rippled water; they floated before her mind's eye as on little waves, rising into view and vanishing until she perceived the whole sentence. The youth S——, whose curious case we have narrated as one to which we can personally pledge ourselves, answered, when we asked him if he saw the letters he had just read inclosed in two envelopes, "I don't see them. When you ask me what is inside, the letters rise up in my mind. I don't *read* them." These uniform results prove that it is not through the bodily senses that the mind operates in this strange condition of existence, but that it is (partially, at least) emancipated from the subjugation to the corporeal organs which attends the ordinary state of being, and in this state exhibits powers which *prove* it to be *spiritual*, and being spiritual, the conclusion follows that it is immortal.

And not only does it, in this state, make acquaintance with material things to the bodily senses impervious, but it communicates directly with other minds. How but thus could it be influenced by the silent unexpressed will of another? How read a thought—feel a sensation—reflect an idea—as it is seen to do, not rarely, not in a few patients, but daily in hundreds and thousands of cases, and so commonly that, wonderful as it is, from its very frequency it has ceased to excite the astonishment of the spectator accustomed to witness the phenomena of Mesmerism. Mere brain and nerve could not thus intercommunicate. Fibre inclosed in a skull could not read the motions of other fibre inclosed in another skull situate a dozen yards apart. The *thing* that does this cannot be a material thing; at all events, according to any definition or notion of matter hitherto acknowledged. It is impossible to avoid the conclusion that the fact we witness daily is the result of mind —soul—spirit; not matter—not any thing corporeal, that we see and handle, and which dies and decays—but something impalpable—invisible—immaterial—in that being who seems to sleep before us so calmly, which enables him to feel as we feel, to taste as we taste, to perceive and obey the wish almost ere it is formed within the depths of our own mind; to read the thoughts, to transcribe the images, that are passing through the alembic of our own kindred mind; and thus again the conclusion comes, if that mind be other than body—if it *be* immaterial, spiritual—it is immortal.

We might multiply proofs upon proofs, all tending to the same conclusion, but these are enough to shew that, if Mesmerism be true, it establishes a fact of the mightiest moment to mankind, and which of itself should induce all the friends of religion and of humanity to hail it as the most powerful coadjutor their cause has ever yet received from the hands of science.

Here, then, we pause for awhile.

LETTER FROM MR. BRAID.

TO THE EDITOR OF THE CRITIC.

SIR,—The attack upon me which appeared in THE CRITIC of the 31st ult. under the signature of "William Holbrook," I should not have considered worthy of a reply as far as I am *personally* concerned; but it involves *higher* interests, which induces me to hope that you will favour me by inserting the following remarks.

There was no occasion for your correspondent to raise as a serious charge against me, that I commenced the practical investigation of Mesmerism as *a sceptic*. I was simple enough to think it neither a sin nor a shame for a man to acknowledge he had been in error, and that he comprehended a subject better *after* investigating it *practically* than when he relied entirely on reading or hearsay evidence for his knowledge of it; I therefore did not hesitate to state this fact most explicitly in my little work on hypnotism; and you also referred to it as nothing uncommon with others at page 131 of No. VI. of THE CRITIC, where you say,—"Mr. Braid went to witness some mesmeric cases a complete sceptic; like everybody who has seen and *tried* them, he returned a believer." Now, whilst I readily admitted what I believed to be facts, after having taken pains to *prove that they really were facts*, still I can see no obligation I was under, on that account, to subscribe to what I *then* believed, and *still as firmly do believe*, to be an erroneous explanation of the *cause* of the phenomena.

It is quite obvious that your correspondent has no wish to deal fairly by me, or he would not have resorted to the very disingenuous expedient he has done, for misrepresenting my views, and raising a prejudice against hypnotism, by merely quoting a brief extract from what was written as a *private* letter to Mr. Hall in Dec. 1842, but which he published in the *first* number of his *Phreno-Magnet*, which appeared in Feb. 1843. Had he intended to act honestly in this matter, he could not have made the remarks he has done in connection with that extract, as he is well aware that, in my work on hypnotism, published six months after the date of said letter, *I have given particular instructions how to guard against the unpleasant effects to which he refers, as resulting from acting on patients as proposed in the paragraph he quotes.* Altogether the letter bears strong evidence that it was written for very different purposes from those avowed; and, moreover, that the author and sponsor were different persons. I may observe that the only William Holbrook whom I have known answering to the description the writer gives of himself, —"deeply engaged in Mesmerism, having, in fact, been many times mesmerised, and having mesmerised many others," and who had called and witnessed my experiments as well as Mr. Hall's, I say the only person answering to this description whom I have known, was a young man who travelled round the country with Mr. Spencer T. Hall as one of the subjects with whom Mr. Hall exhibited the mesmeric phenomena at his lectures.

However much individuals engaged in such experiments may feel inclined to defend them because they attract audiences and excite astonishment in the multitude, still I beg most respectfully to submit, that, in my opinion, the frequent repetition of such experiments, performed during the waking condition, must have a most pernicious tendency on the *minds* of the *subjects* of such experiments, *as well as on those who frequently witness them.* They have a direct tendency to throw the faculties of the mind into a morbid condition, so that they are rendered unable to distinguish between substance and shadow, and thus they become unable to rely on the evidences afforded by impressions made on the external organs of sense, as more trustworthy than *mere ideal impressions.* When a man has suffered himself to be reduced to this pass, his judgment and self-control are lost, and he may be rendered the slave of the grossest delusion. He

has suffered his imagination to run riot until it has got the ascendency of his reason and will; and thus the noblest attributes of his nature, by which he is enabled to control and direct his actions in accordance with certain approved principles, have been dethroned, and rational man is reduced to a condition of abject and helpless imbecility.

In illustration of this, and of the nature of the vigilant experiments, I shall quote what are recorded in THE CRITIC for the 3rd ultimo, at page 17, performed *whilst the patient was in the wide waking state.* "At will his extended arm was made rigid; against his most resolute efforts he was compelled to obey the will of the Mesmeriser. A stick was put into his hand, and involuntarily the arm was thrown into rapid motion, which continued until subdued by the command of the operator. But the strangest phenomenon was, the entire subjection of the senses of the *waking* patient to the silent will of the Mesmeriser. Sight and hearing were destroyed and restored instantaneously. A handkerchief presented to the eyes assumed a variety of colours in succession, appearing to the patient to be white, and blue, and green, and yellow, by turns. The same stick in his hands imparted a sensation as of burning, so that he was obliged to let it fall. Many other experiments of a like nature were made." In my paper in the *Medical Times* for the 14th December last, which I referred to, are detailed various feats of the sort, in which the subjects, *whilst wide awake, appeared to be no longer voluntary agents, but, influenced by a charm or spell, were irresistibly directed in their movements in obedience to the will of the operator.* In like manner I have read and heard of those who have been made to believe in *the transformation of any animal or object into any other animal or object the operator willed.*

Now, I think such experiments as these are eminently calculated for raising a prejudice against all which is real and of practical value in hypnotism and Mesmerism; for what are rational men to think of such proceedings as many of those exhibited on such occasions, but that the whole is a system of rank collusion, or *results from the imagination and belief of the patients being wrought upon until they have been brought into the confines of insanity?* Yes, and insanity in its worst form too, in which the hapless victim feels himself irresistibly impelled to execute whatever commands or ideas are suggested to him by another party. According to this conceit, the subject must irresistibly become a thief, a robber, or an assassin, or the perpetrator of any other enormity, according to the *silent will* or *suggestion of his Mesmeriser;* and it may be worthy of inquiry whether the continual repetition of such experiments, the success of which arises from acting on the mind by false impressions, until the suggestions of the imagination become too strong to be corrected or controverted by the external organs of sense and by an appeal to reason, may not in the end lead to some such dire practical results.

I feel confident that the whole of this alleged mysterious power, by which the effects noted above are produced, depends *on the excited imagination of the patient, and* HIS IMPLICIT BELIEF IN THE OMNIPOTENCE OF SUCH INFLUENCE *so paralysing his reason and will as to render them for the time inoperative.* In consequence of this the subject implicitly obeys whatever he *apprehends to be the will or behests of the operator,* by whatever signals such suggestions are conveyed to him.

In proof that such is the true *rationale* of these "vigilant" phenomena, I beg leave to submit that I have myself repeatedly performed such experiments *successfully* (even on powerful men, who had never been mesmerised or hypnotised) *so long as they believed in the existence of such a power, and were kept ignorant of the* CAUSE *of the remarkable phenomena;* BUT, FROM THE MOMENT I EXPLAINED MY THEORETICAL VIEWS TO THEM, THE SPELL WAS BROKEN, *and I could no longer exercise such power over them.* Several of my friends have also tried and proved the same. It may have been all very well to perform a *few such experiments so as to determine the fact that the human mind could be so acted upon,* because this could enable us to explain much of the mystery in respect of what has been recorded of the past; and by giving a candid and philosophical explanation of the *cause* of the phenomena we may thereby prevent similar delusion and mischief occurring in future. The fact being established, however, that the imaginative, and ignorant, and credulous are liable to be so affected; and that the *rationale* I have here given, *being known and acted upon,* is sufficient to shield any one against the malign influence of such fascination and delusion, I consider nothing can be more pernicious and reprehensible than reiterating such experiments, the tendency of which is to throw the faculties of the human mind into such a morbid condition.

The pernicious influence of an over-excited imagination is well illustrated in cases of fright; such as where people have imagined they have seen a ghost. The impression recurs, with painful intensity, for some time thereafter, whenever they are placed under similar circumstances. It was still more remarkably evinced in the extraordinary delusion which occurred to a number of people on the banks of the Clyde, below Lanark, in 1686, where "many people gathered together for *several afternoons, where there were showers of bonnets, hats, guns, and swords which covered the trees and the ground*: companies of men marched in order upon the water-side; companies meeting companies, going all through each other, and then all falling to the ground, and disappearing; other companies immediately appeared, marching the same way." Now, *two-thirds of those who went to witness these strange sights bore testimony to their reality,* not merely by their words, but also by the physical manifestation of fright and trembling, which was visible to those who could see nothing of the apparitions and martial array themselves. No doubt all this miraculous appearance resulted from excited imagination, and the confusion of vision consequent on overstraining their eyes, by constant and persevering efforts to see the invisible phantasms. Had there been any reality in the objects of observation, they ought to have been obvious to the *whole spectators.* But, what is of most importance to my argument, as proving the baneful influence of repeating false impressions and associations, is the concluding remark of Walker's history of the transaction; and I therefore wish to call especial attention to it: "*Those who did see them there, whenever they went abroad, saw a bonnet or a sword drop in the way.*"

I trust the arguments now adduced will justify me, in the opinion of *most* of your readers, for endeavouring to point out to their consideration what appear to me to be the natural and baneful tendency of the frequent repetition of what are denominated the "vigilant experiments." Exhibitions of like phenomena, during the nervous sleep, are not liable to the same objections, for this reason:—by proper management, the whole of the abnormal combinations of feeling and acting, *although perfectly remembered when in the sleep again, are entirely forgotten on the patient's awaking.* And on the other hand, by another mode of acting, most beneficial results may be realized. Thus, by exciting and allowing it time to develop itself, any function or emotion which it is desirable to arouse into greater activity, by keeping it in the state of activity *up to the moment of awaking the patient, the impression will be carried into that state,* as certainly as a person may be affected the following day by an impressive dream during the previous night.

As to my scepticism in respect to the faculty of any mesmeric patient being able to see and read through opaque bodies, as many allege, unfortunately I remain as incorrigible as ever, and, notwithstanding the assertions of W. H. and Co. about the commonness of these manifestations, I hesitate not to repeat my firm conviction that there is no clairvoyant patient in existence will give a literal reading of the simple tests I have intrusted to your care, and that of my friend Mr. Daniell; but we shall see, when you have applied them and published the results. I understand from Mr. Daniell, that Mr. Vernon had intimated to him that it would be *unsafe* to apply my tests in *public.* In what way it could possibly be unsafe to do so in public more than in private, I cannot imagine; and the tests are so simple, obvious, and unexceptionable, as must at once convince every intelligent person, either that he *has* or *has not* the power of reading through opaque bodies. By such means Mr. V. has contrived to put off the opportunity which ought to have been afforded ere now, for you and Mr. D. to apply my tests; however, another gentleman who had *one* of them has applied *it* to Adolphe, and found *that he could* NOT *read it.* The same gentleman also informed me, as well as another who had personally tested Adolphe, that he had failed in *all the other* independent tests but one, on two separate occasions; and the only word which he succeeded to read in an envelope was the name of a town in France, and this he hit upon only after a great many manœuvres, and guesses, and promptings, and seemed overjoyed at his success, as he had previously failed with half-a-dozen others presented by the same gentleman. I hope soon to have the result of your own testing of this debateable point, and in the mean time beg to subscribe myself

Your very obedient servant,

3, St. Peter's-square, Manchester, JAMES BRAID.
June 7, 1845.

P.S.—Since writing the above, I have had additional proof in support of my position of the incompetency of mesmeric patients to read through opaque bodies. I have been informed by the able author of *Mesmerism True, Mesmerism False,* that he lately had the opportunity of testing Adolphe at Dr. Forbes's, in presence of a number of the most eminent physiologists and scientific gentlemen in London, and *that it was a complete failure. He could not read a word even of only three good-sized letters, inclosed in three envelopes;* and all the other independent tests were failures likewise. He also read me reports of other two séances which took place since, one at another professional gentleman's house, and the other at Mr. Vernon's, where every independent test was a failure but the one which I have referred to above, namely, the word "Toulon," and which he read through an envelope, *without bandaging over the eyes.* This rendering of one word induced the gentleman who applied it to believe that a proof of clairvoyance; but it has since been discovered that

those who were wide awake could read it through its envelope, BY HOLDING IT IN A CERTAIN DIRECTION AS RESPECTS THE RAYS OF LIGHT. I have no doubt but his mode of vision, when bandaged, is by moving the muscles of the face until he makes a channel, which admits a ray of light, *under the cotton bands*, sufficient to enable him to see by one of the eyes. No person who has not attended to this particularly would believe how difficult it is to prevent this being accomplished by some parties, and hence I made the observation in my last letter, "I know from experience that no mode of bandaging the eyes ought to be relied on."

In making such remarks, I wish it to be distinctly understood, that it is not done with any unreasonable desire on my part to oppose a fact in nature; my sole object is to point out sources of fallacy with which I am familiar, but which have been overlooked by some, so to enable us to arrive at truth with the greater certainty, without raising prejudices against what is obviously true and of practical value, by vain endeavours to prove that to be true which may probably, after all, from its rarity, and the unsatisfactory nature of its proofs, be only a delusion or an illusion. J. BRAID.

June 9, 1845.

MR. BRAID'S THEORY.—(*From a Correspondent.*)—His principal doctrine is that the mesmeric state is "subjective or personal, not an affluence passing from the operator to the patient." If this be the case, how does Mr. Braid account for persons being mesmerised when the operator is out of sight or at a distance, and the patient entirely unconscious of any mesmeric process being directed towards him? In these instances there can be no "imperfectly purified blood, arising from the suppressed respiration, resulting from attention to the processes acting as a narcotic;" neither can the effects arise from "imagination, belief, habit, sympathy, or imitation," which Mr. Braid asserts may account for the slight means by which very susceptible patients are affected. A case occurred yesterday which I look upon as no proof of the hypnotic theory. For the last ten days I have been mesmerising a boy of eleven years old for the cure of a deafness to which he is subject. Hitherto I had easily thrown him into the trance by means of the usual passes, but yesterday I carefully mesmerised a glass of water, and desired him to drink it. He had scarcely swallowed it when his eyes closed, he began to tremble, and in less than five minutes fell on a sofa totally insensible. Here, in an ignorant child, there could be no more imagination than there was attention exerted in drinking the water. I have also thrown this same boy into the trance by making passes at him whilst he was conversing with others, and totally unaware of what I was doing. These circumstances have occurred within my own experience, but many similar and much more remarkable facts might be found in different works on Mesmerism to confute Mr. Braid's argument. I would particularly refer your readers to Mr. Townsend's valuable book, in which are related several instances of his having mesmerised his patients without their having the slightest knowledge of his intention. I would also demand attention to a singular case published in THE CRITIC two or three weeks ago, of a gentleman willing a person into a trance when he was at Birmingham, above a hundred miles distant from his patient. What can Mr. Braid say to such facts as these? Surely neither attention, imagination, nor sympathy has any thing to do with them. It is also not unfrequently the case that a patient is very susceptible to the passes of one Magnetiser, whilst another Magnetiser can make no impression whatever. If the trance arises from emotions excited in the person mesmerised, and not from the influence of the Mesmeriser, how is this accounted for? I must now refer to another part of Mr. Braid's letter, in which he professes disbelief in the existence of clairvoyance. I found no argument on the prevision of Miss Martineau's maid, for no real proof can be given whether it arose from her increased power of hearing or an intuitive and mysterious knowledge of distant events; but there are cases which no augmented acuteness of the common organs of sense can account for. It seems difficult to believe that all bandages that have been placed on the eyes of different clairvoyants could be seen through; yet, admitting that to be possible, the clairvoyant has been known to read through the closed back of a book, or with a sheet of paper interposed between him and the writing. How, also, is he able to give his minute description of distant places which he has never been at, or heard of? I myself have been witness to this power (so common amongst mesmeric somnambulists) in Ann Pattenson, the epileptic patient whose case I transmitted to you two or three months ago. I asked her whilst in her trance to describe to me a friend of mine in Ireland. "What is she like?" "She goes on crutches, and can hardly move from room to room." (Right.) "Is she young or old?" "Old, and very stout, with blue eyes and white hair." (Right.) "Who lives with her?" "Two young gentlemen and one old one, and two young ladies with dark hair." (Right.) "Where does she live?" "At a very pretty house, and its windows look on to something like the sea, with many ships and boats on it." (Right; the house I alluded to looked to the mouth of a large river, which was generally covered with shipping.) Ann then went on to describe most accurately the furniture of some of the rooms, which indeed I had partly forgotten myself till reminded by her. She had never been out of the county in which she was born, and the place and its inhabitants which she spoke of were over the sea, and some hundreds of miles from her home, and she had no possible means of knowing any thing about them. Now, how can "fixing the thoughts and the sight on the tip of the nose" (see Mr. Braid's letter) give rise to so accurate a description of distant places and people by one who had never seen or heard of them? I have written this in no spirit of opposition to Mr. Braid, whom I respect for seeking after truth and freeing himself from the prejudices of his profession, but in the hope that it may cause useful discussion on a subject which is as yet so little understood. E. A. A.

MR. SPENCER HALL.—The weekly conversaziones at Mr. Spencer Hall's residence in Pall-Mall continue to be attended by persons of high rank in science and letters, as well as by many distinguished members of the aristocracy, who appear to take a deep interest in the proceedings. Mr. Hall is delivering a course of lectures on Mesmerism at the Literary and Scientific Institution, Aldersgate-street, to large and increasing audiences, whom he never fails deeply to impress with a conviction of the importance and interest of the singular natural phenomena to which that title has been given.

MESMERISM AT READING.—(*From a Correspondent.*)—Mr. Spencer T. Hall, having been invited to give a course of public lectures at Reading, was received by the inquiring people of that town with much interest. That amiable and talented writer, Mary Russel Mitford, attended every lecture, and expressed herself most favourably as to the results; and one gentleman, a son of W. Blandy, esq. the banker, being desirous of testing the mesmeric influence in his own person, offered himself to Mr. Hall on the public platform, and was operated upon very successfully, and the more satisfactorily, as he was well known to the audience, which included several of the most important families of the neighbourhood.

In consequence of the interest excited by these results, Dr. Cowan, a physician, of Reading, delivered a lecture against the practice of Mesmerism, admitting the facts, but urging that it was wrong to induce them—firstly, because they were supernatural, and beyond the legitimate bound which God has set to the desires and rights of humanity; secondly, because they indicated that one man had power to control and to modify the will of another, which was not only supernatural, but criminal, and subversive of our best interests; and lastly, with reference to the cure by Mesmerism of those diseases which medicine could not reach, because man, being in a fallen and corrupt state, and under a curse, there were some diseases of which it was never intended by the Almighty that we should be cured!

To this line of argument Mr. Hall, who was present, replied, that we could only understand what the nature of man was, by a development of his powers; and that the very fact of his developing these powers at all, indicated that it was *within the scope of his nature* to exercise them. Secondly, that it was not supernatural, nor was it necessarily criminal, to control or modify the will of others, since in the first place great conquerors, who subjected not individuals merely that had first consented, but whole nations—men, for instance, like Alexander, Julius Cæsar, and Napoleon, who trod the world on the neck—were not accounted supernatural; nor was it considered in our day supernatural that, in spite of their own will, thousands, nay millions, of people should be still held in slavery; while, in the next place, it was not criminal to make others do our own will; else all jailors, keepers of lunatic asylums, magistrates, schoolmasters, and clergymen would be criminal in every attempt they made to suppress the bad passions, and to give new impulses to those who came under their charge, since all control or restraint was such only in the proportion of its superiority or opposition to the will of the governed or restrained. And lastly, he was not aware of a case on record in which any doctor had repressed a fee, on the ground that the disease of his patient was one it was improper to cure if he could. He should therefore call upon Dr. Cowan to define the limit which he said had been set to the faculties of man; to prove that there was no human being in the world, whose will was held in subjection but by supernatural means; and to declare what diseases they were it was never intended should be cured.

To this Dr. Cowan rejoined that Mr. Hall's arguments did not need an answer, and therefore he should refuse to give any, but he would take that opportunity of warning the audience against encouraging mesmerists, who he had repeatedly declared were in league with Satan.

Mr. Vines, a surgeon of the town, having also taken a some-

what similar course of reasoning to that of Dr. Cowan, in a pamphlet against Mr. Spencer Hall and the mesmerists generally, Mr. Hall again took up the argument in a public lecture on Monday evening, and not only defended Mesmerism in an unaffected and common-sense view of the question, but illustrated its advantages by operating upon two youths who have been cured through his agency after one of them had been declared incurable by his ordinary medical attendant.

Mr. Carter, a surgeon, as we have also heard, has published a pamphlet in reply to that of Mr. Vines.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

No work of importance has been received this week. But foreign literature supplies the interest wanting at home; and the notices in the present Number of German and French books just published, are an earnest of our ultimate design in this new feature of The Critic, should we find it as favourably received by the public as our confidence in the growing taste for the productions of mind abroad, as well as at home, has led us to anticipate. As yet, the experiment being new, it must necessarily be imperfect; but we hope ultimately to be enabled to make such arrangements as shall secure a complete record of the literature of Europe.

It is necessary to inform our bookseller subscribers, that in consequence of the growing business at The Critic Office, we must, for the future, require pre payment of *not less than half a year's subscription* (4s. 4d.) for the copy supplied to them for their own use.

TO THE EDITOR OF THE CRITIC.

Sir,— In answer to your request to Booksellers, I beg to hand you a few details of the state of bookselling and bookreading in Edinburgh.

The number of booksellers is about 120, many of them are in highly respectable circumstances. Thirty of these are also publishers to a greater or lesser extent. The books most sold are religious works. Perhaps the sale of these is equal to the sale of all other works put together.

Of libraries;—there are twelve or fourteen circulating libraries, kept by private individuals; six or eight clubs, chiefly of the wealthy class; and three or four subscription libraries, the books being the property of the subscribers. A large proportion of the 100 congregations in Edinburgh have also congregational libraries, composed chiefly, though not exclusively, of religious works. There are also the College Library, for students; the Advocates' Library, and the Writers' to the Signet Library, both of which, like the British Museum, during certain hours, are open to the public. The working classes are not supplied out of any of these libraries, except the congregational, to any great extent. Their reading I believe consists chiefly of the newspapers and cheap periodicals, such as *Chambers' Journal*. They have, however, one excellent library for themselves, the Mechanics' Library, and the Library of the Schools of Arts, in which the books are chiefly scientific; but I do not think the books in either reach a large number of that class, for permanent reading.

I find in my own library, that the books most read are novels. Those of James are, perhaps, more read than any other; one cause of which may be their *purity*. Lever's, Dickens's, Bulwer's, &c. are of course also in great request. I cannot say that any one class of novel is more sought for than another; fashionable novels, if clever, are as well liked as historical; a dull historical novel is counted more tolerable than a dull fashionable novel. *Jack Sheppard* and the *Mysteries of Paris* would, I daresay, be popular, but I do not keep these works.

I may correct a prevalent mistake regarding novel reading. I believe the number of *habitual* novel readers is very small. Most people have once in their lives had a fit of novel reading; this is followed by an utter distaste of them, and a desire for more solid reading. In general, the novels read are spread over a great number of readers—1,000 read in a year will have, say 300 or 400 to read them,—that is to say, each of these 300 or 400 will only have read three or four novels apiece.

Next to novels in popularity are such works as Strickland's *Queens of England*, *Eöthen*, Macauley's *Essays*, *Eldon's Life*. One reason why these are less sought for out of libraries is plainly, that more people purchase them for themselves; another reason, peculiar to Edinburgh, is the existence of the Advocates' and Signet Libraries. So many of the most wealthy classes belong to these professions, that they supply themselves with solid reading from their own libraries.

The popularity of ordinary novels is about six months; they are in considerable demand for a year,—are read for two years, and after that are forgotten. Memoirs and travels have a much longer life.

Cheap literature has been, I think, favourable to bookselling, but injurious to libraries.

Your obedient servant,
Edinburgh, 5th June, 1845. A Bookseller.

TO THE EDITOR OF THE CRITIC.

Sir,—I cannot afford you a greater proof of the estimation in which The Critic is held by my customers than the simple fact of its introduction into their families in preference to other periodicals of the same class, and their unanimous approval of the healthful and moral tone and tendency of its writings. I will not occupy your valuable space by obtruding my own opinion on the merit of your journal. Its utility and excellence must be felt and appreciated by all who peruse its instructive pages.

I am, Sir, yours respectfully,
Monmouth, June 7, 1845. R. Y. Waugh.

A SUGGESTION.

TO THE EDITOR OF THE CRITIC.

Sir,—I am induced to trouble you with a few lines respecting a subject on which I have often thought, and which the perusal of your remarks on French literature in the last number of The Critic has recalled to my mind.

You are doubtless aware that there has been for some years past a monthly magazine published in Paris, entitled the *Revue Brittanique*, which professes to give to its readers translations of the best articles which from time to time appear in our periodicals. This work enjoys an extensive circulation on the continent.

Now, Sir, my idea is this—namely, the establishment of a monthly periodical in London on a somewhat similar plan, giving *translations* of the higher class of articles which are scattered through the French periodical press, such as tales, essays, and articles on politics, literary criticism, &c. &c.

It might be urged, in opposition to this scheme, that the French language is now so universally known amongst us that readers would naturally prefer the original to the translation. To this I reply, that when you consider the *hundreds* of periodicals published in Paris, not a tithe of which ever meets the eye of the English reader, and in which, I know from experience, many a clever and well-written article lies hidden, buried beneath (I must allow) a vast quantity of rubbish, you will admit that my proposed scheme is not unfeasible on these grounds.

The funds necessary for the undertaking might be created by a proprietary of *contributing shareholders*, with a responsible editor at the head; and I am of opinion that, if properly carried out, the scheme would not fail of meeting with encouragement. It would have the merit, at least, of being a novelty in our periodical literature, and I, for one, would be happy to contribute my mite of labour, &c. towards its success.

I now beg to offer the idea, crude and unformed as it is, for your consideration, in the hope that these lines may meet the eyes of those who would feel inclined to assist in the carrying out of the project which, I must own, has long been a favourite hobby of mine.

With many apologies for thus intruding upon your valuable space,

I am, Sir, your obedient servant,
Tuesday, June 3, 1845. Anglo-Francaise.

REGISTER OF NEW PUBLICATIONS,

From June 7 to 14.

NOTICE TO BOOKSELLERS.

A Register lies at The CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* The Critic, *and no charge will be made either for registration or for publication in* The Critic. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Agathos, in French, by S. Wilberforce, 18mo. 5s. cl.—Apel's (H.) Elementary Grammar of the German Language, Part I. "Etymology," 12mo. 7s. 6d. cl.

Bridge's (Rev. W.) Works, now first collected, 5 vols. 8vo. 37s. 6d. cl.—Burton's (J. H.) Law of Bankruptcy, Insolvency, and Mercantile Sequestration in Scotland, 8vo. Part I. 16s. Part II. 18s. cl.

Catechism of Things in Common Use, by E. E. Willement, square 16mo. 3s. cl.—Caunter's (Rev. J. H.) Triumph of Evil, a Poem in Eight Cantos, 8vo. 10s. 6d. cl.—Christian Lady's Magazine, Vol. XXIII. fc. 8vo. 7s. cl.—Collection of Examples in Pure and Mixed Mathematics, by A. Wrigley and W. H. Johnstone, 8vo. 8s. 6d. bds.—Connon's (C. W.) System of English Grammar, 12mo. 2s. 6d. cl.—Corner's (Miss) History of Ireland, new edit. improved, 3 plates and map, 12mo. 2s. 6d. cl.—Corner's (Miss) Questions to History of Scotland, 12mo. 6d. sd.

Dictionary of the Farm, by the Rev. W. L. Rham, 2nd edit. with Supplement, square crown 8vo. 9s. 6d.—Donaldson's (J. W.) Constructionis Græcæ Præcepta, 12mo. 2s. 6d. cl.—Donn's Hortus Cantabrigiensis, 13th edit. enlarged, by P. N. Donn, 1 large vol. 8vo. 1l. 4s. cl. lettered.

Female Disciple of the First Three Centuries of the Christian Era, by Mrs. H. Smith, fc. 6s. cl.—Fox's (W. J.) Lectures to the Working Classes, Vol. I. 12mo. 5s. 6d. cl.—French Revolution, by C. M'Farlane, Vol. IV. (Knight's Library for the Times) square crown, 8vo. 6s.

Greek-English Lexicon, based on Passow, by H. G. Liddell, M.A. and Robert Scott, M.A. 2nd edit. revised and enlarged, 2l. 2s. sheets, 4to., 2l. 4s. cl.—Guide to Service, "The Gardener," 12mo. 1s. 6d. swd.—Guthrie (C. G.) On Cataract and its Appropriate Treatment, 8vo. 4s. cl.

History of Ceylon, by William Knighton, esq. post 8vo. 9s. bds.—History of Greece by C. Thirlwall, D.D. in 8 vols. Vol. I. new edit. 8vo. 12s. cl.

Letters from the Mountains, by Mrs. Grant, of Laggan, Vol. I. imp. 32mo. 1s. 9d. swd.—Lays, Legends, and Lyrics, by William J. Bosomworth, post 8vo. 5s. cl. gilt edges.

Military Memoirs of the Irish Nation, comprising a Memoir of the Irish Brigade in the Service of France, by the late Matthew O'Conor, esq. 8vo. 9s. cl.—Mitchell's (Lieut.-Col. J.) Fall of Napoleon, 3 vols. post 8vo. 1l. 7s. cl.—Montreal's (Bishop of) Journal during a Visit to the Church Missionary Societies, N.W. America Mission, fc. 4s. cl.—Murchison's (R. I.) Geology of Cheltenham, new edit. 8vo. 8s. 6d. cl.—Murray's Colonial and Home Library, Vol. II. "Bracebridge Hall," square crown 8vo. 6s. cl.—Murray's Illuminated Prayer Book, Part II. royal 8vo. 5s. 6d. swd.

Nichol's (J. P.) Views of the Architecture of the Heavens, 5th edit. crown 8vo. 10s. 6d. cl.

Paterson's (A. S.) Concise System of Theology, 3rd edit. 18mo. 3s. cl. Perilous Times, by George Smith, F. A. S. fc. 8vo. 6s. cl.—Philosophical and Æsthetic Letters and Essays of Schiller, translated, with an Introduction, by J. Weiss, royal 12mo. 7s. 6d. cl.—Practical Notes on Insanity, by J. B. Steward, M. D. post 8vo. 4s. cl.—Practical Sermons, Vol. I. demy 8vo. 7s. cl.—Prout's (Dr.) Bridgewater Treatise on Chemistry, Meteorology, the Function of Digestion, &c. 8vo. 15s. cl.

Scripture Texts Arranged, new edit. 12mo. 2s. 6d. swd.—Some Observations on Organic Alterations of the Heart, by S. Scott Alison, M. D. fc. 8vo. 2s. 6d. cl.—Spain, Tangier, &c. visited in 1840 and 1841, by X. Y. Z. post 8vo. 10s. 6d. cl.

Tales of the Trains, by Tilbury Trump, No. I. royal 18mo. 6d. swd. Thiers's French Revolution, Part VII. (Whittaker's Popular Library) 8vo. 2s. 6d. sd.—Thornthwaite's (W. H. Guide to Photography, 8vo. 3s. 6d. cl.—Times of Daniell, by George, Duke of Manchester, 8vo. 14s. bds.

Warning from the East, by the Rev. W. S. Mackay, 8vo. 1s. swd.—Winslow's (O.) Glory of the Redeemer in his Person and Work, 2nd edit. royal 12mo. 7s.

GLEANINGS,
ORIGINAL AND SELECT.

We copy the following poem from the *American Review*, on account of its unusual beauty. Mr. Willis copies it into *The Mirror* with the following remarks:—"In our opinion it is the most effective single example of fugitive poetry ever published in this country; and unsurpassed in English poetry for subtle conception, masterly ingenuity of versification, and consistent sustaining of imaginative lift. It is one of those 'dainties bred in a book' which we *feed on*. It will stick to the memory of everybody who reads it."

THE RAVEN.

BY EDGAR A. POE.

Once upon a midnight dreary, while I pondered, weak and weary,
Over many a quaint and curious volume of forgotten lore,
While I nodded, nearly napping, suddenly there came a tapping,
As of some one gently rapping, rapping at my chamber door.
"'Tis some visitor," I muttered, "tapping at my chamber door—
Only this, and nothing more."

Ah, distinctly I remember it was in the bleak December,
And each separate dying ember wrought its ghost upon the floor.
Eagerly I wished the morrow;—vainly I had tried to borrow
From my books surcease of sorrow—sorrow for the lost Lenore—
For the rare and radiant maiden whom the angels name Lenore—
Nameless here for evermore.

And the silken sad uncertain rustling of each purple curtain
Thrilled me—filled me with fantastic terrors never felt before;
So that now, to still the beating of my heart, I stood repeating
"'Tis some visitor entreating entrance at my chamber door—
Some late visitor entreating entrance at my chamber door;—
This it is, and nothing more."

Presently my soul grew stronger; hesitating then no longer,
"Sir," said I, "or Madam, truly your forgiveness I implore;
But the fact is I was napping, and so gently you came rapping,
And so faintly you came tapping, tapping at my chamber door,
That I scarce was sure I heard you"—here I opened wide the door;
Darkness there, and nothing more.

Deep into that darkness peering, long I stood there wondering, fearing,
Doubting, dreaming dreams no mortal ever dared to dream before;
But the silence was unbroken, and the darkness gave no token,
And the only word there spoken was the whispered word, "Lenore!"
This *I* whispered, and an echo murmured back the word, "Lenore!"
Merely this and nothing more.

Then into the chamber turning, all my soul within me burning,
Soon I heard again a tapping somewhat louder than before.
"Surely," said I, "surely that is something at my window lattice;
Let me see, then, what thereat is, and this mystery explore—
Let my heart be still a moment and this mystery explore;—
'Tis the wind and nothing more!"

Open here I flung the shutter, when, with many a flirt and flutter,
In there stepped a stately raven of the saintly days of yore;
Not the least obeisance made he; not an instant stopped or stayed he;
But, with mien of lord or lady, perched above my chamber door—
Perched upon a bust of Pallas just above my chamber door—
Perched, and sat, and nothing more.

Then this ebony bird beguiling my sad fancy into smiling,
By the grave and stern decorum of the countenance it wore,
"Though thy crest be shorn and shaven, thou," I said, "art sure no craven,
Ghastly grim and ancient raven, wandering from the nightly shore—
Tell me what thy lordly name is on the Night's Plutonian shore!"
Quoth the raven, "Nevermore."

Much I marvelled this ungainly fowl to hear discourse so plainly,
Though its answer little meaning—little relevancy bore;
For we cannot help agreeing that no living human being
Ever yet was blessed with seeing bird above his chamber door—
Bird or beast upon the sculptured bust above his chamber door,
With such name as "Nevermore."

But the raven, sitting lonely on the placid bust, spoke only
That one word, as if his soul in that one word he did outpour.
Nothing farther then he uttered—not a feather then he fluttered—
Till I scarcely more than muttered "Other friends have flown before—
On the morrow *he* will leave me, as my hopes have flown before."
Then the bird said "Nevermore."

Startled at the stillness broken by reply so aptly spoken,
"Doubtless," said I, "what it utters is its only stock and store,
Caught from some unhappy master whom unmerciful Disaster
Followed fast and followed faster till his song one burden bore—
Till the dirges of his Hope the melancholy burden bore
Of "Nevermore"—of "Nevermore."

But the raven still beguiling all my sad soul into smiling,
Straight I wheeled a cushioned seat in front of bird, and bust, and door;
Then upon the velvet sinking, I betook myself to linking
Fancy unto fancy, thinking what this ominous bird of yore—
What this grim, ungainly, ghastly, gaunt, and ominous bird of yore
Meant in croaking "Nevermore."

Thus I sat engaged in guessing, but no syllable expressing
To the fowl whose fiery eyes now burned into my bosom's core;
This and more I sat divining, with my head at ease reclining
On the cushion's velvet lining that the lamplight gloated o'er,
But whose velvet violet lining with the lamplight gloating o'er,
She shall press, ah, nevermore!

Then, methought, the air grew denser, perfumed from an unseen censer,
Swung by angels whose faint foot-falls tinkled on the tufted floor.
"Wretch," I cried, "thy God hath lent thee—by these angels he hath sent thee
Respite—respite and nepenthe from thy memories of Lenore!
Quaff, oh quaff this kind nepenthe and forget this lost Lenore!"
Quoth the raven, "Nevermore."

"Prophet!" said I, "thing of evil!—prophet still, if bird or devil;—
Whether Tempter sent, or whether tempest tossed thee here ashore,
Desolate yet all undaunted, on this desert land enchanted—
On this home by Horror haunted—tell me truly, I implore—
Is there—*is* there balm in Gilead—tell me—tell me, I implore!"
Quoth the raven, "Nevermore."

"Prophet!" said I, "thing of evil—prophet still, if bird or devil;
By that Heaven that bends above us—by that God we both adore—
Tell this soul with sorrow laden if, within the distant Aidenn,
It shall clasp a sainted maiden whom the angels name Lenore—
Clasp a rare and radiant maiden whom the angels name Lenore."
Quoth the raven, "Nevermore."

"Be that word our sign of parting, bird or fiend!" I shrieked, upstarting—
"Get thee back into the tempest and the Night's Plutonian shore!
Leave no black plume as a token of that lie thy soul hath spoken!
Leave my loneliness unbroken!—quit the bust above my door!
Take thy beak from out my heart, and take thy form from off my door!"
Quoth the raven, "Nevermore."

And the raven, never flitting, still is sitting, still is sitting
On the pallid bust of Pallas just above my chamber door;
And his eyes have all the seeming of a demon that is dreaming,
And the lamp-light o'er him streaming throws his shadow on the floor;
And my soul from out that shadow that lies floating on the floor
Shall be lifted—nevermore!

A PRETTY THOUGHT.—A coquette is a rose from which every lover plucks a leaf—the thorns are reserved for her future husband.

Human life is a gloomy chamber, in which the images of the other world shine the brighter, the deeper it is darkened.

THE CRITIC,
And Journal of Literature.

SATURDAY, JUNE 21, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

LITERATURE.

PHILOSOPHY.

The Power of the Soul over the Body, considered in relation to Health and Morals. By GEORGE MOORE, M.D. London, 1845. Longman and Co.

OF all kinds of philosophy, that which relates to health and morals is the most useful. It is essentially a philosophy for society—practical, not speculative. There is a regular code of health and morals, a prescribed footpath in which men are wont to walk; but there are also diversified routes that lead into the main way, as various streams pour themselves into the Thames, making a grand whole. Dr. MOORE arrives at his conclusions by a different process of reasoning from others who have preceded him. He continues the long-contested war concerning the tendencies of popular phrenology; but, apart from the religious question, we believe that the materialist and the anti-materialist have both for their object the establishment of moral and physical health. Dr. MOORE is one of the *anti*-party, and warm and energetic he is in the defence of his opinions. The book before us is valuable for the information it gives on such subjects as the structure of the nervous system, the action of mind on the body, the will, somnambulism, insanity, &c.

It is argued that the nervous system is merely a galvanic apparatus through which the chemistry of life is carried on. The will is distinct from the brain and spinal cord. WEINHOLD cut off a cat's head, and when the arterial pulsation had ceased, he removed the spinal marrow and brain, and filled the skull and vertebral canal with an amalgam of mercury, silver, and zinc. Life appeared to be instantly restored. The animal lifted its head, opened and shut its eyes, and *endeavoured* to walk, and when it dropped *tried* to raise itself again. It continued in this state twenty minutes, during which time the circulation of the blood went on regularly.

The power of attention in connection with sleep is treated with much skill. In sleep the spirit retains a vigilant discrimination with regard to sound. The mother, who cannot be disturbed by the din and rattle of a London thoroughfare, will wake at the smallest cry from her baby. The captain of a steam-vessel will sleep soundly amidst the rush and the roar of wind and waves, but he would probably wake if the engine were to stop.

In sleep the will is in active operation. TARTINI composed his famous *Devil's Sonata*, while he dreamed that the devil challenged him to a trial of skill on his violin. CABANIS was often a better politician when asleep than when awake, for his dreams solved difficulties.

Dr. MOORE has drawn a careful and nice discrimination between *absence* and *abstraction* of mind. The former he considers to be a morbid vacuity, but the latter an intent occupation. Absence of mind belongs to men in general; it visits them after dinner, in churches, in schools, and in lecture-rooms. We have often seen in such places and circumstances a host of absent men who look seriously wise, and would pass for such with the ignorant, but who are only serious fools. Mental abstraction is very different from this; it only clings to the intellectually great, and to it we are indebted for many of the most brilliant productions in science, literature, and art.

Dr. MOORE is a spacious thinker, and although professedly a physician of bodies, he is also a physician of minds, and understands how and for what they are fashioned. We extract the following for the benefit of all teachers and parents.

Children are not formed for monotony and fixedness: their nervous systems will not bear it with impunity, and even their very bones are intolerant of the erect position for any length of time. *They are made to be restless and active*, and are not healthy if forced to be otherwise. The system of excessive restraint is therefore unchristian, because it is unnatural; for Christianity is not opposed to nature; it is not a violence, but a superior influence in correspondence with an inferior.

Piety itself is not unfrequently rendered terrible by a perverted application of memory to descriptions in which Omnipotence is associated with the final judgment and the terrors of guilt. Many a little child, whose susceptible heart is as ready to yield to the gentlest breath of affection as the aspen-leaf to the zephyr, and whose spirit sparkles with love as readily as a dew-drop with the light, acquires the habit of terror, and scarcely dares to look up because he is taught as soon as he can speak to repeat—

> There's not a sin that we commit,
> Nor wicked word we say,
> But in the dreadful book 'tis writ,
> Against the judgment day.

And the thoughtless and fond parent too frequently makes that appear to be wickedness and sin which, however proper to childhood, is inconvenient to those who should tenderly train it. Surely that is a dangerous expedient for the correction of a child, conscious of having offended the only being he has learned to love, and while perhaps in agony of heart begging pardon from a mother, to be told to remember

> There is a dreadful hell
> And everlasting pains,
> Where sinners must for ever dwell
> In darkness, fire, and chains—
>
> And can a wretch as I
> Escape this cursed end, &c.?
>
> *Divine Songs for Children.*

There is reason to believe that insane despondency and a disposition to suicide, may often be traced to abuse of religious discipline, if religious it may be called, especially that form of it just alluded to.

There is another abuse here demanding remark. No treatment can be more injudicious and injurious than that often resorted to, even in schools of high character, namely, the exertion of memory, not for the sake of acquiring and retaining a knowledge of facts, which must always be useful, but merely to punish some dereliction. What good can arise from thus fatiguing the brain, by excessively straining that faculty, in the happy and spontaneous associations of which all the value of every acquirement consists? No plan is more likely to disable the mind and impair the body, as the servant of the mind; for by this practice the idea of fixing the attention on words becomes peculiarly irksome. The very countenance of a boy thus distressed is apt to assume an expression of vacancy or irritability, and every function of his life to indicate the mischief arising from a debilitated brain under disorderly associations.

The power of the mind over the body is proved by a science, the truth of which few are hardy enough to deny openly; we mean Mesmerism. Baron DUPOTET, who recently visited London, could without contact throw a patient into sleep, convulsions, or a rigid condition. But why refer to the past when at the present moment many operators have the same power? Dr. MOORE is a true disciple of MESMER, and his remarks on this valuable science are more worth, as coming from one of the medical profession.

The literary merits of this work are great, as our readers will perceive by the following extract.

MEN OF GENIUS.

Our experience testifies that the greatest mental confusion and distress of brain arise not so much from steadily continued and determined effort of the mind, in a rational manner, as from interruption to the purpose of the will. Thus, when some daily vexation breaks the chain of thought, or draws the attention off from the intellectual pursuit on which the spirit had earnestly been bent, displeasure and distraction take the place of complacency, and the cause of the disturbance is apt, when thus frequently returning, to take complete possession of the mind, and to haunt the attention like a hateful goblin, blighting the soul with its cloudy presence. Hence the soured misanthrope often appears when the philosopher might have been expected; for unless the man of thought has his heart soothed by affectionate and comfortable appliances, in a suitable and seasonable manner, his resolute and perplexed spirit, incapable of resting from reflection, is very likely to find successive vexations terminate in madness, or some milder form of mental derangement or unhappy eccentricity, which constrains him to seek pleasure only in imagination and with solitude.

Those who are connected with persons constitutionally prone to reflectiveness cannot be too cautious in their manner of opposing the bias of their dispositions, or too gently endeavour to win them from the danger of absorbing study, for both their

sensibilities and affections are generally fine in proportion to the intensity with which they habitually contemplate the objects of their attention. Men of genius, whatever the direction of their minds, are usually as full of feeling as of thought, their intellect being urged on under the dominion of that love which cannot rest without constant approval. Their habit of abstraction may cause them to appear selfish, unsocial, or absurdly whimsical; but they are only engaged too intensely to exhibit in an ordinary manner the appearance of passing interest. They are, however, exactly those who are most subject to insanity, as their minds are kept unavoidably busy to the full extent of nervous endurance. Yet persons of this deep style of thinking and feeling are most devoted to the well-being of others, and are the first to demonstrate the nobility of their nature by those self-sacrifices which have distinguished the best names in history.

Dr. MOORE evidently understands the nervous constitution of genius, and not only this, but the work it can accomplish. No matter how genius may be employed, in constructing railroads, in making us familiar with the order of the heavens, or in conceiving a hero for the young in the person of a Robinson Crusoe, still its business is to send improvement into the world—and it will not fail to fulfil its mission.

The work before us is somewhat dangerous to the science of medicine. Dr. MOORE philosophically represents *hope* as the great mediciner. Surely his brother professors will not blame him for honestly unmasking the assumed virtues of physic. What can be a stronger case than the following, quoted by himself? At the siege of Breda, when the garrison was ravaged by scurvy, a few phials of *sham* medicine were introduced by order of the Prince of ORANGE. Now mark the result. Many who had not moved their limbs for months were soon afterwards seen walking in the streets. Convicts transported for life rarely recover an attack of illness, simply because they have no hope of liberty, and therefore no hope in medicine. Perchance it will benefit our readers to know these facts; for in sickness they can indulge in hope over a glass of pure water, and not make wry faces at the gamboge and aloes of the quack, or the less injurious compounds of the regular practitioner. We have been often called upon to lament with our author the number of diseases that crowd into our workshops and markets. Trade, as it is now conducted, is a certain pestilence; he who ventures into its busy marts may as well venture beneath the shade of the Upas. The extreme excitement of competition, the fear of being shuffled aside by a successful rival, and the envy that thence arises, are the curses that punish the inordinately selfish; but, alas! the unselfish suffer also. The rottenness is in the *system*, and we are not such pseudo-philosophers as to blame individuals. But an evil is never removed without first being clearly understood, and therefore we are pleased to make another extract from a book which possesses so much sound argument, and so much valuable information.

The grand struggle of the multitude is excited neither by ambition nor covetousness; nor that nicer torment, a morbid love of approbation, which racks the sensitive genius; nor by the delirium of an entrancing affection, nor by the tyranny of grosser passion;—but the common aim of the majority in their daily toil, is rather for means to sustain a bare and comfortless existence. The weariness of the scarcely successful effort is visible in almost every face. The vast increase of heart and nervous diseases arises from the distracting excitement and stretch of mind which now prevail throughout society, especially in large cities, where great competition exists, and where an uncertain commerce furnishes a precarious support, and wealth and pride too often take mean advantages of laborious poverty.

The votaries of pleasure are scarcely more exposed to the causes of mental disquietude than the devotees of Mammon, and both alike waste the energies of life in excitement, and alike suffer the penalty of breaking those laws which naturally regulate the uses both of mind and body. The gambling spirit as constantly haunts the exchange and corn-market as the play-table; and, by perplexing and distracting the mind, soon saps the basis of health and anticipates old age. Hence, in large commercial towns, we often witness, even in persons who have barely reached the middle period of life, the haggard face, sunken eye, hoary hair, and feeble gait, which properly belong to "wearied eld." Nor can the results be surprising to those who reflect that anxiety is but a chronic kind of fear; a sort of intermittent fever or ague, which as manifestly disorders the circulation and secretions as that which arises from the poisonous malaria of the marshes, and which is sarcely more deadly than that of the market, in these days of desperate speculation and grasping monopoly.

Here are some

CURIOUS CASES OF MORBID SYMPATHY.

There is a form of sympathy which compels us to imitate what we witness in others. This tendency is greatly aggravated under certain circumstances, as when persons are secluded from the domestic and social duties of life. Thus a French medical practitioner of great merit relates, that, in a convent of nuns, one of the fair inmates was seized with a strange impulse to mew like a cat, and soon the whole sisterhood followed her example, and mewed regularly every day for hours together. This diurnal caterwauling astounded the neighbourhood, and did not cease to scandalize more rational Christians, until the nuns were informed that a company of soldiers were to surround the convent, and to whip all the holy sisterhood with rods till they promised to mew no more. A remedy which would be equally serviceable in many other mental epidemics.

Cardan relates that, in another nunnery, a sister was impelled to bite her companions, and this disposition also spread among the sisterhood; but instead of being confined to one nunnery, it spread from cloister to cloister throughout the whole of Europe. There is a kind of biting mania, not confined to nunneries or to the fair sex, and which may often be witnessed in almost every coterie; it is backbiting; a malignant sort of insanity, which spreads worse than the plague, and disorders alike the body and the mind, both collectively and individually.

The conclusion at which Dr. MOORE arrives from the investigations he has submitted, are thus eloquently stated. He finds in them these

EVIDENCES OF IMMORTALITY.

The one conclusion of all research on this, as on every other subject, is inevitable. There is certainly some end worthy of man's creation, and suited to his spirit, in his advancing struggle after knowledge and goodness, which the economy of earthly existence does not furnish. The purpose of being is not here explained; intelligent desire is not satisfied; the sunshine of truth is only reflected on earth; there is no perfect day to the soul; light direct from its source falls not on the sight; we must imagine the delights of which we are capable, but which we cannot here realize; we must live abstractedly if we would live reasonably in holy intimacy with divine and human science; we must look forward into futurity for the meaning of the past. The present adds but a stone to the grand erection, the design of which is to occupy our contemplation everlastingly; for each individual mind, in its memory and experience, is adding material to material, in an order and for an end at present unknown to itself, but yet manifestly according to the plan of a mind that cannot be disappointed.

The very body, which in health so beautifully obeys us, while the soul seeks only perishing enjoyment, becomes an impediment to our nobler aspirations; and when the spirit awakes to the consciousness of its infinite capacity, its very efforts to be free tend to burst the bonds of the body, which becomes more and more irksome as the mind grows mature; at length the ruinous condition of the earthly tabernacle strengthens the desire for one that is heavenly and eternal; and when the body obeys not, then the attentive believing spirit begins to enjoy true liberty in acquaintance with God's purpose to his creature; and already catching a gleam of glory from beyond the grave, the regenerated man passes through death, and finds it only one step to enter for ever through that gateway into satisfying and endless life.

HISTORY.

Military History of the Irish Nation; comprising a Memoir of the Irish Brigade in the service of France. By the late MATTHEW O'CONOR, Esq. Barrister-at-law. Dublin, 1845. Hodges and Smith,

THE military history of the Irish nation is not only a history of Ireland and her wars, but in reality of all the contests that have agitated Europe during the last three centuries. In most modern continental quarrels, the Irishman has played no inconsiderable part. Now on one side, now on the other, a mercenary truly, but of a different description to the modern Swiss, he rather resembles the Free companion of the middle ages. The Irishman fights, not so much for lucre as through the reckless love of adventure, and, moreover, with a chivalrous devotion to the cause he espouses for the time being, feelings of which the common mercenary has no conception.

That no chronicler should have arisen long ere this to tell the noble deeds of the sons of Erin is remarkable, and must, we presume, be attributed to indifference rather than to modesty.

The present history attempts to supply this deficiency, and

though perhaps not so comprehensive as might be desired, and as probably it would have been had the author lived, ample justice is awarded to his gallant countrymen. No notice is taken by Mr. O'Conor of the early history of Ireland, with its wars great and small, carried on by petty sovereigns in petty states. Nor is even its subjection to England more than cursorily mentioned, and only then for the purpose of noting that the Sister Isle was the last to succumb to the Norman invader, and further to impress upon all true Irishmen the great fact that Ireland, after bearing the oppression of the Danes for two centuries, totally routed them in a pitched battle at Clontarf, and thus set a brilliant example that the Saxon and Frank were unable ever to imitate.

Their last king, Roderick, too, we have the pleasure of learning, was not inferior to, nor need fear comparison with, our own Harold, and with such preliminary observations Mr. O'Conor commences his history at the period preceding the close of the sixteenth century.

The revolt of Hugh O'Neal, Earl of Tyrone, forms the subject of the earlier chapters of the book, and the rebel O'Neal loses none of his reputation for bold deeds and martial daring in Mr. O'Conor's hands. Perhaps his temporary success was as much owing to fortuitous circumstances, and the incompetency of his opponents, the Generals of Elizabeth, as to his own military abilities. Certainly Sir John Norris, whom the ignorance of Lord Burrough quickly superseded, was the only commander of the Queen's forces worthy of the name. As to Lord Essex's disgraceful government, and still more shameful treaty, we are inclined to agree with Mr. O'Conor, that he deserved the harsh punishment he suffered. The mismanagement of the four Irish viceroys, who so rapidly succeeded each other, is sufficiently proved by the almost uniform success that attended Lord Mountjoy's assumption of the vice-regal dignity, and the consequent rapid decline and ultimate fall of the rebel chief.

The rebellion of Tyrone has sometimes been dignified by the name of a religious war and as the effort of an enthusiastic people to recover their religious rights and privileges; and yet, while these same enthusiasts were fighting in Ireland for their religious immunities, their fellow-countrymen were engaged in the Netherlands on the Protestant side. True, they shortly afterwards displayed the strength of their attachment to the Catholic faith, by a seasonable desertion to the Spaniards; yet, even their historian attempts not to exculpate them from the charge of treachery, and severely censures their leader, Sir Edward Stanley, an English Catholic, who had but recently fought for his Protestant mistress in Ireland. However faithless the Irish may have been, they performed for their new masters, the Spaniards, good service, and gallantly bore their share in the defence of Amiens, as also in the numerous enterprises of the campaign, ending in the battle of Nieuport, that destroyed for some time all Spanish hopes of success.

Cromwell's victories in Ireland are passed over without comment, which, with due deference to our author, deserved, we think, some portion of his attention; but Mr. O'Conor at once proceeds to detail the fortunes of the 40,000 Irish landed by the Protector on the shores of Spain and France. To trace their steps would be both tedious and unprofitable; however, they served indiscriminately in the ranks of Turenne and Conde, and were present at Ligni and at Arras.

When Charles II. by the treaty between Cromwell and Mazarin, was obliged to retire into Flanders, the Irish regiments in France displayed their loyalty by offering their duty to the Duke of York. As one or two of these same regiments had previously deserted the Imperialist service, the Spaniards, "a jealous and suspicious people," so Mr. O'Conor calls them, had not the most exalted opinion of their new allies; and thus distrusted by all, as well as perhaps dispirited pirited by the issue of the battle of the Downs, and the taking of Dunkirk, they returned home after the Restoration, with neither increased honour nor respect. To make amends, Charles, on recovering the throne of his fathers, paid them a compliment on their loyalty—but his gratitude extended no further.

Sir George Hamilton afterwards raised an Irish regiment by Charles's command, for the use of his ally Louis, and which was present with Turenne in that marshal's infamous devastation of the Palatinate, and at Altenheim, the deathbed of so many of Louis's best officers, including the excellent, though rapacious, Marshal Turenne.

There still remained during the Rhenish campaigns in the Imperialist camp some few of the Irish troops whom the wear and waste of war had not destroyed; but they soon necessarily lost their identity, and the last achievement we hear of the Irish regiments was at Cambray, but which not even their almost supernatural courage could save from surrender.

And now we come to the formation of the far-famed Irish Brigade; and in justice it must be declared that from the period of its formation we have no more instances of treachery and desertion, but a continued and honourable devotion to the cause of the Catholic house of Stuart and their natural allies the French. Louis XIV. on sending out troops to the assistance of the unfortunate James II. demanded Irish soldiers in exchange. The regiments so sent to France formed the nucleus of the time-honoured Irish Brigade.

Whilst there Irish soldiers were raising the character of their country in the mountains and valleys of Savoy, their countrymen at home were busily employed in preparing for the grand struggle on the banks of the Boyne. Mr. O'Conor's opinion of James II. is not the highest; he hardly allows sufficiently for the despondency—almost hopelessness—that must have bowed down the soul of James when he found himself alone, forsaken by those who had most cause to remain faithful, above all, by the child of his affection, and the man whom from boyhood he had loaded with benefits. The history of the reign of Charles II. and his brother is the most melancholy, most degrading portion of our national annals. Never were men so faithless, so lost to all feeling of honour and shame. Among the Cavaliers and Puritans on either side were men who ennobled by their disinterested and high-minded conduct the cause they fought and bled for; but at the second revolution all high principle appears to have fled; nothing influenced but selfishness and interest. But in our indignation we are wandering from our subject. Let us see the view that our author takes of James's conduct at the Battle of the Boyne:—

James beheld from the hill of Donore, his left wing outflanked, his centre broken, his right inactive. The spirit of his youth was frozen; the elasticity which gives nerve to enterprise was relaxed; old age and the impression made by unwarlike advisers had chilled those feelings, which, in his earlier years, impelled him to encounter the dangers of the field. The hero, who in Flanders excited the admiration of Turenne, sunk into the coward on the banks of the Boyne, and declined leading the charges of his own horse, when he might have restored the battle, and prevented an inglorious retreat. Panic-struck, and guided by counsels suggested by selfishness and fear, he abandoned an army that was beaten, not broken; that yielded to superiority of numbers and generalship, but had still resources and determination to prolong the contest indefinitely. Wexford, Waterford, Cork, Limerick, Youghal, and the line of the Shannon, all of which were in the hands of the Irish, presented obstacles to William's success, that should have inspired James with confidence in maintaining the contest; but Lausun, sensible of his own incapacity in camps, but conscious of his admirable talents for courts, was eager to quit a country where he could reap no harvests of glory, and where he had no field to exercise those arts, and practise those intrigues, which had raised him to the pinnacle of favour at Versailles. He, therefore, advised James to seek safety in flight, to return to France, and thus escape being made prisoner by William. He would give his right hand to have accompanied him, but his duty commanded him to guide the retreat of the French troops, or perish with them. This ill-judged counsel was seconded by Talbot, Earl of Tyrconnel. Talbot was brave in danger, pusillanimous in disaster. In the route of the Boyne he viewed the cause of James as hopeless, that of William as triumphant. He had estates and dignities to preserve, and only in an accommodation could he see security for them. If James remained, the contest would be prolonged beyond the hope of an accommodation. He, therefore, sent his chaplain to him to press his flight to France, and to work on his fears of falling into the hands of William. James reached Dublin on that same day; and, conscious that his flight would be construed into cowardice, he sought to shelter his fame, not only under the cover of the suggestions of his officers, but likewise under that of the advice of his privy council.

The incapacity of the French general Lausun had no slight share in the disasters that befel James's party in Ireland. On his departure the Duke of Berwick took the command, but the quarrels and intrigues of Tyrconnel and Sarsfield could not but render unavailing the great talents they undoubtedly

possessed. The arrival of St. Ruth from France, with fresh assistance, for a time changed the aspect of affairs, but it was only temporary, and the death of St. Ruth at Aughrim destroyed the last hope of the war being favourably concluded. Affairs were not improved by the appearance of treachery in the camp. Baldearg O'Donnell claims to be remembered as the first traitor to the cause, and his example was followed, amongst others of less note, by Henry Luttrel, the bosom friend of Sarsfield. Tyrconnel's death, too, had occurred a short time previously. Perhaps our author's account of this extraordinary man may not prove unacceptable to our readers.

TYRCONNEL.

Tyrconnel was the founder, in a great degree, of the Irsh brigade—his character is an important part of their history. It has been handed down to posterity in such various colours, and flattery and malignity have had such a share in distorting and misrepresenting it, that a fair portrait of this singular personage has never been presented to the public. He was the eighth son of Sir William Talbot, a barrister. Born to no inheritance but his talents, he obtained a commission in the Irish army after the insurrection of 1641. He afterwards went to Spain with the troops exiled by Cromwell, and thence to Flanders, following the fortunes of the exiled Stuarts. He there ingratiated himself with the Duke of York, by a handsome figure, insinuating address, and chivalrous loyalty. After the Restoration, by Court favour or play, he was enabled to purchase large estates in Ireland. Here he became enamoured of Miss Elizabeth Hamilton. Paintings of Aurora, or poetic descriptions of the goddess of Spring, could give but a faint image of that celebrated lady. The Graces had put a finishing hand to the symmetry of her figure, and to the elegance of her movements. The vivacity of her eyes, the rosy hue of her countenance, her sparkling wit, the charms of her conversation, the purity of her mind, the elevation of her sentiments, captivated every person that came within the sphere of her attractions. Talbot saw and loved, and his perseverance in this amour gives a good example of the ardour and energy of the man in all the affairs of life. The Duke of York's favour, an ample fortune, the prospect of a peerage, promised success to his addresses. Refusals, coldness, and contempt could not relax his ardour. He endeavoured, but failed to emancipate himself from the charms which Venus, in the form of this enchantress, had thrown around him. The frost of reserve, and avowed partiality for Phillibert, Count de Grammont, only added fuel to the fires with which he was consumed. He called to his aid his two brothers, one the celebrated Peter Talbot, Almoner to the Queen, and a great matchmaker, the other a secularized friar, who, according to Count Hamilton, retained the licentiousness of his order, and the reputation attached to it. Grammont's uneasiness at the superior fortune and influence of his rival was relieved by a quarrel between Talbot and Ormond, occasioned by the ardour of the former in espousing the cause of his plundered countrymen, and in endeavouring to procure restitution of their estates to many who had been deprived of them by open violence, or the forms of law in the Court of Claims. Though he occasionally received gratuities from those whom his influence rescued from poverty, their gratitude or policy abstained from imputations of corruption. He stood alone in the breach against the assaults of power and religious persecution. Ormond, the great plunderer and persecutor of these times, expressed his dissatisfaction in terms of haughtiness and insult; Talbot's pride retorted in terms of asperity, and afterwards refused an apology, rejected terms of reconciliation, and he was sent to the Tower. Released from confinement by the influence of friends, he renewed his addresses. The success of his rival did not cool his friendship for the house of Strabane, and in every vicissitude of his fortunes his early love seemed to influence his partiality for the brothers of Miss Hamilton. Raised to the peerage and to the Lord-Lieutenancy of Ireland, by imprudent zeal for his master he injured his cause; appointed Roman Catholic sheriffs and lord-lieutenants for almost every county in Ireland, many of them paupers, without birth, education, or property; and excluded Protestants from all power and situations of trust and emolument, so as to alienate the whole body. He had, it is true, great difficulties to encounter. In the race for petty posts, honours, and emoluments, the ambition, vanity, and hunger of a party, spoliated at the Restoration, had no bounds, knew no restraints, and in the rage of disappointment thwarted his measures, exulted in his difficulties, and exaggerated his defeats. Yet he was not altogether devoid of conduct or moderation. He would not deprive the Protestant clergy of their churches or livings, nor admit the Catholic bishops into the House of Lords.

Talbot inherited the hatred and contempt of the English of Ireland for the native Irish. Like most men who rise from humble beginnings, he was haughty, proud, and imperious. Courage he possessed in a high degree, had distinguished himself by numerous acts of bravery in the wars of Flanders, and had been a volunteer in the famous naval engagement between Van Tromp and the Duke of York. His ambition was unbounded; his avarice considerable, but this, indeed, was more the passion of his Duchess than his own; his friendships were said to be inconstant, but they appear to have been steady. To the connection between England and Ireland he was unalterably attached. To this attachment, after the affair of the Boyne, and to the desire of preserving his estates, he sacrificed his loyalty to James, his own safety, and the hopes and prospects of his party in Ireland. The English praised him as a lover of peace, yet confiscated all his estates, which, if he had lived a month longer, would have been preserved by the treaty of Limerick. Tyrconnel died without issue male, and his nephew inherited his title of Earl, the dukedom being entailed on the male issue only. The Earl pined in poverty, a poor dependant at the Court of St. Germain; his son attained the rank of a lieutenant-general in the armies of France, but died without issue, and in him the earldom of Tyrconnel in the Talbot family became extinct.

The gallant stand made at Limerick, and the advantageous terms on which Sarsfield surrendered the town to the Dutch general De Ghinkle are well known. In accordance with the agreement, the Irish regiments sailed to the Continent, preferring, almost to a man, to live in a strange land, than serve a monarch of the house of Orange. They afterwards joined their brethren in the Irish brigade; and in Dauphiné and Piedmont carried everywhere death and terror to the mountaineers. At Marsiglia they contributed their quota to the gaining of that great victory; nor should their noble defence of Guillestre and Embrun be entirely forgotten.

To follow in detail the fortunes of the "bold brigade," it would be necessary to recapitulate all the sieges, battles, and skirmishes the French were engaged in during the long war of the Spanish succession. The Irish legion obtained both honour and renown whilst the good fortune of Louis lasted, and were constant and faithful in his days of tribulation; indeed, could bravery and energy have insured success, fortune would never have forsaken the Irish regiments. The battles of Ramillies, Blenheim, Turin, and Malplaquet, saw the brigade in the foremost of the fight; but all their efforts were unavailing. Mr. O'Conor is a great admirer of the Prince Eugene, whom he eulogizes at the expense of Marlborough: probably national pique has something to do with his depreciation of this great general, whose glory has been, according to him, raised above his deserts, through the servile adulation of "hungry poets." Alas, for poor Steele and Addison! As Eugene is Mr. O'Conor's *beau ideal* of a commander, we insert his comparison between the two rival generals:—

THE PRINCE AND THE DUC DE VENDÔME.

Vendôme inherited the intrepidity of his grandfather, Henry IV.; careless of danger, hot and impetuous in a field of battle, plunging into the midst of the fight when his troops yielded, to animate by his example, and restore confidence by his personal exposure; yet judicious and calculating, and, when not engaged in the midst of the combatants, surveying every part with serenity, sustaining weak points by reserves, throwing in additional battalions to break the enemy's line when yielding, and availing himself of every mistake of his opponent, and of every chance which the fortune of war presented to him. In other respects he was deficient in the qualities of a great commander. In courting the love of his troops, he allowed marauding, and corrupted the discipline of his camp. On a field of battle he shone like a meteor in a clouded sky; his white plumes and scarlet mantle careering in the midst of smoke and fire, moving death and dismay in their rapid course; but when the thunder ceased to roll, and his fiery spirit had no longer the excitement of the conflict to sustain its energy, his soul languished in indolence and repose. He slumbered when his enemy watched; his want of vigilance exposing him to surprises and defeats. The attachment and heroism of his troops often retrieved his mistakes, and often extricated him from difficulties insuperable to his genius. He was slow in penetrating the designs of his enemy; but when they flashed upon him, they electrified all his energies, and the hero and the general were alike conspicuous in the impetuosity of his attack and the skill of his evolutions. In private life he was haughty to his equals, condescending to his inferiors, improvident, extravagant, heedless of private engagements, negligent in the ordinary decencies of personal appearance. Affability of manners, benevolence of disposition, disinterestedness, and love of glory, stamped him as an inheritor of the virtues of his grandfather, Henry IV. Pride, hatred, or revenge had no part in his noble nature, and his prodigality, and indulgence to the vices of others, were the only foibles that clouded the purity of his elevated mind.

Eugene surpassed him in military genius, equalled him in bravery, and rivalled him in the affections of the soldiery, though rigid in discipline, and inexorable in punishing disorders. The love of the one sprung from affability, familiarity, and connivance at their excesses; that of the other in gratitude for ample supplies, for never-failing care of the sick and wounded, and for that confidence in the commander, which genius alone can call up in the breast of the soldier. In enterprise and activity, no comparison can be instituted between these great men. In stratagems, surprises, marches, passages of rivers, encampments, the art of creating resources in the enemy's country, and of turning, with inferior forces, a defensive into an offensive war, Eugene far surpassed the level of his age, and rises to a comparison with Hannibal or Napoleon, the two greatest generals of ancient and modern times. Napoleon, indeed, by the rapidity of his marches, multiplied his forces, beat his enemy in detail, and triumphed over enemies often five times as numerous as his own. But he exhausted his soldiers by fatigues too great for nature to sustain. Eugene, on the contrary, spared his troops, took advantage of canals and defiles, and cast up intrenchments to cover them; never exposing them, but when chance favoured, or necessity required. He effected much by espionage, intrigues, and bribery; but more by great genius, matchless valour, inviolable secrecy, bold conception, and heroic execution. As a military character, Eugene was all virtue: a single vice does not stain him as a warrior in the pages of the historians of his age. In one respect Vendôme and the prince approached each other. They were both descended from houses equally illustrious. The princes of Maurun and Bourbon exhibited constellations of glory for 800 years. They both commanded armies equally brave and equally disciplined, both were nearly of the same age, and the resemblance is only lost in the superior talents of the great Eugene.

BIOGRAPHY.

Collections towards illustrating the Biography of the Scotch, English, and Irish Members of the Society of Jesus. By the Rev. Dr. OLIVER, of St. Nicholas' Priory, Exeter. London, 1845. Dolman.

THIS volume must have been a work of vast research and labour. It is a sort of biographical dictionary of the Scotch, English, and Irish Jesuits: those of each country being distinctly classified under a distinct alphabetical arrangement. It forms a considerable volume, very closely printed, in double columns, and each article relates whatsoever is known concerning the subject of it. To devout Catholics it cannot fail to be welcome as a book of reference, and indeed it may be consulted by others for a great deal of information that could nowhere beside be so readily procured.

SCIENCE.

A Guide to Photography, &c. By W. H. THORNTHWAITE. London, 1845. Horne and Co.

THIS volume contains the most simple and practical details we have yet seen of the most improved processes for the production of pictures by the chemical action of light, including the Daguerreotype, the Calotype, and the other instruments which apply the same principle in various forms and to various objects. It is illustrated with drawings in stone; and no person possessing one of the instruments should fail to keep with it these explicit instructions for its use.

FICTION.

The Mabinogion. By Lady CHARLOTTE GUEST. Part VI. London, 1845. Longman and Co.

The Mabinogion is a collection of ancient Welsh manuscripts, now, for the first time printed, and accompanied with a translation and notes, by Lady CHARLOTTE GUEST. No expense has been spared in the getting up of this bold enterprise; the type and paper being in the handsomest style of the art, and excellent wood-cut illustrations adorn the pages.

As this sixth part is the first we have seen, we are unable to give to our readers any account of the origin, history, or design of the publication; we can state only that the part before us contains three Welsh legends, entitled severally "Branwen, the Daughter of Llyr," "Manawyddan, the Son of Llyr," and "Math, the Son of Mathonwy." The first tells how "Bendigeid Vran was the crowned king of this island, and he was exalted from the crown of London." One afternoon he was sitting on a rock looking over the sea, and with him were his brothers. "One of these youths was a good youth, and of gentle nature, and would make peace between his kindred and cause his family to be friends when their wrath was at the highest; and this one was Nissyen; but the other would cause strife between his two brothers when they were most at peace." As they were sitting, they saw thirteen ships coming from the south of Ireland, with "beautiful flags of satin," and one outstripped the rest, and displayed a shield with the point upwards, in token of peace. The crew landed, and the king saluted them from the rock, and asked whence they came, and wherefore.

"Lord," said they, "Matholwch, king of Ireland, is here, and these ships belong to him." "Wherefore comes he?" asked the king, "and will he come to the land?" "He is a suitor unto thee, lord," said they, "and he will not land unless he have his boon." "And what may that be?" inquired the king. "He desires to ally himself with thee, lord," said they, "and he comes to ask Branwen, the daughter of Llyr, that, if it seem well to thee, the Island of the Mighty may be leagued with Ireland and both become more powerful." "Verily," said he, "let him come to land, and we will take counsel thereupon."

The king of Ireland lands accordingly; his suit is granted, and the wedding takes place. But the quarrelsome brother of the bride comes by chance, and seeing the horses of the bridegroom, demands to whom they belong, and being informed that Matholwch, king of Ireland, had married his sister, he flies into a furious rage that the match should have been made without his consent.

And thereupon he rushed under the horses and cut off their lips at the teeth, and their ears close to their heads, and their tails close to their backs, and wherever he could clutch their eyelids, he cut them to the very bone, and he disfigured the horses and rendered them useless.

On learning the insult that had been offered to him, the King of Ireland departed for his ships in great dudgeon, without asking leave at court. His royal host sends messengers to inquire the cause. This being reported, the king was grieved, and sends another embassy with an apology.

"Arise, Manawyddan, son of Llyr, and Heveydd Hir, and Unic Glew Ysgwyd, and go after him, and tell him that he shall have a sound horse for every one that has been injured. And beside that, as an atonement for the insult, he shall have a staff of silver, as large and as tall as himself, and a plate of gold of the breadth of his face. And shew unto him who it was that did this, and that it was done against my will; but that he who did it is my brother, by the mother's side, and therefore it would be hard for me to put him to death. And let him come and meet me," said he, "and we will make peace in any way he may desire."

The embassy went after Matholwch, and told him all these sayings in a friendly manner, and he listened thereunto. "Men," said he, "I will take counsel." So to the council he went.

The terms were accepted, and the guest was invited to a grand feast, but he was not so cheerful as usual, and this was attributed by his royal host to a feeling that the atonement had not been sufficient.

"Oh man," said Bendigeid Vran, "thou dost not discourse to-night so cheerfully as thou wert wont. And if it be because of the smallness of the atonement, thou shalt add thereunto whatsoever thou mayest choose, and to-morrow I will pay thee the horses." "Lord," said he, "Heaven reward thee." "And I will enhance the atonement," said Bendigeid Vran, "for I will give unto thee a cauldron, the property of which is, that if one of thy men be slain to-day, and be cast therein, to-morrow he will be as well as ever he was at the best, except that he will not regain his speech." And thereupon he gave him great thanks, and very joyful was he for that cause.

The history of this magic cauldron is thus narrated:

And a second night sat they together. "My lord," said Matholwch, "whence hadst thou the cauldron which thou hast given me?" "I had it of a man who had been in thy land," said he, "and I would not give it except to one fom there." "Who was it?" asked he. "Llassar Llaesgyvnewid; he came here from Ireland, with Kymideu Kymeinvoll, his wife, who escaped from the Iron House in Ireland, when it was made red hot around them, and fled hither. And it is a marvel to me that thou shouldst know nothing concerning the matter." "Something I do know," said he, "and as much as I know I will tell thee. One day I was hunting in Ireland, and I came to the mound at the head of the lake, which is called the lake of the Cauldron. And I beheld a huge yellow-haired man coming

from the lake with a cauldron upon his back. And he was a man of vast size, and of horrid aspect, and a woman followed after him. And if the man was tall, twice as large as he was the woman; and they came towards me and greeted me. 'Verily,' asked I, 'wherefore are you journeying?' 'Behold this,' said he to me, 'is the cause that we journey. At the end of a month and a fortnight this woman will have a son; and the child that will be born at the end of the month and the fortnight will be a warrior fully armed.' So I took them with me, and maintained them. And they were with me for a year. And that year I had them with me not grudgingly. But thenceforth was there murmuring, because that they were with me. For from the beginning of the fourth month they had begun to make themselves hated and to be disorderly in the land; committing outrages, and molesting and harassing the nobles and ladies; and thenceforward my people rose up and besought me to part with them, and they bade me to choose between them and my dominions. And I applied to the council of my country to know what should be done concerning them; for of their own free will they would not go, neither could they be compelled against their will, through fighting. And [the people of the country] being in this strait, they caused a chamber to be made all of iron. Now when the chamber was ready, there came there every smith that was in Ireland, and every one who owned tongs and hammer. And they caused coals to be piled up as high as the top of the chamber. And they had the man, and the woman, and the children, served with plenty of meat and drink; but when it was known that they were drunk, they began to put fire to the coals about the chamber, and they blew it with bellows until the house was red hot all around them. Then was there a council held in the centre of the floor of the chamber. And the man tarried until the plates of iron were all of a white heat; and then, by reason of the great heat, the man dashed against the plates with his shoulder and struck them out, and his wife followed him; but except him and his wife none escaped thence. And then I suppose, lord," said Matholwch unto Bendigeid Vran, "that he came over unto thee." "Doubtless he came here," said he, "and gave unto me the cauldron." "In what manner didst thou receive them?" "I dispersed them through every part of my dominions, and they have become numerous and are prospering everywhere, and they fortify the places where they are with men and arms, of the best that were ever seen."

Matholwch returns to Ireland with his bride, and in due time a son was born to them. In the second year a tumult broke out there on account of the insults offered to Matholwch in Wales, and his foster brothers took part in it, and their vengeance was to drive away Branwen, his Welsh wife, from the same chambers with him, and make her cook for the court, "and they caused the butcher, after he had cut up the meat, to come to her and give her every day a blow on the ear, and such they made her punishment." And all intercourse with Wales was prohibited for three years.

And Branwen reared a starling in the cover of the kneading trough, and she taught it to speak, and she taught the bird what manner of man her brother was. And she wrote a letter of her woes, and the despite with which she was treated, and she bound the letter to the root of the bird's wing, and sent it towards Wales. And the bird came to this island, and one day it found Bendigeid Vran at Caer Seiont in Arvon, conferring there, and it alighted upon his shoulder and ruffled its feathers, so that the letter was seen, and they knew that the bird had been reared in a domestic manner.

Bendigeid Vran was sorely grieved at the tidings of Branwen's woes, and he gathered an army, and sailed for the invasion of Ireland.

Now the swineherds of Matholwch were upon the sea-shore, and they came to Matholwch. "Lord," said they, "greeting be unto thee." "Heaven protect you," said he, "have you any news?" "Lord," said they, "we have marvellous news; a wood have we seen upon the sea, in a place where we never yet saw a single tree." "This is indeed a marvel," said he; "saw you aught else?" "We saw, my lord," said they, "a vast mountain beside the wood, which moved, and there was a lofty ridge on the top of the mountain, and a lake on each side of the ridge. And the wood and the mountain, and all these things moved." "Verily," said he, "there is none who can know aught concerning this, unless it be Branwen."

Messengers go to Branwen to ask her the meaning of these strange appearances.

"What is the forest that is seen upon the sea?" asked they. "The yards and the masts of ships," she answered. "Alas," said they, "what is the mountain that is seen by the side of the ships?" "Bendigeid Vran, my brother," she replied, "coming to shoal water;" there is no ship that can contain him in it." "What is the lofty ridge with the lake on each side thereof?" "On looking towards this island he is wroth, and his two eyes on each side of his nose are the two lakes on each side of the ridge."

Matholwch calls a council, and they resolve to retreat across the river, and break down the bridge behind them. When Bendigeid Vran comes to the bank, his followers ask him how they are to cross. "What," said they, "is thy counsel concerning a bridge?" "There is none," said he, "except that he who will be chief, let him be a bridge; I will be so." "And when he had lain down across the river, hurdles were placed upon him, and the host passed over thereby."

On the other side messengers from Matholwch meet him and offer amends. But the terms are, in the opinion of the council, not sufficiently tempting, and they advise something more irresistible.

"Lord," said they, "there is no other counsel than this alone. He was never known to be within a house, make, therefore, a house that will contain him and the men of the Island of the Mighty on the one side, and thyself and thy host on the other; and give over thy kingdom to his will, and do him homage. So by reason of the honour thou doest him in making him a house, whereas he never before had a house to contain him, he will make peace with thee."

The offer was accepted, and a house built "both vast and strong."

But the Irish planned a crafty device, and the craft was that they should put brackets on each side of the hundred pillars that were in the house, and should place a leathern bag on each bracket, and an armed man in every one of them. Then Evnissyen came in before the host of the Island of the Mighty, and scanned the house with fierce and savage looks, and descried the leathern bags which were around the pillars? "What is in this bag?" asked he of one of the Irish. "Meal, good soul," said he. And Evnissyen felt about it until he came to the man's head, and he squeezed the head until he felt his fingers meet together in the brain through the bone. And he left that one and put his hand upon another, and asked what was therein? "Meal," said the Irishman. So he did the like unto every one of them, until he had not left alive of all the two hundred men save one only; and when he came to him, he asked what was there? "Meal, good soul," said the Irishman. And he felt about until he felt the head, and he squeezed that head as he had done the others. And albeit he found that the head of this one was armed, he left him not until he had killed him.

But in spite of this, concord was established between "the men of the Island of Ireland," and "the men of the Island of the Mighty," and the sovereignty was, by agreement, conferred upon the boy, the son of Branwen. But the strife-lover Evnissyen resolves to murder him, and, under pretence of a wish to fondle him, takes him in his arms, "and before any one in the house could seize hold of him, he thrust the boy headlong into the blazing fire." Thereupon there was a tremendous tumult and a great slaughter.

Then the Irish kindled a fire under the cauldron of renovation, and they cast the dead bodies into the cauldron until it was full, and the next day they came forth fighting men as good as before, except that they were not able to speak.

But it would not resuscitate the dead bodies of the men of the Island of the Mighty, and Evnissyen, in despair, casts himself among the dead bodies of the Irish, and two of the people, taking him to be an Irishman, fling him into the cauldron. "And he stretched himself out of the cauldron, so that he rent the cauldron into four pieces, and burst his own heart also."

In consequence of that the Welsh were successful, but only seven men of them all escaped. Then

Bendigeid Vran commanded them that they should cut off his head. "And take you my head," said he, "and bear it even unto the White Mount, in London, and bury it there, with the face towards France; and a long time will you be upon the road. In Harlech you will be feasting seven years, the birds of Rhiannon singing unto you the while; and all that time the head will be to you as pleasant company as it ever was when on my body. And at Gwales in Penvro you will be fourscore years, and you may remain there, and the head with you uncorrupted, until you open the door that looks towards Aber Henvelen, and towards Cornwall. And after you have opened that door, there you may no longer tarry: set forth then to London to bury the head, and go straight forward."

They did as they were bidden; and Branwen exclaiming "Two islands have been destroyed because of me!" uttered a loud groan, and then broke her heart. For the adventures of these seven in their journey to bury the head—how at one repast they continued seven years, charmed by the song of a bird they could not see; and at another they remained fourscore years, unconscious of the flight of time and unwearied; and how while the head remained buried on White Mount "no invasion from across the sea came to this island"—the reader is referred to Lady C. GUEST'S valuable work, where they will find other legends equally curious and equally illustrative of very ancient manners and modes of thought.

The College Chums: a Novel. In 2 vols. By CHARLES LISTER, Esq. London, 1845.

LET no library be tempted to order this weak and worthless production, in which we hesitate whether most to condemn, the conception or the execution. The plot is most extravagant, unnatural, and uninteresting. Dormer and Saville are the names of *the Chums*, and their adventures the subject-matter of the story. Dormer is seduced to gamble, and escapes with difficulty the toils laid for him. Saville is engaged to Dormer's sister, and, while in this position, seduces another girl, and thence arises a whole melodrama of murder, madness, and death, the incidents being introduced without the slightest regard for probability in substance or order of event. The characters are the veriest wooden puppets that ever were played with, and the composition is in the worst style of the penny-a-liner. Such productions ought to be discouraged, and therefore we deal with them thus severely, and according to their deserts.

The Disputed Inheritance: a Novel. In 3 vols. By GRACE WEBSTER. London, 1845. Newby.

THE plot of this novel is sufficiently simple, and entirely without originality. Mr. Dunbar is the owner of Dundauvie Castle. Some persons in his neighbourhood, out of spite, prompt a woman to assert a claim to the inheritance on behalf of her child. But the fraud is too transparent to impose upon any person, and hence it excites no interest. The merit of this novel lies wholly in the quiet, truthful, characteristic picture it presents of a laird's family in Scotland, and for this it may be read with much pleasure. Miss WEBSTER in this emulates the author of *The Inheritance;* and when she writes again, we would recommend her to pay more attention to the plot, for it is dangerous to rest the prosperity of any novel on its descriptive powers alone. Readers require to be at the same time interested in a stirring story.

Eastern Romances. Select Tales from the Arabian and other Sources, adapted to Popular Reading. Vol. I. Burns.

A FORTNIGHT since, we noticed the second volume of this publication. The first has since come to hand. It fully justifies all that then was said in praise of the design, which was simply that of collecting from the *Arabian Nights* and other sources the best Eastern romances, stripping them of whatever militated against delicacy or morals. Thus purified, they are fitted for the family circle, who, thanks to Mr. BURNS, have now opened for their enjoyment the richest stores of a romance, without the slightest fear of evil consequences.

POETRY.

Reliques of Irish Jacobite Poetry; with Biographical Sketches of the Authors. By JOHN DALY. *Together with metrical verses* by EDWARD WALSH. 1845. London: J. R. Smith. Dublin: Machen.

ALTHOUGH the editor indulges in his preface in the stock language of hostility to "*the Saxon*," "*the foe*," "*the stranger*," and nationality, as it is absurdly termed, is the aim of this publication, yet, as it contains some really curious matter, we will not pass it unnoticed.

The poems are collected from popular traditions, or from the shelves of old libraries. They are printed in their native Irish, both language and character, and each is accompanied with an interlinear and literal translation, and a free version in English rhyme. Explanatory notes are introduced occasionally, and narrate the legends alluded to in the verses.

The greater portion of these old poems breathe a spirit of intense hatred of the oppressors of Ireland, as unhappily our countrymen then were; and as the sins of nations, like those of individuals, are ever visited, even to the third and fourth generation, so are we now paying the penalty of our fathers' wrongs; and the spirit they kindled in Ireland, and which flashes on every page of these relics of her popular ballads, is now vexing us, and rises up the most formidable shadow in the pathway of our national greatness. In these poems there is abundance of fire and passionate emotion, and the translator has evidently thrown his entire soul into his task, and done ample justice to the bards whose inspirations he has rendered into another tongue. If they are so fresh and spirit-stirring in translation, what must they be in the original? If they move even the heart of the now unjustly hated Saxon, how must they stir the very soul of the passionate Irishman, stung by centuries of wrong?

EDUCATION.

The New London Copy-Book, with Copies set for the Pupil. Parts I. to X. London. Darton and Clarke.

INFINITE are the designs for copy-books. They are to be found in every conceivable variety of arrangement; the copy set at the head, lines to guide the letters' length, lines to direct the slope and the breadth, faint strokes over which the pen is expected to pass until from sheer habit the hand is made to move mechanically in the same direction. Of all the systems, this last was the worst. It was akin to the scheme of learning to swim by bladders; the aid removed, the pupil was as helpless as ever. Of one thing teachers may be assured, that the child never masters the slightest knowledge until he is thrown upon his own resources. So long as letters, for instance, are shaped for him, he will never learn to shape them for himself. These copy-books, published by Messrs. Darton and Clarke, shun the error we have named. Their merits are two-fold—the copy is given at the side instead of at the head of the leaf, and the lessons are progressive, the progression being arranged, not by the order of the letters, but according to the order of form, advancing from the simple to the more difficult shapes by almost insensible steps. By help of this series, we should think, an attentive child might, by copying a single set, obtain a very decent mastery of the art of writing. Certainly no better copy-books than these have ever passed under our notice.

POLITICS AND POLITICAL ECONOMY.

American Factories and their Female Operatives; with an Appeal on behalf of the British Factory Population, &c. By the Rev. WM. SCORESBY, D.D. London, 1845. Longman and Co.

IN the year 1844 Dr. SCORESBY visited the United States, and having personally witnessed the condition of the factory girls at Lowell, he was so impressed with the spectacle, that on his return he made the information he had gathered the subject of two lectures delivered to the Bradford Church Institution.

Dr. SCORESBY'S description of that interesting place and of the novel sights he witnessed there so entirely coincides in all important particulars with that given by Miss MARTINEAU, and of which a full account was published in an early number of THE CRITIC, that repetition will be unnecessary. The novelty of these lectures lies in the Doctor's inquiry into the causes of the superior moral and intellectual condition of the Lowell Factory-girls. These he concludes to be—1. A general superior tone of moral principle prevalent among the young women of the operative classes of New England. 2. The universal prevalency of education among all classes, combined with a general respect for the Bible and religion. 3. The considerable wages they receive. 4. The watchful consideration and moral care for the young women taken by their employers and others. 5. The self-consideration and regard for moral character of the female operatives themselves.

The reverend Doctor concludes with some valuable suggestions for the improvement of the condition of *our* factory operatives. To the females he proposes that they should emulate their American sisters in their zeal for acquiring education—that they should carefully cultivate a high tone of chaste and moral principle, and exercise a prudent economy in the spending of their wages. To the masters he recommends a more watchful regard to the moral character of their female operatives, and that of those who overlook them; that they should do something for their morals and general benefit *beyond* the walls of the mills and factories; and, lastly, that they should place the operatives generally in a better position by abridging the hours of labour.

These views are enforced by Mr. SCORESBY with great powers of argument and much earnest eloquence, and his pamphlet will not only interest those in the manufacturing districts whom it specially concerns, but the narrative portion must attract the attention of all who acknowledge the improvement of the condition of the working classes to be *the* question of the time.

RELIGION.

The History of the Church of England in the Colonies and Foreign Dependencies of the British Empire. By the Rev. JAMES S. M. ANDERSON, M.A. Vol. I. London, 1845. Rivingtons.

THERE are scarcely any two words in the English language which convey an idea more vague than that suggested by the term "Colonial Church." The instant that a definition of either is attempted, the mind reverts to all those disputes and contentions which have in all ages distracted politicians and theologians. We employ the word colony at one time to denote a particular district or situation, and then, perhaps, define it with CLARK, as "a remote possession or province of this realm, occupied for the purpose of trade or cultivation." At another, we separate it from any mere geographical notion, and understand by it an association of colonists, or, according to JOHNSON, "a body of people drawn from the mother country to inhabit some distant place." And these two are only among the most loose and indefinite significations applied to the term colony. There are not wanting many who hold that the term colony is rightly to be confined within much narrower limits than either of these; that it imports a peculiar stage in national life, a particular development of social civilization, an era in the history of a community springing into existence under circumstances and conditions appropriate and confined to itself. Again, to what single word do men attach such various ideas as to the word "church"? Not only in its deeper and more difficult meaning, but in that which is proper to it—as descriptive of an organized system, an institution religious or political, an orderly scheme of government, effective as one of the most important elements in the history of civilization; it is the source of debate and controversy, anxious thought and unsettled deliberation, presenting to the mind forms grand and majestic, but such as it cannot easily grasp. To write a history, then, of the Colonial Church is no light task, requiring clear and accurate conceptions, and a systematic and well-regulated plan. The materials out of which such a history might be composed are thinly scattered over a vast literary field, lying in incidental notices and occasional allusions, rather than in minute detail. Commencing with the early collections of voyages made by HACKLUYT and PURCHAS, they branch out into an immense number of particular histories and memoirs extending through two centuries and a half, and are carried down to the important discoveries which are even now almost daily being made of papers and documents having reference to the early histories of, or to missionary exertions in, our different colonial settlements.

Mr. ANDERSON'S book has at present reached only the conclusion of its first volume, and therefore it is as yet impossible to say how far his task will be successfully achieved. We are, however, able to judge somewhat from its commencement, and of that little we must now speak. The volume before us professes to carry the history of the Church in the Colonies to the end of the reign of JAMES I. There were no real attempts at colonization before the age of ELIZABETH, so that the present volume is occupied mainly with these two reigns. These occupied a period the most unfavourable for establishing or extending a new branch of the English Church. When the depths of society are once broken up, it is not until after a long lapse of time, and many heavings to and fro, that they can settle down again in peace and order. A religious reformation had at that time been hardly accomplished. Two hostile parties, Romanist and Puritan, stood on either side of the English Church, each equally bitter in hostility, equally intractable and equally feared. At home there was a certain amount of stability and strength in the moderation of the Church of England sufficient to withstand the aggressions of either antagonist. But there was neither will nor power to plant a permanent church among the restless adventurers who had just begun to settle in Virginia, the Bermudas, or Newfoundland, and who might have requited the care of the first planters by changing the character of the church established amongst them in such a sort as to give it a violently Puritanical or Romanist character. Among the settlers themselves were to be found the same strifes, gainsayings, and differences which harassed the country at home. The contentions of hood and tippet, the disputations between the favourers and opponents of Genevan discipline; the libels of Martin Mar-Prelate, and the counter-blasts of the author of "Pap with a hatchet," were re-produced and re-enacted upon the shores of New England. The terms of the Hampton Court Conference were re-debated upon the banks of the Potomac and the Susquehanna. No inconsiderable or uninteresting part therefore of Mr. ANDERSON'S history is devoted to a consideration of the state of the English Church at this time. This is ground which has been often turned, but can never be too often considered. The view now given of it is clear and succinct. The succession of archbishops, from the beginning of ELIZABETH to the end of JAMES, is neatly set down, and the character of each impartially reviewed. This may fairly be considered as one of the preparatory steps necessary for the better understanding of the general subject in hand. Another preparatory step is, the glance taken at the several attempts, effectual or otherwise, made during the period within which we are at present confined, towards occupying or colonizing the northern parts of the continent of America. This, however, could not be adequately done without a short notice of the expeditions which, even so early as the close of the fifteenth century, departed from the English shores, under the guidance of the enterprising JOHN CABOT and his sons. These almost fruitless exertions were followed by the expedition of Sir HUGH WILLOUGHBY, in the year 1553, in search of that great object of all similar voyages, the north-east passage to India and Cathay. The cold of Russian Lapland exterminated every living thing that sailed in two of the ships in that expedition. The frozen bodies of the dead were afterwards found in the vessels, of which they were the crews, upon the coast of Russian Lapland. The third and only remaining vessel parted company from the other two in a violent storm, and succeeded in reaching Archangel, where her people were received with great kindness and hospitality by the inhabitants of the country. The following is the striking description given by CHANCELOR, the only commander who survived, of the squadron when about to sail:—

> It was thought best by the opinion of them all that by the 20th day of May the Captaines and mariners should take shipping, and depart from Radcliffe vpon the ebbe, if it pleased God. They hauing saluted their acquaintances, one his wife, another his children, another his kinsfolkes, and another his friends deerer then his kinsfolkes, were present and ready at the day appoynted: and having wayed ancre, they departed with the turning of the water, and sailing easily, came first to Greenewich. The greater shippes are towed downe with boates and oares, and the mariners being all apparelled in watchet or skie-coloured cloth, rowed amaine, and made way with diligence. And being come neere to Greenewich (where the Court then lay), presently upon the newes thereof, the courtiers came running out, and the common people flockt together, standing very thicke vpon the shoare; the priuie counsel, they lookt out at the windowes of the Court, and the rest ranne vp to the toppes of the towers: the shippes hereupon discharge their ordinance, and shoot off their pieces after the manner of warre, and of the sea, insomuch that the tops of the hilles sounded therewith, the valleys and the waters gaue an eccho, and the mariners they shouted in such sort, that the skie rang againe with the noyse thereof. One stoode in the poope of the ship, and by his gesture bids farewell to his friendes in the best manner hee could. Another walkes vpon the hatches, another climbes the shrowds, another stands vpon the maine yarde, and another in the top of the shippe. To be short, it was a very triumph (after a sort) in all respects to the beholders. But (alas!) the good King Edward (in respect of whom principally all this was prepared) hee onely by reason of his sickenesse was absent from this shewe, and not long after the departure of these ships, the lamentable and most sorrowfull accident of his death followed.

The progress of maritime discovery was, however, very slow, and the progress of colonization upon the part of the English still slower. At the end of the reign of ELIZABETH, while some of the richest provinces in the east and in the west were tributary to Portugal and Spain, the territories of England were still confined to her own shores. It was true, indeed, that she had claimed sovereignty in Newfoundland and Virginia, and even among some of the islands of the West Indies, and on the coasts of Brazil, Guiana, and Peru. But the petty forts and villages which her settlers had built had been dismantled, and the settlers themselves destroyed, by the hostility of the native tribes. The science of establishing a colony was not yet understood, and there is scarcely any thing more gloomy in history than the fearful waste of human life committed in the attempt to establish our earliest American

possessions. And if the science of colonizing was little understood, that of planting new churches was still less so. Whether we have even now advanced much in this last particular is questionable. Assuredly, until within the last few years, of all missionary labours those of England were the worst planned and the worst executed. We have no space to enter upon an enumeration of the various causes of failure in our attempts at founding colonies or colonial churches, but chief amongst them may be mentioned the mutual jealousies, the weakness of all executive power, the cruelties towards native tribes, the iniquities of the slave-trade, and the want of all systematic action exhibited by the government and the settlements themselves. An instance of English injustice at once interesting and melancholy occurs in the case of Pocahuntas, a daughter of Powhatan, an Indian chief, who was captured by the English settlers of Virginia in 1612. This woman, when a child of some twelve years old, had saved the life of the English governor, Captain SMITH, then a prisoner in the hands of her father. At a later period she had more than once risked her own safety that she might bring succour to the English in their distress, warning them of dangers, and supplying them with provisions. Those whom she had thus benefited ill requited her. Anxious to regain from her father certain prisoners' arms and implements of which he had gained possession, by a series of stratagems they made Pocahuntas their prisoner. Ultimately, peace was agreed upon between the Indians and English, by means of certain consequences resulting from this exploit:—

Pocahuntas, however, returned no more to her own people. During the time which had already elapsed since her capture by Argall, Dale and Whitaker had been most careful and assiduous in bringing her to the knowledge of the Christian faith. She shewed a great capacity, as well as an earnest desire for instruction; and, after the lapse of some months, made, at her own request, a public renunciation of the idolatry of her country, and was baptized, receiving the name of Rebecca. An attachment also had sprung up between her and an Englishman named John Rolfe, who is described as 'an honest gentleman, and of good behaviour;' and information of this circumstance having been communicated, with the approval of Sir Thomas Dale, to her father Powhatan, that king sent an aged uncle of hers, Opachisco, and two of his sons, that they might bear the tidings of his consent to the marriage, and do what was required in his behalf for the confirmation of it. The marriage was celebrated on the first of April, 1613; and Dale, speaking of it in the letter which has been before cited, says: "She liues ciuilly and louingly with him, and I trust will increase in goodnesse, as the knowledge of God increaseth in her. She will goe into England with mee; and were it but the gaining of this one soule, I will thinke my time, toile, and present stay well spent."

* * * * *

Having stated thus much of the conversion and marriage of this the first Indian princess who had been brought to the knowledge of the true God, it may be well to anticipate, for a few moments, the exact order of our narrative, and follow her brief story to the end. She accompanied her husband and Sir Thomas Dale to England, when that officer, having placed the affairs of the colony in good order, and left them under the charge of Mr. George Yeardly, deputy-governor, returned home in 1616. They landed at Plymouth on the twelfth of June in that year; and great interest was felt and shewn, as might be expected, towards her who came, under such circumstances, a stranger to these shores. Among the first who welcomed her was Captain Smith, whose life, in the days of her childhood, she had saved at the hazard of her own, and whose wants, and the wants of his countrymen, she had so often relieved. He was eager to introduce her to the notice of the consort of King James, and the letter in which he commends her to the favour of her Majesty, and relates the services she had rendered to himself and the Colony under his command, is not among the least striking evidences which remain to tell us of the honest and hearty zeal of that extraordinary man. He was himself on the point of embarking at that time upon a voyage to New England, and could not stay to render to Pocahuntas the service which she required, and so well deserved. He was the more desirous, therefore, that she should receive a generous reception from those who were in authority. There is something very touching in the simple and affectionate spirit with which she received the man who had exercised such wonderful influence upon her life. At first, Smith relates, she seemed disturbed, and unwilling to express her thoughts; but not long afterwards she began to speak, and called him "Father," —the same title, she said, by which he had addressed her own father, Powhatan, when he had been a stranger in his land. And when Smith hesitated to receive such a title from one who was a king's daughter, she answered, "Were you not afraid to come into my father's countrie, and cause feare in him and all his people (but mee), and feare you here that I should call you father? I tell you then I will, and you shall call me childe, and so I will be for euer and euer your countrieman. They did tell us always you were dead, and I knew no other till I came to Plimoth; yet Powhatan did command Vitamatomakkin to seeke you, and know the truth, because your countriemen will lie much."

Mr. ANDERSON will neither diminish nor increase his reputation by the first volume of his *History of the Colonial Church*. The style is pleasing, and seems to indicate a mind whose tone is religious, without being puritanical or unhealthy. His research, too, is considerable, and his extracts from early writings are happily made. But there wants historical arrangement and a certain definitiveness of object. He writes like a man who has not quite determined upon his plan—who has read much without systematizing that which by reading he has acquired. His pages form, in consequence, very pleasant rambling, desultory reading, but they want the severe dignity which betokens the inspiration of the muse of history; and as they do not belong to the province of history generally, still less have they any part in ecclesiastical history. Incidental notices of religious men do not constitute the history of a Church. To write the biography of individuals is one thing—to exhibit the development of national or political life is another.

MISCELLANEOUS.

The Bokhara Victims. By Captain GROVER, Unatt., F.R.S. London: Chapman and Hall.

A PERUSAL of this book suggests the question, "Has the soldier, whilst in the execution of his mission, a right to expect protection from the power at whose command he acts?" The answer of every rational person will at once be in the affirmative. Even in the days of serfdom, such justice was not refused. Yet, if we are to believe this narrative, two brave men have been wantonly sacrificed.

The position of the soldier is curious. It is one of passive submission to the will and direction of others. He must have no thought of his own. His mind is purely mechanical. Reckless of danger, and careless of social ties and family affections, he rushes onward, daring destruction and looking death boldly in the face. His individuality is lost; he lives and moves and has his being without consulting his own impulses, obedient only to the dicta of other minds. What shall, what ought to be, returned, for these fearful sacrifices? For what are the faculties that distinguish man from the brute surrendered? Wherefore does the British soldier lay down his liberty? The answer must be, for a paltry pittance, whereby to eke out his daily existence.

The work before us is a minute, and seemingly faithful, revelation of all the known circumstances relative to the sufferings of the two envoys sent to Bokhara by the English government. Accounts are given of the steps taken by the author and Dr. WOLFF to arouse the attention of the executive to the fact that two of their agents were confined in dungeons by the Ameer of that distant country.

Our readers will doubtless recollect, that about five years ago Colonel STODDART was sent to Bokhara by the Persian ambassador. The object of his mission was to induce the chief of Meimanah to abandon the system of pillage then devastating the north-west frontier of Persia, and to endeavour to put a stop to the capture of slaves. He was directed to use his best efforts to obtain the liberty of any Russian prisoners he might find at Bokhara, and to conclude a friendly treaty with the Ameer. We have not space to follow the narrative of this book through its many interesting details, but enough that at length the envoy reached his destination and, without any just reason, was seized, bound with cords, and treated as "a spy." The Ameer wrote to the Queen of England, asking for an account of this "traveller." The following is the description of one of the earliest modes of

STODDART'S INCARCERATION.

He was carried to a subterraneous dungeon, which, in fact, was nothing but a well, twenty-one feet deep, the only means of descent to which was by a rope, by which, also, food was conveyed to the prisoners. Here he found three men, companions of his misery, two thieves and a murderer. He was confined two months in that well. He soon made friends with his

wretched companions, one of whom had been several years in that dreadful place; and having contrived to get some tobacco, they passed their time in smoking. The second day of his imprisonment, the executioner descended the well with an order from the Ameer instantly to kill him if he did not embrace Islamism. Colonel Stoddart, his body and mind weakened by the horrid sufferings to which they had been submitted, to save himself from certain destruction, made the required profession of faith. This, however, did not ameliorate his position, although it saved his life.

Ahi dura terra, perchè non t' apristi?

This horrid dungeon, in which he was confined, swarmed with innumerable ticks, and every disgusting species of vermin, which are especially reared to annoy the wretched prisoners; and should this prison, by any extraordinary chance, be without an inmate, that the vermin might not perish, they are supplied with rations of raw meat.

On his removal to another prison, the colonel announced that he still believed in Christianity, averring that the confession of a belief in the religion of the natives was wrung from him through fear. This was the signal for fresh indignities; and attempts to poison the unfortunate envoy were made by members of the court. An unfounded report soon afterwards (1840) reached England, to the effect that STODDART had been executed. On the arrival of this rumour, his name was struck from the Army List. This step is severely rebuked by Captain GROVER.

In 1841, Captain CONOLLY, at his own request, was allowed to visit Bokhara. He was coldly received, and gloomy reports as to the punishment intended for this new guest were soon spread abroad. Imprisonment was deemed certain, and the prevalent opinion was that this would be but a slight portion of his sufferings.

On the 2nd December, the Ameer, a second time, ordered the sufferers to be brought to his palace; when, addressing CONOLLY, he said—

"That as he had not brought any letters for him, he suspected he was a spy; that Bokhara was not so easy to conquer as Affghanistan; that he would put him in prison; and that, then *the English would only have to come with some troops to rescue him.*" Captain Conolly replied, "That the Queen of England never employed such subterfuges with foreign powers; and that it was an offence to imagine for a moment that a government, powerful as the British, could descend to such duplicity as the Ameer imagined." The Ameer then dismissed him, and they were forced to pass a wretched night in the palace. On the following day, however, they were allowed to return to their residence. At this time a messenger arrived, bringing important letters to Colonel Stoddart. This man was immediately conducted to the palace, and the letters were taken to the Ameer, who ordered the bearer of them to be chained to the wall of the passage which leads to the presence-chamber. In a short time one of the Ameer's people came to this messenger, and said, "Can you say the true believer's prayer?" The man began: "There is but one God, and . . . ." Here he hesitated, having in his fright forgotten the remainder; and in an instant his head was struck off!

The letters brought by this unfortunate victim of Islamism led them to expect better treatment. Among the epistles was one from Lord PALMERSTON, in answer to the Ameer's letter to the Queen. At this the Ameer seemed indignant, and stated that her Majesty, and not "her Vizier," should have replied to his communication. He was thus confirmed in his former belief that his prisoners were spies, and persons whose object was to injure his nation. They were again imprisoned in the well.

The author made various attempts to awaken our government to a consideration of the situation in which its envoys were placed, but was unable to prevail on them to demand their release, or resent the injuries done to them. He called a public meeting, subscriptions were raised, and Dr. WOLFF was despatched to Bokhara, having letters of authority from this country. He soon learned that the unfortunate officers had been executed a short time previously, and in a letter related the following as the cause of their murder:

"Firstly, on the 29th of April, the king stated to me by medium of the above-named Nayeb, and in the presence of *Mullah Kasem*, the king's *mahram* (private chamberlain), *that he had put to death*, in the month of *Sarratan*, 1259,* Colonel Stoddart and Captain Conolly. The first had been put to death, firstly, on account of his having treated royalty with the greatest disrespect on different occasions; secondly, that he had turned Mussulman, and then returned to the Christian faith; thirdly, that he had promised to get letters from England, and fourteen months had elapsed without receiving any answer, though the king had erected *Japar Khanas* (post houses) on his account. And with regard to Conolly, that he had been put to death for having induced the Khans of Khiva and Kokan to wage war against the King of Bokhara, &c. His majesty has given me permission to leave Bokhara on the 9th of May, *i. e.* Friday next."

Dr. WOLFF, spite of the authority he carried with him, was soon treated as had been his predecessors, and for a long time doubted whether he should not share a similar tragical fate. Notwithstanding his belief that STODDART and CONOLLY were dead, and the evidence he adduced to support that belief, Capt. GROVER still doubted its accuracy, and again asked the government to seek, and, if found, to protect its servants. The correspondence which passed between him and Lord ABERDEEN on the subject is published, and the evasions of the Foreign-office are fearlessly exposed. He still hazards a supposition that his friends exist, and that the information conveyed by Dr. WOLLF was palmed upon him to mislead our government.

Thus the matter is left in doubt. We trust that this last attempt of Capt. GROVER may have the desired effect, and that if Colonel STODDART and Capt. CONOLLY are still living, means will be adopted to insure their freedom. Those of our readers who may be curious to acquaint themselves with all the minute particulars of this extraordinary event, will find the Captain's book a pleasant informant. Sure we are that they will award him many thanks for the humane and manly anxiety he has manifested for the release of his unfortunate friends.

* I have the highest authority in this country for stating, that the month of Sarratan, 1259, means July, 1843.

The Irish Watering Places; their Climate, Scenery, and Accommodations, &c. By ALEXANDER KNOX, M.D. Dublin, 1845. Curry and Co.

DISABLED by infirm health from pursuing his profession, Dr. KNOX was tempted to try the effect of a prolonged tour in Ireland, in preference to a ramble among the spas of the continent; and that his time might not be wholly wasted, he resolved to perform some service to his native country by collecting accurate details respecting her most celebrated bathing-places, hoping thus to create and increase an interest in her natural resources, by directing public attention to spots which for their beauty to the eye and benefits to the health are unsurpassed by any in Europe.

Although addressing the physician, the author's aim has been to render his work attractive to the general reader by a popular style, and the introduction of passing notices of scenery, history, and antiquities. Accommodations, and the costs and conveniences of locomotion, are carefully noted; while for the benefit of the sick he has treated with much ability of the peculiar classes of ailments for which mineral waters are prescribed as remedies, and added some very valuable, because practical, instructions for the employment of the remedial agent.

In pursuance of this scientific manner of treating his subject, he commences with a statement of the chemical and physical properties of water, whence he passes to the consideration of its medicinal properties. Mineral waters are next treated of, and the properties of some of the most remarkable in Europe are described. He proceeds then to give a series of practical instructions for the use of mineral waters, comprising explicit instructions as to food, drinks, hours of eating, clothing, &c. The following chapter is devoted entirely to a review of the various affections mineral waters are calculated to cure or relieve, and this closes the first part of the work, the entire of the second part being occupied with the description of the watering-places of Ireland, each one of which is noted, with its peculiar claims to attention, arising either from the nature of its waters, the healthfulness of the locality, the beauty of the scenery, or the accommodation it offers to the visitor.

Dr. KNOX is a remarkably *intelligent* guide. To intimate acquaintance with his profession, he adds an extensive range of general knowledge, which enables him to impart an interest even to the driest topic, and to convey information even in his least pedantic moods. With so many other works of more extended interest in their subject-matter, we may not further pause upon this, either for review or extract, but we may recommend it heartily to all invalids seeking health in Ireland.

JOURNAL OF FRENCH LITERATURE.

Without a Dowry. By Madame Charles Reybaud. 2 vols. 8vo. 1845.

Madame Henri Arnaud, under her *pseudonyme* of Madame Charles Reybaud, one of the purest, if not the very purest, of French female writers, has just put forth another of her clever novels under the above singular title. The genius of this lady—and she really possesses genius—is essentially feminine. There is no clap-trap in her inventions, nothing meretricious in her style. Her fount of feeling never fails, and it is sound and healthy feeling, which speaks to the heart. Although a prolific writer, Madame Arnaud has no mannerism, nor does she repeat herself in her various works. Her invention is at once active and graceful; nor does she ever condescend to assist her plot by the slightest deviation from propriety or womanly dignity. Not only are all the events upon which her stories are built up possible in themselves, but they never pass the boundaries of probability, and appear to be the natural and inevitable consequence of a peculiar train of circumstances. Perhaps her *Dernier Oblat* discovered more vigour of talent and depth of thought than any other of her writings with which we are acquainted; it contained scenes and situations almost appalling in their power; but, *en revanche*, her *Deux Marguerites*, and the volumes now under notice, are replete with tenderness and grace. However it may appear as a mere matter of course in England that a lady should produce a series of works, throughout the whole of which it would be impossible for the rigid moralist to distinguish any laxity of principle or expression, such is by no means the case in France. The most uncompromising opinions, both as regards religion, social conventions, and individual independence, have there been boldly put forth by women; the fetid corruptions of vice have been wreathed by the roses of female eloquence, which have only served to make the taint more foul and poisonous. The stage and the bookshelf have alike been thus contaminated; and that not only without shame, but even amid the applause of a thoughtless and reckless age, eager only for variety and excitement, and content to batten mentally on garbage, so that it but present itself in the garb of novelty. To this vicious and perverted taste Madame Arnaud has never condescended to truckle. Other names have resounded further and louder than her own, but they have not produced the same echo. In short, Madame Arnaud is a writer of whom any country might be proud, and who would be an ornament to any age.

The tale under review treats, as its name at once implies, of an undowried wife, an individual sufficiently rare among the *haute volée* of France, where marriage is to the full as much a matter of recognised speculation as the fluctuations of the *Bourse*. The story opens with a death-scene. The young and beautiful, and inexperienced Félicie, at once the bride and the ward of the wealthy Paul de Clavières, is watching anxiously by the side of her expiring husband, who is inhaling, for the last time, the perfumed wind of evening upon the terrace of his villa at Mendon, amid the song of the nightingale and the shivering of the leaves of the ancient wood. Alone in her anxious guard, the wife of seventeen, easily cheated into hope, is beguiled by the voice of the dying man into a belief that the flattering but fatal glow of fever by which his disease is accompanied is a symbol of returning health, and she is only aroused from her error by the arrival of an old friend and distinguished physician, Adrien de Ramsay, who seconds the advice of a selfish and grasping old housekeeper, looking for a legacy, that she should induce the invalid to make his will; a ceremony which at thirty-three years of age, full of projects, and deep in love, he had hitherto neglected. In order to enable some of our readers to understand the generous nature of the refusal by which this proposal is met on the part of the bride, it is necessary to remark, *en passant*, that there exists in France a law, by which, in the event of a man dying intestate who has married an undowried wife, the widow loses all claim to his property, of what nature soever it may be, which passes intact to his next nearest relative. But Madame Arnaud will tell the tale better than ourselves.

A WIFE.

"Not a word, not an allusion, I beseech of you," interrupted Madame de Clavières; "he would understand you too well—I know him. The idea of death is horrible to him; he has never ventured to glance at it. He was so happy! life appeared to him so easy and so sweet! What hopes, what projects will die with him! Oh, let him not know to the last moment that he is about to leave us!"

"But, madam, do you know the price that you must pay for the tranquillity of those last moments?" exclaimed La Carbonnet, perfectly beside herself; "it will cost you a fortune of more than a million."

"Were it necessary, I would purchase it with my life," replied the young matron.

"But, once more, it is your very existence which you sacrifice," persisted the housekeeper; "to-morrow you will wake up stripped of every thing, poorer than me. Mademoiselle de Clavières is the next heir—the monster, as she is called. No, madam! I will not permit you to work out your own ruin in this way."

She made a step towards the death-chamber, but the young wife advancing also to the door, said, in a voice of blended sweetness and authority, "No, you must watch here with the other attendants, Madame Carbonnet; and let no person enter unless by my order or that of the physician."

As she spoke she passed the threshold; but when about to enter the fatal room she paused for a moment, and trembled with horror. Where she had left, as she believed, only an invalid, she was about to look upon a dying man. The physician promptly came to her assistance, and having supported her into the chamber, closed the door behind him.

"That woman witnessed the birth of your husband," he said as he listened in alarm to the sobs and loud words of La Carbonnet in the saloon; "she is, perhaps, interested in the production of a will, and may dare, despite your orders, to intrude during the night."

"I will prevent it," replied Madame de Clavières, as she drew the bolt; "she shall not approach this bed of death."

Tenderness, gratitude, and a sentiment of noble generosity gave at that moment to the young wife at once all that courage, strength, and vigilance with which cupidity so often inspires those who surround the dying.

Doctor," she said, suppressing her sobs, "it is Providence which has sent you to my succour. Alas! I am not quite desolate during these terrible moments. And now I must wear a tranquil face, and cease to weep."

She wiped away her tears, and softly approached the sick man, who, with his eyes still closed, was groaning feebly, and, kneeling beside him, she murmured with mournful firmness, "I shall watch here—I will not quit this spot until——" the words expired upon her lips, and she added, as she made a fresh effort—"until he is at rest for ever." Ere long, in defiance of the injunction of her mistress, La Carbonnet endeavoured to enter the room, but perceiving that the bolt had been drawn within, and well knowing there was no other outlet, she burst forth into lamentations, called loudly to the other servants, and signified to them the orders of Madame de Clavières, after which she exclaimed, as she took her own seat opposite the door,

"As for me, I will not stir from this spot until to-morrow."

The night was calm and serene, and the nightingale was singing in the flowery hedges. A deep stillness reigned in the villa of the Vale of Mendon, and the servants, collected in the saloon, listened with an attentive ear to every sound which issued from the sick-chamber, and awaited in mute anxiety the fatal event which was anticipated.

De Clavières dies; and the girl-widow finds herself totally dependent upon the sister of her husband, a woman whose extreme and revolting ugliness is a proverb throughout Paris, but whose enormous wealth and profuse ostentation collect about her the most select and fashionable society. Of this female Caliban the author has had the courage to make her *seconda donna*, and most ably has she overcome the extreme difficulties which such an attempt engendered. The trials of poor Félicie under the gilded roof of her sister-in-law may be readily imagined; her extreme beauty, her youth, her talents, and her dependence, were all grievances in the eyes of the ill-fated Mademoiselle de Clavières, who, unhappily for herself, unites to her Gorgon head a true woman's heart; she dares to love—humbly, it is true—for she fixes her affections upon a cripple of small fortune, whom she pleases herself by believing could be loved by no other woman upon earth. She looks around her upon the evidences of wealth, scattered over her hotel, and by degrees, forgetting her own hideousness, and remembering only his deformity, she succeeds in convincing herself that the first word which she may deign to utter will bring him to her feet. Alas! even here the perfections of Félicie discover to her the immensity of the error into which she has fallen. With

as much energy as hopelessness, the cripple worships the beautiful young widow. But we will not further reveal the frame-work of the story, which is of absorbing interest; we will rather introduce our readers to the interior of a Parisian hotel *du grand genre*.

A FESTIVAL NIGHT.

There was, on the ground-floor of the hotel de Clavières, an apartment which was known as the summer saloon, and which in fact was habitable only when the burning influence of the dog-star inflamed the lukewarm atmosphere in which we live. A magnificent caprice of Séraphine had transported to this spot the luxury of another age, and the voluptuous inventions of another climate. It was one of the halls of the Alhambra copied in a Parisian house. The walls, covered to a certain height by varnished panels, were embroidered in arabesques, whose details, painted in bright colours and relieved by gold net-work, were of inconceivable delicacy and grace; the folding-doors were of cedar-wood; in the centre of the hall was a fountain formed by two immense basins of alabaster resting against each other; the water did not flow in a noisy stream, but fell in drops as it overflowed with the soft murmur of a summer rain, and bathed in humid dust the flowers that floated on the summit of the vase. The artist who designed the model of the furniture had, without doubt, a vision of the splendour of an Arabian palace, after having read a tale from the *Thousand and One Nights*; and the Queen Zoraya would have recognised the divan starred with gold, the rich carpets, and the seat covered with Cordova leather, and resting upon four globes of ivory. The foliage of the acacias which bordered the terrace shed a green twilight into this spot of silence, coolness, and perfume.

* * * * *

At eight o'clock at night Mdlle. de Clavières was still wandering in her dressing-room through her saloons, already lighted up; she then returned for a moment to her room to dress. As usual, she suffered herself to be decorated as they pleased by her attendants. They attired her in a dress which Mdlle. Camille had just sent home, encircled her hair with a garland of natural flowers, and attached to her bony arm a row of pearls, of which the favourite Sultana of the commander of the Believers might have made her richest necklace.

"What a delicious toilette!" stupidly exclaimed La Carbonnet; "how well Mademoiselle is looking to-night."

Séraphine turned upon her waiting woman a look at once displeased and melancholy; and then, without raising her eyes to the glass before which they had dressed her, descended to the reception-room.

Félicie soon followed; the young beauty wore the rich costume of a Dogeresse; a coif, edged with gold lace, half concealed her hair, which was combed back from her forehead, and sprinkled with precious stones. Her shoulders were covered with a magnificent collar of Venetian point, and her dress of flesh-coloured brocade, with a slight train, gave to her movements a majesty and a grace which are indescribable. But she was pale beneath the sumptuous dress, and her eyes were yet glistening with the tears that she had shed.

* * * * * * *

The carriages began to roll into the court.

* * * * * * *

"I here find once more," said the Count Lucien, "memories of all the lands which I have visited. Yonder are the orange-trees of the kingdom of Valence, and the palm-trees of Egypt. Here I find the cactus which flourishes in the ravines of the Balearic Islands; and in the distance, through the windows which open upon the terrace, I distinguish a hall similar to those of the Alhambra. Might it not be said, moreover, that we stand at the entrance of the Arab palace, and dance under the lemon-trees of Grenada?

* * * * * * *

The ball was magnificent; the glittering crowd undulated in the vast saloons, and mixed its joyous murmurs with the melodies of the orchestra. The air, impregnated with the perfume of flowers, began to animate the complexions of the fair dancers, and amid this brilliant throng came and went continually the frightful countenance of Séraphine, like the figure, which, in the scenic games of the middle ages, appeared in the midst of every festival, and represented Death, for ever an intruder upon the joyous revels of the living.

A handsome young *roué*, of noble birth, discarded by his family, and persecuted by his creditors, resolves to offer his hand to the hideous hostess. The fête progresses.

A FORTUNE-HUNTER.

Séraphine ascended the terrace steps, and seated herself upon the golden-starred divan, which dominated like a throne the whole length of the saloons. Gazing around her with a dark and eager look, she resembled one of those horrible fairies who reign over the giddy swarm of tricksey spirits. M. d'Altefaye had followed her; and, seated at her side, he played with the fan which served as a sceptre to this mournful sovereign, and appeared to be overwhelming her with gallantry and homage.

* * * * * * *

Meanwhile Mdlle. de Clavières, at first astonished by the marked attentions of her companion, began to comprehend his meaning. Never previously had such a circumstance occurred to her, and, be it said to her praise, her first sensation was one of secret indignation. Her penetrating and sagacious nature at once probed his vile spirit, and the result was contempt and disdain. Then, it struck her that it would be laughable to allow M. d'Altefaye to pay his addresses to her, and to amuse herself with his projects and his hopes. She felt disposed to play the coquette, and determined to do so at the expense of this interested lover. Despite his cunning, Gaston did not perceive the snare into which he was about to fall, and his conceit being stronger than his modesty, he assumed without delay his destined part.

"Ah, mademoiselle," he said, looking towards the reception-rooms, "my heart will long retain the memory of this fête; I never witnessed any other at once so completely elegant and magnificent. The imagination of a woman like yourself could alone have created and ordained such marvels. It is inspiration, it is the genius of an art as charming as it is rare in the present day—the art of living splendidly."

"It is a natural gift," replied Séraphine, carelessly; "I love luxury, and I am rich. Such is the inspiration, the genius. Many persons, without doubt, have not that genius; but we must remember that it is not their fault. Come," she added, as she rose, and looked towards the garden, "we sup to-night by torch-light, beneath a dome of orange-trees, myrtles, and oleanders. I have had the presumption to introduce my friends to the bowers of Greece or Italy."

M. d'Altefaye had also risen. He waited until Mdlle. de Clavières should point out in the crowd the person who was to lead her to the banquet-hall; and as she looked around her with an air of indecision, he said, in a low voice—"Among so many noble personages, who is the fortunate individual who is to offer his hand to the queen of the festival?"

She turned towards him, and answered, with a singular smile, "You!"

JOURNAL OF AMERICAN LITERATURE.

Sketches of Residence and Travels in Brazil, embracing Historical and Biographical Notices of the Empire and its several Provinces. By the Rev. DANIEL P. KIDDER, A.M. In two vols. Vol. I. New York and London, 1845. Wiley and Putnam.

FAMILIAR as recent discussions in Parliament and the newspapers have made to English ears the name of Brazil, there are few parts of the civilized world of which our countrymen really *know* so little. The American press has produced *no* work exclusively on Brazil; and some time has elapsed since any book containing original information on that remote empire and its people has proceeded from the British press, although our travellers have almost exhausted every other land, and have long been seeking some new field for the indulgence of their vagrant tastes, and the employment of their busy pens.

In these circumstances, the narrative of an intelligent missionary, such as Mr. KIDDER, enjoying extensive opportunities for observation, and having the capacity to turn them to the best account, cannot but be heartily welcomed here, as on the other side of the Atlantic; and the more since he writes in an agreeable strain, possesses considerable powers of description, and not unfrequently rises to eloquence when excited by a congenial theme. His fault is an occasional ambitious endeavour at fine writing, an error too common to be the subject of peculiar censure in Mr. KIDDER, but one which he would do well to avoid in any future literary adventure. The general tone of a narrative should be plain, straightforward, and even,—but always lively and graphic; only occasionally are flights of eloquence permissible, and the utmost care should be taken that they *never* be indulged in save when the subject is one which, beyond all doubt, excuses raptures or passionate emotions. If there be the slightest question whether it *be* a case for a soaring, a prudent writer will err on the safe side, and give to sober narrative the benefit of the doubt.

Mr. KIDDER has combined with reminiscences of his residence and travels in Brazil, historical and geographical sketches of the country. His attention was primarily directed

to the subjects of morality, education, and religion. He pleads a needless apology, that in the collection of his materials he met with many embarrassments arising from the unsettled state of the people.

The first volume, which only we have yet received, contains a sketch of the history of Brazil, briefly but succinctly written. But for our readers the other materials, descriptive of the place and the people, will possess the most interest; and the subject being very nearly a new one, we shall make no apology for dwelling upon it at more length than we are wont to do when we accompany travellers through countries well trodden, save where they have the faculty of scattering a glow, reflected from their own minds, upon the objects through which they move, and so as to present the most familiar things in new aspects that interest us in them almost more than if they had possessed the charm of novelty in substance.

Mr. KIDDER takes us at once to Rio Janeiro, its harbour opening by a bold and narrow passage between two granite mountains, so situate that fortresses upon the islands and heights might defy the hostile ingress of the proudest navies of the globe. These passed, the city bursts upon the view.

RIO JANEIRO FROM THE SEA.

The aspect which Rio de Janeiro presents to the beholder bears no resemblance to the compacted brick walls, the dingy roofs, the tall chimneys, and the generally even sites of our northern cities. The surface of the town is diversified by several ranges of hills which shoot off in irregular spurs from the neighbouring mountains, leaving between them flat intervals of greater or less width. Along the bases of these hills and up their sides, stand rows of buildings whose whitened walls and red tiled roofs are both in happy contrast with the deep green of the foliage that always surrounds and often embowers them.

It is called by the natives the City of Palaces, and it well deserves the proud title. It is thronged with fine edifices. The streets intersect each other at right angles, save where the beach and the declivities of the hills forbid. Open to the sea-breeze is a public promenade. Large squares are scattered about. Fountains, supplied by aqueducts from the adjacent mountains, some of them beautifully constructed, abound in every direction. From the centre of the city the suburbs ascend four miles in each of three principal directions. The ways are paved with stones of large size. The houses seldom exceed three stories in height, and are built, for the most part, of granite, but coated with plastering on the outside, their colour is, consequently, a clear white, painfully dazzling to the eye.

A regulation, requiring vessels to discharge and receive their cargoes only between the hours of nine and two, produces an animated scene of bustle, especially as the labour is almost entirely performed by negroes, there being scarcely a cart or dray in the city. Hence this curious

STREET SCENE AT RIO.

The coffee-carriers usually go in troops, numbering ten or twenty individuals, of whom one takes the lead, and is called the captain. These are usually the largest and strongest men that can be found. While at work, they seldom wear any other garment than a pair of short pantaloons; their shirt is thrown aside for the time as an incumbrance. Each one takes a bag of coffee upon his head, weighing one hundred and sixty pounds, and when all are ready they start off upon a measured trot, which soon increases to a rapid run.

As one hand is sufficient to steady the load, several of them frequently carry musical instruments in the other, resembling children's rattle-boxes; these they shake to the double-quick time of some wild Ethiopian ditty, which they all join in singing as they run. Music has a powerful effect in exhilarating the spirits of the negro, and certainly no one should deny him the privilege of softening his hard lot by producing the harmony of sounds, which are sweet to him, however uncouth to other ears. It is said, however, that an attempt was at one time made to secure greater quietness in the streets, by forbidding the negroes to sing. As a consequence they performed little or no work, so the restriction was in a short time taken off. Certain it is that they now avail themselves of their vocal privileges at pleasure, whether in singing and shouting to each other as they run, or in proclaiming to the people the various articles they carry about for sale. The impression made upon the stranger by the mingled sound of their hundred voices falling upon his ear at once, is not soon forgotten.

A striking peculiarity in the aspect of Rio arises from the circumstance of all the most commanding sites being occupied by churches and convents. The hospitals are numerous, and many are richly endowed. One of them, situate without the city, is devoted to persons affected with elephantiasis and other disorders of the leprous kind. It is occupied by about eighty patients. A curious anecdote is related of this institution. Some time since an ingenious antiquary announced that the elephantiasis of Brazil was the identical disease that used to be cured among the ancient Greeks by the bite of a rattle-snake. The assertion made some noise, and one of the patients resolved to try the experiment. The physicians and his friends assembled on the appointed day, and this was the result :—

The serpent was brought into the room in a gaiola, a species of cage. Into this the individual introduced his hand with the most perfect presence of mind. The reptile seemed to shrink from the contact, as though there were something in the part which neutralized its venom. When touched, the serpent would even lick the hand without biting. It became necessary at length for the patient to grasp and squeeze the reptile tightly, in order to receive a thrust from his fangs. The desired thrust was at length given, near the base of the little finger.

So little sensation pervaded the member, that the patient was not aware he was bitten, until informed of it by those who saw the act. A little blood oozed from the wound, and a slight swelling appeared when the hand was withdrawn from the cage, but no pain was felt. Moments of intense anxiety now followed, while it remained to be seen whether the strange application would issue for the better or for the worse. The effects became gradually manifest, although it was evidently retarded by the disease which had pre-occupied the system. In less than twenty-four hours the Lazarus was a corpse.

The Foundling Hospital has produced the same effects upon society here as elsewhere. It has encouraged unbounded licentiousness, and the consequences to the infants thus removed from parental care are most fatal.

Out of three thousand six hundred and thirty infants exposed in Rio during ten years anterior to 1840, only one thousand and twenty-four were living at the end of that period. In the year 1838-9, four hundred and forty-nine were deposited in the wheel, of whom six were found dead when taken out; many expired the first day after their arrival, and two hundred and thirty-nine died in a short period. By means of all possible endeavours, and the expense of all the wet-nurses to be procured, it has only been possible to save about one-third of all that are received. Well might one of the physicians of the establishment, in whose company I visited several departments of the institution, remark, "Monsieur, c'est une boucherie!"

At Rio, our missionary remarks the singular scarcity of inns and boarding-houses. Visitors are, for the most part, compelled to take lodgings or rely upon the hospitality of the inhabitants.

From the returns of the prisons, it would appear that homicide is much more frequent, and theft much less so, than in our northern climes. A horrible instance is related of the desperation of a band of robbers condemned to be executed for murder. When the guard approached to conduct them to the place of execution,

to their astonishment the convicts had filed off their fetters, and stood brandishing them as weapons of defence. They challenged the fire of the soldiers, and demanded to be killed on the spot. The officers preferred that they should be executed according to the form of law, and put them in siege, thinking that the torments of hunger and thirst would soon reduce them to a surrender.

The next morning a ball of ignited sulphur was hurled into the dungeon, designed to produce suffocation; a single voice responded, crying for mercy. Three of the assassins had committed suicide by means of a razor, with which in regular turn they had cut their own throats. The fourth had become horror-stricken while witnessing the dreadful deed, and the dying agonies of his companions, with whose blood the floor of the prison was now covered. Weakened by hunger, tormented by the stings of conscience, and despairing of life, but afraid to follow the example of those who rushed before him into the presence of the Eternal, he survived to give the frightful details of the original crime, and of the scene of desperation to which it led.

Rio is well lighted by oil-lamps, the luxury of gas not being yet introduced. The streets at night are quiet and secure, and the police is efficient. Schools and colleges are numerous, and the government appears to recognize the vast importance of education, which it aids with a liberality that

might put richer countries to the blush. The National Library is a noble institution, comprising both a library and reading-room, the latter well supplied with home and European periodicals, and open without charge to all who choose to enter the saloon and read.

The book trade in Brazil is by no means flourishing. Native productions of the press are few; an increase of readers is but an extension of the Parisian market, whence comes the greater portion of the literature patronized by the people. Translations have been substituted for original works. Every petty *feuilleton* from the French newspapers is translated to make a book for Lisbon and Rio. Indeed the language of France is almost the language of the country—it is entirely that of good society, and held requisite to an entrance into all public institutions of a higher grade.

The newspaper press is, however, extremely prolific. Rio issues four daily, two tri-weekly, and from six to ten weekly journals. But their conduct is quite unique.

The established papers are not, as in this country, the organs of different political parties. While they enter warmly into political discussions, they seem to consider it a duty to be always on the side of the government, or the party in power. Hence, however much any change is deprecated before it occurs, yet when it is once consummated, it is chronicled as a glorious event. If the party in the minority wish to abuse those in power, they must establish a journal for the express purpose, or publish their correspondence in hand-bills, which will be sent out as an accompaniment to the daily, into whose columns it could not be admitted.

The advertisements, with which the journals are crowded, are very curious, and throw much light on the peculiarities of the people.

One peculiar custom may be noticed, growing out of the patronage of the numerous lotteries authorized by government. Persons frequently form companies for the purchase of tickets, and those at a distance order their correspondents to purchase for them. In order to avoid any subsequent transfer or dispute, the purchaser announces, through the newspaper, the number of the ticket bought, and for whose account—as for example: "M. F. S. purchased, by order of J. T. Pinto, two half-tickets, Nos. 1513 and 4817, of the lottery in behalf of the theatre of Itaborahy." "The treasurer of the company, entitled '*The Friends of Good Luck*,' has purchased, on the company's account, half tickets, Nos. 3885 and 5430, of the lottery of the cathedral of Goyaz." Following this custom, individuals who wish to publish some pert thing, usually announce it as the name of a company for the purchase of lottery tickets; although that name extends sometimes through a dozen lines of rhyme.

Not a few of these annuncios would appear very singular among us. It was announced at one time that a solemn *Te Deum* would be celebrated on a given day, in the church of S. Francisco de Paula, for the happy restoration of Bahia, subsequent to a rebellion in that city, and that his imperial majesty would attend. A few days after the following appeared:—"The committee to make arrangements for the *Te Deum* in S. Francisco de Paula, thinking that they would better satisfy the philanthropic designs of those who have subscribed for that object, by remitting the money in their hands to Bahia, to be divided among the poor widows and orphans, and especially since *due thanks* have already, in another church, been offered to God for the restoration, have resolved not to have the proposed *Te Deum* sung, of which persons invited are now informed."

Again—"Senhor Jozé Domingos da Costa is requested to pay, at No. 35, Rua de S. Jozé, the sum of six hundred milreis; and in case he shall not do so in three days, his conduct will be exposed in this journal, together with the manner in which this debt was contracted."

The natural scenery in the neighbourhood of Rio is represented as charming. Von Martius has thus depicted

EVENING IN BRAZIL.

A delicate transparent mist hangs over the country; the moon shines brightly amidst heavy and singulary-grouped clouds. The outlines of the objects illuminated by it are clear and well defined' while a magic twilight seems to remove from the eye those which are in the shade. Scarce a breath of air is stirring, and the neighbouring mimosas, that have folded up their leaves to sleep, stand motionless beside the dark crowns of the mangueiras, the jaca tree, and the etherial jambos. Sometimes a sudden wind arises, and the juiceless leaves of the acaju rustle; the richly flowered grumijama and pitanga let drop a fragrant shower of snow-white blossoms; the crowns of the majestic palms wave slowly over the silent roof which they overshade, like a symbol of peace and tranquillity. Shrill cries of the cicada, the grasshopper, and the tree-frog, make an incessant hum, and produce by their monotony a pleasing melancholy. At intervals different balsamic odours fill the air; and flowers, alternately unfolding their leaves to the night, delight the senses with their perfume—now the bowers of paullinias, or the neighbouring orange grove—then the thick tufts of the eupatoria, or the bunches of the flowering palms, suddenly bursting, disclose their blossoms, and thus maintain a constant succession of fragrance; while the silent vegetable world, illuminated by swarms of fireflies, as by a thousand moving stars, charms the night by its delicious odours. Brilliant lightnings play incessantly in the horizon, and elevate the mind in joyful admiration to the stars, which, glowing in solemn silence in the firmament, fill the soul with a presentiment of still sublimer wonders.

Here, as in all Catholic countries, religious festivals abound. The Intrudo, answering to the carnival of Italy, is a time for unlicensed frolic, but wanting the gracefulness of the Venetian *bon-bons*. The pelting in Rio is performed with showers of waxen balls, made in the shape of oranges and eggs, but filled with water. The shell is of sufficient strength to admit of being thrown a considerable distance, but when it strikes, it bursts and floods the victim with its contents. This sport is played by high and low, in and out of doors, and without any respect to persons.

In fact, whoever goes out at all on these days would do well to expect a ducking, and at least to carry his umbrella; for in the enthusiasm of the game, the waxen balls are frequently soon consumed; then come into play syringes, basins, bowls, and sometimes pails of water, and they are plied without mercy until the parties are thoroughly drenched.

Males and females perch themselves along the balconies and windows, from which they not only throw at each other, but also at the passers by. So great, indeed, have been the excesses that have grown out of this sport, that it has been prohibited by law.

But custom is more powerful than law, and police notices are laughed at.

Religious processions are conducted with great pomp, but they appear to excite little reverence in the people; a small proportion only are seen to kneel as the host passes.

No class enter into the spirit of these holiday parades with more zeal than the people of colour. They are, moreover, specially complimented from time to time by the appearance of a coloured saint, or of Nossa Senhora under an ebony skin. "*Lá vem o meu parente*," "there comes my kindred," exclaimed an old negro standing near me, as a coloured effigy, with woolly hair and thick lips, came in sight; and in the overflow of his joy the old man had expressed the precise sentiment that is addressed by such appeals to the senses and feelings of the Africans.

In spite of slavery and its usual concomitants, it is pleasant to learn that condition, and not colour, is the test of respectability in Brazil. The only observance required to admit a person of any hue to all public places is that he be well dressed. A jacket is held in especial abhorrence, and a coat, however inconvenient in such a climate, is therefore indispensable to him who would be deemed respectable. At Tejuco Mr. Kidder lighted upon a novelty in mechanics.

A NEW MILL.

The reader will imagine a stick of timber, ten feet long, poised upon a fulcrum, with six feet of one extremity reaching to a quantity of corn in a cavity, and upon the other end a box, constructed and placed so as to receive a small stream of water from a brook running down the ravine. When the box is nearly filled with water, the equilibrium passes to the shorter extremity of the timber, and the long end is thrown up into the air; as the short end goes down the water is spilled out, and the long end falls back upon the corn. Thus, by the process of filling and spilling, the timber is kept in a regular motion, and the corn is at length pounded into meal.

The emperor moves familiarly among his subjects. He is often upon the promenade, dressed plainly as any citizen, and he salutes politely the persons he meets. The people are devotedly attached to their sovereign and his family, and unanimous in their loyalty.

The funeral ceremonies in Brazil are various, but all exhibit that fondness for parade and display which appears to be characteristic of the people. In the case of infants and young children, the occasion is considered joyous, and the procession is one of triumph. In the case of adults night is generally chosen, and there is a profusion of the usual trappings of woe. When the body is placed in the catacomb, quick-lime is thrown

over it to hasten the progress of decay; and after the lapse of about twelve months, the cavity is opened, the bones are taken out, cleansed, and by the friends placed in a box, which is carried home or remains in the church.

Very different is the funeral of the slave. His body is placed in a hammock, the ends of which are fastened to a long pole carried on the shoulders of two comrades. Within the cemetery of the Misericordia a grave is daily dug in the form of a pit, seven feet square. In this are placed the bodies of those who die in the hospitals, and of the slaves and poor brought for gratuitous interment. In the evening the pit is closed, and on the next morning another yawns for its prey.

For a Christmas excursion Mr. KIDDER visited some villages on the upper borders of the Bay of Rio. The government had not been so vigilant here as at Rio; robbery was rife; and education was so little cared for, that, according to a priest whom our missionary met, scarcely one in thirty of the population could read. Intemperance, too, was common.

Travelling in Brazil is sufficiently primitive. There are no carriages. All who do not walk must ride on mules or horses. Baggage is transported in the same manner. Professional carriers thus travel in large troops, each troop under the care of a conductor, and regularity and security can be relied upon. This is a sketch of

A TROPEIRO.

The first characters that engaged my attention were the two tropeiros, or conductors of the troop. They were not mounted, but preferred going on foot, in order to give proper attention to their animals and baggage. The latter being mostly of an inconvenient form, and not easily balanced, gave them great annoyance from its propensity to get loose and fall off. The principal was a very tall, athletic man, apparently about thirty years of age. His features were coarse in the extreme, and a hair-lip rendered his speech indistinct. His arms, feet, and legs to his knees were bare; and soon after starting, off came his shirt, exhibiting a tawny and properly yellow skin. His companion, and probably younger brother, was not so large, but appeared to have equal nerve. He was better dressed, and walked with his shoulders inclined forwards. His jet black hair was long, and hung in ringlets upon his neck. His eyes were dark and flashing, and his countenance not dissimilar to that of a North American Indian. These persons were a specimen of the Paulista tropeiros, who, as a class, differ very much from the Mineiros and conductors that visit Rio de Janeiro. They have a certain wildness in their look, which, mingled with intelligence and sometimes benignity, gives to their countenance altogether a peculiar expression. They universally wear a large pointed knife, twisted into the girdle behind. This faca de ponta is perhaps more essential to them than the knife of the sailor is to him. It serves to cut wood, to mend harnesses, to kill and dress an animal, to carve food, and in case of necessity, to defend or to assault. Its blade has a curve peculiar to itself, and in order to be approved, must have a temper that will enable it to be struck through a thick piece of copper without bending or breaking. This being a favourite companion, is often mounted with a silver handle, and sometimes incased in a silver sheath, although it is generally worn naked.

It was with such a party that our missionary proceeded upon a journey into the interior. In the more unfrequented parts a species of caravanserai is erected for the accommodation of travellers, and called

A RANCHO.

The ordinary rancho is a simple shed, or rather, a thatched roof set upon posts, entirely open below. It is built expressly for the accommodation of travellers, and its size corresponds to the public spirit of the neighbourhood. Sometimes a rancho is from sixty to one hundred feet long, and proportionally wide. Occasionally one may be found inclosed. Those who first come are entitled to their choice of position. They unlade their mules, and pile up their saddles and cargo, frequently constructing a hollow square, within which they sleep, either upon skins extended on the ground, or in hammocks. Their beasts are turned out to graze for the night; and as each troop ordinarily carries such culinary apparatus as its company requires, they have abundant leisure for preparing food while their animals are resting.

The ladies are, of course, excellent horsewomen, and not the less so because, in the absence of side-saddles, they are obliged to sit after the fashion of the other sex. The caravans, or troops, so often met with on the road, are an interesting sight.

They are composed of from one to three hundred mules each, attended by a sufficient number of persons to manage and protect them. The animals are generally accoutred with simply a pack-saddle, bearing upon each side well-balanced panniers, containing bags of sugar, or other cargo. One, however, is trained to take the lead. This animal, selected on account of experience in the roads, and other good qualities, is often adorned by a headstall fantastically wrought with sea-shell and galoon, and crowned with plumes of peacock's feathers. The same animal wears a bell, and yields the foremost place to no other. The conductor of each troop is well mounted, and wearing a lasso at the skirt of his saddle, is ready to pick up a stray animal at any moment.

At S. Paulo Mr. KIDDER made a long stay. He describes it as a delightful town, the inhabitants highly refined and civilized, the women remarkable for beauty, grace, and *esprit*.

Among other curiosities of its neighbourhood was the manufacture of madioc flour, the principal farinaceous product of Brazil, having the peculiarity of an union of a deadly poison with highly nutritious qualities. The poison is confined to the root, and the operation of preparing it for food is deemed an unwholesome one. It is cut, dried, and pressed; then pounded, moistened, and granulated. The poison is exuded in the juice; that again is allowed to stand, when it deposits the valuable substance known in commerce as tapioca.

The domestic arrangements of a country establishment in the neighbourhood of S. Paulo are thus described:—

There was a princely profusion in the provisions for the table, but an amount of disorder in the service, performed by near a dozen waiters, which might have been amply remedied by two that understood well their business. The plate was of the most massive and costly kind. The chairs and tables were equally miserable. The sheets, pillow-cases and towels, of the sleeping apartments were of cotton, but at the same time ornamented with wide fringes of wrought cambric. Thus the law of contrast seemed to prevail throughout. Dinner was served at six P.M.; supper at about nine.

In the course of the evening half an hour was devoted to vespers. I had observed a great number of the slaves entering, who in succession addressed us with crossed hands, and the pious salutation, "*Seja louvado Nosso Senhor Jesus Christo*"—"blessed be the Lord Jesus Christ." Presently there commenced a chant in the adjoining room, when the padre, who sat by my side, rising, said he supposed I did not pray, but that he was going to do so. I corrected his mistake, and he went out laughing, without, however, inviting any of us to accompany him. I was told that he attended these exercises merely as any other member of the family—the singing and prayers being taught and conducted by an aged black man. The devotions of the evening consisted principally of a *Novena*, a species of religious service including a litany, and consisting of nine parts, which are severally chanted on as many successive evenings. It was really pleasant to hear the sound of a hundred voices mingling in this their chief religious exercise and privilege. This assembling the slaves, generally at evening, and sometimes both at morning and evening, is said to be common on plantations in the country, and is not unfrequent among domestics in the cities. Mistresses and servants, at these times, meet on a level.

Great efforts are being made to establish the cultivation of the tea plant in Brazil, and sanguine expectations are entertained that ultimately it will be enabled, not only to supply its own wants, but to carry on a large commerce in it with other countries. The plant flourishes luxuriously, but the quality is not equal to that from China.

In the region of Coritiba, our missionary met with the famous Paraguay herb, the Matte.

The infusion is prepared in a bowl. A small quantity of the leaf, mixed with sugar, is suffered to stand a short time in cold water. Boiling water is then added, and it is at once ready for use. A peculiar method of drinking has grown out of the circumstance, that the particles of leaf still swim in the tea. It is sipped through a tube, with a fine globular strainer at the end, immersed in the fluid. For ordinary and plebeian use, a reed with a wicker bulb, neatly wrought, suffices. Among the wealthy, the *bombilha* must be silver. Great virtues are ascribed to this tea. It is said, especially if taken cold, to relieve hunger and thirst.

Indians, who have been labouring at the oar all day, feel immediately refreshed by a cup of the herb, mixed simply with river water. In Chili and Peru, the people believe they could not exist without it; and many persons take it every hour in the day, debauching with it, as the Turks do with opium. Its use was learned from the natives; but, having been adopted, it spread among the Spaniards and Portuguese, until the demand became

so great as to render the herb of Paraguay almost as fatal to the Indians of this part of America, as mines and pearl-fisheries had been elsewhere.

The Jesuits attempted to cultivate the shrub bearing the Matte, but only partially succeeded. It grows spontaneously in the regions of Coritiba and Paranaguá, and flourishes best when suffered to propagate itself. I might remark, that the flavour of the Matte was, to my taste, quite as agreeable as that of the Chinese tea—both decoctions being, in my judgment, quite inferior to the pure water of either North or South America.

It is not only on the prairies that a hunt with the lasso may be enjoyed. It is seen at times also in the streets of Rio.

At the *Matadouro publico*, situated on the Praya d'Ajuda, vast numbers of cattle are slaughtered daily. Among the droves that reach the capital from the distant sertoës, there is occasionally an ox so wild and powerful, that he is not disposed to surrender life without a desperate struggle. He breaks from his inclosure and dashes into the streets of the city, threatening destruction to whomsoever opposes his course. A horse, caparisoned with saddle, bridle, and a lasso festened to him by a strong girth, stands ready for the emergency, and is mounted in an instant to give pursuit. The chase is widely different in its circumstances from that which occurs in the open *campos;* but, perhaps, no interest is lost in the rapid turning of corners of streets, the heavy clatter of hoofs upon the pavement, and the hasty accumulation of spectators. In a short time, usually, the noose of the lasso strikes and fastens round the horns of the fugitive; an area is cleared and the scene above described is enacted, until the runaway ox is killed on the spot or led away in triumph to the slaughter.

At Paolo he heard the following

STORY OF AN ENGLISHMAN.

A poor man in England, on reading the work of Mr. Mawe, had become so enthusiastic with the idea of the vegetable and mineral riches of Brazil, that in order to get to the country, he actually came out in the capacity of a servant. After reaching Rio de Janeiro, he had, by some means, found his way up the Serras into the interior, where his industrious exertions had been rewarded with success, and where the botanist found him actually possessed of a fortune.

An appendix contains a large collection of statistics and other documents, and thus closes the first volume.

The second will be heartily welcomed, if it contain as much solid information as is to be found in this, and we would only hint to the author the propriety of a little more strictness in expunging Americanisms, the single fault we have to find with a very valuable contribution to the library.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

Black's Picturesque Tourist of Scotland. Fourth edition. Edinburgh, 1845. A. & B. Black.

EVERY BODY who has crossed the Channel must be familiar with *Murray's Handbooks*, those indispensable companions to travellers upon the continent. What those hand-books perform for the tourist abroad, the volume on our table supplies to the tourist at home. Since the visit of the Queen to Scotland, the tide of travelling has turned thither, and the increasing accommodations of the railways will doubtless soon make the highlands as well frequented as the Rhine.

They who are rational enough to contemplate a visit to Scotland during the present summer, must not omit to take with them this volume as their guide. They will find it to be a singularly intelligent, useful, *sensible* companion. It really supplies the information wanted; and not, like most guide-books, every sort of instruction save that which is required. Scotland would, in fact, be scarcely half seen without its aid, to inform us what to look for, and what it is we are looking at. Then it tells in most intelligible and business-like form of the travelling expenses upon which the intended tourist must reckon, and how he may proceed with the most economy of cash or time. Fifteen tours are successively described, compassing the whole country, together with the objects to be beheld in each; and short but graphic accounts of their history and most striking features; and these are moreover illustrated by no less than sixteen maps and plans, and forty-five views of scenery, &c., some engraved on steel, others on wood, forming in the whole one of the most complete and practically useful guide-books we have ever opened either at home or abroad.

ART.

SCULPTURE.

IN our last critique upon the Royal Academy exhibition we remarked, with expressions of disappointment and regret, that there were fewer specimens of superior statuary this season exhibited than we for some years remembered. Arriving in this country too late for admission to the gallery, or excluded from some other cause, we know not which, a singularly beautiful and meritorious statue has, through the kindness of Messrs. GRAVES, been made known to the public. It is called *The Greek Slave*, is the production of an American sculptor named POWER, and surpasses beyond a doubt the best work of this class in the year's exhibition. The figure is that of a female, tall, and of exquisite proportions. She stands naked, her head inclined gently downward and towards the left shoulder; her weight thrown upon the left leg, while the right is eased back. Her wrists are fettered loosely, and with her right hand she leans upon a kind of post over which is cast some drapery. The *pose* of the body is highly graceful, the limbs are round and symmetrical, and the countenance is most lovely. The eyes are downcast, and the expression (equally conveyed by the attitude of the entire figure, as well as by the lineaments of the face), is a mingled one of humiliation, modesty, and resignation. The manipulative merits of the statue are great; the chiselling is perfect, and the marble has not been overwrought—a fault to which the works of one of our best sculptors are too clearly obnoxious. It may be objected that the posture of the left arm of this beautiful statue is borrowed from the Medicean Venus, and as far as action goes, undoubtedly it is; but the line is varied, and as the act itself is the natural result of an emotion springing from the circumstances which bear upon the figure, there is no reason why the modern should be shut out from availing himself of the same as the ancient sculptor. Altogether this is a work to remember, one of which CANOVA might have been proud, and our own classic-minded FLAXMAN not ashamed.

In the opposite corner of Messrs. GRAVES's gallery is shewn a "Statue of a Nymph preparing for the Dance," by Mr. W. THEED. A descriptive card, placed beside it, informs us that this marble was forwarded by the artist from Rome for the Academy exhibition, but reached England too late for admission. It is a work full of pretensions; one on which much time and labour have been lavished. The nymph holds a tambourine in her right hand, whilst with the other she adjusts her drapery, so that it may least encumber her when dancing. The face is handsome; the attitude unhackneyed, and the modelling of the limbs singularly bold and prominent—so much so, indeed, as to amount to a fault. The drapery is finely cast, and the hollowing out of the folds has been so cleverly managed as to convey the idea of lightness and texture so as we never before saw it in marble, if we except, perhaps, the notable instance in the figure of Grief on ROUBILIAC'S fine monument of Bishop Hough in Worcester cathedral. The care bestowed on this statue deserves the highest praise, and makes us regret that greater judgment had not been at the artist's command, when he meted out the proportions of his figure, to have contributed to the production of a perfect work of art. The air of sturdy, rustic strength, which the lower limbs present; the squatness of the figure, and the idea the work suggests of a forced and exuberant womanhood, are objections which all the merits of this work fail to counterbalance.

MUSIC.

New Publications.

They nam'd Him; a Ballad. Words by L. E. L.; Music by G. J. O. ALLMAN. London, Prowse.

Mr. ALLMAN still improves; there is evidence of growing feeling in his composition, and of more self-reliance. This is better worth a place in the portfolio than nine-tenths of the music every day produced.

The Musical Bouquet. Parts I. to V. 1845. Bingley.
THIS is a collection of miscellaneous music, original and selected, comprising opera, overture, quadrilles, polkas, waltzes, songs, duets, glees, &c. published at a very trifling cost and illustrated with engravings. Here a piece of music that used to be *marked* 2s. may be had for *threepence*, and the great success which, as we understand, has attended the enterprise, proves that there was an immense public previously debarred from the purchase of music by its immense cost. That complaint no longer exists: the *Musical Bouquet* has removed it.

THE DRAMA AND PUBLIC AMUSEMENTS.

HER MAJESTY'S THEATRE.—We have little to record this week as to the Italian Opera: the chief feature has been JULIA GRISI'S benefit, which took place on Thursday, when *Otello* was performed for the first time this season. We need hardly add that it was nobly performed, and that a vast crowd assembled at once to do homage to the great cantatrice, and to enjoy ROSSINI'S glorious production. *Lucrezia Borgia* has been presented twice. As the heroine of this terrible drama, GRISI is finer, as actress not less than as singer, even than PASTA herself—the Mrs. SIDDONS of the opera stage. Indeed, we cannot imagine JOHN KEMBLE'S sister greater in the part than GRISI, with such mighty power, such intense passion, such perfect nature, does she impersonate the high-souled, intellectual, bold, bad woman, angel in her feelings as a mother, devil in all besides, whose story she presents before us with such awful reality. What a *Beatrice Cenci* she would make! Towards the close of the ballet, the charming CERITO slipped, and falling as heavily as such a sylph could fall, created a general alarm throughout the audience—an alarm, however, almost immediately dispelled, the dropped curtain being again raised, by her reappearance before them safe and sound. You may readily conceive the thunder of *vivas* which congratulated her escape. The Viennese children have been re-engaged.

FRENCH OPERA, COVENT GARDEN.—We have sincere pleasure in stating that this refined and most agreeable entertainment is fast achieving the success it so amply merits. We found a good attendance on Friday, and on Monday the house was well nigh full in every part. The performances on the former evening were AUBER'S opera, *La Part du Démon*, and *Le Maître de Chapelle*, an operetta. The plot of the former is known to English playgoers from *The Little Devil*, the Anglicized form under which it appeared at the Haymarket, with MATTHEWS and Madame VESTRIS as its principal personages. It was also, we believe, *conveyed* under the designation of *The Devil's in It* at the Princess's. But the imitation gives the barest possible idea of the original. In the first place, there is infinitely more wit and point in SCRIBE'S libretto than in the English version; and, secondly, you want AUBER'S graceful, sparkling music, which, at Covent Garden, you realize in all its perfection. Madame LABORDE is the heroine—a pretty woman, an accomplished actress, full of graceful, lady-like ease, of quiet animation, and a charming singer; to our mind, quite as "fascinating" as Madame THILLON, though she takes no trouble about the matter, whereas the fair ANNA, though she has no need to do so, works as hard to be fascinating as a snake-charmer. Madame LABORDE is excellently supported by CONDERE, as *Rafael*; by ZELZER, as the *King*, and by the whole company, high and low. Indeed, one main cause of the masterly manner in which the operas here are executed, is that every body seems to make a pleasure of his business, the footman being as careful to fill his part well and accurately as is his master. In the *Diamans de la Couronne*, for instance, the company assembled at the house of the minister of justice, instead of standing painfully about, silent, and with long faces, when they have no chorus to join in, with still longer faces when they have, or, if seated, sitting as though they had no business to be so, are grouped comfortably and easily about the stage on chairs, on sofas, on ottomans, chatting, laughing, and playing as they would at a real *soirée*. The operetta we mentioned above, *Le Maître de Chapelle*, is an exceedingly pleasant affair, wherein, among other pleasant things, LAURENT QUILLEVERI, in the character of a musical composer, sings a capital burlesque *scena*. It was repeated on Monday, preceding *Les Diamans de la Couronne*, which we counsel our readers to go and see on the first recurring opportunity, as the only chance they are likely to have this year, in England at least, of seeing so charming an opera done complete justice to. We say *this year*, for we are in full confidence that the welcome given to the Brussels *troupe* on the present occasion will be such in its results as to induce them to pay us an annual and an extended visit. Let us not omit to offer just tribute to Mademoiselle PLUNKETT; her *Cachucha* is a true thing, so full of fire, of purpose, of meaning, and withal so graceful, so artistically excellent! Her costume is perfectly gorgeous.

Robert le Diable was produced on Tuesday. We were unable to attend, but shall notice it next week, only observing now that this magnificent work has never been adequately performed in this country since MONCK MASON brought over the Grand Opera Company from Paris. The German Company gave it not badly, it is true, but the German *Duke Robert* was so preposterously fat as to make the whole thing look somewhat burlesque. We recollect, when he was going to fall on his knees before his mistress, we anticipated that a footman would have to come and help him up, as happened to over-obese GIBBON, when he popped the question to his Lausanne fair one; but the *Duke*, foreseeing this dilemma, only made a feint of kneeling, and that was a terrible business.

ADELPHI THEATRE.—The indefatigable SELBY'S pen was hardly dry from revising the last pages of his *Irish Dragoon*, when he set to work, or, more correctly speaking of such a trifling matter, to play upon, *Powder and Ball; or, St. Tibbs's Eve*, a joke upon the *bal costumé* at the Palace, which was successfully produced here on Tuesday. It is in truth an amusing extravaganza, and capitally acted by SELBY himself, WRIGHT, Mrs. FRANK MATTHEWS, and Miss WOOLGAR. The piece was put on the stage with excellent effect.

HAYMARKET.—A new piece was produced here on Wednesday, entitled *The Old Soldier*. It is only a sketch, but as full of good stuff as a plover's egg. M. VALLEBRECQUE used to say that an Italian Opera Company need only consist of Madame CATALANI and *trois ou quartre poupées*; the *personæ* of *The Old Soldier* are Mr. FARREN and *trois ou quatre poupées*, for on the competent shoulders of that accomplished actor the whole thing rests. The plot, if we may employ so lofty a term on the occasion, is this: *The Old Soldier*, a disbanded veteran, ninety-five years old, poor as a church-mouse, but heart-whole as ever, has, some time back, received on the field of Worcester, from the dying hands of his *seigneur*, Sir Roger de Trevor, a letter addressed to "Honest Michael Crump," the steward, which tells him where the family papers are deposited, within a secret panel in the library at Trevor Hall. With this document, carefully preserved in an old handkerchief, old *Leathersole* arrives, after many painful wanderings, at his native village within the domain of Trevor. To his utter amazement he finds that the roguish steward has, somehow or other, got possession of the estate, to the exclusion of Sir Roger's only remaining relative, a nephew. Seeing how matters stand, *The Old Soldier* opens the letter himself, it being obvious that *Master* Michael Crump is not the *Honest* Michael Crump indicated on the superscription. But now occurs a difficulty; *The Old Soldier* cannot read the letter, nor can *Buff*, a worthy fellow, serving *Crump*, but devoted to the old family, and therefore cordially hating his master. At this juncture in comes Sir Roger's nephew, who, in the overhearing of *Leathersole*, proposes to *Master Crump* for his daughter and is rejected, for the sake of a supposed better match, though the fair *Helen* is as attached to the nephew as he to her. The letter is accordingly intrusted to the nephew, who learns from it that the panel in question is beneath a particular picture in the library; but, alack-the-day! all the pictures have been removed! *Leathersole* is for a moment *au dessus poir*, but a thought strikes him; he remembers that the picture designated hung exactly opposite to him when, many years ago, he was undergoing, at Sir Roger's hands, in that very room, an examination touching deer-stealing. With excellent effect, he goes over the scene, incident by incident, and placing himself where erst he stood, thus ascertains the exact position at that time occupied by the picture; the panel is found, and the papers, which declare the nephew heir of Trevor; *Crump*, no longer *Master*, any more than *Honest*, is but too glad to escape other punishment by resigning land and daughter to the just claimant. It is needless to add that Mr. FARREN'S impersonation of *The Old Soldier* is life-like; it exhibits, in a high degree, the nice discrimination which distinguishes this finished actor's representations of senility. With ordinary dramatic artists, all old men are exactly the same; old courtiers and old citizens, old peers and old peasants, old civilians and old soldiers present identically the same features, whereas they are all marked by as different characteristics after they have attained sixty years of age as before. The *comediettina*, which we take to be adapted from *Le Père Tourloutoutou*, one of BOUFFE'S pieces, was, with the general approbation of a full house, announced for repetition every evening till further notice.

SURREY THEATRE.—We found a string of novelties in successful progress at this theatre on Monday last. First came *The Old Mint of Southwark*, a drama with immense effects, and as much (red) fire in it as in any of the productions of our old dramatists. The plot is too complicated to admit of description in our columns; suffice it to say, that it has some scenes of no inconsiderable interest. Mr. HENRY SMITH, the American vocalist, who has entered upon an engagement here, sang "The Maniac," a *scena* we cannot abide, but which he sings very well; and "The Ship on Fire." Next came, its first performance, a drama called *L'Estelle, or the Wrecker's Bride*, ad-

mirably adapted to the lovers of the terrible who throng this establishment. The story runs thus:—A lady and her child, about twelve years before the commencement of the drama, were wrecked at or near the *locus in quo*. The mother perished, the child was saved by one of the marauders who plundered the vessel. 'Tis a stormy night when the scene first opens upon us, and a stranger seeks shelter in the cottage of *Pierre La Roche*, the benevolent wrecker, in gratitude to whom he tells the story of his life. From this it is evident to the meanest capacity that he is the father of the preserved girl. Further on, we find *Pierre La Roche* proposing to his adopted daughter the chief of the wreckers as a husband, but on her declining the suggestion on the score of pre-engagement, the worthy fellow withdraws his proposition. That very evening, the accepted lover happens to be the only survivor of a wrecked vessel; the marauders are about to kill him, when his mistress saves his life by offering on these terms to marry First Ruffian (we have lost our play-bill, and forget the name). Not that she means to keep her word, for as soon as her lover is free, off they go, and when pursued, she fires a powder magazine, and blows all the nefarious crew into immortal smash. The stranger turns out to be *Colonel La Roche*, brother of *Pierre*, and giving his daughter and his blessing to the accepted lover, every thing ends happily. We confess to a great fancy for these melo-dramas, with their intensely thrilling effects and terrific combats. They *mind us of our boyhood*, when the Coburg was the Coburg, and when Messrs. BLANCHARD, ever the defender of innocence, and BRADLEY, utterly incorrigible as a remorseless assassin, were wont to fight a good hour by Shrewsbury clock, amid the wrapt attention of pit, boxes, and gallery.

VAUXHALL.—The masked ball at these gardens on Monday night was superior to any thing of the kind we have had occasion to notice of late. In the first place, it was *al fresco*, a great blessing to dancers and promenaders, at all times, weather permitting, and more especially in the Canadian summer which has all at once come upon us; then the incomparable MUSARD was there, conducting with all his wonted excellence, with all his accustomed grave consciousness of command, his Band of One Hundred Performers; then, the dresses were much better than usual, and we actually observed several attempts at sustaining the characters assumed; then, the deportment of the company, while, as inevitable in the default of a responsible committee of selection, sufficiently *dégagé*, did not, in any cases that fell under our notice, up to half-past two, when we left, necessitate a caning or a call for the police. Then the wines and viands, of a good quality, were purchasable at a reasonable rate; the whole of the arrangements, in short, as far as we observed, were effective and in good taste. The appearance of the Royal Promenade, in all parts brilliantly illuminated, with its broad walks, festooned and trelliced o'er with endless wreaths of infinite-coloured lamps, thronged with the gay representatives of all known and unknown lands, "from Indus to the Pole," was really very striking. We have no doubt these *Bals*, for that of Monday was the first of a series, will be successful. We do not understand why similar fêtes, conducted on a system which should exclude improper persons, are not organized. Once established, they would unquestionably be profitable to all parties, "enriching him that gives and him that takes;" the one by the money, the other by the merriment realized; for "to our poor way of thinking," an evening spent pleasantly, and not too irrationally in its pleasantness, is, as well in its actual enjoyment as in its reminiscences, capital stock, enabling us to do our daily work more cheerfully and contentedly till the next joyous occasion comes round. A series of *Bals Masqués* or *Costumés*, under the direction of a committee of management and authentication, such as that which rules Almack's, would, in our opinion, be decidedly beneficial to that portion of English society constituted by the higher class of industrials, professional and commercial, which is at present for the most part in a deplorable state of stagnation. "All work and no play makes Jack a dull boy," says the aphorism; and a dull affair does Jack Bull, rich Jack Bull, make of his leisure time. Observe whole squares, streets, crescents, and what not, in more or less affluent urban and suburban quarters, not actually aristocratic, and you shall find them 300 out of the 313 available nights of the year, as silent as sepulchres. The master of the house goes to business in the morning; goes home at four, or five, or six, as the case may be; goes to dinner, and then goes to sleep till bed-time, and the rest of the family acting, first perforce, and then from habit, conformably. "They manage these things better abroad."

The anniversary of the memorable day which gave birth in the ancient capital of Normandy, A.D. 1606, to PIERRE CORNEILLE, was celebrated on the 6th inst. at the THEATRE FRANCAIS, in Paris, in this fashion: When the curtain drew up, all the principal performers were seen grouped around a bust of the great dramatist, holding in their hands, more or less listlessly, according to M. JULES JANIN'S account, garlands, more or less faded. The charming PLESSY was there, and the terrible RACHEL. M. GEFFROY then came forward, and recited CASSIMIR SOPHIZNE'S oration on the inauguration of the bronze statue of CORNEILLE, at the close of which the garland-bearers deposited their offerings at the feet of the pedestal, and the curtain fell; rising again, in due course of time, for the representation of the author's *Menteur*, a much more satisfactory affair than the preliminary apotheosis.

THE COLOSSEUM.—Already we have noticed at considerable length the magnificent day exhibition at this building; we must now briefly review the still more magnificent night-scene, limiting our present remarks to that which is certainly the most extraordinary *sight* in London—the panorama of the metropolis by night—reserving the other attractions of the place for future notices.

Imagine, then, a view of London by night; every street lighted up, even the shop-windows visible; and thus being enabled to trace a plan of the whole metropolis. The full moon is shining above; the Thames lies bathed in light, its surface sometimes slightly stirred by a passing steamer or a summer wind. We say passing, because the water is seen to move, light clouds actually flit across the face of the sky, and indeed in all respects, so perfect is the deception of pictorial art in this unique exhibition, that it would be very difficult to persuade a stranger who had been taken thither by night, that he had not gazed upon veritable London, instead of a canvas; nay, while looking at it we caught ourselves continually relapsing into a sense of the reality of the scene. Every part is painted with most elaborate care, and the countless lines of streets are shewn with such distinctness, that the spectator has no difficulty in at once discovering his own residence.

This monster diorama, the greatest triumph of pictorial art that ever has been accomplished, should be seen by all who can feel an interest either in the subject, or in the astonishing achievement of the artist, and, being one only of a number of attractions collected within this noble building, no visitor from the country should fail to make it one of the earliest, as it will certainly be the most splendid, of the *sights* he beholds.

ROYAL POLYTECHNIC INSTITUTION.—Among the many attractions we have noticed there is one which certainly deserves great commendation; it is the optical department, which we understand to be under the superintendence of Mr. LONGBOTTOM, and which has of late been carried on with much activity. The particular instrument to which we allude is called the Chromatrope; its wonders are shewn in the theatre, after the Dissolving Views. It consists of a series of beautiful concentric circles of various colours, exhibited upon the white ground or disc. These revolve rapidly, presenting a most singular appearance. The circles seem at times to be moving independently of one another, and often in opposite directions, and at such times the general effect is similar to the rose turning on the back of a watch, the rings being divided into little compartments, although still maintaining their concentricity of colour. Another very striking peculiarity of this exhibition is, the undulation of the colour, which seems to possess a centrifugal motion, yet without confusion. The waves of light appear to emanate from a central nucleus, and assume in succession the colours of the various rings through which they pass. The phenomena are somewhat similar to what might be expected if a kaleidoscope were put in rapid revolution, the arrangement and combination of colours being varied at pleasure. There is another very interesting instrument, called the *Physioscope*, by which the human face and form are magnified to an immense size; while by another, called the *Proteoscope*, flowers and fruit are also highly magnified, and yet retain their delicacy of colour.

ORIGINAL CONTRIBUTIONS.

A SIMILE.

How soon, how very soon,
No vestige will be left
Of one who loved the pallid moon
And died of hope bereft!

I see thy hand, oh Death!
I hear thy stealthy tread;
And as I feel thy icy breath,
My days are numbered.

Come, then, thou churlish friend;
When pleasure lit my way
I scorn'd a passing thought to lend
Unto the coffin'd clay.

But I can greet thee now,
Grim chastener, grisly form,—
Take these grief-wrinkles from my brow,
And let it feed the worm!

E'en thus the bodily eye
Caught by the garish ray,
Can mark no stars for brilliancy
Throughout the sunny day;

But down the chilly mine
Though noon still reign above,
Each gentle star will softly shine,
And cast its gleam of love.

NECROLOGY.

REV. MR. BARHAM.

We regret to have to announce the death of the Rev. Mr. Barham, better known to the literary world as the author of the "Ingoldsby Legends," and of one of the most popular of our modern novels, "Cousin Nicholas." Mr. Barham died on Tuesday at his residence in Amen-corner, St. Paul's, after a short but severe illness. It seldom falls to the lot of a journalist to record the death of a gentleman who more thoroughly combined high and distinguished talents with all the social virtues and qualities. Those who had the happiness of knowing the deceased, will read of his death with unfeigned sorrow, and sympathize with the members of his family in their deep affliction.—*Globe.*

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

USES AND OBJECTS OF THE STUDY OF MESMERISM.

(BY THE EDITOR.)

HAVING considered the *religious* uses of Mesmerism, let us turn now to its scientific uses.

Of these, the foremost in our estimation is the light which it throws upon that branch of science concerning which our ignorance has been hitherto the most profound—the physiology of mind, both as respects its relationship to matter, its anatomy (if the term may be permitted in default of one equally descriptive), and its mode of operation. Of these, at present, we may be said to *know* almost nothing. Theories and conjectures there are and have been without number, but of ascertained and proved facts, founded like the other sciences upon demonstrative evidence, as yet the world has possessed none. One of the many and invaluable uses of Mesmerism, if true, will consist in this,—that it supplies the evidence so long demanded, and opens to us the portal through which, if at all, we shall be enabled to explain the mysteries of mind, and make a science of that which hitherto has been but conjecture. The possibility of a result so important to the highest interests of humanity would, it might be supposed, of itself have attracted the most earnest attention of every man whose reflections had rested at any moment of his life upon the smallness of our present knowledge in this direction, compared with the incalculable value of a more accurate and enlarged knowledge, were it but possible of attainment.

A glance at the knowledge we do not possess will best indicate what remains to be learned, and help the reader to understand how it is that Mesmerism promises to help us to that knowledge.

What know we of mind? So little, that at this moment its very existence is disputed, not a few persons of unquestionable intelligence contending that there is nothing save that which we behold as forming part of the man—brain, nerve. Among those who admit the existence of mind as distinct from matter, there is equal difference upon every subsidiary question; such as, How is it linked with the body? What is its relationship to the body? How does matter operate upon it, and how does it operate upon matter? What are its functions as a whole or in parts. How does it think, feel? What are its influences upon other minds, or how is it influenced by them? What are its faculties, what its boundaries, what its prospects? There is not one of these inquiries the solution of which would not be fraught with incalculable blessings to humanity, and yet upon no one of them are philosophers as yet agreed. In almost every other region of science there are ascertained truths which no sane man questions; and which, because established, are practically applied to the advancement of human happiness and the enlargement of the sphere of human knowledge. Mind alone is yet a region of cloud and conjecture, where each man is at liberty to differ from all the rest; and, conscious that it is so, men shun with instinctive caution the application of any single doctrine of mental physiology to the practical affairs of life.

It may, therefore, be pronounced that, spite of the thousand conflicting systems the ingenious have delighted to weave—of the actual physiology of mind, as a science founded on demonstrated facts, we are, at this nineteenth century of the Christian era, still entirely and shamefully ignorant.

We affirm that Mesmerism, if it be true, *must* remove a very considerable portion of this ignorance; that it affords the only known means of experimenting directly upon mind, and substituting facts for conjectures, proofs for hypotheses. *What* Mesmerism must thus accomplish for mental science, and *how* it will effect that momentous object, we propose next to consider; and the subject is so large, that it must ask the serious attention of our readers for a few minutes during the next and some following weeks.

CLAIRVOYANCE.—The following is related by the *Gazette des Tribunaux*, which asserts that its authenticity is well attested:—"On Wednesday in last week, a young man named B——, aged 19, the only son of a wealthy farmer of the commune of Wuissons, in the canton of Lonjumeau, went with a cart and carter to the rock of Saulx-les-Chartreux, a distance of about two leagues, to bring back a load of stones. The cart being filled, it was driven towards Paris, the young B—— following it to Lonjumeau. There he met with a young friend, with whom he went to dine at his house, about half a league from Wuissons. At eight in the evening they walked together half the way towards Wuissons, where they parted. As the night passed and the next morning came without the appearance of the young B——, his family were thrown into the greatest distress, and had every possible search made for him during the three following days—forests and woods being penetrated in every direction, and the river and ponds dragged with the utmost care—in which labours a large party of gendarmes and upwards of 60 inhabitants were engaged, but no trace of the absentee could be found, except a letter, which was known to belong to him. Two poachers, however, were caught on Friday night netting quails, and robbing the partridges' nests. As a forlorn hope the parents came to Paris, and consulted a female somnambulist. The result of this consultation is thus related:—The somnambulist, in answer to the questions put to her, said, 'Your son is not dead. I see him on a rock. He is now coming down, and is following a cart towards a town. There he dines with a friend. I see them at table. They separate on the road. A little after I see your son stopped by two men—they make him drink, but what they give him I cannot tell. I have now lost sight of your son, and know not what has become of him. But he will return, and will not himself be able to tell what has become of him during the three days. He will return home tomorrow morning, Sunday.' On their return to Wuissons, the parents of the lost youth communicated to the inhabitants the hope given them by the somnambulist. The news spread to all the surrounding communes. The singularity of the circumstances, the miraculous words of the somnambulist, the coincidence of the two men having been arrested, excited all minds to wonder and anxious expectation. On Sunday morning all the roads leading to Wuissons were covered with people, watching for the arrival of the lost youth. At last, about 11 o'clock, the diligence from Orsay drove up, and from it jumped the young man, and threw himself into the arms of his mother. On being questioned he confirmed in every particular the statement of the somnambulist. After having been left by his friend, ande whil he was walking home, he was stopped by two men, who made him drink. From that moment he lost his senses, and had no recollection of where he was taken, or what became of him for three days. On Saturday night, however, a woman came and conducted him from where he was to the village of St. Aubin, and left him in the middle of the street, saying that a coach would shortly come through, take him up, and carry him home. This actually occurred, but he was totally unable to give any other account. One important fact, however, must be added,—the watch and the sum of 10f. that he had with him were stolen from him."

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

The past week has brought some new publications, which have been distributed among our corps of contributors for review according to their various merits, and in the meanwhile we here, according to custom, acknowledge their receipt. Mr. Moxon has sent two very handsome volumes, the one an *Essay on the Wisdom and Genius of Edmund Burke*, illustrated by extracts from his speeches and writings, and with a summary of his life; the other, a new edition of the *Works of Spenser*, in one volume, a very gem of typography. From Mr. Dolman we have received a curious volume, entitled *Collections towards illustrating the Biography of the Scotch, English, and Irish Members of the Society of Jesus;* from the pen of the Rev. Dr. Oliver. Messrs. Black, of Edinburgh, have forwarded a new and handsome edition of their *Picturesque Guide-Book for Scotland*. From the author, Mr. Colquhoun, of Edinburgh, we have received a translation of Wienholt's *Lectures on Somnambulism*. Messrs. Dearden, of Nottingham, the publishers, have transmitted a new and revised edition, in three volumes, of Wright's *Translation of Dante*. From Messrs. Taylor and Walton we have the second volume of Dr. Gregory's *Outlines of Chemistry;* and from Maclachlan, Stewart, and Co. of Edinburgh, a seemingly useful treatise on *The Human Body in Health and Disease*. Mr. Chapman, of Newgate-street, has inclosed a volume which will hereafter be the subject of a notice proportioned to its great intrinsic worth: it is a translation of the *Philosophical and Æsthetic Letters and Essays of Schiller*. A parcel from Messrs. Curry and Co. of Dublin, incloses a promising volume of *Dramatic Sketches and other Poems*, by the Rev. James Wills; and a *Guide to the Irish Watering Places*, by Dr. A. Knox. Many works of lesser importance, reprints, serials, &c. have come to hand, but of such, brief notice in their proper places will be sufficient. The list here is intended to serve the double purpose of an acknowledgment to the publishers and authors of works that have come to hand, and to our readers of literary intelligence—a current record of the progress of publication in England.

Again we request the booksellers and country librarians to send us communications as to their experience of books and readers similar to those which have already appeared in our columns.

TO THE EDITOR OF THE CRITIC.

Sir,—As you have expressed a wish to have the opinions of the various library-keepers as to the class of books most in request, I beg to express my concurrence generally in the statements of the librarians which have already appeared in your journal. The works of Bulwer, James, D'Israeli, Marryatt, Dickens, and Lever are the favourites. Mrs. Gore and Mrs. Grey have many admirers; Mrs. Trollope but few. Fashionable novels are little sought after here, and I don't know that historical ones are preferred in a general way to others. Travels and biographies are often inquired for, but by no means so generally as novels; neither are they so well adapted for circulation. Much more *time* is required for the perusal of such books, and this circumstance, in addition to the comparatively small demand, renders them very unproductive to such libraries as are obliged to be limited in their selection.

The cheap editions of Murray, Chambers, Smith, Burns, Knight, Bruce and Wyld, and Clarke, interfere sadly with the libraries, but certainly improve the book trade.

I do not think that if novels were published in a small form at 4*s.* or 5*s.* they would be *generally* purchased by the public. There is always an objection to small print. But if they were *half* the present price, I have no doubt the sale would be amazingly increased, because *all* the libraries would then purchase books *new*, instead of waiting, as numbers at present do, to pick them up second-hand at a reduced price, only buying a new one here and there.

The monthly series of Chapman and Hall certainly deserves encouragement, and is, I think, an important step towards an alteration in the guinea-and-a-half system; yet, as it is to the libraries they must chiefly look for support, I am of opinion that an entire work should be published *at once*, bound in the usual library style. Such books as *Mount Sorel* would be sure to command a sale.

The *Novel Times* should also be supported, and as the publisher has adopted the suggestion of Mr. Procter, I see no reason why it should not circulate.

In conclusion, allow me to observe that The Critic is becoming very popular in my reading-room, and I am chiefly guided by its reviews in my selection of books, and have hitherto been well satisfied with its judgment. The articles on advertising are instructive—an alteration in the present system is required. No doubt if the charges were reduced, a proportionate increase would soon follow. I am, yours, &c.

Tenby, June 17, 1845. G. H. Hough.

TO THE EDITOR OF THE CRITIC.

Sir,—I have much pleasure in adding my testimony to the merits of your publication. At first I found my customers were somewhat reluctant to venture upon ordering it, since so many new publications are worthless; but after a trial I soon perceived that the merits of The Critic were duly appreciated, and its sale with me is now greater than either the *Athenæum* or the *Literary Gazette*. I am, yours, &c.

Leighton Buzzard, Beds. Edw. Rowland.

The Critic.—(From Mr. J. Charles, bookseller, Dublin.)—The late alteration in the publication has given complete satisfaction.

LITERARY INTELLIGENCE.

The late Thomas Hood.—We are informed that a local subscription was last week set on foot at Manchester by a few private gentlemen in aid of the fund now raising for the family of this distinguished writer, and that upwards of 100*l.* were collected in the first two days. Contributions are still flowing in with a rapidity that well attests the liberality of Manchester, and the estimation in which literary genius is there held. It is probable that, in the other great towns of Britain, subscriptions for this excellent object, if started with equal spirit by individuals, would be supported with similar liberality by the public. Among the distinguished names which have already appeared in the subscription lists of the fund now raising in honour of this eminent writer are the following:—Lord Francis Egerton, Sir Robert Peel, Lord Ashley, Sir Edward Bulwer Lytton, Mr. Charles Dickens, the Hon. Mrs. Norton, Mr. Monckton Milnes, the Marquis of Northampton, Mr. Rowland Hill, Mr. G. P. R. James, the Marquis of Normanby, Lord John Manners, Sir John Hanmer, &c.

The late M. de Schlegel.—The *Journal des Débats* publishes the following extract from a letter dated Bonn, the 7th inst.:—"The will of M. de Schlegel was opened last week. The illustrious author bequeathed all his unpublished manuscripts to the celebrated archaiologist, Frederic Theophilus Welcker, Professor at the Royal University of Bonn, with a request that he would publish them. The writing-desk, which M. de Schlegel bequeathed to the King of Prussia, is of massive silver, and belonged formerly to Madame de Stael, who presented it to M. de Schlegel."

The late Rev. Sydney Smith.—We are gratified to hear, that with the entire approbation of the family of the late Rev. Sydney Smith, his biography will be written by his friend Mr. Thomas Moore. Numerous letters from the pen of the late witty canon must be scattered about in the hands of his correspondents, and we earnestly hope they will avail themselves of this occasion of making them available to Mr. Moore for the purpose of his work.

To Readers and Correspondents.

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisements adopted by The Critic.

For 6 lines and under..... 5*s.*
For every three lines above ..... 1*s.*

The volumes of The Critic *neatly half-bound, as completed, for* 4*s.* 6*d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of The Critic *may be had at the office, or by order, of any bookseller in the country, price* 4*s.* 6*d.*

The Critic *may also be had in monthly parts, sewed in a wrapper, price* 1*s.* 6*d. each.*

THE CRITIC,
And Journal of Literature.

SATURDAY, JUNE 28, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

ADVERTISING.

THE weekly papers offer a much larger and more perplexing choice than do the daily journals. In amount and character of circulation, in the different classes by whom they are patronized, they submit to the advertiser claims so conflicting that it requires some knowledge of the actual condition of the press, combined with considerable calculation and forethought, to insure that the money intended to be spent in advertising be laid out to the best advantage.

It must be borne in mind that two elements are always to be considered in the choice of an advertising medium, *the extent* of circulation, and the *character* of circulation. A journal with two thousand subscribers may be, and very often is, a better medium for certain kinds of advertisements than a journal that can boast its sixty thousand buyers. *Extent* is the primary recommendation for advertisements addressed to the poorer classes, as quack medicines and such like; but *character* is the most important consideration for announcements addressed to the wealthy and intelligent.

Of all the weekly papers the *Weekly Dispatch* has the largest circulation; but that is chiefly among the lowest classes, and consequently it is peculiarly fitted for advertisements addressed to those classes. Its charges are high, but not unreasonably so, considering the number of copies issued.

The next in point of circulation is the *Sunday Times;* and that being among a better class (chiefly the middle class), it is adapted for a far wider range of advertisements than is the *Dispatch*. Its charges are extravagantly high, but they do not appear to deter advertisers, as its columns are always crowded. It would be unwise to address the aristocracy through this medium; but as a middle class medium it has few rivals.

The next in point of *number* is *The League*. This journal circulates to an immense extent (upwards of 20,000 weekly) among the manufacturing and commercial classes, and especially in the northern hive. Its readers are almost exclusively among the enterprising, the wealthy, and the intelligent of the community, and consequently it is an unrivalled medium for advertisements addressed to them. We are enabled practically to shew the excellence of this journal for an advertisement. We have advertised THE CRITIC in many of the daily and weekly papers, stating that a copy, as a specimen, would be sent to any person inclosing three postage stamps. A comparison of the results will afford a fair test of the value of each journal as an advertising medium for such a work. *The League* produced 18 applications; the *Athenæum*, 1; the *Spectator*, 4; the *Examiner*, 5; the *Britannia*, 2; the *Sunday Times*, 4; the *John Bull*, 2; the *Morning Chronicle*, 5; the *Morning Herald*, 5; and the *Times*, only 1. But the *League* is not very accessible. Only two pages are devoted to the reception of advertisements, and they are generally engaged a fortnight in advance. The charges are moderate, its circulation considered.

The *Spectator* has not a large circulation, but it is very choice, and it possesses the advantage of being read by all parties. It is an excellent medium for books and advertisements addressed to the intellectual, but not for quack and trade announcements. Its charges are very high, and therefore great care should be exercised by persons transmitting advertisements from the country to compress them into the fewest words consistent with intelligibility.

And here we must again pause.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

The Causes and Consequences of National Revolutions among the Ancients and the Moderns compared. A Prize Essay read in the Sheldonian Theatre, Oxford, June 4, 1845. By SAMUEL LUCAS, B. A. Queen's College, Oxford. London, 1845. Murray.

A SYNOPSIS prefixed to this singularly thoughtful essay will help to such a brief description of the author's views as it is the duty of a literary journal to present to its readers, not by way of substitute for the book reviewed, but as an introduction from which they may form their own judgment whether a further acquaintance with it will be likely to satisfy their wants or tastes.

Prize essays and prize poems are usually remarkable for wealth of words and poverty of thought. Whatever the cause, whether the fault be in the judges, who are more taken by sounding periods and mechanical excellencies than by largeness of ideas, or whether genius shrinks from a competition with mediocrity, conscious that its claims are not those usually acknowledged in such contests, certain it is that prize compositions are, with few exceptions, very dull and worthless works, and die almost as soon as they are submitted to public criticism.

The essay before us is undoubtedly one of the brilliant exceptions to the rule. It is not only a skilful piece of writing, but it is a masterly production of thought. The subject was large, too large to be properly considered within the limits assigned to a prize essayist, yet has Mr. LUCAS contrived with singular ingenuity to compress into his pamphlet a complete argument, which, with less labour, he might have expanded into a portly volume. The difficulty the reviewer feels is, how he shall yet further analyze that which is in itself but an analysis of a mighty theme.

Mr. LUCAS opens appropriately with a statement of his design, in viewing which he beholds "the spectacle apparent of two civilizations—Past and Present—the living and the dead," each the witness of revolutions. To understand aright the causes of these movements, it is necessary to group events; to observe the laws that governed each series, both in their origin and development, and thus to discern "the proportions of history in all their harmony, simplicity, and truth."

Thus methodising, we elevate history to a science, and are able to classify its laws, according as they are transitory or permanent, local or universal. We see the difference in the changes which spring from the spontaneous movement of nations within the range, according to their free volition, and those which are attributable to a higher power, defining and limiting the conditions of their progress. Revolutions are no longer assumed to be the result of accident, of characters and circumstances in fortuitous combination. They are seen to proceed from certain definite functions of national life, to be the result of a free and conscious agency in political society; yet, in their impulse, succession, and later result, to be a part of the Divine scheme which orders the universe.

History, thus philosophically viewed, establishes the existence of two laws as regulating all national movements,—the *law of development* and the *law of equalization*, the former being the chief cause of the differences, the latter of the resemblances, in revolutions.

The *law of equalization* produces two movements which can only proceed by consecutive stages, each designating an epoch in the history of nations; first comes the contest of property for equalization with birth, and then follows the conflict of numbers against property. We find civil equality invariably preceding political equality: "in other words, the recognition of a right to an equal administration of existing laws was prior to a share in the power which enacts them."

In ancient and modern history, we trace the same tendency to equality of both kinds. In the ancient world the revolution was fully accomplished. In the modern world it is only yet

in progress. It has reached its first stage, the equalization of property and birth; it is struggling towards the second, the equality of numbers with property. In the ancient world, the completion of the revolution was attended with entire destruction. The fate of the modern world under the development of the same law can but be conjecture, but Mr. LUCAS feels much confidence that the results will be different, inasmuch as the elements by which and upon which the change is to be wrought are different.

What then are those differences in the constitution of modern communities which are likely to affect the results of the inevitable progress of the *law of development?* These, according to Mr. LUCAS, consist in four elements—race, religion, the municipal system, and the idea of empire: from the two former especially may we expect the main difference in the aspects of our revolutions.

The temperament of the modern race is more in accordance with national liberty than was that of the ancients.

> In no respect did the northern races, the Celts and the Teutons, differ more remarkably from Classic nations than in the readiness with which the latter could sacrifice their liberty to their eager desire for political organization. When Aristotle asserted that the notion of a state was antecedent to that of an individual, he was merely giving philosophic expression to a natural sentiment of the Greek mind. To the Greek's lively and social temperament *αὐτάρκεια*—independence—was the greatest of evils; a condition befitting only gods or beasts, and, as happiness was impossible apart from a community, he was ready to surrender every thing to its welfare. Thus he had no regard for individual rights as opposed to the state. He never discussed their origin or extent, or treated them as having a substantive existence. On the contrary, he acquiesced in the state's interference with his personal liberty less reservedly than his Persian enemies submitted to every caprice of their king. What consequences, on the other hand, have followed the opposite tendency of the Northern! Prizing above all things his personal independence, history represents him as only overcoming by degrees his natural repugnance to political connection. For a time he appears in direct antagonism to the necessity of government, seemingly unwilling to sacrifice any portion of his individual will for a common purpose or united effort. He is thus seen rudely subverting the systems which the genius of Pepin and Otho had constructed, and relapsing into anarchy under the later Carlovingians and the Salic descendants of Conrad. The same spirit in a subdued form he exemplifies in the isolating tendencies of his feudalism, in his later struggles to preserve its privileges of private war and territorial jurisdiction. He is reluctant at first to be incorporated with the state,—incorporated, he revolts at its interference with his inclinations. Variously he exhibits his jealousy of its control—in Hermandads of Castile—imperial interregnums—rough sessions at Runnymede or Oxford—in the characters and guarantees he sought to exact as the price of his co-operation or the limits of his obedience. In later times he is found appealing to these past compacts for fresh concessions, persisting in the privilege of self-taxation—claiming liberty of conscience and freedom of speech—holding ominous language respecting rights of resistance—in habeas corpus acts and assertions that his house is his castle—maintaining the inviolability of his person and his home.

> Combined with this is a respect for the law, as distinct from the monarch or the magistrate; the entire separation of the judicial from the executive power; the municipal system, accustoming men to association and combination independently of the state, which were entirely unknown to the ancients, but which must vastly modify whatever revolutions may occur among the moderns.
>
> Religion constitutes another important distinction. Christianity, as compared with Paganism, has mighty influences upon private and public conduct. It has established a new code of morals, it moulds public opinion, and turns it into more wholesome channels; it is the antagonist of tyranny in all shapes; it connects duties with rights, and responsibility with power. Whatever the form of Christianity, its tendencies are the same. Almost everywhere it has become a recognised political element, and though sometimes perverted for purposes of state-craft, its influence upon the whole is to the maintenance of honesty and liberality in governments, by keeping ever before them a code of morals from which they cannot very widely depart.
>
> The modern world, then, presents this remarkable contrast with the ancient world, "that while the latter attained a more absolute unity, the former has resolved a more difficult problem, sustaining a balance in the internal strife, the frequent and active antagonism of all."
>
> The closest examination of ancient states presents them commonly at all periods, yielding to the preponderance of a single principle. Monarchy, aristocracy, tyranny, democracy, each hold sway by turns—each have their special term of domination. In modern history all are contemporaneous—flourishing in the closest juxtaposition — great monarchies — aristocracies—free cities and federal republics, encountering, repelling, or combining with each other.
>
> The energies of material civilization in modern times are scarcely less powerful in modifying the results of revolutions. Gunpowder, the art of printing, mechanical improvements, and so forth, prepare the way for the change, without the convulsion that accompanied it when there were few other elements in the struggle than physical force.
>
> Another important modifying influence is the *place* of the development of the law. Climate, soil, and geographical situation are all in favour of its more fortunate solution.
>
> And, lastly, *the time* of that development is a source of confidence to the philosopher. We have a past fraught with lessons that cannot fail to teach us wisdom; what changes we must look for, so that they will not find us unprepared; how we may best avoid the evils from which the ancients suffered, and how make the most of the benefits that may lurk in changes we cannot avoid.
>
> But withal the question comes,—is it true, as many assert, as all must have some lurking fear,—that the lot of individuals is the necessary destiny of nations? that in the history of a single state we may read the history of all? that youth, maturity, decline, old age, dissolution, are the course of empires as of men? that the cycle of each is the same, and the same the doom, and that thus ultimate and enduring progress is unattainable?
>
> Mr. LUCAS sees in Christianity a source of confidence in the permanence of progress. He finds it also in the *internal* movements of Europe.
>
> Could we also for the present purpose expose the *internal* movements of Europe, though the mind might regard them not without anxiety in their painful testimony to existing evils, yet as a whole, they too would be found to rebuke the despondency which could indulge in apprehensions of decay. It would be seen that society, old in years, has none of the symptoms of feebleness or lassitude—that it has attained refinement without enervation—and grown in wealth without deepening in corruption. Rarely would mind appear to have been more variously active, or private morality, in even recent exemplars, to have prescribed to itself a purer standard. Social wants, wherever detected, would be seen to attain an adequate expression, in the growing worth of earnest endeavour, may we not add, a possible relief? Above all, it would be recognised that the tone of the higher minds among us is hopeful—secluded thinkers—active politicians, turning with confidence to the distant horizon. The more distinct political changes also of the last century would be found altering indeed in form, but invariably tending to the stability of government. It would be seen that its resources have been increased by centralization—that where the latter was urged forward by violence or necessitated by emergency, its results have been accepted and perpetuated under circumstances of the strongest re-action—that local and secondary powers once superseded, the supreme executive, clothed with their functions, is enabled to fulfil them more efficiently, and in virtue of its strength and enlarged circumspection, to take to itself daily new responsibilities. Without, if war has made its conquests, peace would be seen enjoining its restorations—Westphalia—Utrecht—Paris—Vienna, all restoring the balance of power shaken for the moment by international encroachment. Lastly, the Church would be seen, mindful yet of her ancient prerogative, cherishing the poor, elevating the depressed, reconciling social extremes in her charity, and, in her promise of abiding strength, guarantee, as it were, of permanence to the system in which she has sunk her deep foundations. All elements and institutions—the aspect of the wide earth—the inner inspirations of the soul of man—and, if without irreverence we may so apply it, the language and tenor of Holy Prophecy—all would seem to point to the conclusion that "the *great* mutations of the world are acted"—that within the limits of a system, as a whole indissoluble, the "increasing purpose which runs through the ages" may some day consummate its ends in peace.

And with this eloquent and hopeful passage we conclude our notice of one of the most thoughtful and interesting compositions we have read for many a day.

NEWSPAPER

SCIENCE.

On the History and Art of Warming and Ventilating Rooms and Buildings; with notices of the progress of fireside and personal comfort, and of the Management of Fuel. By WALTER BERNAN. 2 vols. London, 1845. Bell.

WERE the success of a book in this country always commensurate with its utility, the author of these volumes would receive a larger bonus for his labours than accrues from all the fashionable fictions and light reading of the season.

Notwithstanding the high degree of refinement we have attained in domestic conveniences and arrangements, and the perfection to which, in particular cases, the arts of warming and ventilation have been carried by scientific men at the present day, a thorough knowledge of them has never become popular. The ignorance, indeed, that for the most part prevails on these subjects, at a period when people are abundantly intelligent on matters which much less closely affect them, is absolutely astonishing. One might suppose that the comforts of home, the equal and sufficient distribution of heat and light and air, since they affect men so powerfully as to lengthen or contract the period of life, while they have an immediate effect upon the health and spirits, would be regarded by them as of paramount importance, and command a proportionate degree of attention. Yet that such is not the case the experience of every one must give assurance. The requisite of light, indispensable though it be to the animal economy, is to a great extent denied by an ill-judged and pernicious fiscal enactment; ventilation is almost wholly disregarded, and if an improvement of late years has been introduced in our stove-grates by lowering them, as compared with those of former times, it is owing, not to local architects, nor to the usual fabricators of our houses, but to the sagacity of the manufacturer at the foundry. How rarely do we see a flue so constructed as to insure a uniform and sufficient draught, while, on the other hand, how provokingly abundant are smoky chimneys. Yet the means of securing the one, and of correcting the other, and of distributing warmth and pure air in a simple, adequate, and economical manner, are well enough known among scientific men, though the public prejudices in favour of long-established custom, the indolence of builders, or an aversion to what is looked upon as experiment, have one or all operated against their diffusion and adoption.

Compared with its profusion in past centuries, before agriculture had swept away the woods, and whilst our population was some two-thirds less than it now is, fuel at the present day is both scarce and dear. The value of inventions for the effectual heating of apartments, and for the purposes of trade, becomes therefore the more apparent; and it is to be regretted that the public eye is not more frequently turned in this direction. On the mismanagement of fuel, and the unwillingness of people to benefit by the inventions for their good which have from time to time been laid before them, our author has the following pertinent remarks:—"Though much has been done by ingenious men in the art of distributing heat for household uses, it must be confessed that in one or two instances only have they been able to make a permanent impression, or bring their contrivances into such general use as to constitute them 'machines of society;' while in the economy of fuel for manufacturing purposes invention has already produced marked benefits; yet, however great the saving that may ultimately be effected in furnaces, still, from the nature of things, it must ever be of small importance when compared with that which would arise were better methods of heating and ventilating dwelling-houses generally followed. Of the fifteen-and-a-half millions of tons of coals raised yearly from the mines, not more than three-and-a-half millions are consumed by steam-engines and in manufacturing operations; leaving eleven or twelve millions of tons of fuel to be mismanaged in kitchens and sitting-rooms throughout the country. The register-plate was described at the close of the fifteenth century by Alberti, the ancient Florentine architect, and by others who wrote afterwards. Were this simple and cheap smoke-valve introduced into every cottage chimney, it would save the heat of five or six millions of tons of coals that is now annually wasted and thrown away." This assertion of the author's, that more than one-third of the coal consumed in Great Britain is annually wasted, is a bold one; yet there can be little doubt it is founded on fact; at all events, it contains enough of truth to deserve consideration and justify attempts to correct so serious an evil.

Of the varied merits of the volumes which have given occasion for the foregoing remarks it were difficult to speak in terms too flattering. Keeping steadily in view to the very last the praiseworthy object with which he sets out, namely, the heightening of domestic comfort and the promotion of the public health, our author has urged every argument, and successively shewn every useful invention, having a tendency to secure those ends. He divides his work into nine essays; in which he traces the history of those inventions which have successively contributed to raise man in the scale of social comfort, from the very simplest form of society down to the civilization of the present age. His reading is most extensive; he has ransacked the works of every author among the ancients, and many of the moderns; seizing upon every thing that served his purpose, either for illustration, information, or amusement. The result has been, that, whilst producing an eminently useful and practical book, he has made a most entertaining one also. He philosophizes with judgment and shrewdness on the general influence of climate and temperature on communities; suggests the means of counteracting the pernicious effects of either by artificial appliances; enumerates the best of these, and describes them in a popular manner, so that not only the intelligent reader may understand them, but the humblest artificer construct from the details and diagrams set before him. So full of matter are these volumes, and so succinct is the arrangement of the many subjects embraced in them, that it would be impossible in the brief space we can here command to follow our author through the several divisions of his work. We must therefore content ourselves with laying before our readers such extracts as will convey a fair idea of the volumes themselves; that these are amusing and instructive will at once be seen, for we have not met with a page that is not both.

The hieroglyphics and paintings of the Egyptians furnish us with the first examples of social life drawn from the existing reality. The following is Mr. BERNAN'S description of the

DOMESTIC LIFE OF THE EGYPTIANS.

Their houses were generally small, connected together, and formed the continuous sides of streets: they seldom exceeded two stories in height, and had the reception-rooms and dormitories placed in the upper floor. All parts within and without were stuccoed; the walls of the rooms were painted, and the floors paved. The doors, formed with one or two valves, turning on metal pivots, opened inwards, and were fastened by bolts and locks. Window openings were fitted with lattices and shutters, that could be secured like the doors; they were made very small, on the principle that where little light is admitted, little heat penetrates. Yet though familiar with the manufacture, and many of the uses of glass in the time of the Pharaohs, the Egyptians overlooked its application as a transparent weather screen, and thus were without the enjoyment of rooms with a cheerful light and a proper ventilation in all seasons. Their furniture consisted of chairs and ottomans with stuffed seats, carpets, floor mats, raised bedsteads, and couches with mattresses; or the Egyptian might repose on the floor on skins and cushions, with bedding perhaps composed of the same materials as his garments—linen, cotton, or woollen. From the manner in which their houses were constructed, the use of doors and shutters, and the convenience of the furniture, it is clear this people, at a very early period, had made great advances in the arts of life, and were in possession of the elements of a comfortable indoor climate in the genial seasons.

But in this region there are great vicissitudes even of diurnal temperature. Fires are often pleasant in the evenings of June; and if they may be sometimes omitted in the middle of the day for an hour or two between November and March, the nights and mornings during that season are so cold that artificial heat becomes necessary to comfort. This was obtained by the primitive means of a fire on a hearth, or by placing a pan of live charcoal in the apartment; either method so strangely opposed in its rudeness to the elegance and ingenuity of the other domestic arrangements, that the great discomfort it must have occasioned to a race scrupulously nice and cleanly in person and dwelling, was not much lessened by the practice of burning odorous substances, and strewing their couches and floors with flowers. Their houses being designed more with a view to increase the enjoyments of summer, than to mitigate the privations of winter, subterranean chambers, grottoes, and galleries were formed for retirement from the heat; and with the intention also of promoting ventilation, the top of the house was often formed into a terrace, covered with a roof supported by columns, that by excluding the sun caused a

refreshing stream of air to pass through them. In the warm weather the citizen slept on the terrace at night, covered with a net to protect him from the gnats; or he trusted to a current of wind flowing over the elevated space for preventing the visits of these troublesome insects.

To the same ingenious people is attributed the invention of that useful adjunct to the hearth, *the bellows*. It was in use so long back as the time of MOSES, and a curious implement was

THE FIRST BELLOWS.

The art of producing fire was imperfect until a method was found out of concentrating its energy; the first bellows was probably a mere reed or pipe, that was afterwards improved by a metal tip to resist the heat. On the authority of Strabo, who quotes from an ancient historian, the invention of the bellows with a bag of air was assigned to Anacharsis, though in use among the Egyptians long before the time of the Scythian philosopher. Its form and the method of using it are represented in a painting executed about the time of Thothmes, who was contemporary with Moses. The machine consisted of two leathern bags fitted into a frame attached to a long pipe, which conducted the wind to the fire. A string attached to each bag was held by the operator in his hand, as he stood with a bag under each foot. When, by throwing his weight on one foot, he had compressed one bag, and expelled the air, he transferred his pressure to the other foot, and pulling the string attached to the flattened bag, he raised it, and permitted it to be again distended with air. After his weight had pressed down and exhausted the second bag, he then again threw his weight on the first bag, and drawing the string of the second flattened skin upwards, he allowed the air to enter it also. And thus, pressing on and drawing up each skin alternately, he forced a continuous blast of air through the pipe into the fire. One instance was observed, of the wind-bags being raised up as if full of air after the man had left the bellows, which would imply, as correctly suggested by the truly ingenious antiquary, a "knowledge of the valve" among the Egyptians.

The Jews heated their dwellings with fires on a hearth, the smoke from which escaped through a hole in the roof, or by an opening for vision termed *arubbah*.

The Greeks, notwithstanding their refinements in other arts, knew little that contributed to domestic comfort. They burnt their fuel in a manner similar to the Hebrews. They relied on their fires equally to diffuse light as well as heat; for in the heroic age of their country, though they had oil and tallow in abundance, they were ignorant of the manner of burning them in lamps. The subjoined extract conveys a notion of the state of domestic manners among this renowned people:—

With all their ingenuity, the Greeks were but novices in the art of comfort. Though obliged to take great care of his coarse clothes, the Spartan, in his affected contempt for personal indulgence, made no difference in his dress during summer and winter; and living in a house, whose timbers by law were to be formed with the axe only, and the doors with a saw, if his dwelling and clothing were comfortable in the summer, both must have often been intolerable in the winter. The other Greeks were accustomed to go lightly clad, but as their rooms were well finished, and had doors, shutters, curtains, and carpets, they probably shivered less in cold weather than their Arcadian neighbours. They could also keep themselves warm enough at night, for they had bedsteads, soft mattresses, skins, cushions, carpet-blankets, and coverlets. The beautiful Greek undressed when she went to rest for the night, yet her bed wanted the delicate and refined ventilators—sheets. When she arose from her blanket-covered plane of repose, to array herself in woollen, she had no stays nor stockings to add to her comfort, and a buckle only, or a skewer, instead of a paper of pins, to make her garments air-tight. If this perfumed model of woman-kind, with her painted cheeks and lips and eyebrows, did not indulge in the luxury of the shift, neither had her lord any shirt, nor drawers, nor hose, nor buttons, nor handkerchief, nor pockets, nor lining to his cloak, nor gloves, —items essential to the perfection of the most common modern portable climate. Their lamps, too, though elegant, were offensive; and if they had wax and tallow pith and rush lights, of candles they were always entirely ignorant. Abroad, therefore, the Greek, during his sharp winter, must often have suffered much privation; and within doors, he never could enjoy artificial heat or light without smoke and risk of suffocation, for his house had not a chimney; nor, in the cold weather, could he enjoy warmth with daylight in his elegant apartment, for he made no use of glazed windows.

We can afford no more space in the present number to this valuable work, but propose returning to it at the first opportunity, when we hope to find room for a few extracts suggestive of alterations and improvements in the economy of that "seat of self-fruition" (as Sir HENRY WOTTON has termed it) the Englishman's hearth.

Seven Lectures on Somnambulism, translated from the German of Dr. Arnold Wienholt; with a Preface, Introduction, Notes, and Appendix. By J. C. COLQUHOUN, Esq. Advocate. Author of "Isis revelata," &c. Edinburgh, 1845. A. and C. Black.

AN Essay on Somnambulism, from the pen of the translator, introduces the valuable lectures of WIENHOLT to the English public. To that essay we propose to devote a short notice before we enter upon a review of the lectures.

After a brief history of the rise and progress of Mesmerism as a science, Mr. COLQUHOUN proceeds to comment upon that which has already so often engaged the attention of THE CRITIC, and which, indeed, it is one of the purposes of its establishment to counteract, the tendencies of the age to mere utilitarianism—to mechanical science and other means of money-making, to the entire neglect of philosophy, and the cultivation of the higher and nobler faculties of the mind.

It is, unquestionably, a strange and unaccountable thing, that, in this pretended "age of intellect"—and more especially in our own country—men will voluntarily subject themselves to the severest labours and privations, in order to advance our knowledge of external nature, even in the most minute, and apparently trivial particulars: they will traverse the tempestuous ocean; penetrate almost impervious forests; ascend the loftiest mountains, descend into the bowels of the earth; with unwearied zeal, and inexhaustible ingenuity, invent instruments for exploring the immeasurable heavens—(*cælum ipsum petimus stultitia*);—yet will they start in alarm, as if frightened for their own shadow, at the mere proposal to investigate a much nearer, and far more important and more interesting object—the wonderful microcosm of man—with the view of ascertaining the recondite phenomena of their own internal organization, and the laws by which they are governed, and of becoming thereby more intimately acquainted with that peculiar constitution of the sensitive and percipient being, upon which all our knowledge of external and internal nature must ultimately depend. In our own country, where, as has been remarked, the disposition in question principally prevails, this aversion from psychological studies may, no doubt, have been produced by the paramount importance which has long been assigned to physical and mechanical philosophy; to the absorbing pursuit of wealth through the means of manufacturing machinery and mercantile adventure; and, perhaps, in some degree, to a most mistaken notion that the philosophy of Bacon is hostile to the cultivation of anthropological and mental science. Nay, so far has this prejudice been carried, that all psychological inquiry is frequently reprobated as mere mysticism; while the veriest tyro in physical science, who has been taught to perform the most simple experiment in chemistry, or to carve the most trifling article on the turning lathe, does not hesitate to sneer at the idea of any higher philosophy.

With such a tendency of public opinion, it was not wonderful that the announcement of the curious and apparently anomalous fact, that in certain abnormal states of the organism, persons were found to be capable of perceiving external objects while the natural organ of vision was unsusceptible to the impressions of light, should have been received with unbounded ridicule and incredulity, and that it was only by slow degrees, as conviction was forced upon spectators of the fact by actual and careful experiment, that it began to be admitted by a few of those least under the blinding influence of prejudice, and that even yet many should be found who persist in denying that fact in the face of the cloud of witnesses of unquestioned capacity and honesty who have attested to it. To those whom *facts* cannot move, Mr. COLQUHOUN addresses some philosophy to shew that the facts asserted are not so mystical and unnatural as at the first glance they appear to be. It is admitted by Dr. REID that the whole philosophy of perception is involved in obscurity. "We shall find," he says, "many things in this operation unaccountable; sufficient to convince us that we know but little of our own frame." Elsewhere he observes of our perception by means of bodily organs, "We know it from experience only. We can give no reason for it, but that such is the will of our Maker. No man can shew it to be impossible to the Supreme Being to have given us the power of perceiving external objects without such organs. We have reason to believe that when we put off these bodies, and all the organs belonging to

them, our perceptive powers shall rather be improved than destroyed or impaired."

And Dr. REID is right. It is not the eye that sees, the ear that ears. The eye and the ear are but the media through which the impression of the external object is conveyed to the mind. No one reason can be adduced why the mind may not, in certain abnormal conditions, receive these impressions either directly or through some other media.

Mesmerism asserts only that such a condition does exist, and that such are, in fact, its phenomena. It appeals to the same experience on which alone the ordinary mode of perception is based, as proof of the existence also of the extraordinary mode of perception. We are unacquainted with the *rationale* of either process; both are equally unaccountable; both rest upon the evidence of experience, and there is nothing in the more rare condition at all inconsistent with reason or the soundest experience. It is not unnatural, it is only uncommon.

Mr. COLQUHOUN, while very properly objecting to the application of Scriptural texts to philosophical dogmas, yet offers *pro tanto* a remarkable proof of the perfect agreement between the phenomena of nature, the deductions of reason, and the tenets of Christianity.

In the first Epistle to the Corinthians (chap. xv. 40), St. Paul informs us that "there are celestial bodies, and bodies terrestrial;" and in the 44th verse of the same chapter, we are told, n regard to our own bodies, that "it is sown a *natural* body; it is raised a *spiritual* body;" and then follows the important declaration:—"*There is a natural body, and there is a spiritual body.*" Man, in short, is composed of two different natures—the physical or corporeal, and the psychical or spiritual. In our present state, these two natures are conjoined; in the future state, the soul, or spirit, will be disembodied, and our knowledge, instead of being acquired through the instrumentality of material organs, will probably be derived from immediate intuition—the product of pure consciousness.

A brief biographical notice of WIENHOLT follows this introduction. He was born at Bremen on the 18th of August, 1740, and there died on the 1st of September, 1804. He studied medicine, and devoted his life to his profession. He was a man of quiet habits, much addicted to research. Sir J. D. BRANDIS, physician to the king of Denmark, who knew him well, speaks of him as "my honest and upright WIENHOLT."

In the year 1787 his attention was attracted to the discoveries of MESMER: he was at first very sceptical, but, earnest in the pursuit of truth, he resolved to play the part of an honest man, and make trial of the facts alleged before he denied their existence. His experiments were successful, and he became a decided convert, and published the grounds of his conviction. Soon afterwards the controversy upon the question raged furiously. WIENHOLT declined to take part in it, but pursued his investigations with industry. One of the most gratifying results of his practice of Mesmerism was, the perfect cure of his own son—a delicate epileptic, who, after all other means had been tried in vain, was restored to health by Mesmerism, and afterwards attained a vigorous manhood.

The cases in which he was engaged are reported in a work of three volumes, which forms a rich treasure for the student.

Among many productions of WIENHOLT upon the same subject, his lectures deserve a prominent place for their philosophical and enlarged views; and as they well deserve attentive consideration from their great interest and value, we purpose to make them the subject of a distinct notice.

Outlines of Chemistry, for the Use of Students. By WILLIAM GREGORY, M.D. London, Taylor and Walton.

THIS is the second part of a book of which we lately noticed the first part. It is devoted to a concise account of the laws regulating organic chemistry. The work is intended more particularly for students, and as an introduction to treatises of greater bulk. The subject is divided into numerous branches, each of which is dealt with in a learned, yet intelligible manner. Compound radicals, known or admitted, are treated with due and careful attention. So undeveloped is this branch of the science, that extreme care is necessary lest the student be misled. Even whilst this book was in progress of being printed, new and valuable discoveries were made, an account of which is given in Addenda. The warm commendation we awarded to the volume on Inorganic Chemistry, we have pleasure in repeating as applicable also to the one before us.

VOYAGES AND TRAVELS.

The Sportsman in Canada. By FREDERICK TOLFREY. Author of "The Sportsman in France." In 2 vols. 1845. Newby.

SHORTLY after the battle of Waterloo, Mr. TOLFREY obtained a staff appointment in Canada, and there spent many years hunting, shooting, fishing, sleighing, and living the merriest of lives, as a sportsman always contrives to do, in whatever land his lot is cast. The recollections of his adventures in these various enterprises are the pleasant theme of these pleasant volumes, interspersed occasionally with army jokes, mess stories, stray anecdotes, and sketches of character and manners, making together an amusing and very readable *mélange*, not exactly amenable to any canons of criticism, nor offering to the reviewer a theme for disquisition, but affording some excellent bits for extract, and just the work for the book-club and for such of the circulating libraries as are wont to look beyond the department of *fiction* for their orders.

The charm of these recollections lies in the truly sportsmanlike spirit of the author. He enters heart and soul into his subject; his descriptions of hunts and takes have that peculiar raciness which only a sportsman can infuse, and we suspect only a sportsman can thoroughly enjoy, because he alone can understand and appreciate it. His style is not highly polished, but it is vigorous, graphic, and straightforward, well adapted to the nature of his theme, and more attractive, probably, than would have been the laboured effusions of a professional writer, who *rounds* sentences and makes paragraphs, and will blow the veriest ghost of a thought into as big a bubble as may be desired, by sounding words that have no meaning.

But we must present a passage or two to exhibit the author's manner, and what may be expected by the reader. Here is a lively description of

WINTER IN CANADA.

The Canadians of high and low degree invariably adopt a fur or seal-skin cap for winter wear; but a stout beaver hat of an extra size, to admit of a strong lining throughout of the aforesaid chamois leather, will be found a more comfortable covering for the head-piece.

To proceed to extremities—a word about the feet: the Indian moccasin is the lightest, warmest, and best protection: a large boot made of cloth with a sole of felt, is a favourite adoption with some; but a moccasin over an easy boot is the best of all.

But methinks I hear the impatient reader exclaim, "This is all very well; but the nose—what is to become of the nose?" Ay! there's the *rub*, as I shall presently shew.

A Canadian frost is no respecter of persons; his rude, uncouth hand twitches the prominent feature of all: and well do I remember, in the first week of my campaign, when a private of one of the regiments came up to me, and, saluting me with his right hand, rubbed my nose most unceremoniously with his left. To draw back, with a clenched fist preparatory to knocking the fellow down, was the work of a moment: but ere I had carried into effect this pugnacious resolution, the man had retreated, and respectfully announced that the most remarkable feature in my countenance was frost-bitten; and that unless I submitted to instant friction with a bountiful application of snow, I should, in all probability, rue the consequences, and carry with me, to say the least, very equivocal symptoms of having been deprived of my nasal proportions in a less glorious cause. I gave the fellow a trifling reward for his timely assistance, and have frequently tendered a similar service to the greenhorns.

One of the most interesting portions of the work is the minute particulars which Mr. TOLFREY has recorded of the melancholy death of the Duke of RICHMOND, from hydrophobia, produced by the bite of a tame fox. It is curious that at a dinner-party on the previous day, before any symptom of the disease had manifested itself, the Duke observed to Colonel COCKBURN, as he was sipping his claret, "I don't know how it is, Cockburn, but I cannot relish my wine to-night as usual, and I feel that if I were a dog I should be shot for a mad one." The following particulars of the progress of the malady, and the last sad scene are deeply interesting.

DEATH OF THE DUKE OF RICHMOND FROM HYDROPHOBIA.

Colonel Cockburn and Major Bowles pressed the Duke to partake of some nourishment; but the tea and coffee were untouched, and an impatient gesture of the hand betrayed the sufferings of

the object of their solicitude at the sight of liquids. The meal was hurried over with all practicable despatch, and the Duke consented to accompany these gentlemen down to the river and embark in the canoe; and it had been decided upon that Major Bowles was to attend the Duke, while Colonel Cockburn rode from the place of embarkation to the Rapids, there to make arrangements for the Duke's being conveyed down the Ottoway to La Chine, about nine miles from Montreal. Leaning on the arms of his companions, the Duke walked to the river's side. But the moment his Grace saw the water, a spasmodic seizure told the agony he was enduring. He was turning away from the obnoxious element, when his Grace was entreated to muster resolution and enter the canoe. With a desperate effort he did so, exclaiming, as he rushed into the frail bark, "Charles Lennox never was afraid of any thing!"

Major Bowles as quickly followed; the Canadian boatmen shoved off, and the canoe with its illustrious freight was soon floating down the current. Its course, however, was but of short duration; for a few seconds had scarcely elapsed ere the Duke, in a paroxysm of agony, seized one of the Canadian boatmen by the throat, commanding him with frantic earnestness to row to land.

The mandate was of too imperative a nature to admit of a refusal or even delay: it was obeyed on the instant; and the canoe had scarcely grated on the strand before the Duke had leaped upon the bank, and was making for the woods. Colonel Cockburn, who had mounted his horse for the purpose of apprizing the *Bateliers* at the station at the head of the Rapids of the Duke's approach, had not proceeded half a mile on the road when he caught a glimpse of his Grace through the pine-trees running at the top of his speed in an opposite direction from the river. To turn his horse and gallop after the Duke was the work of a moment; and having succeeded in his object, the next point was to place the unhappy nobleman under shelter. One of the boatmen who had followed the Duke into the woods having reached the spot where Colonel Cockburn had overtaken his Grace, undertook to conduct the party to a farm-house about a quarter of a mile lower down the stream.

To this humble dwelling the Duke was taken; but, when laid upon a sofa in the only habitable part of this building, his Grace's agitation increased to a violent degree; and, while labouring under frightful spasmodic affection, he entreated to be removed *further from the river*, as he could hear the rippling caused by the current. In compliance with this request, the Duke was supported by Major Bowles and Colonel Cockburn to a barn about a hundred yards in the rear of the dwelling-house; and a rude bed of clean straw having been piled together in one corner, his Grace was laid upon it. It became evident to those around the sufferer, that the dreaded crisis was approaching; indeed, the Duke himself was aware that his last hour was at hand. His Grace was perfectly calm and collected and resigned to his fate; so much so, that a very short time before he breathed his last, the Duke wrote a letter to Lady Mary Lennox, his eldest daughter, the contents of which related to family matters of a strictly private nature. From the moment this task had been accomplished, the Duke grew gradually worse, and appeared to be sinking. Towards evening, his Grace was seized with shivering fits, and the extremities became cold; but his senses never forsook him: he recognised every one around him, and prayed to be released from his sufferings. About eight o'clock, this revered and lamented nobleman breathed his last, with the resignation of a Christian, and the fortitude which is inseparable from the just and the good.

FICTION.

Life in Dalecarlia: the Parsonage of Mora. By FREDRIKA BREMER. Translated by WILLIAM HOWITT. 1845. Chapman and Hall.

THERE can be no more pleasing task to the critic than to review a new work by Miss BREMER; and yet the labour, light and agreeable as it seems, is not unattended with difficulty. The charming dialogues and picturesque scenes which our authoress touches off so happily, are too apt to cause him to forget the sterner portion of his duty, and to overlook the great defect of these popular fictions—the lax tone of morality pervading the majority of the series. We may probably be deemed fastidious; but it appears to us that too low a standard is allowed to feminine purity, and thus a dark shade is cast over that otherwise beautiful story, *Home;* and we fear that *Life in Dalecarlia* cannot be exempted from a similar reproach.

In the former novel, a lady represented as moving in the higher circles of Swedish life, an excellent and exemplary woman, but just escapes an entanglement with the tutor of her children, a young man of 20. In the present tale a lady of equally admirable character, loved and respected by an attached and worthy husband, lives with him for years without acquainting him with her former marriage—a marriage unhappily contracted against the advice of friends with a clever, but unprincipled man, whose contempt for human ordinances separates him from his wife, and subjects him to the ignominy of a shameful death. This man is believed dead; so far the wife is justified in marrying again; yet how she can live on year after year with an open-hearted, confiding husband, keeping her own secret, and yet happy, seems such an anomaly, that really we can neither reconcile ourselves to the fact nor the lady.

Perhaps we might not have made this protest, but for the purpose of noticing the difference existing between English and Swedish manners; and of observing, that although our own domestic life may be less romantic than that of our northern friends, it is, in appearance at least, infinitely more moral. Yet how ungrateful it seems to make these remarks when we consider how much we are indebted to the HOWITTS for the introduction of their books,—books that have pictured in such bright colours the delights of home—that holy word so dear to every Englishman—and that have thrown a halo around the most trivial and common-place offices of life, investing them with a charm, which many must have felt, but more forgotten; ever existed; or if remembered, remembered but to ridicule.

And now, having finished our homily, let us at once start for Dalecarlia, where a Mrs. Ingelborgh, the wife of the pastor of Mora, the identical lady whose matrimonial conduct we have dared to censure, assembles around her some young relations, whose pursuits afford her both employment and pleasure. The little party consists of two young ladies, Valborg and Brigetta; Brigetta's brother; Lieut. Lam; Mrs. Ingelborgh's stepson, Olof, just returned from Upsala; and her niece, "the fifteen-year old Siri;" the lady herself and her husband, Gustaf Nordevall, complete the list.

Of these Siri, the young and elf-like Siri, and the heroine of the tale, is one of the most beautiful creations that a modern author has conceived. Her child-like simplicity, joined to a reflective, yet wayward spirit—her love of nature and nature's creatures—her fondness for the poor elk Durathor, admiration of the fiery Brunehilda—by the way a capital name for a lady's courser—her affectionate, though energetic disposition, render her most engaging, and centre in her the whole and undivided interest of the reader. How to introduce this fairy-like being—mind, a German fairy, not the pretty, delicate elf of merrie England, or the waggish imp of ould Ireland, whether sailing on the Silja, "the eye of Dalarna," galloping wildly on the before-mentioned furious Brunehilda, or diving for the wedding ring of Martin's Stina, is difficult to decide. Perhaps her thoughtful, gentle, though sportive spirit, may not be better displayed than in a walk with her lover and self-elected tutor, Olof Nordevall, on the banks of the Silja.

Olof gazed on the river's playful windings, on the distant mountain, veiled in an azure mystic shadow, and he thought on Siri; for that landscape with its changing physiognomy was to him as an image of the charming enigmatical maiden, who continued more and more to occupy his mind. His heart was now softened towards her, for he called to mind her late acquiescence and her tears. As he then went on, and thought he began to hear delicious notes of a flute. They played one of those northern melodies, in which a sad seriousness is pervaded by, I know not what, touching, innocent joy, and every close has a moriendo, in which the tone does not seem to terminate, but to disappear like a spirit in space, which goes to continue its song upon another shore. Deeply was Olof's soul now smitten by these notes, and by this holy still life—the life of Dalarna—which he seemed to drink in from them. The young man became warmed and elevated in spirit; and it seemed to him as if some deep and beautiful secret of existence was about in this moment to be revealed to him.

He knew well that the siren who called forth these tones was no other than Siri; and he followed them in order to discover her. He soon descried her, where she lay in the soft grass, by a verdant sepulchral mount near the river-bank. Wild rose-bushes, which in certain districts so richly adorn the margin of the Dalilf, budded around her, and the elk Durathor shook, as he lay at her feet, his little bells, as he already at a distance heard some one approaching. Siri, too, looked up; she blushed a little at Olof's presence, and greeted him in a friendly manner. She looked gentle but not joyous.

"That was beautiful which you just now played!" said Olof.

"Did you think so?" said she; "then I will play more for you." She played again some melodious measures, and then said, "Do you know what these are?"

"No."

"That is the song that the water spirit by Husby sings at night as he sits on the rock at the waterfall, above the mill. The words are:—

"'And I hope, and I hope, that my Redeemer liveth!'

"Ah! how gladly would I hear him, when he sings this!"

"And he actually sits there at night, and sings?" said Olof, smiling, while he seated himself on a little hillock opposite to Siri.

"Yes, so they say," answered Siri, hesitatingly. "I know well that others say that it is all superstition; but then much must be superstition which is right, beautiful, and which sounds like truth. For example"——

"Tell me something more about these things," said Olof, familiarly.

"For example, about the cairn-people," continued Siri. "Do you know what dwells in the cairn here? They are the cairn-people, for the sepulchral mount is a spirit-house. And when we, on a summer evening, lay ourselves down beside such a mount, we hear the music within. They are the cairn-people who play on their harps, and sing laments over their captivity, and call on men for salvation. If you promise it them, then they play blithely the whole night through. But if you answer them, 'You have no Redeemer!' then do they dash their harps to pieces, amid lamentations, and remain silent in the cairn. And do you know, that in the springs live maidens, who are very beautiful, but who are captives, and beneath their silver roof long for the day of judgment, for then shall they be free. They are dumb, and look very sorrowful, and roll slowly their eyes, and shed large tears. Yes, in all streams and lakes, in mountain and wood, are these beings found, who are captive, and who seek after release. Ah, Olof! how do I pity all these, and gladly would I liberate them. I have often felt, and feel it again at the present time, how hard it is to be in thraldom; and only think to be so all life long!" And Siri stooped her face into her hands and wept.

"But, my sweet child," represented Olof; "all these beings over whom you grieve are the offspring of phantasy—they do not exist."

"Yes, so many people say," answered Siri; "but I know, nevertheless, that in some way or other, they do exist, although I cannot explain how. Often when I am out alone, by day or by night, I think that I will talk to all around me, and that all shall talk to me, and that I will get to understand about it. Yes, I cannot tell what hinders, but it seems to me often as if I am bound, and need a deliverance; then should I understand every thing, and be good and happy. Ah, Olof! my mind is often very strangely affected; and when I see then any thing in nature which suffers, or which is ruined,—which dies, then do I long to be able to help it; and it distresses me that I cannot."

"God knows, my little sister, whence you have got all these melancholy phantasies of nature. I think that all in nature is glorious and perfect."

"Yes, sometimes it does seem so! But I have seen deeper into it, and there is much that is evil and repulsive. I have seen how all is devoured,—all destroys itself in rotation; how the beasts persecute each other, and what barbarities men hourly and daily practise upon them. Ah, Olof! all is not good in nature! But can you tell me, Olof, whether the beast has a soul,—I mean a soul that outlives the body?

Our extract is of the longest, but a shorter one could not have done justice to the little metaphysical maiden. Notwithstanding our limited space, we cannot resist inserting the account of the copper mines of Fahlua, whither our Dalman friends make a progress. To this journey Siri, with her love for the "warm earth," has long looked forward, and is doomed to see her dreams of the glorious life in the mines vanish in the reality.

THE COPPER MINES OF FAHLUA.

"There have been learned men who have traced up the origin of the copper mines of Fahlua to Tubal Cain himself, a master "of all kinds of iron and copper work," as related in the First Book of Moses. Certain it is, that its working loses itself in the ages of sagas, when the artistical race of dwarfs were believed to work at their forges in our mountains, and the people of the south glanced towards the north as towards a land of treasures and of giants. More than 1,200 people have formerly been employed at once in this subterranean world, which, in its enormous labyrinth of passages, shafts, caverns, and halls, represents an excavated netherworld, the ideal of a mine king's palace. It is said to demand more than eight days to go through all its rooms, as far as the territory of Terra Nova, and the region of Whereto, which extends two hundred fathoms deep below the bottom of the mine. The various and picturesque names of these rooms and halls, gathered out of all periods of history, out of the kingdoms of both fancy and reality, contribute to give to the place a romantic interest for the imagination. Almost all the kings and queens of Sweden have paid visits to this mine. Charles IX. whose heart seemed to have much of the nature and character of a mountain, except for the tender woman, his first beloved wife, in honour of whom he founded and named the towns, "Mariefred and Mariestad," Charles IX. was extremely attached to this mining country, was often residing there, and called the mine "Sweden's Fortune," and desired that the great room there might be called the Room of God's Gifts. His great son, Gustavus Adolphus, also exclaimed, as he stood in one of the rooms of the mine, when the bright copper ore beamed from the walls, roof, and floor, "Where is the monarch who has such a palace as that in which we now are?"

But, notwithstanding all this, Siri did not find here the palaces, the magnificent underworld, of which she had dreamed to herself, and whose names, the Jewel, the Crown, the Sceptre, &c. seemed to promise. There were perpetually the same dark vaulted passages, the same great empty halls and domes, excavations and shafts, or sinkings, out of which eternal night seemed to stare upon you. There was everywhere the same damp, cold air, the same dripping and dropping from above, and which rendered the floor slippery. The sides of the mine glittered, indeed, when the torches shone upon them, or when they were struck against them, and sent forth showers of sparks; and the stalactites glimmered also as they hung above on the arched roofs; but it was a chill and colourless gleam, which left soul and sense cold. In the passages, the miners frequently were met with torches in their hands, in their black dresses, with solemn, pale, grimy countenances, and slow and heavy steps. The life in the mine did not seem to be joyous, and at every glance Siri's eyes grew darker, and her heart more oppressed.

She would not have been astonished if she now had been told that the most melancholy of mortal ailments, insanity, was one of the most prevalent amongst the labourers of this subterranean kingdom.

For such a high-minded and romantic creature as Siri, marriage of course would have been too common-place; accordingly we find her, at the conclusion of the tale, following the course pointed out to her by her father, the misguided but enthusiastic Julius Wolff, the former husband of Mrs. Ingelborgh, whose discovery and death terminate the story.

We cannot better conclude than with his words:—

I dedicate thee to a life in which daily joys and daily sorrows will be counted of little value, but where the smallest of them will serve the Most High. I consecrate thee to a work of peace and beauty, thy days to a still *Creation's day*. Live for a new heaven and a new earth.

Satanstoe; or, the Family of Littlepage. A Tale of the Colony. By J. FENIMORE COOPER, Esq. Author of "The Spy," &c. In 3 vols. London, 1845. Bentley.

THE announcement of a new novel from the pen of such a veteran as COOPER, with whose name are associated so many pleasant recollections of the poetry of Indian life, adventure in the prairies and backwoods, and, foremost of all, the romance of the sea, cannot but interest the reader, who will anxiously inquire what is the subject of, what the promise of amusement in, the fiction he must wait his turn at the library to possess; a brief account of *Satanstoe* will therefore be expected; but in mercy to the reader we will not anticipate the plot—we will limit our remarks to a description of the subject and the manner of its execution.

The new romance of the great American novelist is written with an avowed purpose, namely, to denounce "the great New York question of the day, Anti-Rentism." With the memory of COOPER'S former continuations, it will be no recommendation to this romance that it is intended to be the first of a series, although the author declares his determination that they shall not, as did their predecessors, preserve such a family likeness that it was tedious as a twice-told tale. He promises that each of the projected series shall have "its own hero, its own heroine, and its own manners." We can only hope that he will be enabled to accomplish his design; but we can feel no confidence that we shall not meet again, under new names, almost all the personages to whom he has introduced us here; and certain it is that many of these are *not* strangers.

The title is taken from the name of a farm, the inheritance of Cornelius Littlepage, the hero, that name being derived from a legend current in the neighbourhood, that the devil left his foot-mark upon the place when he fled from it before the approach of Christianity in the persons of the first colonizers, the Dutchmen. The time at which the principal portion of the events occur is about the year 1757, a period which enables him to bring together in strong contrast a great variety of character not then amalgamated and fused into a sort of average nationality by the

influence of a common citizenship and free institutions. There is the Englishman pure in birth and breeding; the Englishman once removed, born in America, but not yet de-Anglicised; the genuine American Yankee, a sort of Englishman *travestie;* the Dutchman of like degree, pure and mixed; the negro slave; and, infusing some grace of manner and gentlemanly feeling into the incongruous mass, the British officers, naval and military. Of such materials it would be difficult not to frame an interesting novel, and by help of a *few* striking incidents, such as an unexpected breaking up of the ice on the Hudson, and the perils thence encountered by the hero and heroine, and a vivid description of a journey into the interior to take possession of an estate, with divers warlike doings, that serve to re-introduce the Indians, and their skill, cunning, and magniloquence, make up a work that will sustain the reader's interest to the end.

But all COOPER's faults are exhibited here in unwonted profusion. His prosiness grows with age; there is more than even his wonted word-spinning; long, dull, wearisome dialogues continually try the reader's patience, and descriptions are elaborated with the tedious minuteness of a penny-a-liner, but without the liveliness of manner that usually belongs to that functionary. Then there is a provoking self-repetition in the characters and incidents; almost every man and woman to whom we are introduced is but an old friend in a new dress; we have met the same people before in a dozen of his novels, and their very talk is an echo of familiar dialogues. Nor has he been very happy in his portraiture of colonial manners; it strikes us as stiff and unnatural, as if the author copied from books rather than from the life; they are conventional, and not actual characters; abstract ideas of a class, and not transcripts of individuals. The most real and life-like is Mr. Jason Newcome, the Yankee, intended to be the type of the Anti-Rentist party, against whom the purposed series of fictions is to be levelled. This rich specimen of the genuine New England has been drawn, not merely with the zest given by a hearty hatred of the species, but with an existing model before the author, from which he has caught the minutest shades, and worked them up into an admirable picture.

The Desborough Family. By Mrs. PONSONBY. In 3 vols. MRS. PONSONBY is a lively writer, but unskilled in the art of novel-making. She errs in being too literal. Her plot is clumsy in its construction, and the interest is too much scattered. The loves of a family of five, four girls and one boy, the complement of the Desboroughs, are too much for one novel; they should have been divided among three. The characters, moreover, want that *reality* which is necessary to win our sympathies. We feel, as we read, that they are *but* fictions; never, for an instant, are we tempted to forget the mimic scene and smile or weep in a sympathy we cannot control. The best is, perhaps, Lady Desborough, the blue; probably because Mrs. PONSONBY sketched from the life, and not from her reading. Only the largest libraries should order this novel.

POETRY.

The Works of Edmund Spenser, with a Selection of Notes from various Commentators, and a Glossarial Index: to which is prefixed some account of the Life of Spenser. By the Rev. HENRY JOHN TODD, M.A. Archdeacon of Cleveland. London, 1845. Moxon.

To Mr. MOXON the lovers of the poetry and drama of England owe a large debt. His brave, enterprising spirit, under the guidance of a fine taste, has presented to the reading public a series of new editions of our best authors, carefully corrected, learnedly annotated, exquisitely printed, and published at a price that brings them within the reach even of the humbler classes, while they are fitted to adorn the libraries of the wealthiest. The latest accession to this valuable series is a collected edition of the works of EDMUND SPENSER, comprised in a single handsome volume, in type sufficiently clear and bold to be read without fatigue.

Mr. TODD, to whom the editorship was intrusted, has evidently undertaken the task more as a labour of love than in the manner of a literary hack. He is a devoted, an enthusiastic, admirer of the poet, has profoundly studied the peculiarities of his genius, has mastered the phraseology in which his "jewelled thoughts" were set; consequently the numerous notes by which he has explained obscurities of allusion or language exhibit a thorough understanding, not of the poet alone, but of the ideas, manners, and genius of the times in which he lived. To the poems is prefixed a memoir in which whatever history and tradition have recorded of the poet has been laboriously collected and wrought into a narrative of great interest, gracefully told, and interspersed with criticism founded on that which is a better and safer guide than any canons of *authority*, the dictates of a keen sensibility for the beautiful, and of a sound judgment to recognise the true.

An outline of the history of the man SPENSER may be given in a few words. The history of the *poet*—a memoir of his mind—would be a longer although more pleasing labour. In our contracted limits we can do little more than glance at the former.

Descended from an ancient and honourable family, EDMUND SPENSER was born in London, in East Smithfield, about the year 1553. The school that first received him is not known, but on May 20, 1569, he was admitted a sizer of Pembroke Hall, in Cambridge.

Of his college life little is known. He was an unsuccessful candidate for a fellowship, and he retired from it as soon as he had taken his master's degree, and went to reside with some relations in the north of England.

Mr. TODD supposes that he had exerted his poetical powers, though concealing his name, soon after entering the university. Certain it is that from the time of quitting it he devoted himself with unwearied industry to the cultivation of his genius. In a letter dated April 10, 1580, he speaks of "his *Slumber* and other pamphlets," and mentions his *Dreams* and *Dying Pelicane* as fully finished, and that he designed soon "to sette forthe a booke, entitled *Epithalamion Thamesis.*" In the year 1579 he published his *Shepheard's Calendar*, whose love laments are due to a jilting the poet received from a young lady on whom he had fixed his affections.

Before the appearance of this poem, he had been induced to remove to London, where he obtained an introduction to the accomplished PHILIP SIDNEY, by whom he was recommended to the Earl of LEICESTER. It is to SIDNEY that the *Shepheard's Calendar* is dedicated, and a long and useless controversy has arisen whether the introduction led to the dedication, or the dedication produced the introduction. This moot point has, however, effected one advantage, it has brought to light many letters from SPENSER and his friends that might otherwise have mouldered in obscurity.

A man of his genius was not likely to be overlooked by such friends at court. He was soon pressed into the public service. In July 1580 he was appointed secretary to Lord GREY, Lord Lieutenant of Ireland. This nobleman held the post for two years, and then returning to England, it is probable that SPENSER returned with him.

Four years afterwards, he received from Queen ELIZABETH a grant of 3,028 acres in the county of Cork, out of the forfeited lands of the Earl of DESMOND. The grant bears date June 27, 1586. In the following year he lost his friend Sir PHILIP SIDNEY. After this melancholy event he returned to Ireland to cultivate his estate.

His residence here was at Kilcolman, in the county of Cork, and in this retreat he was visited by Sir WALTER RALEIGH, to whom were shewn the first three books of the *Faery Queene*, and at whose instigation it was that the poet resolved to give them to the world. At the end of the third book were annexed a letter to RALEIGH, describing the design and plan of the poem, the poetical commendations of friends to whose opinion it had been submitted, and a number of sonnets addressed by SPENSER himself to various persons of distinction. "It appears to have been the custom of the time for an author to present, with a copy of his publication, poetical addresses of this kind to his superiors."

It is probable that SPENSER returned to England with RALEIGH for the purpose of superintending the publication, and there he was by that same fast friend presented at court, and received with marked favour. A pension of 50*l.* per annum was conferred upon him; but the story that he was at the same time appointed poet laureate appears to be unsupported by the evidence.

A ridiculous anecdote in relation to this pension has been handed down, as it would seem, without good authority; it is, however, too amusing to be omitted. It is said that when the Queen ordered the pension, Lord BURLEIGH told her Majesty that it was too great for a *ballad-maker;* and that he actually intercepted it. On SPENSER presenting to the Queen some poems, she ordered him a gratuity of 100*l.*, upon which his astonished lordship exclaimed, "What! all this for a song?" "Then," said the Queen, "give him what is reason." But

his economical lordship ventured to disobey the order, upon which the poet presented to her Majesty the following humorous memorial:—

I was promised on a time
To have reason for my rhyme;
From that time unto this season
I received nor rhyme nor reason.

The appeal was successful; the treasurer was rebuked, and the money paid.

The *Faerie Queene* brought to the author immediate and extensive fame. So popular was he, that the bookseller collected and published every production that could be traced to his pen, under the title of *Complaints*, which comprised—1. The Ruines of Tunis. 2. The Teares of the Muses. 3. Virgil's Gnat. 4. Prosopopoia, or Mother Hubberd's Tale. 5. The Ruines of Rome, by Bellay. 6. Mniopotmos, or the Tale of the Butterflie. 7. Visions of the World's Vanitie. 8. Bellaye's Visions. 9. Petrarche's Visions.

The next publication was the *Daphnaida*, an elegy written on the occasion of the death of DOUGLAS HOWARD, daughter and heiress of HENRY, Lord HOWARD.

This was followed by the pastoral whimsically entitled *Colin Clout's Come Home Again*, which Mr. TODD dates in 1594 or '95. The characters in this poem are those of contemporaries, introduced under fictitious names.

In the same year he published also the pastoral elegy of *Astrophel*, devoted entirely to the memory of his friend and patron, Sir PHILIP SIDNEY.

It is to this year also that Mr. TODD ascribes the appearance of the *Amoretti*, or *Sonnets*, dedicated to Sir ROBERT NEEDHAM, and in which sonnets he gives us the history of his courtship of a woman whom he afterwards married, and beautifully portrays the growth of love, and the progress from fear to hope, from hope to certainty, from the chase to the possession; the whole appropriately closing with an *Epithalamium*. The marriage took place at Cork, probably in 1594.

In 1596 he published his *Four Hymns on Love and Beauty*, written, as himself states, "in the greener times of his youth;" and in the same year his *Prothalamion*, a spousal verse, in honour of the double marriage of the Ladies ELIZABETH and CATHERINE SOMERSET, and the second part of the *Faerie Queene*, with a new edition of the first part.

Upon the controversy whether a portion of the *Faerie Queene* has been lost, or if the work was left unfinished, Mr. TODD is decidedly of opinion that we possess it very nearly, if not quite, as it was left by the author.

While SPENSER was in England in 1596, he presented to the Queen his political treatise, entitled *The View of the State of Ireland*—a masterly, eloquent, and interesting work.

In 1597 he returned to Ireland; but unexpected misfortunes descended upon him. In the following year TYRONE'S rebellion broke out; the poet and his family were compelled to fly. In the confusion one of the children was left behind; the rebels burnt the house and the infant in it. From this calamity the sensitive poet never recovered. He went to England, and there died, in the January following, of a broken heart—*poor*, as compared with his previous wealth, but rich in friends, who would have gladly supplied him with all the necessaries and many of the luxuries of life; so that the stories of his abject poverty, with which it has been the custom to point the moral of "the misfortunes of genius," are altogether exaggerations and absurdities.

A handsome monument was erected to his memory in Westminster Abbey, by ANNE, Countess of Dorset. The inscription is as follows:—

Here lyes (expecting the second comminge of ovr Saviovr Christ Jesvs) the body of Edmond Spenser the Prince of Poets in his Tyme whose divine Spirrit needs noe othir Witnesse then the Works which he left behinde him. He was borne in London in the yeare 1553 and died in the yeare 1598.

The works which he left behind him, witnessing to his "divine spirit," are now offered to his countrymen in a dress worthy of their beauty, yet at a price which ought to insure them a welcome wide as their fame.

Dante; translated by ICHABOD CHARLES WRIGHT, M.A., late Fellow of Magdalen College, Oxford. In 3 vols. *A new edition, revised and corrected.* London, 1845. Longman & Co.

THIS is, we believe, the first complete edition of Mr. WRIGHT'S translations of DANTE, which have received the approval alike of the English student, of Italian, and of the Italian who has mastered the English tongue. They agree in estimating it as the most faithful and vigorous of the many attempts that have been made to render into the language of England the glorious poet of the South. It is evident that Mr. WRIGHT had taken the pains to inform himself of the *idea* that floated in his poet's mind, as well as of the precise translation of the words in which he clothed it, so that he has produced something more than a mere transcript; it is an elegant composition, and reads smoothly, and not as most translations do, pedantically and stiffly. Mr. WRIGHT has moreover appended to his translation historical, critical, and illustrative notes, which add materially to the utility of the work, because without them the meaning would often be obscure, from its allusions to persons, and manners, and modes of thought that have now passed away and live only in books. The work is beautifully printed on fine paper and is of convenient size for poetry. Its price is very moderate, and it ought to be added to every library that does not possess a translation of *the* poet of Italy. Mr. WRIGHT'S translation has become a standard work, and no bookshelves will be furnished without it.

POLITICS AND POLITICAL ECONOMY.

Jewish Emancipation. By an Israelite. London, 1845. Nutt.

AN energetic appeal on behalf of that policy of perfect toleration on the part of the state to which statesmen are fast tending. The author labours to shew, and with entire success, that emancipation may be extended to the Jews with absolute security to Christian institutions, and that as a matter of state policy it must be the interest of the country to encourage the settlement in it of a community so wealthy, so industrious, and such supporters of peace and established institutions as the Jews have ever proved themselves.

RELIGION.

Emendations of the Authorized Version of the Old Testament. By SELIG NEWMAN, Author of "The Abridged Hebrew Grammar," &c.

ALTHOUGH this singularly learned pamphlet is the production of a Jew, it is by no means a sectarian production. The author has entertained no anti-Christian design, his sole purpose being to pursue the investigation as a scholar desirous of discovering the true meaning of dubious passages. To the students of the Hebrew language, and indeed to all investigators of Scripture philology, the contents of this curious work must be extremely interesting and instructive.

MISCELLANEOUS.

The Wisdom and Genius of the Right Hon. Edmund Burke, illustrated in a series of extracts from his writings and speeches; with a Summary of his Life. By PETER BURKE, Esq. of the Inner Temple, Barrister-at-Law. London, 1845. Moxon.

STRANGE but true it is, as remarked by the editor of this volume in his preface, that though everybody talks about BURKE, his works are not generally read. Few, indeed, of those who cite him as an authority to support their own personal or party views can boast of any further acquaintance with his writings and speeches than was obtained from some collection of elegant extracts. The cause of this is clear; the bursts of eloquence or wisdom that so charm us in recital are scattered through some eight or ten volumes of close print, the greater portion of which, however admirably adapted to the occasion upon which it was produced, relates to matters that have now lost their interest, and therefore the discourses about them, however able in themselves, are to readers of this age altogether unintelligible or unattractive. Words that touched the passions of contemporaries like coals of fire, fall frozen upon our unsympathizing ears; and the dry details of parliamentary combats, often encumbered with figures, frighten from the necessary scrutiny him who would seek the gems that lie scattered among the heap of rubbish.

A volume of selections from the mass, gathered by a treasure-seeker of patience and sound judgment, who has carefully explored every page with intent to extract from it whatever he might find there of enduring value and intrinsic beauty, cannot but be an acceptable addition to the family library. Such is the task undertaken, and very satisfactorily executed, by Mr. PETER BURKE. With excellent taste he has

collected the beauties that are contained in the voluminous works of his great namesake, and that they might have something like a connecting link, he has adopted a systematic arrangement of them, classifying into chapters the principal subjects that had engaged the thoughts of the orator, and then, in each chapter, linking together in a series "extracts the most remarkable for eloquence, argument, or style."

To these is prefixed a short but ably written Summary of the Life of BURKE, that serves admirably to introduce that which is, in fact, a history of his mind.

To offer a criticism upon the genius of one whose fame has received the sanction of time would be a sheer impertinence; to attempt an analysis of a memoir which is itself a summary would be ridiculous. Nor is it needful. Every person who has learned to look with reverence upon the name of BURKE, and who estimates aright his wisdom as a statesman, not inferior to his eloquence as an orator, will procure this volume, containing the profoundest utterances of the one and the most brilliant flashes of the other.

JOURNAL OF FRENCH LITERATURE.

Caroline in Sicily. By CHARLES DIDIER.

THE very clever work now before us must not be confounded with the mere novels of the day, in which great names are made subservient to the purposes of fiction. The tale interwoven with the main outline of the composition is so slight as to constitute simply the skeleton of the work, and to throw into broader relief the historical episode upon which it is based. The opening chapter at once introduces us to the high-spirited, uncompromising, and beautiful CAROLINE of Naples, the daughter of the Cæsars, and the favourite child of the heroic MARIA THERESA, who, as an infant in the arms of her imperial mother, drank in the glorious war-cry of the Hungarian nobles at Presburg, "Long live our king Maria Theresa!" Like her illustrious parent, CAROLINE was sacrificed by state policy to a husband totally unable to comprehend her loftiness of character, or to emulate her princely aspirations. Whoever remembers JOSEPH II. save as the consort of MARIA THERESA? and who would retain a memory of FERDINAND of Naples, had he not espoused the Austrian Archduchess CAROLINE? Born "beneath the purple," the sister of MARIA ANTOINETTE, the aunt of MARIA LOUISA, the Frédégonda of NAPOLEON never suffered any consideration of womanly mercy to counteract the bold schemes of her ambition; and yet, although "every inch a queen," even when dethroned, exiled, and in a state of honourable captivity, her passions, when fully awakened, were not always such as consorted with her dignity.

The Anglo-Sicilian squadron, under the command of the gallant Sir SYDNEY SMITH, had taken possession of the islands of Procida and Ischia; MURAT had replaced JOSEPH on the throne of FERDINAND, and the English troops remained quietly in garrison in Sicily, while, in order to give more importance to the position of Lord BENTINCK, when he succeeded Lord AMHERST as Minister Plenipotentiary of Great Britain, he was appointed also Commander-in-Chief of all the English forces in the Mediterranean. Immediately after his arrival he became pre-eminently obnoxious to CAROLINE; his constant interference in state affairs, and the air of protecting authority which he assumed, wounded her pride. She exerted in vain every system of warfare against him. He treated with indifference alike her violence and her seductions. Nothing could turn him from his purpose; and eventually he transported the English head-quarters from Messina to Palermo, in order that the troops might be made more immediately available, on an exigency; a step which so much irritated the queen that she accused him of having exceeded his instructions. "I will go and obtain others," was the quiet rejoinder; and he embarked at once for England, whence he returned with unlimited powers. Of these he availed himself to the utmost, and the Court was compelled to feel that it could contend no longer; while the result of all the intrigue, and of all the struggle, was the temporary abdication of the king in favour of his son FRANCIS, whom he created, under pretence of ill-health, Vicar-General of the kingdom of Sicily, but retained power to resume at will his own authority. After this step, he retired to Ficuzza, a shooting lodge in the midst of the Corleone mountains, and the queen was consigned, first to the villa of Mezzomonzeale, and subsequently to Castelvetrano.

Such was the situation of affairs at the opening of the work. Sicily was precisely in the position of the Indian provinces, which, while declaring themselves independent, are nevertheless under British rule. A certain Captain FABIO, dismissed the service by a Sicilian minister to whom he had become obnoxious, and passing a life of penury and privation in a ruined villa of which he is the proprietor, spending his time almost equally in brooding over the indignity to which he has been subjected, and in shooting over the vast and desert plain, which extends along the coast beneath Castelvetrano, chances in one of these excursions to come upon the hut of a Zingara, noted throughout the country for her skill in soothsaying. In the idleness of the moment he bids her read the secret of his fate; to which she replies by prognosticating to him a crown and a scaffold. At this instant the sound of bells is heard, and the *lettiga* of CAROLINE, escorted by a troop of horse, is seen advancing through the plain, and ultimately stops near the hovel of the fortune-teller, towards which the queen advances unattended. Her first movement, on perceiving the young officer, is one of visible annoyance; but it is not in the nature of CAROLINE to look twice upon such a face and form as that of FABIO with displeasure; and she accordingly bids him wait without during her interview with the Zingara. This concluded, she turns her steps towards the *Rocchj di Cusa*, followed by FABIO.

THE ROCCHJ DI CUSA.

Not far from the Greek city of Selinont exists a monument quite as curious and still more rare, of ancient architecture—the quarries whence the Selinontines derived their temples and their palaces. The work appears to have been abandoned only yesterday; were the workmen to return to-morrow they need only resume their task where they quitted it 2000 years ago. In some places columns, half cut, require only the last stroke of the chisel to separate them from the rock; others, already detached, are scattered along the road which leads to the town, as though death had surprised the artificer in the midst of his occupation. They stand in the present day like gigantic finger-posts, erected in the vast solitude, stern in their uselessness, and conducting nowhere.

An unbroken and eternal silence has succeeded to the chant of the slaves, whose rude labour has impressed these deep and living traces. Not even the voice of the ocean can be heard, for its murmurs are smothered by the stretches of sand which extend along the coast.

This spot, called in the country *Rocchj di Cusa*, or the Blocks of Cusa, is one of the most striking in Sicily; protected by a double or triple rampart of cactus, whose metallic leaves are bristled with needles, the quarries form a vast excavation, with high, perpendicular sides, and are nearly covered with vegetation. The wild fig and olive trees grow in the fissures of the rock, and throw, from one block to another, their leafy branches; the winds and the wild birds sport amid the tendrilled garlands; the rabbit burrows beneath the unfinished columns; the nocturnal hedge-hog disputes with him his retreat; and, amid the dew, the adder and the green lizard come to seek, upon every exposed point, the first rays of the ascending sun. It is rare that a human figure disturbs these peaceful tenants of the solitude, save at times an idle shepherd or some traveller enamoured of antiquity.

Amid this wild and glorious scene, CAROLINE listens to the history of the heart-broken young soldier; and there she learns his implacable hatred to the English, through whose agency his disgrace was definitively accomplished; she was on the eve of a great attempt, and she was at once conscious of the value of such a follower as FABIO; young, fearless, and impetuous, he presented the very attributes calculated to insure success—or, at least, resolute perseverance in any cause which he might adopt; and the queen well knew the worth of the passionate enthusiasm betrayed by his every word and gesture. Our readers will cease to wonder that he should unhesitatingly vow himself even to the death to the fortunes of the royal lady who condescended to seek his allegiance when they read M. DIDIER'S sketch of

CAROLINE OF NAPLES.

The queen was reclining carelessly against the shaft of a column, and continued, as she spoke, to caress the greyhound (of Fabio) which was lying at her feet. She wore a long dress of black velvet, with short sleeves, which heightened the fairness of her complexion; a transparent glove shaded rather than covered an arm which she delighted to display, and of which the perfection was celebrated. Her light hair, arranged in large curls ac-

cording to the fashion of the period, fell upon her bosom, perhaps a degree too ample, and she had flung over her head a white veil, which floated negligently about her. It was the same headdress in which she caused herself to be painted for her friend Lady Hamilton.

Her blue eye was large and expressive; it changed from sweetness to menace, from boldness to languor, with extraordinary facility. Her ordinary look, however, was cold and impassible; it said no more than it was willing to say. Her features were fine, and their proportions regular, save that her nostril inflated too readily; but the leading characteristic of her physiognomy was seated in her mouth, of which the under-lip, salient like that of Dante, revealed at once pride, disdain, sensuality, command, and revenge. This imperious and threatening lip, which she sometimes bit until blood followed the pressure of her teeth, during a moment of violence, was the thermometer of her mood; friends and enemies alike read their fate upon it. She carried her head loftily, sometimes even slightly thrown back; and her carriage and all her person breathed a natural dignity, which, while it did not exclude grace, compelled respect.

Such was CAROLINE of Naples, when, defeated in every open attempt at independence of action by the vigorous and unremitting policy of Lord BENTINCK, she was covertly meditating a new revolution in Sicily, and the destruction of its foreign masters. Purchased by the produce of her jewels, pawned to raise money for the purpose, the plains of Selinonte concealed amid their ruins the wild bands of Calabrian banditti who had vowed themselves to her service. Discontent and fierce hatred of their English inmates pervaded the ranks of the Sicilian army, among whom moved the agents of CAROLINE stealthily, but no less surely, fomenting the fierce passions of the mass. FERDINAND meanwhile, the worthy pupil of the Prince of SAINT-NICANDRE, was wearing away his time in the most sordid puerilities at Fecuzza. Every thing like business had become utterly hateful to him; and his existence was spent between the sports of the field, the caresses of LUCIA MIGLIACCIA, the widow of the Sicilian Prince of PARTAUNA, and the homilies of his confessor. The character of FERDINAND is ably pictured in a letter addressed at this period to his energetic and ambitious wife.

A ROYAL EPISTLE.

I have duly received your letters, my dear Caroline, and I thank you. They amuse me, and I require amusement. Time hangs heavy with me. Fishing is here impossible, for several reasons, the first being that there is no water at Ficuzza. Where is now the happy time when we angled together in our pretty lakes of Patria and Fuzàro, and where I sold my fish to my customers? I might, to be sure, as an alternative, fish in my tunny reservoir at Solanto, but this is not the season for tunny; and besides, if I approached the coast, those cursed English would imagine that I wanted to escape. To go where? To Naples without doubt. Would that it might please God and St. Januarius to make it possible! Truly, my dear Caroline, there is only one Naples in the world. See Naples and die, cry some; see Naples once more and live, say I. I am reduced to hunting, but I do not know why; it amuses me much less than formerly. I scarcely hunt at all. Yesterday, nevertheless, I killed a wild boar in the wood of Capellaso; but the Sicilian boars are not equal to those of Porsano. Felio, who is my messenger, will tell you that the good father Caccamo says regularly two masses a day for me, and sometimes three; it is a great consolation to the poor exile who embraces you. FERDINAND.

P.S.—I open my letter again to tell you that my great blue bitch has brought forth four puppies, and that we hope to save them all. Apropos, are you aware that our son Francis, my vicar-general, has had a stomach-complaint, which threatened to carry him off? It is not yet certain that he will escape.

And this letter was written when Sicily, like her own volcano of Etna, was preparing her intestine fires to overthrow all before her; when she was not only condemned to foreign rule and the presence of her foreign rulers, but when her exasperated children were banded together in dark and mysterious parties, bound by strange vows, and obeying with a blind and headlong zeal the bidding of fanatical or ambitious masters. The fearful society of the *Beati Paoli* was supposed to be extinct, but such was far from being the case: another, and a more formidable society had, in truth, been built up over its ruins, entitled, "the Noble Brotherhood." Second in power to this, and greatly exceeding it in reckless ferocity, was "the Tanners' Company," of which, in addition to their self-delegated power, the chiefs were rendered still more certain of impunity in their violence, by an incorporation with the first-mentioned band, although this fact was unknown to the inferior members. The Noble Brotherhood, ostensibly a congregation of penitents, never appeared in public when engaged in their offices of penance, save enveloped from head to foot in an ample cassock of black serge, with the hood so arranged as to conceal the whole of the face except the eyes. None knew, save themselves, the individuals of whom the order was composed; but, like those of the secret council at Venice, their visitations of vengeance were only the more severe and the more certain. The head of the fraternity was, at that period, the wealthy, haughty, and reserved Count of ALLEGRONI, known as "the man of cameos," from the affectation with which, in order to deceive the vigilance of the world, he collected and exhibited a museum of those precious works of art, lest his total want of occupation should subject him to suspicion. Having premised thus much, we will at once introduce our readers to a nocturnal meeting of the brotherhood on the rock of Procida.

THE MIDNIGHT MEETING.

La Scoglia di Malconsiglio, or rock of evil counsel, which may be seen from the summit of Mount Eryx, is a mere desert islet, situated in mid-sea, at the extreme point of the Port of Trapani. Tradition asserts that Procida had collected there the conspirators of the city at the period of the Sicilian Vespers.

It was night. All was dark and starless; the town gloomy and silent; the port still more so. Scarcely did the lamps of the Madonnas, in their niches at the corners of the houses, or at the prows of the vessels, shed a few feeble gleams along the streets or upon the waves. Sentinels, scantily stationed, moved at intervals upon the ramparts; and a stray dog wandered about the port, howling lamentably.

"If he carries his nose in the air, it is a sign of fire; if he runs with his head low, it is a death-warning. In any case, it forebodes evil."

These words, uttered in a low voice, proceeded from a bark impelled by two masked oarsmen, and occupied by a silent figure, exactly habited like the members of the Noble Brotherhood. The bark glided mysteriously along the mole, in the direction of the Rock of Procida; and when it had nearly gained its haven, a small boat, which appeared either to escort or to watch it, but which remained at a distance, as though it feared discovery, was perceived or heard by the dark passenger; he whispered a few words to the rowers, who immediately tacked, and bore down upon the boat, which attempted to escape, but was soon overtaken. Not a sentence was exchanged; the two oarsmen of the bark boarded the boat, occupied by a single individual, seized him before he had time to assume an attitude of defence or even to resign his oars, and cast him into the sea without pronouncing a syllable. The victim, as he fell, uttered a hoarse cry, and then all was still. This frightful scene, rendered yet more frightful by the deep silence and the thick darkness, was acted in less time than has been required to write it. The murder committed, the two murderers returned to their bark, which resumed its course as though nothing had occurred; only they had the precaution to upset the boat, in order that their victim might appear to have been drowned by accident.

"Did I not tell you," murmured one of the rowers to his companion, "that the dog which howled just now announced misfortune? He must have run with his head low."

Arrived at the rock, the bark entered a little creek, where several other boats, all empty, were already moored. The rowers remained resting upon their oars, and the passenger instantly landed. He had advanced only a few hundred paces, when he found himself in the midst of a group of men in the same garb as himself, who hastened to form a circle, with a gesture of marked respect. The last comer then made the tour of the assemblage, and received the pass-word, in a low voice, from all the members who composed it. That ceremony concluded, he returned to the centre of the circle.

"As surely," said he, throwing back the hood which covered his face, "as surely as I am called Allégroni, there is a stranger among us. I detected him by his manner of pronouncing *Sicilia*, which is our word of recognition. Let every one uncover."

Every hood was thrown off like his own.

"There is the traitor!" he resumed, walking straight towards one of the party. "Seize him!"

The order was executed as soon as given. The suspected individual was surrounded, and, on approaching a dark-lantern to his face, he was discovered to be an Englishman.

"An Englishman!" exclaimed Allégroni, "an Englishman has dared to intrude upon our nocturnal meeting to discover the mysteries which we shroud in the shades of night and of our own consciences. Already had I, only a few minutes since, executed justice on a spy who followed my bark; and now I discover another in our very ranks! Let him go and join his accomplice! May our secret perish with him in the waves!"

The captive made no attempt to defend himself; he suffered himself to be bound and gagged without resistance, as though a superstitious terror and a feeling of the irrevocable had paralyzed his tongue and all his faculties. Four men bore him towards the coast, and ere long a heavy weight was heard to fall into the sea. The four executioners returned an instant afterwards, and resumed their places in the circle without a word of the unhappy wretch whom they had sacrificed.

* * * * * * *

"And now" said Allégroni, "when we are watched, and perhaps threatened with danger, suffer me to strengthen your hearts by recalling the origin and object of our sacred and holy institution. The ancient brotherhood of St. Paul, to which we succeed, and which has been so much calumniated, had not, as you know, any one thought or aim, save the independence of Sicily, of the unfortunate island which, always aspiring to liberty, has experienced nothing but a change of slavery. And if the Beati Paoli, our ancestors, redressed at once the wrongs of society; if they punished prevaricating ministers and powerful oppressors; if they revenged the weak and the innocent, it was because they desired to establish public happiness upon individual happiness, and wished virtue to be the prelude to liberty. They never lost sight, however, of the supreme vow of the order, and were, on several occasions, about to realize it. Destiny decided otherwise. Reduced by time, worn out by exertion and adverse circumstances, the brotherhood became at last a mere shadow, and threatened to perish altogether. It was then that I formed the project of transforming it, in order to secure its preservation; and I merged it in this society of nobles, which now serves us as a mask, and beneath whose disguise we may still continue to act. Blended together and animated by the same spirit, the two associations now form but one, whose public mission covers its secret aim. Faithful to the lessons, and to the examples of our ancestors, what they willed in their time, we will in ours, and we press to the same point that they did, if not by the same path, at least with the same confidence and the same ardour. We have already done much, we will do still more.

* * * * * *

"Like Procida and his conspirators, whom we replace in this desert rock, consecrated by them, and, without doubt, visited by their shades, let us oppose cunning by cunning and force by force. We are, perhaps, not so weak and powerless as we may appear. But let us strike no useless blow; let us have no more of those partial executions which diminish our strength by dispersing it; let us concentrate it all upon one point; let us aim at the head, and we shall conquer. You know that we have always at Palermo instruments, auxiliaries, and adepts. The corporation of tanners, those fearful *conciariotti*, who make the whole capital tremble, are blindly devoted to us; the day is come to put their devotion to the test."

Such was the Noble Brotherhood of Sicily,—the sworn enemies to English rule. But our space forbids our pursuing further this interesting work, which, in addition to its historical accuracy, presents a perfect picture of Sicily as it was and is, both geographically, archæologically, and socially. It need scarcely be remarked that, being the production of a Frenchman, betrays in almost every page a virulent hatred of the English; but this we look upon so perfectly as a matter of course, that we feel rather disposed to smile than to blame the author by whom it is betrayed. Taken altogether, this is one of the best books of the kind that we have met with for a considerable time.

JOURNAL OF GERMAN LITERATURE.

Englische Skizzen; aus den Tagebuchern von Ida Kohl und J. G. Kohl. (English Sketches from the Diaries of Ida and J. G. Kohl.) 3 vols. 12mo. London, 1845. Nutt.

We shall not enter into any detailed criticism upon this work. Mr. Kohl combines many excellent qualities both as a traveller and an author, with a tendency to note down too much, and to describe whatever he sees, touches, tastes, or handles with similar minuteness. He observes rapidly, masters his subject readily, condenses ably, seeks information with an unapproachable activity, both of mind and body, and conveys himself, by some mysterious agency, wherever he travels, through every building above ground. He stretches forth his hand, like Asmodeus, and the interior of every habitation in a city is laid open, even, as says Luis Velez, of Gucoara, "we see the contents of the pie on the removal of the crust." But here the resemblance ceases; he is resolved to be exact, and we know he is so; but the conviction of that truth is accompanied also with a slight sensation of weariness of mind. Thus he bears condensation well, is the more sparkling for compression, and far more agreeable in the *Family Library* than when fully translated. We shall commence our extracts with that theme of national pride and national blessing which has been the subject of so much poetry and of so much painting—

THE ENGLISHMAN'S FIRE-SIDE,

a scene which we hope our readers will recognize by Mr. Kohl's description of its furniture:—

The central point of interest in this is the capacious grate, with its polished bars, and beneath this the glowing hearth or iron plate on which the ashes fall, and which gave rise to the conundrum, "Why is the hearth like Westminster Abbey?" "Because it receives the ashes of the great" (grate). Then on both sides are the hobs, small flat places, to hold a kettle or flat iron, and last, as the shrine of the consecrated hearth, the fender, generally of bronze, and which derives its name from the verb "to fend, or keep off." These latter, in the drawing-room, are generally small and low; they are higher in the school-room, and rise to the height of a hedge in the nursery. But it is upon the small low fender that you place your feet, when the weather is cold, if haply you can then elude the cautious glance of the lady of the house; for many mothers will not allow their daughters even the household privilege of sitting on the rug—the thick-piled piece of carpet placed before the fender, and which partly serves to give a becoming completeness to the fire-place, and to supply a soft cushion for the feet. It is upon the manufacture of these that the greatest care is bestowed. They are made generally of the most brilliant colours, of many different sorts, but all alike warm and soft. Large manufactories supply them; they are the common employment of the prisoners; and the delicate hands of ladies work them upon the coarsest canvas. Many ladies, indeed, evince much dexterity in this, mingling their colours with the greatest taste, imitating clouds, or introducing some elegant design. Not unfrequently we meet with the emblem of the three kingdoms,—the rose, shamrock, and thistle, whilst their apparently rough texture and name remind one of the kirt rugs of the old forefathers of the Britons—their wolf and bear skins. To keep the "fireplace," "hearth," and "grate" extremely bright is the first care and duty in the morning of the English housemaids. Dow and Mieriz never represented their Dutch countrywomen more solicitous with their pots and pans.

They lay the spotless tongs and shovel, always of equal weight and strength (as though they belonged to the heir-looms of the family), in one corner of the fender, and in the other the poker; all display the most excellent workmanship, and, even in the houses of the poor, are as polished as silver. But it is the chimney-piece which forms the "*ne plus ultra* of the whole." Upon this are arranged the ornaments for the most part of the room. Porcelain urns, antiquities, Chinese figures, thermometers, clocks, spillholders, and sundry other things are here all heaped together. Even among the poorest classes in England, I have observed that the chimney-piece is the spot preferred amid the furniture of the room, insomuch that it often struck me that the greater part of their wages was expended in gilt cups, glass ornaments, imitations of fruit, Indian shells, &c. as offerings to their household gods.

We cannot follow Mr. Kohl through his little dissertation upon looking-glass, nor attempt to justify ourselves against the accusation of being the most lack-looking-glass (*spiegelarmste*) nation in Europe. We trust the recent remission of taxation upon this branch of manufactures will free us from this sad reproach, and enable us to compete hereafter both with Paris and Vienna. But if inferior in looking-glass, as compared with other more favoured nations, it is a consolation to know that we excel them in "brooms, bellows, fireguards, and coal-box," to all of which Mr. Kohl very properly directs attention, and describes with great accuracy their several uses; in particular the coal-box, which it seems is specially constructed as a resource in time of need for governesses and the school-room, a custom which, if contrasted with the general place of the more highly honoured scuttle, establishes very fully the theory of nice gradations in aristocratic circles. The scuttle for the duchess, the coal-box for the governess—who can doubt it?

SHAKING HANDS.

As a means of defence, the Englishman uses the clenched fist, and not the dagger, as the Spaniards and Italians. They consider this a more manly, noble, and, as being more *at hand* when wanted, a more efficient power. But for friendship, as its most heartfelt expression, the worthiest, manliest, and sincerest sign of feeling they give the open hand. To us, indeed, this English

hand-shaking, when immoderate, as it sometimes is, has a somewhat comical effect. But it has its bright side also. For in this custom, hearty, strong, and sometimes rough, we see expressed the deep fraternal sympathy of these great nations. Bodily union, as far as the junction of the ten fingers can effect it, is a beautiful symbol of that of the soul, and almost all nations have adopted two hands clasped together as the emblem of mutual brotherhood and aid. There is a language, silent indeed, but ever variously expressive, in this custom. Think but upon its degrees; the pressure; the grasp; the hands held; twisted within each other, given, or shaken; all, from woman's soft, gentle touch, which seems to linger as a feeling, to man's nervous, strong retention. For example, the bishop's, or pastoral shake. This is prolonged, and indicative of inward feeling, as though it would say, "And you also are one of my fold." Such a greeting, if the pastor be a man of God, and we impressed by religious feeling, has a happier influence than a two hours' discourse. And when we pray, when in the stillness of the soul, with no disturbing passion in our mind, do we not fold our hands together as the sign that we are in charity with all, and that reconciled, passionless, in Christian union with men, we bow before the shrine of the Most High? Mark those who, unacquainted with each other, or possibly estranged, offer the hand as a mere act of outward courtesy. How restrained is their action; how motionless, unfeeling, insensible; like oil upon water, one hand rests within another; how readily they depart, each glad to escape from this hypocritical communion. On the contrary, when long-tried friends, who have been separated for years, again meet, with what haste and warmth of feeling do they not grasp the hand; how short, but hearty, is their salutation, "Well met." They seem riveted together as the links of a chain, true and inseparable, with hearts for any fate. And when we bid "Farewell," does not our hand rest folded within another's, motionless, yet thrilling with gentlest touch: for sorrow and affliction have a soft restraining feeling which refuse to yield the hand so often clasped in love, until the last moment of separation.

There is much of truth, and some little, very little, we are free to admit, of poetry in this. Mr. KOHL, we observe, prefers the "handshaking" to kissing, the latter being, as he tells us, an affair of the moment, which hides from us the face of the loved one, and is not so susceptible of being treated by the artist with effect. He is also of opinion that, like the handwriting, handshaking is an index of individual character. We have heard the same theory founded on the shape of a man's hat, upon his being fat or thin, silent or loquacious, all of which, we believe, offer grounds for reasoning as satisfactory as those that usually guarantee the prognostics of teacups.

A MORNING CALL.

Hark! there goes the door-bell—who can it be? The agreeable silence of the comfortable parlour is disturbed by the shrill sound, which echoes throughout the house. One raises the eye from his book, another puts aside the workbox, and a third silently withdraws the feet from the fender. I dare say it is the doctor (upon whom suspicion at first generally falls), or perhaps Mr. ——, the clergyman. We had better stay where we are, and let them go into the library. In the mean time, the door is opened, and instead of the doctor or rector, a family—Mr. T. and his daughters—are announced. We are at home; and immediately they enter the well-warmed room. The ladies have escaped at the first intimation of the visitors, and are now lost in the recesses of their bedrooms. A becoming cap is hastily put on, a prettier and more dressy apron, and, after awhile, the guests are all comfortably settled in the armchairs around the fire. Now "handshaking" commences; one grasps that of another, moves it to and fro; my friend shakes mine, I return his vibration; this excites him still more, and, inspired by his overflowing kindness, I recommence the greeting with greater emotion than before. We are seated, and conversation flows at first gently and slowly, but, as another and another member of the family enters, the whole process is again gone through. A quarter of an hour has elapsed, and the visitors request their hostess to ring for the carriage. But you will first take luncheon with us, it will be ready directly. Well, we have no objection, and luncheon is immediately announced.

Now, luncheon is a meal of which the gentlemen do not in general partake. They are apt to express surprise that ladies should, at two o'clock, again confess an appetite, quite forgetful of the slices of cold beef or ham, the beefsteaks and cold pigeon-pie, the tongue and cold duck, which they have enjoyed with their coffee, whilst those they censure by their astonishment have but satisfied their "morning call" of hunger with muffins, toast buttered and dry, or bread and Scotch marmalade. They forget, too, that for a lady luncheon is but, for the most part, a change of occupation. Nevertheless, Mr. KOHL admits their assiduities at the table and great zeal in cutting bread, recommending delicacies, suggesting a glass of wine, and very laudable enforcement of that suggestion by their example. He adds the following upon some luncheon peculiarities he has observed:—

Some ladies prefer sweets, particularly those who fear they have a tendency to become stout. The doctor has said, "Don't eat meat more than once a day," so they solace themselves with bread and cheese, and the addition of raw celery; but others, who cannot so readily moderate their appetites, assure us, and this not unfrequently, "They really trust we shall not be surprised at their apparent indulgence at this hour, but in truth luncheon is their dinner."

Visitors have a natural right to make a good luncheon, and are reminded they have a long way before them; and there is always, moreover, a delicate daughter who has been ordered by the doctor not to go too long without food, and to take regularly a tumbler of porter or of double X; it fattens, say the English. We deny the double X, but admit the general truth of the remainder. Very few who have paid or received domestic and friendly duties of this nature can deny the accuracy of this sketch, from the shaking which communicates a kind of friendly palsy to the body, the gradual dropping in of every member of the family—

> The atmospheric conversation,
> Dear to our weather-beaten nation—

to the native prose of county interests, hop and apple speculations, and the final addition of dear and delicate Louisa so much improved by Guinness's or Bass's very bitter. But we deny the X X.

The "Women of England" have a chapter entirely devoted to a criticism on their beauty, and we are much gratified to find that, notwithstanding this is tested by that ideal and law of all excellence in this respect, the Venus de Medici, judgment upon most points is given in their favour. The following we trust is a libel:—

BEAUTY AND GRACE.

Dress precludes any further criticism except upon the hands and feet: these, opinion condemns as generally too large. Nor should I be surprised, upon more accurate inquiry, to find this suspicion true; for large hands and feet are the common inheritance of all the Teutonic race, and constitute two important defects. After the features, no part of the body is so expressive as the hand; but the foot is as the pedestal of the whole, and upon the delicacy of its formation depends much of the beauty both of motion and of repose. Beauty profiteth little if unaccompanied by grace, and is as virtue without wisdom to instruct and guide it. Englishwomen are, in this respect, inferior to those of other nations. We see many so devoid of all natural grace, that it foils the influence of their beauty.

Many Frenchwomen, on the contrary, who may be fairly considered plain, are yet enabled to hold and to exercise dominion over admirers and friends by the mere influence of gracefulness of manner. An Englishwoman possesses a capital of beauty, which to her is profitless, but which to her more gifted sister would be the wizard's power. They are sometimes too tall, and their walk stilted, too quick, and too manly. Their carriage is too formal and stiff, and they dance without feeling. It is by their superiority in all these respects that continental beauties obtain full reparation for the gifts which nature has so liberally lavished upon their more favoured insular sisters.

Mr. KOHL attributes the beauty of the Englishwoman's complexion in part to the wretchedness of the climate and the blending of various races before and since the Conquest. That this latter has had its influence, we do not doubt; but that the "dews and fogs which guard her from the garish eye of day as with a veil" have exercised any very immediate influence, we must hesitate to affirm,—certainly none more potent, or very frequently so direct, as ROWLAND'S Odonto, or ATKINSON'S Milk of Roses. We are grateful for this admission of our patriotism as regards this subject.

The beauty of his countrywomen is to the Englishman a matter of as much deep, heart-felt, patriotic feeling as any other by which he is distinguished. There are always some "reigning toasts,"—some ladies whose names are honoured, and constantly cited for their beauty in suitors' tones and phrases. Thus in past times was the Duchess of Devonshire, as at the present Mrs. Norton, and Lady Seimont (*sic*—which we believe should be translated Seymour).

We must extend our extracts to a few lines on the

DRESS OF THE ENGLISH LADIES.

The desire for display, which has increased with the still increasing wealth of the middle classes, has so greatly stimulated numbers who are ambitious to be held "ladylike," and who live in the belief that they are the more so in proportion as they are splendidly and expensively dressed, and has so largely added to the mass of tasteless vulgar finery in vogue, that it cannot fail to excite the surprise of every foreigner. Often have I looked with the most regretful pity upon many pretty women disfigured by pearls in their hair, heavy gold chains about their necks, flowers behind their ears, tasteless silk gowns with colours striving to eclipse the rainbow, and whose natural beauty is thus entirely destroyed by the artificial means for its display. There is no medium in their toilette; here they have too little, there they have too much. The neck and bosom go most beggarly clothed, and in this particular they seem entirely to forget the verse of Homer, which represents Juno as clasping her dress *over*, and not *under* the bosom, with a golden brooch. Were it not a subject almost too delicate for me to handle, and to define the nice boundary of taste in this respect, I should feel inclined to declare war against my English friends, who oppose here the general habit and feeling of all their sex on the continent.

This weighty matter, which Mr. KOHL fears to handle, we shall not venture to discuss, but leave it to the discretion of our countrywomen, "near and dear," to determine. Human nature, we suspect, is very much the same in all countries; and we are surprised that Mr. KOHL, who has apparently observed so closely, should have forgotten so completely that, in general, we display the advantages and beauties we possess, and hide those we have not. Juno, and the ladies of the continent, had and have, no doubt, sufficient reasons for their costume; and the relative moral of envelopment and development will, we fear, be ever more governed by natural circumstances than Homeric quotations.

CABINS AND POTATOES.

County Clare, when I first travelled through it, had all the appearance of an uninhabited desert. But my attention was soon directed to numerous cabins which had escaped my eye, from being of the same colour as the earth. These were ranged together like beehives; and I soon learnt readily to know them as we passed. They are generally the most wretched abodes imagination can conceive, built of clay and mud, and are brought to so ruinous a condition by weather and time, that props are required on all sides. The roof is of straw, upon which, to keep it from being blown away, stones are seen lying as if they had been rained from heaven. The chimney is represented by a kind of willow-basket, which projects from one side of the roof. This serves also, during the intervals when the sun's rays pierce through its thick clouds of turf smoke, as a window, for they have no other opening for light or air than the door, made of a few old boards clumsily nailed together. The inhabitants of these abodes consist, generally, of the mistress of the house, who, in a vesture almost classically simple, sits spinning before the door; of tribes of half-naked urchins playing around her; and of the husband in the fields at work. The other members of the family are the cow and the pig. This latter is a never failing companion; it has its trough in the immediate neighbourhood of the door, and when cold, becomes a parlour boarder within, a part being boarded off by the wheelbarrow, or else the interior of this is given up for his especial accommodation. A cock and two hens complete the family circle, who scratch about the dunghill, or the roof, and roost, since better may not be, near the basket-worked chimney. The furniture consists of one bed, a table, and a few broken chairs. Pictures of St. Patrick or some other saint decorate the walls, against which a dresser is placed, whereupon stands a few broken cups and saucers. The poor Irish peasant lives almost entirely on potatoes. Meat and bread to him are rarities. Nevertheless they are ever contented whilst the supply is sufficient; they never murmur so long as the potato bubbles in the pot, which hangs over the glowing turf fire. But in summer, when the provision of the past year is exhausted, and the new crop is yet unripe, hundreds, aye, thousands, are then driven from their huts to obtain from the passing hand of charity some respite from the daily pangs of hunger. Then appears the hospitable spirit, the kind humanity of the Irishman; and truly both in rich and poor. The poor gives to the poorer all that he can spare, in food, clothes, and lodging; and the richer add liberally to the stores of these.

With this sadly truthful sketch we conclude. Mr. KOHL, as an author, is not to be estimated by his more recent works, as these appear to have been written more for Germany than as contributions to European literature. Hence his minute details, his philological and ethnographical researches, and too frequent recurrence to the daily hints of his note-book. The present work exhibits all his peculiarities; his patience in inquiry, his generally pleasing narrative, his dry and unimaginative conception both of character and event, and praiseworthy fidelity throughout, intermixed with a partiality for mythology, which would induce us to believe he has either lately returned from, or meditates an excursion to Olympus, with Tooke's Pantheon as his hand-book. We shall look with much interest for the promised publication of his works "On London," and "The Social Characteristics of the English," feeling assured that we shall at all times recognize in Mr. KOHL an able intellectual author, and an observant, feeling man.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

TO THE EDITOR OF THE CRITIC.

SIR,—I heartily congratulate you upon the introduction of a feature so new, and promising to be so useful, as *The Tourist*. I hope all travellers will give it their cordial co-operation, by making it that which has so long been wanted—a medium to which they may communicate the results of their experience, and where those who seek information may be sure to find it. MURRAY'S *Handbooks* are admirable, nay, indispensable companions, but they are not infallible; and I, in common with others, have continually felt the want of some periodical publication in which errors in guide-books may be corrected, additions made to their information, and altered circumstances in travelling, inns, prices, &c. announced almost as soon as they occur. This I take to be the design of *The Tourist*, combined, I presume, with memorials of travel, skeleton tours, advice to travellers, and occasional notes of objects that deserve attention in different localities, in the collection of which information you will ask the aid of all tourists who can contribute any thing likely to be useful to those who may follow after them.

If I rightly understand your plan, I, for one, beg to render you hearty thanks for the inception of it; and I promise to help you to its accomplishment, not only by occasional contributions of the results of my own experience, but by making it known to my travelling friends, and endeavouring to enlist their aid also.

Yours faithfully,

Athenæum Club, 24th June, 1845. VIATOR.

(Our correspondent has correctly understood the design of *The Tourist*. It must depend upon those who approve it, by their contributions to the common store of information, to render it as widely useful as it may be made.—*Editor of* THE CRITIC.)

Black's Economical Guide through Edinburgh; including a Description of the Environs, &c. 4th edition. Edinburgh, A. and C. Black.

THIS is another of the excellent Guides for the Tourist, published by Messrs. BLACK. In copiousness of information, in typographical elegance, in the multitude and beauty of the engravings that illustrate it, this is a fit companion to the larger Guide to Scotland generally, which we had occasion to notice last week. Every visitor to the modern Athens should take this book in his hand. It will be serviceable to him at every step.

ART.

SALE OF LORD GRANVILLE'S PICTURES.—The sale of this small but almost incomparable collection of pictures took place on the 21st, at the great room of Messrs. Christie and Manson, King-street, St. James's. The sale was, as might be expected, well attended, most of the great collectors and the best judges being present in the course of the morning. The gross sum realized by the sale of the whole collection (19 pictures) amounted to 5,226*l*. Lot 10, Cuyp, *The artist drawing from nature*, a view over a flat country during a fine evening; on the right of the foreground two gentlemen, who appear to have alighted from their horses, a grey and a bay, of which an account is given in Smith's Catalogue, was purchased by the well-known collector Mr. Farrer for 550 guineas; and the companion, by the same artist, a hilly landscape, with trees, a woman on a bay horse, and a farmer on a grey one, &c. was bought by Mr. Dunford for, we believe, a similar sum. The beautiful landscape, by P. Koninck,

an extensive view over a flat country, lot 17, a most extraordinary imitation of nature, fetched 682*l*. Lot 18, W. Vandervelde, a view off the coast during a fresh breeze, presenting on the left a coasting vessel scudding under mainsail, carrying a blue flag at the yard-arm, with four men on board, and a small boat alongside, with two men in it, merchant ships in the distance, and on the right hand a man-of-war, a small boat, and a vessel in full sail, a perfect gem, was knocked down at 500 guineas; and lot 19, by the same artist, a view, "looking seaward during a calm," a beautiful production of art, fetched 350 guineas. Perhaps a more unique collection of cabinet pictures of the highest class was never brought at one time to the hammer.

ART-UNIONS.—A new bill, introduced a few nights since by Messrs. Wise and Ewart, "for legalizing Art-unions," enacts, after a lengthy preamble, referring to recent circumstances connected with these institutions, that all voluntary associations, such as Art-unions, for the purchase of paintings and drawings, &c. to be afterwards allotted and distributed by chance, now constituted, or which may be hereafter constituted, shall be deemed and taken to be lawful associations, provided always that a royal charter shall have been first obtained for the incorporation of such associations, &c.

COUNT D'ORSAY'S STATUE OF WELLINGTON.—A small equestrian figure of the Duke of Wellington in military costume, and as it is understood he appeared at Waterloo, is to be seen at Messrs. Howell and James's, in Regent-street. It is a cast in plaster of Paris from the clay model by Count D'Orsay, and is about to be cast in silver by Messrs. Hunt and Roskill, of Bond-street. The figure is somewhat too bulky for the Duke, the limbs being large and muscular, and scarcely conveying much notion of the real appearance of his Grace at any time of life, and certainly not like him at this time. Some portions of the face are good portraiture; and as everybody knows that it is the Duke of Wellington, the identity is recognised as a matter of course. For an amateur artist it is a creditable performance, but we doubt whether it would much increase the reputation of a Royal academician, or even an artist not exalted to that honour.

MUSIC.

MADAME AND HERR ED. MEYER gave a *Matinée Musicale*, at the residence of Madame DULCKEN (whose sister Madame MEYER is), on Monday, the 23rd instant. They had the valuable assistance of Mesdames HASSELT, BARTH, SCHLOSS, RAINFORTH, A. SHAW, and BIRCH, and of Messrs. G. COOKE (as vocalist and oboist), STAUDIGL, and PISCHEK. The playing of Madame MEYER, who has appeared but rarely before a public audience, is marked by many of the attributes which distinguish that of her accomplished relative; it has, moreover, lately acquired an expression, not a little due to association with the refinement and taste of M. MEYER, whose command over the inmost resources of his instrument (the clarionet), those more subtle influences of tenderness and sweetness, is fully recognised. Madame H. BARTH appeared under all the disadvantages which a prolonged attack of influenza could produce. Another and more favourable occasion must consequently be sought for pronouncing definitely upon her qualifications; the scope of which appears to be of no ordinary ambition. Herr PISCHEK gave the "Adelaide" of BEETHOVEN with taste and feeling, somewhat overwrought; the composition was much injured as to the accompaniment, by the transposition (into G) which the singer's voice rendered necessary. Mr. G. COOKE must extricate himself from the trammels of his musical pedagogue before we can venture to assign him a place among singers. With reference to Herr PISCHEK's performance at the Philharmonic concert of BEETHOVEN's cantata, we beg leave to quote from the *Morning Herald*, of Tuesday, the following *critical* effusion: "Herr PISCHEK sang "Adelaide" *beautifully*; BUT he elaborated the expression *far too much*. He *hung over the* notes and *coquetted* with the time, until the *refinement* was felt to be as *artificial as it was unmeaning*. It was *overdone*: and although a fine instance of polished and delicate vocalism, was *far from satisfactory* as a reading. He was nevertheless encored." Artificiality and unmeaningness are, in sooth, elements of the BEAUTIFUL.

THE DRAMA AND PUBLIC AMUSEMENTS.

HER MAJESTY'S THEATRE.—*Otello* was repeated on Saturday to an overflowing and brilliant audience, when GRISI's reception was not less enthusiastic than that which hailed her on her benefit-night, and she merited it, if possible, still more. Her impersonation of the *gentle Desdemona* exhibits really marvellous versatility in one who embodies with such awe-inspiring power the stupendous *Semiramide*, and the terrible *Lucrezia Borgia*. She was admirably supported by LABLACHE, and FORNASARI as *Iago*. MARIO'S *Otello* is miserably inefficient. This personage appears to imagine it quite sufficient for him to walk on the stage and shew himself; to take the slightest trouble about any thing unconnected with the adornment of his person would seem never to enter his notions of the necessary. We can assure him that he herein labours under a very serious delusion, the effects of which he will ere long find particularly inconvenient, if he does not accept warning in time. Mr. LUMLEY, if we estimate him aright, is not a man to be made a fool of by any singer, were he fifty MARIOS in one.

On Tuesday there was again an enormous audience, on the tip-toe of expectation, one-fourth of the pit literally so, to see and hear two singers of high continental celebrity make their *début* in *Roberto Devereux*. The *début* in each case was entirely successful. Madame (why not Senora) ROSSI CACCIA is *prima donna* at the Italian opera at Lisbon; M. BARROILHET is the eminent baritone of the Grand Opera at Paris. To have secured their services is an additional proof of the exquisite judgment which directs the management of this theatre. The opera selected for their appearance is by no means DONIZETTI'S *chef d'œuvre;* when produced here in 1841, after three or four representations, which went off as flatly as possible, it was withdrawn, and no more seen. The story is that of the ring which the unfortunate Earl of Essex gave to the Countess of Nottingham, to be transmitted to Queen Elizabeth as that last appeal to her mercy which, in happier hours, she had promised him should, under any circumstances, prevail. The ring, as our readers will remember, was not delivered, and the Earl's head fell beneath the axe, the Queen's heart breaking at the same fatal moment. The plot thus presents opportunities for considerable dramatic effect, and this effect is done complete justice to by the admirable performers who fill the principal parts; for both Madame ROSSI CACCIA and M. BARROILHET have the good sense to understand that acting is an essential ingredient in opera, and the ability to act well. The music is commonplace enough in its conception, though skilfully handled by the accomplished composer, who, however, is *rather* too much given to borrowing from himself. In the Italian theatres, the practised ears of the audience at once detect all such plagiarisms, and, when too liberally exhibited, there arise exclamations from all parts of the house of "*Bravo* MOZART!"—"*Bravo* CIMAROSA!"—"*Bravo* ROSSINI!" and so on, giving merit in each case where merit is due. Were this species of identifying criticism to take place on the production of a *new* opera by DONIZETTI, more or less of every bit of it would be hailed with "*Bravo* DONIZETTA!" It is a system as little profitable to the reputation of a composer as a man's taking money out of his left breeches pocket and putting it into his right would be to his augmentation of pecuniary wealth. Madame CACCIA'S voice is a genuine soprano of great compass, and well nigh incredible flexibility. She executes the most intricate and difficult passages with perfect certainty and clearness, and with apparently entire ease to herself. M. BARROILHET'S voice, though it has been finer, is still very fine, and he has it under thorough discipline. The *mise en scène* was in excellent keeping.

TAGLIONI made her reappearance on Thursday. She is to be with us but a very limited period, and that for the last time, an announcement we make with sincere sorrow, for in her there is united a combination of attributes which no other dancer that we have seen could even pretend to. She is the very impersonation of the poetry of motion.

COVENT-GARDEN.—*Robert le Diable* is produced at this theatre in a manner which has never been surpassed in this country, and which can only have been equalled anywhere. LABORDE presents us certainly with the best *Robert* we have seen, and although STAUDIGL, perhaps, may be superior to ZELZER in the power of his voice, yet the latter singer's embodiment of the fiend father is, at all events, very nearly as satisfactory as the German basso's, and in costume and acting he is decidedly superior. In its *ensemble*, in short, the Brussels company's representation of this magnificent work leaves nothing to be desired. We much regret that it is not to be repeated this season, the engagements of the *troupe* absolutely requiring them to be back at Brussels on the 15th July, and there being several operas still to be brought out, HALLEY'S *Reine de Chypre*, among the number, which is announced for Monday.

FRENCH PLAYS, ST. JAMES'S THEATRE.—M. ARNAL made his appearance here on Monday, in *L'Humoriste, ou l'Homme difficile à vivre*, an amusing vaudeville, wherein he sustains the part of a *valet à pied* with consummate truth and knowledge. The astonishing thing is how actors, engaged as they are two-thirds of their waking hours in the actual work of their laborious profession, can find time to study the infinite characters, in every class, and variety, and period of life, which they are called upon to represent. To have attained, for instance, so perfect an insight into the peculiarities of the *genus* footman, as that exhibited by M. ARNAL in this little piece, would seem alone to necessitate the careful observation of years; yet the part is only one of a hundred of which the same comedian is expected, and of which he manifests himself to be equally a master. The second performance on Monday was *Le Mari de la Dame des Chœurs*, in which ARNAL impersonated a theatrical tailor, who is kept in a constant state of excitement by the perils which environ his spouse, the chorus singer, a fair dame still possessing her virtue, but in terrible danger of losing it, so pertinacious are the indelicate attentions of two eminently scientific *roués*. It is a very entertaining comediettn. On Wednesday, M. ARNAL appeared in two pieces new to this theatre, *L'Homme blazé* and *Le Poltron*. With the former our readers are familiar in its anglicized form—*Used Up*, a version by the skilful hand of CHARLES MATTHEWS, with whom for its hero it has realized, most deservedly, thorough and permanent success, at the Haymarket. Comparisons, they say, are odious, and of consequence, those who make them; we will therefore enter into none between M. ARNAL and Mr. CHARLES MATTHEWS, in their respective embodiment of this capital conception. It is at once more agreeable and perfectly just to pronounce them both excellent. But while offering no comparison ourselves, we earnestly counsel our readers to see both performances, presenting, as they do, happy exemplars for the consideration of thinking playgoers, of English and French modes of illustrating the same idea. There is one capital touch in ARNAL'S view of the matter which CHARLES MATTHEWS could not adopt, for he, in his metamorphosis, wears a wig; when *M. Nantouillet* returns horror-stricken from the cellar where he thinks he has seen the ghost of the supposed defunct, his hair is all turned grey with affright. This is a bit of nature for which some years ago nobody would have given a French actor credit. Those who desire to see the French plays must lose no time, for the season, unfortunately, is about to terminate. We do not ourselves understand why there should not be French plays all the year round in London. One would imagine that, even at its most deserted time, *the Village* still retained a pleasure-seeking population enough to fill all the theatres that exist, and a dozen more; and where is better entertainment to be found than at the St. James's Theatre? Merely regarded as so many lessons in French, its performances would be worth infinitely more than the money, communicating, as they would, to sedulous pupil-visitors, in a course of ten or twelve attendances, the French of Paris, and not that of Stratford-at-Bowe, ordinarily administered at seminaries for young ladies, and academies for young gentlemen. We present this suggestion to judicious parents and heads of schools.

PRINCESS'S THEATRE.—The representation *in petto* of her Majesty's *bal costumé* is the present attraction, and it is got up with a magnificence of dress and decoration, and with a good taste in the design, which cannot fail to delight the spectator. All who had not an opportunity of seeing the original should make a point of going to see this not unworthy shadow of it. GILBERT and Miss BALLIN play their parts of royal hosts with dignity. The dances are in the best style of the time revived in the costume. The stately and formal minuet is followed by Sir Roger de Coverley, in which the mixture of the stiff manner and the free dance is preserved in a manner the most real and effective. Miss CUSHMAN continues to divide with the musical drama the applause of the patrons of this elegant and well-managed theatre.

LYCEUM.—*Luck's All*, is the title of a new piece brought out at this theatre on Monday from the pen of Mr. A. WIGAN, whether as author or as versioner we know not. It is an amusing little affair enough, the joke of which turns upon the old idea of a stupid servant becoming, by the merest accident, the supposed agent in a variety of pieces of good fortune that befal his master. KEELEY'S expression of utter amazement and bewildered surprise as he is successively complimented upon and questioned about the extraordinary events that befal, may be readily imagined; indeed, Mr. KEELEY'S mode of acting any given part may always be somewhat too readily imagined.

ADELPHI.—A new comedy, in two acts, called *Peg Woffington; or, the State Secret*, was produced here on Monday, and successfully, owing mainly to the exertions of Miss WOOLGAR, who enacts *Peg*. *Peg* is a *danseuse, circa* 1746, as lively as need be, but more careful of her character than dancers are said generally to be. Not that she is unsusceptible of the tender passion; on the contrary, she is over head and ears in love with *Master George Tarleton*, and would marry him, only that, just at the moment, prudence forbids, for he has run away with all her money. In the nick of time for her purpose she gets employed by the English government to conduct a negotiation with the French ministry, and her success in the matter being complete, she is enabled to place her lover once more in a condition of affluence sufficient to justify her marrying him. Mr. PAUL BEDFORD enacts a *Baron Stuph*, a rival diplomatist, whom *Peg* outwits. Mr. PAUL BEDFORD is, to our notion, a huge bore, and for parts such as this, which pre-suppose the idea of a gentleman, though a silly one, is quite out of the question; it being perfectly impossible for him to represent a gentleman. Mr. WRIGHT is ridiculous as a fantastical ballet-master, for which character his capering qualities adapt him.

The STRAND THEATRE.—The dramatized version at this theatre of DOUGLAS JERROLD'S admirable apologue *The Story of a Feather*, is not unskilfully put together, and promises to have a run. An account of the plot would manifestly be superfluous, for who is there that reads not *Punch?* The characters are, on the whole, well filled; Mr. LEE'S *Peter Flamingo*, being particularly noticeable; but as to Mr. LAWS, oh, law! Besides the *Story of a Feather*, there was *She's mine for a Thousand*, an amusing affair enough, and *Secret Memoirs* (of the Devil). The management of this theatre is really entitled to commendation for its various enterprise; but why does it not secure HAMMOND, and give us *Buzzbottle?*

ORIGINAL CONTRIBUTIONS.

A SONG FROM THE ISLE OF THANET.

BY CALDER CAMPBELL.

Oh! when the glorious summer's sun
Shines bright in the sky of June,
And the dancing skiff to the jutting cliff
Sends forth a merry tune—
A merry tune from the gay young band
That sail o'er the sparkling brine—
I sigh as I think of that eastern land
Where youth and joy were mine.

Oh! never more shall the Neem-tree wave
Its scented lilac hair
O'er the Indian bower, where my mid-day hour
Was spent in visions fair!
But when the sun of June lights up
Yon sea with a silver shine,
Bright Fancy's wand brings back the land
Where youth and joy were mine!

The sun sends down, midst emerald grass,
Its golden beams to sport;
And skiff, and sloop, and steamboat pass
Beneath the cliffy fort.
But, in my dreams, by eastern streams,
With loved ones I recline,
Who, heart and hand, in that dear land,
With youth and joy were mine.

Margate, June 23, 1845.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

SUMMER BEVERAGES.—A correspondent remarks: "Have you tasted the summer beverages of Sainsbury's, near Norfolk-street in the Strand. They are in fact very well made soda-water, flavoured by syrups of various fruits, at the choice of the customer. Some dozen of these flavours are imparted in perfection. The apple is especially delicious, the aroma of the ribstone pippin is preserved in singular perfection."—B. B. (We can personally attest the truth of our correspondent's criticism. We hope others will follow his example, and make known in like manner the many other good things scattered over this great metropolis, where without such a medium as this it becomes daily more difficult to find them out.—EDITOR OF THE CRITIC.)

ROYAL POLYTECHNIC INSTITUTION.—Perfect drainage, not only of the surface, but also of the subsoil, is now acknowledged to be one of the primary elements in the process of agri-

culture; but the immense outlay of capital necessary to carry out such an object has proved a great drawback upon the progressive improvement of our waste lands; consequently large tracts of country which by draining might be brought into a state of cultivation remain worse than useless; for not only are they unproductive as regards crops, but they are constantly throwing off poisonous effluvia, from the stagnant water and decayed vegetable matter which they contain, and which must necessarily exert considerable influence over the sanitary condition of the country. These facts, together with the constant excitement kept up among agriculturists, seem to have acted as powerful stimuli to the inventive genius of man, for, in addition to the ingenious contrivance of Mr. Ainslie for making draining-tiles, pipes, &c. lately deposited at the Royal Polytechnic Institution, there are two others, one by Messrs. Cottam and Hallen, engineers, and the other by Mr. Webster, of Southampton, each differing from the other in construction, but all beautifully simple and effective. Mr. Ainslie's has one great advantage, that of making bricks, which it does equally well, by a slight alteration in the machine. All stones in the clay are crushed to pieces without retarding the movement, and these are the only machines hitherto offered to the public, for which, with most clays, no previous preparation of the clay is required, an expense generally greater than the cost of making. Of course we do not presume to say which machine will prove the most useful, but would strongly recommend an inspection of them to all those who may feel interested in such matters.

To lessen the Combustibility of Houses.—A correspondent of the *Builder* proposes the substitution of iron for wooden lathing in all cases where wooden laths are now used for partitions, ceilings, studding, &c. In every house that is burnt the lathing supplies the train. The fire creeps up the walls, ignites the joists and floors, and, in short, prepares the bonfire with perfect pyrotechnic art. No fire could possibly pass from a room without combustible laths on wall or ceiling (or wainscoting, which is rare in modern houses), to any other room.—*Builder.*

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of The Critic is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

The review of, and extracts from, Mr. Colquhoun's work, touching, as it does, on nearly the same topic, render it desirable that we should suspend our own comments on the uses and advantages of Mesmerism, lest the reader be wearied by repetitions.

AMPUTATION OF THE HAND WITHOUT PAIN, AT SHALDON.

TO THE EDITOR OF THE CRITIC.

Sir,—The following highly interesting case of amputation, performed during mesmeric *coma*, the accuracy of which (from the high respectability of the operator, Dr. Jolly, and others who witnessed the operation, and have appended their names to the inclosed copy of testimonial and statement to which it refers) may be fully relied on, I think deserves a place in your impartial journal. I have known the patient for many years, and am well acquainted with the severe nature of her sufferings for many years past. She has had recourse to every means which empiricism and legitimate practitioners of the highest standing could suggest. At length her protracted sufferings and frequent copious hemorrages reduced her to such a state of weakness as to subject her to frequent fainting fits; in fact, her health was evidently fast declining, and she at last resolved to undergo the operation which has so successfully terminated. It is gratifying to add that the stump was perfectly healed on the thirtieth day after amputation was performed; she has had no recurrence of the fainting fits, nor of the severe tooth-ache she previously suffered, and which she declared to Mr. Davey would keep her awake in spite of all his efforts to induce sleep; her health is daily improving. She is truly thankful for the benefits she has received from Mesmerism. Thanks were publicly returned on her behalf at Torr Church on Sunday last.

Mr. Davey has delivered two lectures here, one on the 9th and 13th inst. respectively; the audiences were highly respectable, and from the intense interest felt in the case of Mrs. Northway (who was present), the lecture-room was crowded to excess, especially on the latter occasion. The extraordinary manifestations produced by the excitement of the different cerebral organs convinced the most sceptical, and completely established the truth of the science of Phrenology. Mrs. Northway was present on both occasions, and exhibited the phenomena of community of sensation by swallowing when water was drunk by the chairman, Mr. Davey holding him by one hand, and with the other, the hand of the patient. The power of attraction was also shewn, by her head being drawn from side to side of the chair at the will of the magnetiser. Knitting-needles, worsted, &c. were given her, the organ of constructiveness was excited, and she immediately gave a specimen of her knitting abilities, which, considering the loss of her right hand, was truly astonishing. Time and tune were then excited; she sang the doxology. One surprising feature in every case brought forward was this; on the fingers being removed from the organs, while in the middle of a syllable or note, they of course became motionless, and on re-exciting the same, they invariably began at the same syllable and note at which they left off. In one subject (a boy of about 14 years of age) the organs of acquisitiveness and secretiveness being excited, having obtained all he had previously given away (when benevolence was excited), and still craving more, a large pillow and a bust were given him, which he made the most ludicrous attempts to put in his pockets, being scarcely able to grasp them, his countenance exhibited an expression of mental agony, painful to behold, produced no doubt from his inability to gratify the desires of his mind by secretiug what he had and acquiring more. On the excitement of the organs of weight, or resistance, the strength displayed by the sleeper was astonishing. Imitation was then excited by desire of a lady present; several foreign languages were spoken, which he imitated perfectly, in tone, accent, pronunciation, and emphasis. The chairman (one elected by the audience) was called upon, and stated his conviction that no deception had been practised, also his intention of availing himself of Mr. Davey's invitation given to the audience of witnessing Mr. Davey's operations at his lodgings. The audience gave the highest demonstrations of their perfect gratification.

W. B. B.

Shaldon, Devon, June 18, 1845.

(*From Woolmer's Exeter Gazette.*)

Mesmerism.—Successful Surgical Operation.—The fourth public lecture and exhibition of Mesmerism was delivered by Mr. Davey in the Assembly Rooms, at the Royal Hotel, Torquay, on Monday, May 19, before a highly respectable audience. The greatest interest was excited by the recital of a surgical operation which was successfully performed under the influence of Mesmerism a few days previously. The following statement was read by the chairman, Dr. P. L. Phillips, a member of the Royal College of Physicians residing in Torquay, who with many of his medical brethren had witnessed the operation.

Mrs. Northway, of Shaldon, having suffered severely and for many years from disease at the wrist, probably of the nature of *fungus hematodes*, and being much reduced in health, not only by the pain and suffering, but from repeated copious hemorrhages, came to Torquay, about three weeks or a month back, for the purpose of having the fore-arm amputated, hoping previously to get into a better state of health than she had lately enjoyed, and which may be judged of by the fact of her having frequent fainting fits, apparently from exhaustion. Hearing of Mesmerism at this time, she readily yielded to the suggestion of allowing Mr. Davey to endeavour to bring her under the influence of Mesmerism previous to the performance of the operation. For the first three or four times little or no effect was produced on her, but gradually the influence of the Mesmeriser became more and more powerful, and about the eighth or ninth time I saw her put into a deep sleep, during which she exhibited very strongly the phenomena of sympathy or community of sensation with the Mesmeriser; she swallowed when he drank water, though he did it noiselessly and with averted head; she shrunk when I pricked his hand with a needle, &c. &c. On the 15th inst. the operation was performed, but under circumstances by no means favourable to the Mesmeriser.

In the first place, whether from the heat of the room, which was excessive, or from the agitation of the Mesmeriser, who had never seen an operation before, or from both causes, as is probable, and also from the agitation consequent upon taking leave of her husband, who was obliged to proceed on a voyage in the morning, though aware that the operation would be performed within a few days; from all these causes probably Mrs. Northway was in a much less profound sleep when we were admitted to the room than she had usually been of late; she moved slightly, and moaned once or twice, and her pulse was at least 130 in the minute, but betrayed no mental agitation.

Secondly, after the tourniquet had been applied, without her evincing the least degree of sensation, it was found necessary to

wheel the patient all round in a chair; and whereas previously her face had been from the light, it was suddenly brought opposite to a south window, and at the same time the blind was drawn up so as to admit by far the strongest sun which had shone this year; yet there was not the least movement of the eyelids, as I conceive there must have been in a person either simulating sleep or in a sleep of an ordinary character.

Thirdly, it was found necessary on applying the tourniquet to remove the bandage from the diseased wrist, and to examine there for the pulse; all which, under ordinary circumstances, would have been attended by acute suffering, but which, in the present case, appeared to be in no way noticed.

Fourthly, in order that the patient might not have any idea of what was in view, nothing had been prepared for the operation in the room, and therefore some time elapsed beyond that occupied in the change of position and the cutting off her gown sleeve, between the application of the tourniquet and the application of the knife; still, not the least indication of consciousness was detected, though about a dozen gentlemen were most accurately observing the patient; she continued the whole time as a person in the deepest sleep.

The last operation of the Mesmeriser having been to produce rigidity of the arm, the incision for the circular operation was made without producing the slightest movement in the arm, countenance, or body; the whole was in a perfectly passive state, exactly as in a dead subject. Subsequently a considerable change occurred; the operation was proceeded with very deliberately (perhaps the instruments might not have been as sharp as they sometimes are); and the patient became uneasy, and moaned repeatedly and heavily, and once louder than at other times; the head was thrown from side to side, and the body once or twice was somewhat contorted for a moment; but at no time was there any continuous muscular action or setting of the extremities (as testified by a gentleman who had placed his knee against the feet of the patient), no fixing of the teeth or countenance; all was perfectly passive, except the occasional movements before mentioned, and which resembled exactly, as did the moans, what might have been expected in a person sleeping deeply and dreaming uncomfortably, but without any distinct object in the dream. It was particularly remarkable that the moans and the movements were indulged in freely, without the slightest apparent effort to restrain them, affording a striking contrast to the deportment of many who have borne operations with courage and determination enough to suppress all signs of suffering.

It is further to be observed, that the patient had on former occasions of being under mesmeric influence, both moaned and twitched her arm, and that upon waking she had said that she had been dreaming of having tight bandages on her arm, and of a dog gnawing the little finger of her diseased hand, shewing, as I conceive, that the sentient nerves of that arm were in a peculiarly excitable state, and therefore very likely to be excited by the operation more than in ordinary cases. At the conclusion of the operation, the patient became partially conscious, and complained much of the tightness of the bandages which had been applied, but it was not until she had taken some wine and been demesmerised, that she appeared in the least degree conscious of what had been done. Whilst recovering, she told the operator, in answer to his question, that she would not have the operation performed till the day after the morrow, which had been originally mentioned to her as the day when it would probably take place; but upon coming to a full perception of what had occurred, she became highly excited and hysterical, complained much of the strappings, and declined to be put to sleep again, but requested to be allowed to walk about a little. After a short time, however, she reclined on a sofa, and allowed herself to be subjected to the mesmeric influence, which acted within a very few seconds as a most truly astonishing charm, and quite beyond what I could have supposed. In a few minutes she was asleep, slept soundly for an hour and a half, woke very comfortable, declaring that she had not had the least consciousness of what was passing. Upon the whole, the impression made upon the spectators (mostly professional gentlemen, with scarcely an exception) was, that the sense of consciousness was entirely suppressed, though the excitability of the sentient nerves was only dulled; that the patient was saved all mental suffering, and the operator all the difficulties arising from the struggles of the patient.

(COPY.)

We, the undersigned, witnessed the amputation of the right arm undergone by Mrs. Northway while under the influence of Mesmerism at Torquay, on the 15th of last May, as well as the previous preparations that were thought necessary by Mr. Davey to insure the success of the operation, and at his request we willingly certify that Dr. Phillips's account of the case, published in *Woolmer's Gazette* of last week, accurately represents our own individual impressions and opinions of every feature of this interesting experiment. We would only add, that the patient appeared totally insensible while the first incision was made, and that though there was an expression of suffering afterwards, we see no reason to doubt her own assertion that she remained quite unconscious until she was demesmerised at the conclusion of the operation.

Torquay, June 5, 1845.

ALYTH.—AMPUTATION OF THE LEG WITHOUT PAIN.—Thomas Dysart, a young man of this place, was for a period of two years confined to his bed by a sore leg. During that period every thing that medical skill could suggest was done for him; but in spite of every effort the disease continued to increase. His body became quite emaciated, and it was apparent that his disease would carry him off in a very short time. As a last resource, his medical attendant resolved to amputate the leg. This, considering the extreme state of debility to which he had been reduced, was looked upon as a most dangerous experiment.

In order, if possible, to alleviate the pain, his medical attendant (Dr. Fenton) mesmerised him almost daily for a number of weeks, and at last, in presence of a number of medical gentlemen, amputated the leg. During the operation he was in the mesmeric sleep, the leg being in the cataleptic state. During the operation of amputating, the patient moaned heavily, especially at the taking up of the arteries. The patient states that he had no sense of pain, nor any idea of what was going on, until he saw the amputated leg lying before him, although his eyes were open during most of the operation.

His being in this state is easily accounted for, when we consider that for some days previous to the operation he was in a state of the greatest excitement, expecting that it would take place every day. By Mesmerism he got a sound and refreshing sleep after the operation; and subsequently, whenever he has felt pain, a few passes of the hand or of a book have given him immediate relief. He is now completely recovered, and it may truly be said that Mesmerism has saved his life.

The subject of the above remarks is very poor, and a few benevolent friends are anxious to get one of the artificial legs for him which you mentioned in THE CRITIC some time ago, as being an invention of the greatest importance to those who had been deprived of this useful member. I am requested to address a letter to you, respectfully requesting that you would inform us of the plan we ought to pursue to procure one of the artificial legs. ROBERT MARSHALL, Bookseller.

Alyth, Perthshire, N.B. June 17, 1845.

CLAIRVOYANCE.—An extremely interesting case of *Clairvoyance*, accidentally elicited, has just come to our knowledge, and although we are not at liberty to mention the names of the parties, we can pledge ourselves to the readers of THE CRITIC that we have it from an authority personally known to us, and of whose veracity we can entertain no doubt. The facts, indeed, were witnessed by many.

A near relative of the editor, a youth of seventeen, had witnessed some mesmeric experiments. On his return to school he was induced to make trial upon one of his school-fellows. Not only was the sleep induced in a few minutes, but the higher phenomena of *clairvoyance* were elicited in extraordinary perfection. The boy described accurately Canterbury Cathedral, which he had never seen, the house and its furniture of our relation's parents; named, without a single error, the age, the month, and day of the month of the birth of every boy in the school, (which is a very large one), and finally read a book, that was closed and covered with a thick cloth, at any page the spectators named.

Strange as these facts appear, the accidental manner in which they were elicited, the character and station in life of the parties, and the presence of so many witnesses, compel credence.—Editor CRITIC.

PROGRESS OF MESMERISM IN LONDON.—As a proof of the progress that Mesmerism is now making in the higher circles, we may state that several of the most distinguished families in the West End are having *conversazioni* at their residences. Mr. Spencer T. Hall has been engaged to experiment at several such during the past week. At a recent *soirée* at that gentleman's residence in Pall Mall, Mr. William Howitt declared unequivocally his belief in *clairvoyance*, from the clear evidence of it that had arisen within the sphere of his personal observation; and Mr. John Gray, proprietor of the *North British Advertiser*, stated that Mr. Hall had been instrumental in relieving a lady connected with his own family of a paralytic affection of seventeen years' continuance. These statements, made in the presence,

not only of several persons of title, but of others highly distinguished in the world of science and letters, cannot fail to have great weight.

TO THE EDITOR OF THE CRITIC.

SIR,—Having lately, in the course of my mesmeric experience, observed that a draught of mesmerised water will throw a susceptible patient into the trance as easily as the usual passes, I am anxious to know what its medical effects may be. Would drinking it be of use in any disease of the digestive organs? Or, where the eyes are weak, would washing them with it be likely to strengthen them? As mesmerised water is capable of bringing on the trance, it must possess a considerable portion of mesmeric power, and therefore might, I think, be beneficially used, along with the passes, as a curative means. Perhaps some one who has studied and practised Mesmerism medically will, through the pages of your journal, afford some information on this part of the subject. I am, yours, &c.

Wigton-hall, Cumberland, June 16. E. A. AGLIONBY.

"A few words for Mr. Braid," from Mr. Spencer T. Hall, next week.

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

THE publishing world has been seldom so stagnant as at this moment. Very few new books, and none of any value, have appeared or are coming out, if advertisements be the proof of the doings of the Row. The record of the receipts during the last week at the office of THE CRITIC is consequently extremely brief. Mr. BURNS, who is a very model of good taste in typography, and to whom the reading world is indebted for re-introducing so much of the fine old poetry and romance of England and Germany, has sent us some more volumes of his charming *Fireside Library*, a series that deserves its name. Messrs. A. and C. BLACK, of Edinburgh, have transmitted a *Guide* to that city, got up with great completeness.

As it is the design of THE CRITIC to leave the physical sciences to journals that are devoted to them, as is this to philosophy, literature, and art, we have preferred to occupy our columns with the matters more especially belonging to them than with elaborate reports of scientific meetings, and the proceedings of the British Association. These will be noticed when they come before us in the proper form for recognition in such a journal as THE CRITIC, as published volumes of the Transactions. We trust that this determination will meet the approval of our readers generally, although differing from the plan pursued by our contemporaries, who fill more than half their pages with reports of scientific meetings which not one in a hundred of their readers will peruse, and not half of those who read can understand.

OPINIONS ON THE CRITIC.

(*From the Ayr Advertiser.*)

The judicious counsel of our great dramatist—"Nothing extenuate, nor aught set down in malice," seems to be the ruling principle of this excellent little periodical. Without that arbitrary opinionativeness which so generally prevails among its contemporaray connoisseurs in literature, it gives plain and solid reasons for awarding the merit or demerit it considers due to the publications that come under its review. It confessedly "belongs to the new generation; and endeavours to be the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the young *heart* and hopes of the country." While it pursues the unbiassed and honourable path it has chalked out, we wish it increasing prosperity, and would cordially recommend it to the librarian, and all who cater for the intellectual appetite of man, as a magazine in whose opinions some faith may be reposed, when replenishing their shelves with new books. To another numerous class, whose circumstances restrict their purchases to a few select volumes, THE CRITIC will be invaluable, as placing within their reach epitomes of many works that are worthy members of the great Republic of Letters.

(*From* Mr. ROBERT MARSHALL, *Bookseller, Alyth, Perthshire.*)

I look upon it as a publication of the highest merit, and I hope it will speedily reach the high standing it so eminently deserves.

LITERARY INTELLIGENCE.

ARCHÆOLOGICAL ASSOCIATION.

Further interesting and important Discoveries in the Barrows of Derbyshire and Staffordshire.

THANKS to the patronage of Lord Albert Conyngham, and the indefatigable exertions of Mr. Pettigrew, Mr. C. Roach Smith, Mr. Wright, and other able and accomplished antiquaries, the British Archæological Association is permanently established, at Mr. Henry G. Bolm's, York-street, Covent-garden. We mention this as introductory to the observations we are about to offer, because Mr. Bateman, and the Rev. S. Isaacson, to whose persevering labours in the investigation of the British antiquities of this neighbourhood we have on several occasions lately referred, have contributed in no small degree to this consummation, so devoutly wished, by their several communications, both at the first congress at Canterbury, and subsequently at the meetings of the central committee.

An observation was made, upwards of fifty-five years since, that an examination of barrows (*the ancient* and genuine records of past ages) throughout the different counties of England, by persons whose learning, ingenuity, and attention qualify them for the task, was the only way of ascertaining to which of the successive inhabitants of this island they are to be ascribed. But, notwithstanding this palpable truism—with the splendid exception of Sir R. C. Hoare, and a few trifling investigations, like angels' visits, few and far between—till Lord Albert Conyngham in Kent, and Mr. Bateman in Derbyshire, took up the gauntlet, nothing of any moment has been effected. Now, however, a different era dawns upon us. The central committee of the British Archæological Association assembles every fortnight at Mr. Pettigrew's, in London, to receive communications from distant parts of the kingdom, and to give that practical information which their high character and standing so well qualify them to afford; and we have authority to state, that every point, however trifling it may appear to the uninitiated, receives at their hands the most patient and searching investigation.

On the 4th of this month, Mr. Bateman and the Rev. S. Isaacson commenced operations upon a large flat barrow, twenty-five yards in diameter, and two feet above the surface of the surrounding soil, situate in a field on Alsop Moor, known familiarly as Net-Lowe Hill, probably Naete-Lowe. On excavating towards the centre, a vast quantity of rats' bones, and some horses' teeth, clearly proved the existence of a deposit, and that, in all probability, it was undisturbed. Although the discovery of one or two small fragments of pottery made it evident that an earlier interment had taken place in the same barrow, at a very small distance from the surface of the natural soil, and nearly in the centre of the barrow, a skeleton was found, lying upon its back, near the right arm of which a large dagger of brass had been deposited, with thirty rivets and two pins of the same metal, which formed a part of the decorations of the handle; and it is very remarkable that, in Sir R. C. Hoare's "Ancient Wiltshire," a very similar dagger, with precisely the same number of rivets ornamenting the handle, is engraved. (Vol. I. pl. 23.) In the immediate neighbourhood of this weapon, two beautiful ornaments were discovered, which at first appeared like highly-polished jet; but, upon a brief exposure to the atmosphere, the external surface began to chip off, and they were pronounced to be Kimmeridge coal, so well known in the South-west of England as the material of many ancient British ornaments, and supposed to have occasionally been used as a circulating medium, probably in the way of barter; thus clearly establishing the fact that our forefathers did not live like hordes of independent savages, but cultivated throughout the length and breadth of the land those social and commercial relations which indicate a rapid advance in civilization. These ornaments are circular, and about two inches and a half in diameter, moulded round the edges, and perforated in the back, as a means of attaching them to some portion of the dress, or, more probably, from the position in which they were found, to the dagger-belt of the chieftain with whose remains they were interred. In vol. I. plate 34, of Sir R. C. Hoare's work, a smaller ornament, of similar character, there pronounced to be *jet* (?) is engraved; it does not, however, appear to have moulding round the edge, and is clearly inferior to those discovered in this Lowe. Along with these articles were numerous chippings of white flint, and amongst the soil of the barrow two rude instruments of the same material were picked up. It may be added, as a singular fact, that, although it was evident the skeleton had not been disturbed, the lower jaw lay with the feet.

Taken as a whole, we view this discovery as the most important in its results which has yet been made, even by these persevering and scientific gentlemen. We are glad to hear that barrows are spontaneously offered for their inspection in all directions, and that every sensible and right-minded person places a due value on their praiseworthy efforts to illustrate the earliest periods of the history of their country.

June 7th.—Accompanied by Mr. F. W. Lock, the above-

named parties inspected a barrow situate on the Three Lowes, near Wetton, Staffordshire. In the centre, a cist, about 18 inches deep, was found—the top being about three feet and a half from the surface—in which the skeleton had evidently been buried in a sitting position; one of his arms had been broken, and had not manifestly been set by an experienced surgeon. Near him was deposited an unbaked urn, of the rudest workmanship, and a large mass of burnt bones. Immediately above this, part of an ornamental urn, and a portion of another human skull, were met with. In another part of the interior of the barrow, the floor for a considerable extent exhibited the appearance of having been subjected to the action of powerful heat, many burnt human bones and charcoal still remaining, upon which latter was laid the skeleton of a young girl, about fourteen years of age, the skull in good preservation, and near it a rude flint arrow-head. Six inches above this reposed the remains of an infant. In another part of the tumulus there was a full-grown skeleton, which had been disturbed before. The immense quantity of debris of stags' horns, and in one place a pair of perfect antlers of splendid dimensions, prove this to have been the sepulchre of a distinguished chief and hunter; whilst the rude form of three flint arrow-heads—the fragments of unbaked pottery, broken by former excavators, probably lead miners—bones of dogs, rats, and other animals, and the entire absence of instruments—prove this to have been one of the very earliest sepulchral monuments in the country.—*Derbyshire Chronicle.*

BRITISH ARCHÆOLOGICAL ASSOCIATION.—The second of a series of *conversaziones*, given by Mr. Pettigrew to the members of the association, was held on Wednesday evening in Saville-row, and was as numerously attended as the former one. The exhibition of works of ancient art which crowded the tables and walls of the apartment, displayed the resources of the association, and the activity with which it is carrying out the objects for which it was instituted. Among these was an extraordinary collection of Romano-British remains recently discovered by Mr. E. T. Artis, F.S.A. in the neighbourhood of Castor, near Peterborough. It consists chiefly of an extensive variety of fictile vessels, taken from the debris of Roman potteries, which it appears extended along the banks of the Nen for at least twenty miles. These vases are thus proved to be of home manufacture, and the mode in which they were worked, glazed, ornamented, and baked was detailed by Mr. Artis himself, in a pleasing and familiar way, to a large group of the company. The subjects upon the vases are mythological, hunting, arabesque, or composed of animals and fanciful ornaments. These, which often display much force and beauty, were, Mr. Artis stated, composed in an off-handed way by the maker, without a mould. Near one of the kilns was found a portion of a mould, which had been made by some native artist for pottery, intended to resemble the beautiful red kind, familiar to antiquaries by the term "Samian." It appears that at Castor (the Durobrivæ of the Romans) were also fabricated many of the plated and debased coins which are still discovered in such profusion throughout England. Mr. Artis exhibited the very moulds in which these coins were made, and in some of which were the coins themselves, which had never been removed. They were chiefly of the family of Severus, and his immediate successors. Drawings were also exhibited of the discoveries now being made by Mr. Bateman, of Bakewell, in the neighbourhood of Hart-hill, a site at once attractive to the lover of nature and the archæologist. They consist of implements of war, domestic utensils, ornaments, &c. exhumed from a numerous range of barrows or tumuli. These objects, it was stated, Mr. Bateman intended to bring before the meeting of the association in August, at Winchester.

THE BOOKSELLERS' PROVIDENT INSTITUTION.—The eighth anniversary of this provident institution was celebrated on Monday by a meeting at the Star and Garter, Richmond, where a party of 100 sat down to a splendid repast. The chair was occupied by Mr. B. E. Green, who was supported by Captain Lamont, Professor M'Culloch, Dr. A. T. Thomson, Mr. T. Longman, Mr. W. Longman, Mr. E. Longman, Mr. Murray, Mr. Dickinson, Mr. Britton, and most of the leading members of the publishing and bookselling trades. On the removal of the cloth, the chairman, in a highly appropriate manner, proposed the health of her Majesty, which was followed by other toasts of the usual character. He then proceeded to advocate the cause of the institution in aid of which they had assembled, which had rapidly passed through a period of probation, and now took its stand as a permanent establishment. It was at present constituted of 455 members, with a prospect of increasing numbers; and had an invested capital exceeding 14,000*l.* after relief of the few claims which had hitherto arisen. The toast of "Success to the Booksellers' Provident Institution" was received with much enthusiasm, and an earnest of unanimous approbation. The health of Mr. Nisbet, the president, was proposed by Mr. Britton; and that of Mr. Dickinson, one of the vice-presidents, and the donor of a piece of land as the site of a Provident Retreat, by Mr. T. Longman. Those gentlemen having returned thanks, Mr. M'Culloch, after a handsome eulogy, gave "the chairman," whose valuable aid had been so kindly bestowed. Mr. Hodgson, one of the trustees, then read a long list of subscriptions, among which we noticed the chairman, 26*l.* 5s.; Mr. Orme, 21*l.*; Mr. Nisbet, 21*l.*; Mr. Harris, 10*l.*; Mr. Dickinson, 10*l.*; Messrs. Thomas, William, and Charles Longman, 5*l.* 5s. each; Messrs. Taylor and Walton, 21*l.*; Mr. W. Low, 10*l.* 10s.; Mr. M'Culloch, 5*l.* 5s.; Mr. Colburn, 5*l.* 5s.; Captain Lamont, 5*l.* 5s., the whole amount exceeding 300*l.* The intervals were agreeably diversified by several songs and glees; the vocalists comprising Mr. Kenney, Mr. Smith, Mr. Moody, and several others.

REGISTER OF NEW PUBLICATIONS,

From June 21 *to* 28.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Adair's (Rt. Hon. Sir Robert, G. C. B.) Negociations for the peace of the Dardanelles, 1808-9, 2 vols. 8vo. 1*l.* 8s. cl.—Addison's (C. G. esq.) Treatise on the Law of Contracts and Parties to Actions ex Contractu, Part I. royal 8vo. 14s. swd.

Backslider's Mirror (The), a Popular Welsh Treatise, translated by E. S. Byam, esq. square 12mo. 2s. 6d. cl.—Baker's (C. J.) Sydney and Melbourne, post 8vo. 8s. cl.—Bosomworth's (W. J.) Lays, Legends, and Lyrics, fc. 8vo. 5s. cl.—Braithwaite's Retrospect of Medicine and Surgery, Vol. II. January to June 1845, 12mo. 5s. 6d. cl.; also new editions of Parts I. and II. 12mo. 4s. 6d. each, cl.—Brodie's History of the Fossil Insects of the Secondary Rocks of England, 8vo. 9s. cl.

Carlyle's (Thomas) Life of Schiller, 2nd edit. 12mo. 8s. 6d. cl.—Christian Experience, being the Second Series of Peace for the Dying Christian, selected by H. Drummond, 12mo. 4s. cl.—Cook's (Eliza) Poems, Second Series, fc. 8vo. 5s. cl.

Dante, translated by Ichabod Charles Wright, M.A. new edit. 3 vols. fc. 8vo. 7s. 6d. swd.

Edinburgh Tales, edited by Mrs. Johnstone, Vol. I. roy. 8vo. 4s. 6d. cl.—Evenings in the land of Uz, by Mrs. Henry van Hagen, with Introductory Pages, by Isaac Taylor, 2nd edit. fc. 5s. 6d.—Evenings in the Pyrenees, by Miss Bunbury, post 8vo. 8s. 6d. cl.

Guide to the Lake District, by the Rev. W. Ford, 12mo. 4s. cl.

Hemingway's (J.) Panorama of the Beauties, Curiosities, and Antiquities of North Wales, 4th ed. corrected and improved, 18mo. 5s. cl.

Knox's (Alexander) Irish Watering Places, their Climate, Scenery, and Accommodation, post 8vo. 10s. 6d. cl.

Lady Mary; or, Not of the World, by Rev. C. B. Tayler, M.A. fc. 8vo. 5s. 6d. cl.—Lectures on Foreign Churches, delivered in Edinburgh and Glasgow, May, 1845, First Series, 12mo. 4s. cl.—Little Basket-maker, and other Tales, with four illustrations, by Absalon, square, 2s. 6d. tinted; 3s. 6d. col. bds.—Love, Courtship, and Marriage, fc. 8vo. 3s. cl.

Marryatt (Captain), The Mission; or, Scenes in Africa, for Young People, 2 vols. fcp. 8vo. 12s. cl.—Memoirs of Sophia Dorothea, Consort of George I., 2 vols. 8vo. with Portrait, 1*l.* 8s. cl.—Myrtle's (Mrs. H.) Story Book of the Seasons; Spring, with Illustrations, square, 3s. 6d. tinted; 4s. 6d. coloured, bds.—Mysteries of Paris, People's Edition, 8vo. 2s. 6d. swd.

Oliver's (Rev. Dr.) Collections toward Illustrating the Biography of the English, Irish, and Scotch Members of the Society of Jesus, 8vo. 12s. cl.

Palmer's (S. M. D.) Pentaglot Dictionary of Terms employed in Anatomy, &c. 8vo. 10s. cl.—Peel's (Sir Robert) New Tariff as just passed, with Explanations, 8vo. 1s. swd.—Perceval's (Wm.) Hippopathology, a Treatise on the Disorders, &c. of the Horse, Vol. III. 8vo. 14s. cl.

Quin's (Thomas) Principia Latina, new edit. 18mo. 2s. cl.

Rhymes and Recollections of a Hand-loom Weaver, by W. Thom, 2nd edit. post 8vo. 5s. cl.

Saint Oldooman, a Myth of the XIXth Century, contained in a Letter from the Bishop of Verulanum to the Lord Drayton, 12mo. 6d. swd.—Scoresby's (Rev. W.) American Factories and their Female Operatives; with an Appeal on Behalf of the British Factory Population, and suggestions for the Improvement of their Condition, 1s. 6d. swd. 2s. cl. bds.—Sketches of Sermons on Christian Missions, Original and Selected, by the Author of 'Four Hundred Sketches of Sermons,' &c. 12mo. 4s. 6d. cl.

The Sacraments; two Explanatory Treatises, by Rev. T. T. Smith, M.A. 12mo. 3s. cl.—Two Doves and other Tales, with four pictures, by Absalon, square, 2s. 6d. tinted, 3s. 6d. col. bds.—Thompson's (E. P.) Note Book of a Naturalist, post 8vo. 9s. cl.—Twelve Lectures at St. George's Chapel, Old Brentford, in Lent 1844 and 1845, by Rev. E. E. Thomson, B.A. 8s. cl.

Wandering Jew (Roscoe's Library Edition), roy. 8vo. Vol. I. 6s. cl.—Will's (Rev. James) Dramatic Sketches and other Poems, post 8vo. 10s. 6d. cl.—Wisdom and Genius of Edmund Burke, 1 vol. 8vo. 10s. 6d. cl.

THE CRITIC,
And Journal of Literature.

SATURDAY, JULY 5, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

The Philosophical and Æsthetic Letters and Essays of Schiller translated, with an Introduction. By J. WEISS. London, 1845. Chapman.

ÆSTHETICS is a term that has long been familiar in German philosophy, and is now only growing into use in England. But we agree with Mr. CHAPMAN in his preface to this volume, that even with those who are accustomed to use the word in discourse and in writing, it is "beset with unusual ambiguity in its signification, in consequence of the wide field of philosophy that it comprehends, compared with the restricted one of its original and etymological meaning." And in truth we suspect that there is commonly attached to it a very vague and indefinite idea, no two authors using it in precisely the same sense. By SCHILLER, according to Mr. CHAPMAN, it is employed to express "that state of humanity which manifests a harmonious and equal development of its *entire nature, exclusive of the will*, comprehending the circle of its sensuous, intellectual, and moral attributes. It supposes an absence of all constraint from any particular law, or more truly such an equable and perfect action of all the laws of nature which centre in humanity that none predominate—there is no tendency in any *particular* direction—hence an equal aptness and capability in *every* direction. It does not embrace the idea of any special kind of *doing*, but the universal *ability to do*. The *complement* of this development is Æsthetic beauty."

It may be obtuseness on our part, but we must confess that this definition of SCHILLER'S meaning of the term Æsthetics leaves it just as unintelligible, to our mind, as before, if not a little more so. Instead of a comprehensive sense, it seems to us remarkably vague. Nevertheless, as it is his meaning, we must read it with that understanding, or we shall fall into serious mistakes in the construction of his essays. If, however, it might be permitted to the reviewer to throw out a definition of his own, we should be induced to define Æsthetics as *the science of beauty*; its province, the emotions, as distinguished from the reason; its purpose, the investigation of the laws by which the *feelings* are governed, whose language is the test of the beautiful, as is that of reason of the true. With more distinctness does SCHILLER state the objects of his science:—"Out of beauties to educe beauty, is the problem of Æsthetic culture;" meaning, we presume, by the term Beauty, not that which we so call, but the discovery of the details of which consists that whole we term Beauty.

And SCHILLER, it appears, has a peculiar conception of Beauty, using the word in a sense of his own. His idea of it is not the ordinary idea, nor is it educed from experience, but from abstract reflection and the pure reason. "It is," he says, "the harmonious complement of all the attributes of man. It comprehends the conception of humanity *æsthetically developed*, and *æsthetically free*."

Form is another term in frequent use in these essays, which needs some definition. It does not mean merely the external material shape, but the mode of the manifestation of Beauty to the senses; and Beauty being the result of an amalgamation of *matter* and *spirit*, Form expresses the result of the combination of both.

These premised, we may turn to the letters and essays.

The letters were published in 1795, when the Reign of Terror was drawing to its close, and the affiliated societies throughout France and Germany stormed the fiercest. The earlier letters contain the writer's opinions of the movement. The views there developed are thus ably abridged in the Introduction.

The philosophic poet feels that the age requires a declaration of Freedom rather than of Beauty; and the great process pending in France, which ought to be decided by the reason, naturally would engage his pen. But he withstands this temptation, and excuses himself not on the ground of inclination, but *on principle*. He undertakes to shew, that to solve this political problem, one must pass through the region of the Æsthetic. To prove this, he considers in one view the nature of Man and of the State, and finds that if man would exchange the state of nature or need for the moral state, he must possess that totality of the ancients, in whom there was a distinct harmony of thought, perception and action, both in Art and Polity; while our bodies politic display rudeness in the lower, and relaxation in the higher classes. We cannot suppose that the State, which has induced this evil, can of itself obviate it: where the upper classes do not use their freedom, they need not be deprived of it, and it need not be given to the great mass who blindly abuse it. All political improvement can result only from ennoblement of the character; but how can that take place under a barbarous polity? For this design we must seek an instrument which is independent of the State, and lay open sources which preserve themselves pure through every political depravation. This instrument is the Fine Arts. The Artist may secede from his age and elevate himself above it.

SCHILLER then proceeds to consult experience for the effects of Beauty upon the character. He finds that nations have declined in strength as they have grown in culture of refined taste. But he denies that the taste cultivated in the historical examples is the same as that of which he is the champion. He then proceeds to evolve the conception of Beauty from the reason, and to establish a new and purer idea of it than has been hitherto recognized, and thence to prophesy surely and hopefully of a better future.

The new Beauty which Schiller discovers is equivalent to a philosophy of history, and he returns to the order of nature in the Twenty-third and Twenty-fourth Letters. The three different moments, passivity under nature's force, freedom in the æsthetic state, and government of that force in the moral state, are the three epochs for the development of humanity in the mass and in the individual, just as they are the condition of every cognition we receive through the senses: we pass to the Real through the Ideal, to the deeds of manhood through the wishes of youth.

Such is a shadow of the design proposed in these letters and essays. To follow more closely the train of reasoning by which it is worked out, would be a demand upon our space which, with regard for other claims, could not be conceded. Readers whom the outline might have interested can readily procure the volume, which is published at a very trifling price. It will be enough for the purpose of such a journal as this, if we now present a few passages, remarkable for their beauty or truth, to indicate the treasures that are to be found in these pages.

First, let us take the magnificent essay entitled

WORLD AND MIND.

The universe is a thought of the Deity. Since this ideal spirit-form has stepped forth into reality, and the new-born world has embodied the draught of its maker—pardon me this human representation—it is the business of every thinking being to discover the first outline in this existing whole, the principle of the machine, the unity in the composition; to search for the law in the phenomenon, and to analyze the structure to its ground-plan. Thus I find only a single mode (*Erscheinung*) in nature, namely, Mind, the thinking essence. The great embodiment which we call World, now remains to me remarkable, only because it is at hand to denote by symbols the manifold expressions of that essence. All within and without me is only a hieroglyph of a power which resembles me. The laws of Nature are the ciphers, which Mind combines, to make itself intelligible to Mind—the alphabet, by whose means all spirit communicates with the Father of Spirits and with itself. Harmony, truth, order, beauty, excellence, give me joy, because they place me in the active condition of their designer, their possessor; because they reveal to me the presence of a rational, sensible being, and leave me to divine my affinity with that being. A new experience in this kingdom of truth, gravitation, the discovered circulation of the blood, the nature-system of Linnæus, tell me directly the same as an antique recovered from Herculaneum—both give only a reflection of a spirit, a new acquaintance with an existence like my own. I converse with the Infinite through the instrument of Nature, through universal history: I read the soul of the artist in his Apollo.

Reason from effect to cause, Raphael, if you would persuade yourself. Every condition of the human soul has somewhere a

similitude in the physical creation, whereby it is indicated; and not artists and poets alone, but even the most abstract reasoners, have supplied themselves from this rich magazine. Lively activity we call fire; time is a stream which hurriedly rolls away; eternity is a circle: a secret conceals itself in the midnight, and truth dwells in the sun. I even begin to believe that the future destiny of the human soul lies prophesied in the dark oracle of the material creation. Each coming spring, which attracts the budding plant from the earth's bosom, gives me insight into the sad enigma of death, and confutes my anxious fears of an eternal sleep. The swallow, which we find torpid in winter, and see revived in spring; the dead caterpillar, which lifts itself, renewed as a butterfly, in the air, afford us striking symbols of our immortality.

How notable does all become to me! Now, Raphael, every thing around me is teeming with life. I find no desert in the whole of Nature. Wherever I discover a body, there I suppose a spirit—where I perceive motion, there I divine a thought.

Where no dead lie buried, where no resurrection is,

still the Almighty speaks to me through His works, and so I understand the doctrine of an omnipresent God.

This idea, so finely expressed, is the master-key to a large portion of the German philosophy, and therefore we make no apology for its length, even were it not recommended by its intrinsic beauty.

Every word of the following eloquent and truthful passage should be committed to memory by all who seek the advancement of their fellow-men.

ADVICE TO REFORMERS.

Then I would say to the young disciple of Truth and Beauty, who would know how to satisfy the noble impulse of his heart, through every opposition of the century, I would say, give the world beneath your influence a *direction* towards the good, and the tranquil rhythm of time will bring its development. You have given it this direction if as a teacher you elevate its thoughts to the necessary and eternal; if, while acting or composing, you transform the necessary and eternal into an object of its impulse. The fabric of error and caprice will fall, it must—nay, it has already fallen, when you are sure that it declines; but it must decline not only in the outward but in the inner man. Create the conquering truth in the modest stillness of your soul, array it in a form of beauty, that not only thought may pay it homage, but sense lovingly comprehend its presence. And lest you should chance to take the pattern you would give it from reality, do not venture into its hazardous society, till you are sure of an ideal retinue in your heart. Live *with* your century, but be not its creature; bestow upon your contemporaries not what they praise, but what they need. Share with a noble resignation their punishment, without sharing their fault, and bend with freedom beneath the yoke, which with equal ill grace they miss or suffer. You will prove to them, by the resolute spirit with which you slight their fortune, how little their misery resulted from your effeminacy. Imagine them as they *should* be, if you are to influence them, but regard them as they *are*, if you are tempted to work for them. Through their dignity seek their approbation, but impute their fortune to their unworthiness; thus, on the one hand, your own nobility will arouse theirs, and their demerit, on the other, will not annul your design. In the graceful play of your fancy they would tolerate your principles, from whose naked severity they would shrink; their taste is purer than their heart, and here you must seize the timorous inconstant. You will in vain attack their opinions, in vain condemn their deeds, but you can make essay of your forming hand in their leisure. Banish caprice, frivolity, rudeness, from their pleasures, and you will banish them imperceptibly from their actions, finally even from their inclinations. Wherever you find them, encircle them with noble, great, and spiritual forms; invest them with the symbols of all that is excellent, till reality bends to the ideal, and nature to art.

Schiller contends that there are three different moments or epochs of development through which the individual man, as well as the whole race, must pass in a prescribed order, if they would complete the entire circle of their destiny. These he terms the *physical*, the *æsthetical*, and the *moral* conditions. In the *physical*, man obeys only the force of nature; in the *æsthetical*, he frees himself from this force; in the *moral*, he governs it. This is the picture of man in the *physical* condition, or first stage.

MAN THE SAVAGE.

What is man, before beauty steals from him his free enjoyment and tranquil form tempers his savage life? Is he not ever uniform in his designs; ever vacillating in his decisions; selfish, without being yet himself; unrestrained, without being free; a slave, without subserving a principle? In this epoch the world is merely fate to him, but no object; all has an existence for him, only so far as it makes him to exist:—what neither gives nor takes, is to him non-extant. Every phenomenon stands before him, single and isolated, as he finds himself in the scale of being. All that is, is to him only through the emphasis of the moment; each change is to him a fresh creation, since, through failure of the Necessary *within*, he wants that *external* necessity, which gathers all mutable shapes into one universe, and retains eternal law upon the stage, while the individual melts away. In vain does nature display her rich manifoldness before his senses; in her majestic fulness he sees only his booty, in her power and greatness only his foe. He either throws himself upon the outward, invading it with wild desire, or the outward presses ruinously upon him, and is thrust back with aversion. In both cases direct *contact* is his relation to the world of sense, and being for ever disturbed by its pressure, unceasingly distressed by imperious need, he finds rest nowhere but in exhaustion, and no limits but in sated desire.

Unacquainted with *his own* human dignity, he is far from revering it in others; and conscious of his own wild passion, he fears it in every creature that resembles him. He never beholds others in himself, but only himself in others; and society, instead of expanding him to a genus, only confines him more and more closely to his individuality. Thus unworthily restricted, he wanders through his starless life, till an auspicious nature tosses the dull load of matter from his beclouded senses, till reflection distinguishes *himself* from things, and objects at last manifest themselves in his reflected consciousness.

In this, his physical condition, man perceives only; he passively receives the world of sense, and is still completely one with it. In his æsthetical state, he places the world beyond himself, his personality is then distinct, and reflection becomes his first unconstrained relation to the universe which surrounds him. Nature, which formerly ruled him only as *force*, now stands before him as *object*. The mind awakens to a sense of Beauty, and by it is conducted to moral freedom. Thus man advances from a sense of mere life to a sense of Beauty, and thence to *moral* being.

The rise and progress of the perception of Beauty is thus depicted.

THE GROWTH OF TASTE.

Hence we see the uncultivated taste embracing first the novel and surprising, the extravagant, wonderful, and bizarre, the vehement and wild; and avoiding nothing so much as calmness and simplicity. It fashions grotesque shapes, delights in harsh transitions, exuberant forms, dazzling contrasts, glaring lights, pathetic tones. In this epoch it only calls that beautiful which excites it, which gives it substance—but which excites to a self-acting opposition, and gives it substance for a *possible image*, for otherwise it would not possess for it the character of Beauty. Then a remarkable alteration takes place in the form of its decisions; it seeks these objects not since they give it something to endure, but something to act upon; they please it not because they meet a want, but because they satisfy a law which speaks, although still gently, in its bosom.

Soon man is no longer satisfied, that things please him; he himself wishes to please, at first indeed only by that which is *his own*, but finally by that which *he is*. What he possesses or produces need bear no longer the traces of servitude, the straightened form of his design; next to the service which it renders, it must also reflect the ingenious intellect which conceived it, the ready hand which performed it, and the serene and free spirit which selected and expressed it. Now the ancient German seeks for splendid skins, stately antlers, ornamental drinking-horns; and the Caledonian chooses the finest cockles for his feasts. Weapons themselves need no longer be mere objects of terror, but of pleasure also, and the cunning shoulder-belt will be no less noticeable than the deadly edge of the sword. Not content with introducing an æsthetic surplus into the necessary, the play-impulse finally rids itself entirely from the fetters of exigency, and Beauty for her own sake becomes the object of its endeavour. Man *adorns* himself. Unconstrained joy is reckoned among his wants, and the unnecessary soon makes the best part of his pleasures.

As form gradually approaches him from without, in his dwelling, his furniture, his garments, it begins at last to take possession of himself—at first only transforming the outward, at last also the inward man. The unchartered elasticity of joy resolves itself into the dance, shapeless gesture into a graceful, harmonious language of action; the chaos of sound unfolds itself to the perception, and begins to obey time and acknowledge harmony. The Trojan host stormed forth to the battle-field with shrill cries, like an army of cranes, but the Greeks approached with a calm and noble movement. There we see only

NEWSPAPER

the excess of blind force, here the triumph of form and the simple majesty of law.

Now a fairer necessity knits the sexes together, and sympathy of heart assists in preserving the alliance, which was only begun by the capricious and fickle moods of desire. Shape, released from its gloomy fetters, is recognised by the tranquil eye, soul looks into soul, and a generous interchange of inclination supplants a selfish traffic in pleasure. Desire enlarges and elevates itself to love, as humanity beams from its object; and a sordid advantage over sense is despised for a nobler triumph over will. The need of pleasing subjects the man of force to the mild jurisdiction of taste; he can make booty of pleasure, but love must be a gift. He can only strive to reach this loftier prize through form, and not through matter. He must cease to affect, as a force, the feeling, and as phenomenon, to oppose the intellect; if he would satisfy freedom, he must concede it. As Beauty nullifies the conflict of nature in its simplest and purest example, in the eternal contrariety of sex, so also it nullifies it—or at least tends to do so—in the complicated whole of society, and to reconcile all the gentle and the violent in the moral world, according to the model of that free union which it forms between manly power and womanly tenderness. Weakness now becomes inviolate, and licentious strength is rebuked; the generosity of knightly manners ameliorates the right of nature. The graceful blush of modesty disarms the one whom no force can terrify, and tears quench a revenge which no blood could appease. Hatred itself regards the gentle appeal of honour, the sword of the conqueror spares a disarmed foe, and a hospitable hearth smokes for the stranger, on the dreaded shore where death was once his only welcome.

And as a companion picture let us add—

THE TRIUMPHS OF TASTE.

Taste conducts knowledge from the mysteries of science forth beneath the open heaven of common sense, and converts the property of the schools into a common good for the whole human family. Even the loftiest genius must resign its particular elevation, and descend familiarly to the comprehension of a child. Power must submit while the Graces bind it, and the self-willed lion must obey the reins of Love. To this end it draws its favouring veil over physical need, which offends the dignity of a free spirit in its naked shape, and conceals from us the degrading relationship with matter, by a delicious illusion of freedom. Even mercenary art, borrowing its wings, lifts itself from the dust; and the fetters of corporiety, touched by its wand, drop from the inanimate as well as animate. In the æsthetic state, all, even the subserving tool, is a free citizen, possessing equal rights with the noblest; and the intellect, which forcibly moulds the passive mass to its designs, must consult with it concerning its destination.

The next essay is an inquiry into the *Limits of Taste*—an inquiry much too long and intricate for abridgment. We can take from it only one passage; but it is as true, and will be as useful, as it is eloquent.

THE TEST OF GENIUS.

The Beautiful operates through mere observation, the True will have study. Whoever, then, merely exercises his sense of Beauty, contents himself where study is absolutely necessary, with superficial observation, and will only sport cleverly, where grave exertion is demanded. Nothing is ever gained by mere observation. Whoever will perform any thing great, must penetrate deeply, discriminate accurately, combine in manifold ways, and remain steadfast. Even the artist and the poet, although both labour only for the satisfaction arising from observation, can succeed in making their works acceptable to us in the sense of play, only by a strenuous and nothing less than attractive study.

This appears to me to be the infallible test, by which we may distinguish the mere dilettante from the genuine artistic genius. The seductive charm of the great and the beautiful, the fire with which it enkindles the youthful imagination, and the appearance of facility with which it deceives the senses, have already persuaded many an inexperienced one to seize the palette or the lyre, and to pour out whatever within him would become living, in shapes or tones. Dark ideas labour like a becoming world in his head, and lead him to believe that he is inspired. He mistakes the dark for the profound, the savage for the powerful, the indefinite for the infinite, the senseless for the supersensuous—and how does he not plume himself at its birth! But the judgment of the connoisseur will not allow this testimony of ardent self-love. With obdurate criticism he destroys the legerdemain of the heated imagination, and sheds a light down the deep shaft of science and experience, where, concealed from the unconsecrated, bubbles up the fountain of all true Beauty. If genuine genius slumbers in the interrogating youth, at first, indeed, his modesty will prove a stumbling-block, but the courage of true talent will soon animate him to endeavour. If nature has designed him for a creative artist, he studies the human structure beneath the knife of the *anatomist, enters the profoundest depths in order to be true upon the surface*, and investigates the whole genus in order to prove his right to the individual. If he is born to be a poet, he watches the humanity in his own breast, in order to comprehend its infinitely changing play upon the wide theatre of the world; he subjects luxuriant fancy to the discipline of taste, and suffers the sober intellect to survey the banks, between which the stream of inspiration is to leap and sparkle. He is well aware that the great increases only from unseemly trifles, and he rears grain for grain, the wondrous fabric whose single impression now makes us giddy. But if, on the contrary, nature has only stamped him for a dilettante, difficulty cools his lifeless zeal, and he either deserts, if he is modest, a path which self-deception pointed out; or, if he is not, he diminishes the great ideal to the little diameter of his own capacity, since he is not in a condition to enlarge his capacity to the noble proportions of the ideal. The genuine artistic genius, then, is ever to be recognised in this, that in the most glowing feeling for totality, it preserves coldness and enduring patience for the partial, and rather sacrifices the delight of consummation, lest it should mar perfection. The laboriousness of the means disgusts the mere amateur with the end, and he would fain remain at ease in production as in observation.

This is followed by a treatise, still developing the same principle, on the *the moral use of Æsthetic manners*, and then an essay *on the pathetic*, in which, applying them to art, and especially to the drama, he observes—"The first law of tragic art is representation of suffering nature; the second, representation of moral opposition to suffering." "The melting emotions, the merely tender excitements, belong to the province of the *agreeable*, with which the fine arts have nothing to do." A noble specimen of pathos is

THE LAOCOON.

"Laocoon," says Winckelmann, "is a nature in the deepest pain, made in the image of a man, who seeks to collect against it a conscious strength of spirit; and, while his suffering swells the muscles and strains the nerves, the soul armed with power appears in the channelled forehead, and the breast heaves over the confined breath and the stifled expression of feeling, as it strives to comprehend and to lock the pain within. The breath laden with anxious sighs, which he swallows and represses, exhausts the abdomen, and makes the sides hollow, by which we may judge of the agitation of the viscera. But his own suffering seems to afflict him less than that of his children, who turn their faces to him and cry for help: for the paternal heart shews itself in the saddened eyes, and sympathy seems to float over them in a dim vapour. His countenance is complaining, but not exclaiming; his eyes are directed after higher aid. The mouth is full of sadness, and the fallen underlip is heavy with it: but it is mingled in the arched upper lip with pain, which, with an expression of chagrin, as if at unworthy and unmerited suffering, ascends to the nose, causes it to swell, and appears in the distended and up-drawn nostrils. The conflict between pain and opposition, united under the forehead as into a focus, is shaped with great truth: for while the pain draws up the eyebrows, the struggle against it presses down the cuticle above the eye against the upper eyelid, so that it is almost covered by the impending flesh. The artist has sought to give the nature, which he could not improve, more development, more tension, more power: the greatest beauty appears where the greatest pain lies. The left side, into which the snake sends its venom with furious bite, is the one which appears to suffer most sharply, from the closer susceptibility of the heart. His legs lift themselves, in order to escape from his calamity: no part is in rest, the chisel-strokes themselves assist in indicating a stiffened skin.

How finely is the conflict of intelligence with physical sense, the triumph of mind over matter, developed in this description. To constitute true pathos, then, the suffering man must be apparent through all the struggles of the spirit, and the spirit must appear through all the struggles of humanity rising superior to them, not amenable to pain and sorrow, but subduing them by dignified endurance.

SCHILLER pursues the application of the same principles successively to the *sublime, the common and the low*, and *the tragic art*, evolving the laws of criticism with astonishing precision. His definition of the *sublime* is new and startling. "The feeling of sublimity is a mingled feeling. It is a composition of *wofulness*, which, in its highest degree, appears as horror, and of *joyfulness*, which can amount to transport." The sublimity of an object is of a twofold nature. "We either

refer it to our *comprehensive power*, and fail in the attempt to form for ourselves an image or conception of it; or we refer it to our *vital power*, and consider it as a force against which our own sinks into nothing." The sublime must be added to the beautiful in order to complete the totality of æsthetic culture.

Here we must close, unwillingly, this volume, so abounding in food for thought, so fruitful of fine passages, heartily commending it to all of our readers who desire to make acquaintance with the philosophy of art. The extracts we have taken will prove what a treasure is here, for they are but a fraction of the gems that are to be gathered in every page. We make no apology for having so long lingered over this book; for, albeit philosophy is somewhat out of fashion in our age of materialism, it yet will find its votaries, fit though few; and even they who care not for the higher regions of reflection cannot fail to reap infinite pleasure from the eloquent and truthful passages we have sought to cull for their mingled delight and edification.

HISTORY.

Memoirs of the Reign of George the Third. By HORACE WALPOLE, youngest son of Sir Robert Walpole, Earl of Orford. *Now first published from the original MS.* Edited, with Notes, by Sir DENIS LE MARCHANT, Bart. London, 1845. Bentley.

SOME years since Lord HOLLAND edited *Walpole's Memoirs of the Reign of George the Second*, of which work this is a continuation, and it was to have been brought out under the same auspices; but the noble editor delayed it from time to time, and upon his death the papers were transferred by Lord WALDEGRAVE to Sir DENIS LE MARCHANT, by whom two volumes of them are at length given to the world.

The period to which this portion of the work is devoted comprises about six years, from 1760 to 1767, and was signalized by many memorable events. But it is not as a narrative of facts already famous in history that these volumes are valuable. They are, indeed, not history at all, but strictly that which they are termed—"Memoirs." WALPOLE relates his own experiences—his own impressions of men and things; he has sketched character, and suggested motives, and exhibited the machinery of politics with the minute accuracy of one who was himself engaged in pulling the strings of the puppets, and to whom the tinsel and make-believes of the courtly stage were shewn at their true worth. This form of composition, while it produces the most entertaining book, and will attract the greatest number of readers, must yet be taken with ample allowance for the colouring derived from the personal prejudices of the writer, and from the unavoidable misapprehensions which one who mingles with a crowd and sees only the little circle immediately about him, must form of the movements and tendencies of the entire mass. Taken with such needful allowances, and bearing in mind these disturbing influences, the reader may procure from these memoirs not only a great deal of amusement, but a very enlarged acquaintance with the men, the manners, and the tide of events in the first six years of the reign of George the Third.

WALPOLE's portrait of the young king is by no means flattering. A deliberately-planned falsehood was

THE FIRST ACT OF GEORGE THE THIRD.

The first moment of the new reign afforded a symptom of the prince's character; of that cool dissimulation in which he had been so well initiated by his mother, and which comprehended almost the whole of what she had taught him. Princess Amalie, as soon as she was certain of her father's death, sent an account of it to the Prince of Wales; but he had already been apprised of it. He was riding, and received a note from a German *valet-de-chambre*, attendant on the late king, with a private mark agreed upon between them, which certified him of the event. Without surprise or emotion, without dropping a word that indicated what had happened, he said his horse was lame, and turned back to Kew. At dismounting, he said to the groom, "I have said this horse is lame; I forbid you to say the contrary."

The Princess Dowager, and her avowed lover, Lord BUTE, were the young monarch's first advisers, neither of them peculiarly qualified for the government of a people requiring to be humoured with so much astuteness as the English. A difficulty met them at the very commencement in the corruption of the House of Commons, the country being governed through that body, and the *honourable* house being itself governed through the pocket. A remarkable instance of this we take now from a subsequent page.

VENALITY OF THE HOUSE OF COMMONS.

Had the peace been instantaneously proposed to the House of Commons, there is no question but it would have been rejected; so strong a disgust was taken at the union of Bute and Fox, and so numerous were their several personal enemies. Yet in one respect Bute had chosen judiciously: Fox was not to be daunted, but set himself to work at the root. He even made applications to Newcastle; but the Duke o' Cumberland had inspired even Newcastle and Devonshire with resolution. This, however, was the last miscarriage of moment that Fox experienced. Leaving the grandees to their ill-humour, he directly attacked the separate members of the House of Commons; and with so little decorum on the part of either buyer or seller, that a shop was publicly opened at the Pay-office, whither the members flocked, and received the wages of their venality in bank-bills, even to so low a sum as two hundred pounds for their votes on the treaty. Twenty-five thousand pounds, as Martin, Secretary of the Treasury, afterwards owned, were issued in one morning; and in a single fortnight, a vast majority was purchased to approve the peace.

At this time, it must be remembered, that neither debates nor votes were published, so that the check of public opinion was entirely unknown.

Lord BUTE was not content with backstairs influence, he hastened to thrust himself into the administration, a step that was followed by disunion and dissension. It was in the midst of these jars that the cabinet were suddenly summoned to receive a notification of the intended

MARRIAGE OF GEORGE THE THIRD.

It has been mentioned with what aversion the princess dowager had opposed a marriage, projected by the late king, between his heir apparent and a very accomplished princess of Brunswick. A wife for her son, not chosen by herself, nor obliged to her, by no means suited the views of the princess. Could she have chained up his body, as she fettered his mind, it is probable she would have preferred his remaining single. A mistress would have been more tremendous than a wife. The next brother, the Duke of York, was not equally tractable, had expressed little reverence for his mother, and much antipathy to her favourite. If the king should die and leave even an infant, a minority did not deprive the princess of all prospect of protracting her rule.

But there had happened circumstances still more pressing, more alarming. The king was fallen in love with Lady Sarah Lenox, sister of the Duke of Richmond—a very young lady, of the most blooming beauty, and shining with all the graces of unaffected, but animated nature. What concurred to make her formidable to the mother and favourite, was, her being under the tutorage of Mr. Fox, her eldest sister's husband; and in truth she and her family spared no assiduity to fix the young monarch's heart. And though Fox would probably not have been scrupulous or delicate on the terms of cementing that union, the king's overtures were so encouraging, that Fox's views extended even to placing the young lady on the throne. Early in the winter, the king told Lady Susan Strangways, Mr. Fox's niece, and the confidant of Lady Sarah, that he hoped she (Lady Susan) would not go out of town soon. She said, she should. "But," replied the king, "you will return in summer, for the coronation?" Lady Susan answered, "I do not know; I hope so." "But," said the king again, "they talk of a wedding. There have been many proposals; but I think an English match would do better than a foreign one. Pray, tell Lady Sarah Lenox I say so." The next time Lady Sarah went to court (and her family took care that should not be seldom) the king said, "he hoped Lady Susan had told her his last conversation."

The junto was not blind to these whispers and dialogues. Lady Bute was instructed to endeavour to place herself in the circle, and prevent them. And the Princess Augusta marked her observation of what was going forward to Lady Sarah herself, laughing in her face, and trying to affront her. But Fox was not to be so rebuffed. Though he went himself to bathe in the sea (possibly to disguise his intrigues), he left Lady Sarah at Holland House, where she appeared every morning in a field close to the great road (where the king passed on horseback) in a fancied habit, making hay.

Such mutual propensity fixed the resolution of the princess. One Colonel Graeme was despatched in the most private manner as a traveller, and vested with no character, to visit various little Protestant courts, and make report of the qualifications of the several unmarried princesses. Beauty, and still less, talents, were not, it is likely, the first object of his instructions. On the testimony of this man, the golden apple was given to the Princess of Mecklenberg, and the marriage precipitately concluded. The ambassador was too remarkable not to be farther mentioned.

This Graeme, then, was a notorious Jacobite, and had been engaged in the late rebellion. On a visit he made to Scotland, his native country, after this embassy, David Hume, the historian, said to him, "Colonel Graeme, I congratulate you on having exchanged the dangerous employment of making kings, for the more lucrative province of making queens."

So complete was the king's deference to the will of his mother, that he blindly accepted the bride she had chosen for him; though, to the very day of the council, he carried on his courtship to Lady Sarah; and she did not doubt of receiving the crown from him, till she heard the public declaration of its being designed for another. Yet, in confirmation of the trust he had reposed in Lady Susan Strangways, himself appointed Lady Sarah to be one of the bridesmaids to the queen. Yet Lord Bute's friends affected to give another turn to the story, and insisted that the king had never thought of Lady Sarah but for his mistress. All, they affirmed, he had said to Lady Susan was, to bid her ask Lady Sarah if she should like a place in the family of the new queen; that she had accepted it; and that the king had destined her to be mistress of the robes. Her surprise and disappointment, however, were too strongly marked to make this legend credible. Lady Susan adhered to the truth of what she reported, in various examinations by her father and uncle. And the resentment Lady Sarah expressed, and which caused, as the court said, her not being placed about the new queen, was proof enough on which side the truth lay. The junto persuaded the king that she was a bad young woman; but if she was, what hindered her becoming his mistress? Was it criminal to propose being his wife rather than his mistress? And what became of the king's boasted piety if he intended to place his mistress about his wife? Some coquet attempts which Lady Sarah afterwards made to recover his notice, and her stooping to bear the queen's train as bridemaid, did her more prejudice than all that was invented against her. Pique and extreme youth might excuse both; and her soon after preferring a clergyman's son to several great matches gave evidence that ambition was not a rooted passion in her.

In my opinion the king had thoughts of her as a wife; but wanted resolution to oppose his mother and Lord Bute. Fortunately, no doubt, in this instance, for the daughter of a subject, and the sister-in-law of so ambitious and exceptionable a man as Fox, would probably have been productive of most serious consequences. To avoid returning to this topic I will only remember, that during the wedding service, on mention of Abraham and Sarah, the king could not conceal his confusion. And the day following, when everybody was presented to the queen, Lord Westmoreland, old and dimsighted, seeing Lady Sarah in the rich habit of bridemaid, mistook her for queen and was going to kneel and kiss her hand.

On the 7th of September the queen landed in England.

PORTRAIT OF QUEEN CHARLOTTE.

She had been educated in that strict course of piety, which, in Germany, reaches to superstition; a habit in which she was encouraged to such a degree, that when the king visited his mother, which he soon, at the desire of the princess, began to do, without the queen, she was afraid of staying alone, and retired to her two German women—her English ladies not being suffered to keep her company. Yet this weakness seemed solely the result of a bad education. Her temper appeared to be lively, and her understanding sensible and quick. Great good-nature, set off by much grace in her manner, recommended all she said. Her person was small, and very lean, but well made. Her face pale and homely, her nose something flat, her mouth very large. Her hair was of a fine brown, and her countenance pleasing.

When first she saw the palace, she trembled. The Duchess of Hamilton smiled. The queen said, "You may laugh; you have been married twice; but it is no joke to me." The king received her in the garden of St. James's; she would have kneeled, but he raised and embraced her, and led her to the princess, where they and Lady Augusta dined together. Between nine and ten at night they went to chapel. The Duke of Cumberland gave her away; and after the ceremony they appeared for a few minutes in the drawing-room, and then went to supper. She played and sung, for music was her passion; but she loved other amusements too, and had been accustomed to them; but excepting her music, all the rest were retrenched; nor was she ever suffered to play at cards,* which she loved. While she was dressing, she was told the king liked some particular manner of dress. She said, "Let him dress himself; I shall dress as I please." They told her he liked early hours; she replied she did not, and "quelle ne voulait se coucher les poules." A few weeks taught her how little power she had acquired with a crown. The affection she conceived for the king softened the rigour of her captivity.

The next great event was the resignation of PITT, which made an immense sensation; and the king and his new ministers were compelled to appease the national indignation by heaping honours upon the retired orator. BUTE's popularity fell as that of PITT advanced. When the king dined in the city, the mob crowded about the carriage with cries of "PITT for ever!" "No BUTE, no petticoat government!"

It was in the midst of the excitement that the session of parliament opened, and introduced a new orator, whom WALPOLE thus describes:—

COLONEL BARRE.

My ear was struck with sounds I had little been accustomed to of late; virulent abuse on the last reign, and from a voice unknown to me. I turned and saw a face equally new; a black, robust man, of a military figure, rather hard-favoured than not, young, with a peculiar distortion on one side of his face, which it seems was owing to a bullet lodged loosely in his cheek, and which gave a savage glare to one eye. What I less expected from his appearance, was very classic and eloquent diction, and as determined boldness as if accustomed to harangue in that place. He told the House that in the late king's reign we had been governed solely by Hanoverian measures and councils; and though called to order (in truth unparliamentarily), he proceeded with the same vociferous spirit to censure all ministers but Lord Bute; and for Mr. Pitt, who was not present, he received the appellation of a profligate minister, who had thrust himself into power on the shoulders of the mob. The present king, said this new court tribune, was so English, that he did not believe he had looked into the map for Hanover; and he commiserated the present ministers, who were labouring through the dregs of German councils.

The reader must imagine the astonishment occasioned by this martial censor. He was Colonel Barré, of French extraction, born at Dublin, and had served for some years in the war in America with reputation, prosecuting his studies with assiduity in the intervals of duty. With General Wolfe he had been intimately connected, both as an officer and penman; but had thought himself ill-used by Mr. Pitt, though the friends of the latter, and Lord Barrington, lately secretary at war, bore witness that Mr. Pitt had made it a point to serve him. In his younger years he had acted plays with so much applause, that, it was said, Garrick offered him a thousand pounds a year to come upon the stage.

The resignation of the Duke of NEWCASTLE shortly afterwards enabled BUTE to gratify his long-cherished ambition of seizing the premiership, and, relying on court favour and the venality of the House of Commons, he contrived to hold it against the will and even amid the execrations of the people. The debates in both houses were conducted with extreme heat, and personalities were bandied about from one side to the other, while out of doors WILKES was exciting the people by his speeches and JUNIUS by his pen. Amid the grand conflict was the debate upon the peace, from which the minister had anticipated that illness would keep away the man he most feared and hated. But his expectations were disappointed; to his extreme dismay, when all were assembled eager for the fray, the door opened and the great orator was carried to his place. Very interesting is WALPOLE's description of the scene.

It was the other House on which expectation hung. The very uncertainty whether Mr. Pitt's health would allow him to attend, concurred to augment the impatience of the public on so serious a crisis. The court, it was true, had purchased an effective number of votes to ratify their treaty; but could Mr. Pitt appear, he might so expose the negotiation, and give breath to such a flame, that the ministers could not but be anxious till the day was decided, and they knew all that they had to apprehend from Mr. Pitt. Their hopes grew brighter as the debate began, and he did not appear. The probability of his absence augmented as Beckford proposed to refer the preliminaries to a committee of the whole House; a measure that seemed calculated to gain time, and that was seconded by James Grenville, who told the courtiers that it did not look as if they were very desirous of praise, so eager were they to hurry through the question. The demand was opposed by Ellis, Sir Francis Dashwood, and Harris of Salisbury; when the House was alarmed by a shout from without. The doors opened, and at the head of a large acclaiming concourse was seen Mr. Pitt, borne in the arms of his servants, who, setting him down within the bar, he crawled by the help of a crutch, and with the assistance of some few friends, to his seat: not without the sneers of some of Fox's party. In truth, there was a mixture of the very solemn and the theatric in this apparition. The moment was so well timed, the importance of the man and his services, the languor of his emaciated countenance, and the study bestowed on his dress, were circumstances that struck solemnity into a patriot mind, and did a little furnish

* She did some years afterwards with the king, but quite in private.

ridicule to the hardened and insensible. He was dressed in black velvet, his legs and thighs wrapped in flannel, his feet covered with buskins of black cloth, and his hands with thick gloves.

Ministers triumphed in the division, if not in the debate. They were supported by the large majority of 319 to 65, and when this was announced to the Princess Dowager, in her delight she exclaimed "Now is my son really a king!"

But the victory was in sounding only. Both Fox and Bute were unable to endure the storm of public hatred, and they resigned, and were succeeded by Lord Grenville, who was taken not from choice, but as a necessity. He is represented as a dull prosy person, and peculiarly unpleasing to the king, who detested long stories. Yet would Grenville talk on, spite of the king's impatience, and, said his Majesty, "When he has talked on for two hours, he takes out his watch, to see if he cannot detain me an hour longer."

The next important event, although its mighty consequences were wholly unanticipated, was the imposition of the stamp duties on America, an act of folly of which we, who witness the results, now wonder that any minister could have been guilty; but it excited no reprobation among those who were contemporary with it, and therefore it is to be presumed that, according to the experience of the time, there was nothing in it that deserved censure. This was followed by the king's illness, the first symptom of his malady, and the intrigues and discussions that thence arose, full details of which the reader will find in the work itself, which we can confidently commend to every book-club, and to all circulating libraries who extend their purchases beyond the province of fiction. The remaining volumes will be looked for with interest.

SCIENCE.

Contributions to Vital Statistics, &c. with an Inquiry into the Influence of Locality on Health. By F. G. P. Neison, F.L.S. London, 1845. Cunningham.

This volume contains the substance of a paper read before the Statistical Society by Mr. Neison, who is the actuary to the Medical and Invalid Insurance Office. Its facts being of very considerable value, we propose to lay before the readers of The Critic some of the more important results of the inquiries and calculations, the proofs of which are here adduced in detail.

Mr. Neison first treats of "the Duration of Life in England and Wales." The calculations are based upon the average of 100,000 persons.

The highest value of life in both sexes is at the age of 14. Thence up to the age of 25, the male life is of considerably more value than the female life; from 25 to 38 the difference is trifling, but slightly in favour of male life; from 38 upwards, the balance turns in favour of female life. At the age of 50 again the scale is even, the number of survivors at that age being exactly equal.

Mr. Neison next considers the duration of life in various classes.

Comparing the value of life in the town districts and the rural districts, it appears that the average duration of life is six years more in the latter than in the former. There is a proportionate difference in the expectation of life. At 10 it is 5·5 years in favour of the rural districts, at 30 it is 4·3 years, and at 60 it is 2·1 years.

In exhibiting the general value of male life as it exists among the members of the community composing friendly societies, Mr. Neison points out a curious fact:—

The circumstances in which the humble and working population of the country is placed have generally been thought adverse to a prolonged duration of life; but the healthiest life tables hitherto formed have not shewn any thing so favourable as the present results, even among what are generally considered the select classes of society.

So remarkable and unexpected a result has led Mr. Neison to investigate the causes.

If the nature of the present paper led to a further investigation of this point, it could be clearly shewn, by tracing the various classes of society in which there exists sufficient means of subsistence, beginning with the most humble, and passing on to the middle and upper classes, that a gradual deterioration in the duration of life takes place; and that just as life, with all its wealth, pomp, and magnificence, would seem to become more valuable and tempting, so are its opportunities and chances of enjoyment lessened. As far as the results of figures admit of judging, this condition would seem to flow directly from the luxuriant and pampered style of living among the wealthier classes, whose artificial habits interfere with the nature and degree of those physical exercises which, in a simpler class of society, are accompanied with a long life.

Thus far, then, it is plain that the amount of life enjoyed by the middle and upper classes tends rather to depreciate than elevate the standard deduced from the general results of the country. And carrying this out still further, and viewing the value of life in the highest ranks of society—namely, the peerage and baronetage—as given in the recent and very interesting paper submitted by Dr. Guy, it will be seen that the expectation of life is not only less than in the general community, but also very much below the measure of life *among the members of friendly societies in the* City districts. It may then be conclusively admitted, that the standard of life in the general community is not elevated in any way by the influence of the middle or upper classes. With regard to the very highest ranks, the opposite conclusion must be come to.

The value of life in various occupations differs considerably. It appears from the tables here collected, that, taking the average of life in town and country, and of all pursuits at 100, that of bakers is 88 per cent.; miners, 85 per cent.; glaziers, 81 per cent.; and clerks only 75 per cent.

The influence of locality on sickness is examined by Mr. Neison with great minuteness. The comparison shews a higher rate of sickness in the town than in the rural districts throughout the whole period of life: the rate of sickness is also higher in the former from 23 to 63 years of age, but then it continues at a lower rate up to the age of 75, when it again rises and continues higher till the end of life.

Another curious fact is elicited; that a high rate of sickness is often accompanied by a low rate of mortality; for example, labourers, although presenting the most favourable rate of mortality, are subject to as high an amount of sickness as the general average. This, we presume, is occasioned by the health of labourers being peculiarly affected at some particular period of life, not that the general average of sickness is higher.

Again, in the sixteen least healthy trades, although the mortality is greater, the sickness is less than the general average.

Another curious result is thus stated.

Perhaps the most curious and interesting part of the preceding table is column 5, as it presents some remarkable and novel features connected with Vital Statistics. A careful survey of the figures presented will shew, that although, as age advances, the human constitution has a greater tendency to decay, and greater liability to sickness, still it presents the apparent anomaly of having in advanced life a greater power of enduring sickness than in younger life; and yet, although there is less power to resist the approach of disease, there is a higher capability of sustaining its insidious and destroying agency.

At the period of life 31-35, it will be seen that for every 116 weeks of sickness there is one death; but at the term of life 66-70, there is only one death for 252 weeks of sickness; or in other words, a greater amount of sickness is required to destroy life at advanced ages than at younger ages.

This peculiar feature, which seems to have been unexpected by those giving attention to such subjects, may be explained in several ways. Many of the diseases prevalent in younger life disappear in after-years; and, in passing from the diseases peculiar to youth, other diseases ensue, which, although not so acute in their nature, are yet fatal in their results; and thus the change from the acute to the more chronic form of disease will impart increased duration, but not severity, to the sick-list of a society. Again, many fatal diseases of youth, such as consumption and other diseases of the chest, do not, to any great extent, incapacitate from labour; and in those diseases the mortality may be high, while the amount of sickness is small.

Mr. Neison concludes his very laborious essay with an elaborate review of the rates and contributions that ought to be required in friendly societies in order to secure them against ruin, an inquiry much too voluminous and statistical for our columns, but which may be consulted with advantage by those who have to deal practically with the subject.

Altogether this is the most valuable contribution which has ever been made to the important science of Vital Statistics.

VOYAGES AND TRAVELS.

The French in Algiers: the Prisoners of Abd-el-Kader 8vo. London, 1845. John Murray.

(SECOND NOTICE.)

It has been a principle in the conduct of this journal from its commencement (though perhaps never so fully adverted to before) that, irrespective of size, cost, the name of author or publisher, every work should receive such attention as its intrinsic merits deserve. Were it otherwise, we should not recur as we now do to the cheap yet entertaining volume before us.

In a late number, it will be remembered, we gave a review of the first part of this work, the Reminiscences of Lieutenant Lamping; the remaining section, now under consideration, is the production of M. De France, a lieutenant in the French navy, who was taken prisoner by the Arabs, and endured amongst them a cruel and horrible captivity of some five months.

Though the author modestly assures us that he is far better skilled in the management of a ship than of his pen, he has unconsciously produced a narrative of thrilling interest, as is proved by its reaching to a second edition in France within a very brief period. The charm of this work in a literary point of view, lies in its unaffected simplicity; the writer jotted down the occurrences as they took place, without exaggerating the facts or heightening them with colour; the result is, that his pictures have a *vraisemblance* which cannot be mistaken, and the very absence of visible effort in their production constitutes one of their greatest charms.

Having gone ashore at Arzew with forty of the crew of the *Loiret*, to which vessel he belonged, intending to reconnoitre a well about two leagues beyond the French outposts, the orders to this effect were suddenly countermanded, but the sailors, overjoyed at being on land, determined to amuse themselves by seeking for the balls expended by the cannon practice of the day before. When thus engaged, and while yet within range of the guns from the ship, M. De France espying a partridge, pointed it out to Dr. Clinchard, his companion, and pursued it. Suddenly a troop of Arabs rushed out of a ravine and surrounded them. A short fight ensued, which ended by the lieutenant's being noosed in a cord by an Arab, who galloped rapidly away, dragging his half-strangled prisoner after him. The occurrence had been seen from the brig, and they fired upon the Arabs, who, nevertheless, made good their capture.

The following is his description of the first halt of the Arabs after the skirmish, and his emotions on this painful occasion.

As soon as the Arabs thought themselves out of reach of pursuit, they halted in order to cut off my head. The rope was taken off my neck, my hands bound behind my back, and I was tied to a dwarf palm tree. I was so tired, that I lay down upon the ground perfectly indifferent to the fate which I knew awaited all prisoners taken by the Arabs. I had but one sad thought, of my family and my poor sister, but this was soon driven away by the near approach of death and the animated scene in which I, though chained and silent, was the principal person.

A violent discussion had arisen among the Arabs: they brandished their sabres over my head, and each claimed the pleasure of cutting it off, all crying at once, "I took him, I have a right to cut off his head;" and each to prove the truth of his assertion shewed a fragment of my shirt or of my coat. The Arabs were already taking aim at one another, and exclaiming, "I ought to cut off his head, and I will kill you if you don't let me enjoy my rights," when a horseman galloped up and threw into my lap the head of Jonquié, one of the sailors; as I turned away in disgust at this horrible spectacle, I saw the Arab whom I had wounded lying on the ground about fifty paces off. He could scarcely support himself, and was endeavouring to aim at me with a pistol which he held in his left hand. But horsemen were every instant passing to and fro before him, and he dropped his hand, patiently awaiting the favourable moment to fire.

I was expecting the end of this horrible discussion with some impatience, when the arrival of another horseman changed the determination of the Arabs. This was Adda, a spy of Abd-el-Kader, who had often visited us at Arzew, where he feigned an intention of establishing himself, and allayed any suspicion we might entertain of him by assuring us that his frequent visits were for the purpose of selecting some favourable spot for the settlement of his tribe. * * * When Adda saw them furiously disputing who should kill me, he exclaimed that I was an officer, and that Abd-el-Kader would give them much more for my head if it was left upon my shoulders, and would willingly replace the three horses they had lost if I were taken to him alive. But the Arabs still continued to brandish their yataghans over my head, with the most horrible imprecations against the dog of a Christian. Adda used still stronger arguments; and when the dying Arab had been removed, it was decided that I should be presented alive to Abd-el-Kader, who was to choose the manner of my death, after paying my ransom and replacing the horses which our men had shot. I was then released from the tree, and a rope was passed through the cord which bound my arms. An Arab took hold of either end, and we started for Old Arzew. After a march of two hours we reached Old Arzew. I was worn out with fatigue and suffering—naked, wounded, covered with dust and sweat, and dying of thirst; and I expected that my body would be left without burial at Arzew, while my head would serve to adorn Abd-el-Kader's tent.

Starting for the head-quarters of Abd-el-Kader, at Kaala, he was now compelled to carry the bleeding head of a French sailor; was beaten, spit upon, reviled, and though perishing of thirst, denied the smallest draught of water. Arrived at the camp of the Sultan, whom he "expected to find a furious blood-thirsty barbarian, always ready to cut off heads," he found to his joy, his expectations were unfounded, for he was calmly, and even kindly received.

There is power in his description of the brave, enterprising, and able man who has been so terrible a scourge to the French since their first establishment in Algeria.

ABD-EL-KADER.

Abd-el-Kader is twenty-eight years of age and very small, his face is long and deadly pale, his large black eyes are soft and languishing, his mouth small and delicate, and his nose rather aquiline; his beard is thin, but jet black, and he wears a small mustachio, which gives a martial character to his soft and delicate face, and becomes him vastly. His hands are small and exquisitely formed, and his feet equally beautiful; the care he takes of them is quite coquetish; he is constantly washing them, and paring and filing his nails with a small knife with a beautifully-carved mother-of-pearl handle, which he holds all the while as he sits crouching on his cushions with his toes clasped between his fingers.

His dress is distinguished by the most studied simplicity; there is not a vestige of gold or embroidery on any part of it. He wears a shirt of very fine linen, the seams of which are covered with a silk braid terminating in a small silk tassel. Over the shirt is a haick, and over the haick two white bernouses; the uppermost garment is a black bernouse. A few silk tassels are the only ornaments about his dress; he wears no arms in his girdle, his head is shaved, and covered with three or four scull-caps one within the other, over which he draws the hood of his bernouse.

The following account of M. De France's second interview with the Sultan is characteristic; and the recognition of an unhappy fellow-prisoner, which follows, is touchingly told.

The second time that I went to the Sultan's tent he was seated on some cushions with his secretaries and some marabouts crouching in a semicircle on either side of him: his smiling and graceful countenance contrasted charmingly with the stupid savage faces around him. The chief secretary first attracted my attention by his Tartuffe expression, and the rogue has always persuaded Abd-el-Kader to ask a large sum for my ransom.

The Sultan, with a smile of the greatest kindness, bade me be seated, and asked me, in Arabic, my name and where I was taken, and on my answering his questions, told me to fear nothing so long as I was with him.

He then began to talk about our generals who have commanded in Africa, and was very curious to know what had become of them all. On hearing the name of General Trézel, he flew into a violent rage, and cried, "He was author of all our misfortunes; it was he who broke the peace and caused such endless disasters!" I saw that he alluded to the battle of Tafna, by which General Bugeaud made up for the defeat at Macta, where we lost five hundred men.

"How many horsemen did you lose at Tafna?" asked I.

"How many?" cried he, furiously. "How many? What is that to thee? The Arabs were not killed at Tafna as the French were at Macta; you have never retrieved my great victory over you there. Five hundred of our men did not return from Tafna."

Now as the Arabs are the greatest liars in the world, one may fairly presume that General Bugeaud killed at least twelve hundred of them at Tafna; but I took very good care to make no further remark; and after a few moments of silence the Sultan smiled again and said—

"Dost thou desire anything more to-day?"

"I am quite naked, give some clothes," said I, and immediately, at a sign from Abd-el-Kader, I was taken to the store tent and furnished with a scull-cap, a very thin haick, a shirt, and a pair of slippers: my trousers were also returned to me, and I put them on, though all in rags, as no others were to be had.

No sooner was I dressed, than I was accosted by a man, or rather a phantom, wrapped in a ragged haick, pale and emaciated, with a long uncombed beard, naked chest and meagre legs, and every appearance of having endured long and cruel misery; a smile lit up his wan dejected countenance as he said—

"Don't you recognise me, Sir?"

"No, Sir, I am not aware that I ever saw you before," said I.

"Oh, that is because I have suffered so much since we met. I hear that you are a prisoner, and for your sake I am very sorry for it, for you do not yet know all the torments that await you; but I cannot conceal from you the joy your presence gives me. I shall no longer be alone; I shall have a companion who will share my sufferings, and to whom I can talk of my country and of my sorrows, and I shall suffer less. But have you really forgotten me, M. De France? I met you at dinner at M. Lafont's."

"At M. Lafont's? Good heavens! are you M. Meurice?"

The unfortunate man wrung my hand, and his eyes filled with tears. I said everything I could think of to encourage and cheer him; but while I talked hopefully and gladly, my thoughts were occupied with poor Meurice's wretched appearance: his face disfigured by pain, his extreme thinness, the feebleness of his limbs, and the dejection of his spirits, gave me the idea of a dying man. When I saw him at M. Lafont's dinner at Algiers, he was a stout healthy man of about forty, good-looking, lively, and agreeable; but ill-usage and suffering had stupified him, destroyed all his energy and powers of mind, and unhinged his whole frame; he was now weak, credulous, almost imbecile. He had endured unheard-of tortures which I had escaped, and he had not, like me, been inured to hardships and privations by a sailor's life.

M. DE FRANCE and MEURICE were not the only European prisoners in the camp; there were also three Sardinian prisoners, and two French deserters. The histories of these men form entertaining episodes grafted on the Lieutenant's narrative.

We will not pain our readers by the recital of the insults, apprehensions, and sufferings endured by the prisoners during their melancholy captivity, but, contenting ourselves with remarking that the indignities and privations they encountered were of the most revolting and depressing nature, we will select a few extracts which shall convey to the reader some notion of the character, customs, and usages of the wild and singular people among whom they were captive.

There is spirit in the description of the

RAISING OF AN ARAB CAMP.

We were awakened very early in the morning by the chief of our tent shouting, "Dogs of Christians, sons of dogs, get up! the tent is coming down, for the Sultan has ordered the camp to be raised." Scarce were the words out of his mouth than the whole tent came tumbling down upon Meurice and myself. This was one of the thousand pleasantries with which the Arabs continually entertained us. We were still struggling to disentangle ourselves from the tent, in which we lay caught like fish in a net, when a drum beat the *reveille*, which was followed in a few minutes by the signal of march for the infantry, which accordingly started. The camels, mules, and pack-horses were immediately loaded with all the camp equipage, stowed in panniers woven of the leaves of the dwarf palm. A third beat of the drum gave the signal of departure to the muleteers and camel drivers. Meurice and I were placed in the centre of this detachment, which was under the command of Ben Faka. In obedience to the Sultan's order, we were mounted on the two mules which carry Abd-el-Kader's own coffers; the Italian sailors were worse off,—they rode on camels. Among the baggage I observed eight very ill-joined chests; these contained the reserve cartridges.

Whenever the camp is raised, Abd-el-Kader, who, like every other Arab, begins his prayers at three in the morning, does not cease from them until all the other tents are struck, and it is time for the slaves to strike his; he then quits it, and seats himself at a short distance on a silken cushion, surrounded by the marabouts and chiefs. Meanwhile the horsemen assemble, and place themselves in a line on his right hand, with Muftar at their head, and the thirty negro slaves are drawn up in a line on his left. The chiefs and the marabouts next mount their horses, and as soon as the baggage has passed the limits of what was the camp, a slave comes forward leading the Sultan's horse, followed by another bearing the footstool which he uses as a horse-block.

Abd-el-Kader's favourite horse is a magnificent black charger; he is the best rider I ever saw among the Arabs; and as his legs are disproportionately short for the length of his body, the Arab fashion of short stirrups, by concealing this defect, sets off his figure to great advantage, and his appearance on horseback is at once graceful and imposing. As soon as the Sultan is mounted, the chiefs give the signal of departure; the nine musicians ride at the head of the column, followed by eight Arabs bearing long rifles in red cloth cases; I have often asked leave to examine them, but the Arabs always answered, "They are the arms of the Sultan; a dog of a Christian like thee is not worthy to behold them." Next come four more horsemen bearing the four flags which I have already described, and then Abd-el-Kader, in the centre of a line of horsemen: behind him are the thirty negroes, and they are followed by all the rest of the cavalry pell mell. The Arabs never set out on an expedition until the sun has risen. No order or discipline is kept on their marches; thus, if a soldier sees a fruit-tree or a solitary tent, he leaves the line to strip the one or pillage the other. Two strangely-harnessed mules, more lean and broken-winded than hackney coach horses, drag the solitary cannon. Not a day passes on which it is not overturned and half buried in the mud. I hope, for the sake of the poor gunners, that it will at last be left behind fast stuck, which will save them a vast deal of useless trouble and burning of their fingers.

A number of Kaits who had been sent out to collect tribute, when the Sultan was encamped above Milianeh, brought in with their booty of horses, cattle, and sheep, a number of women, children, and negroes.

At the news of the arrival of these prisoners, many Arabs came to the camp with the hope of driving a profitable bargain for the women or negroes. They glanced at the crouching slaves, raised any that struck their fancy, examined the limbs and mouth, as Europeans do a horse; concluded their bargain, and led off the unfortunate wretches, who for their part followed their new masters with an air of hopelessness and insensibility.

The chaffering for the purchase of a beautiful black slave girl is given with such an air of truth, and excites so just an execration of the abominable custom of slavery among the Moors, that we need urge no apology for its insertion here.

Among the prisoners for sale who were in our tent, was a beautiful black girl of about fourteen; she had large soft black eyes, lips like coral, and teeth like the pearls set in the handle of a yataghan; her legs were like those of a race-horse, and her feet and hands smaller than those of a Spanish woman; her shape was perfect, and the slenderness of her waist contrasted beautifully with the fulness of her hips; for the poor girl, contrary to the custom of the women of this country, had confined her white haick round her middle with a red worsted cord. Her beauty and the fineness and cleanliness of her dress clearly shewed that she had been the property of wealthy people. The poor girl laid herself on the ground beside me, weeping and lamenting, and refused the food that was offered to her.

Seeing her so beautiful and so unhappy, I tried to comfort her; but she said, "I was so happy in the tent from which they robbed me, and now I shall be made to sleep outside with the horses: I shall have no kuskussu to eat, and I shall wear a torn and dirty haick;" and she wept again.

Before long, a chief of the Garrabas came into the tent: he had brought the head of a French soldier whom he had surprised that morning in a field near Mostaganem, so that he was welcome in the camp. He was rich and wanted to buy slaves. At the sight of the young negress his eyes brightened with pleasure, and he ordered her to rise. The slave obeyed, she was subjected to the most minute examination and found faultless. The Garraba turned to Ben Faka, and said, "Fifty boutjous?"

"I must have eighty boutjous (10*l.*) for her," said Ben Faka.

"She is not worth them."

"Didst thou ever see so beautiful a negress?—Open thy mouth."

The slave obeyed.

"Look, what teeth! there is not one missing!—Walk."

The slave walked.

"What hips! what a firm and graceful step! She is a virgin too—Open thy haick and thy shift."

The slave did as she was commanded.

"Press her breasts; she has no more milk than a new-born lamb. Don't weep, slave, or the chaous shall dry thy tears with his stick."

The girl wiped her eyes.

"Eighty boutjous."

"Sixty. She is not strong; she will not be able to carry the dung out of the stable.

"In two years she will carry the dung of all the horses belonging to thy tent. Eighty boutjous."

"Seventy."

"Her hands are delicate; she has never worked. Eighty boutjous. Yea or nay? the Sultan waits for me."

The Garraba paid them and bade his slave follow him; the poor girl left the tent fixing on me her eyes bathed in tears. I saw the Garraba stop at the Sultan's tent to receive the price of the Frenchman's head, and in a few minutes they left the camp, and I lost sight of the poor black girl.

At Mascara, MEURICE, the companion in captivity of M. DE FRANCE, shook off his chains, and quitted for ever his earthly sufferings. A touching picture of his death is the following:—

On the morning of the 12th the weather was detestable, the rain fell in torrents, and we suffered even more than usual from cold and damp. Meurice stretched out his hand towards me, as we lay side by side; I took it, and asked him how he felt. He replied that he was no better, and felt very cold. I crept closer to him, and offered him my haick; but he refused it, saying that he did not suffer more than the day before, but that he felt he had not long to live. "You," said he, "are young and strong; Clarisse! tell her how much I loved her, and that my last you will return to Algiers, where you will see my wife—poor thought was of her." He then covered his head with his haick, and for half an hour uttered not a single groan. At the end of that time I took hold of his arm, and asked him how he felt: he made no answer, and I uncovered his face—he was dead.

I will not attempt to describe the feelings which crowded upon me as I lay with Meurice's body by my side. Night was come, and I called the other prisoners, and bade them examine whether our poor companion was really dead. They went to fetch the Kait, who, now that it was too late, ordered a fire for us. Had this been granted us a few days earlier, Meurice might have been saved. Bourgeois and Mardulin undressed the body, rolled it in a rug, and laid it in the opposite corner of the room. They gave me his clothes. The vermin on the haick were so thick that it stood on end; but misery by degrees blunts all our sensibilities, both moral and physical. I rolled myself in his clothes, and at least was warmer.

The next afternoon Mardulin and Bourgeois, assisted by a couple of Jews, whom the Kait had appointed for the purpose, removed the body. They dug a hole just outside the wall of the town, on the road to Eli Borgj, sewed the body in a ragged piece of old haick, and buried it there.

The weather that night was terrific; the rain fell in torrents, and the wind blew a perfect gale; nevertheless, at sunrise an Arab came to inform the Kait that the corpse of the Christian was half out of the earth. In spite of the weather, the Arabs had dug up the body, in order to steal the ragged piece of haick in which Mardulin had sewn it. The Kait affected to be very angry, and promised us that he would punish the thieves; but he made no attempt to discover them. Mardulin immediately went to the spot where he had buried Meurice, enlarged the hole, and replaced in it our unfortunate companion, whom these barbarians would not suffer to rest in peace, even after death.

At length, after a captivity of five months, M. DE FRANCE and twelve Christian prisoners were exchanged for Arabs and sent to Algiers, where, under the brotherly care of his countrymen, the Lieutenant recovered from the sickness which had seized on him when a prisoner, and shortly afterwards he returned to France.

It is impossible that any one can read this book without censuring in the strongest terms that restless spirit of aggression which characterizes the French nation, and has led, while Europe is in the enjoyment of a profound peace, to the terrible scenes of bloodshed and carnage, of privation and suffering, which these narratives record. In order that France may obtain a few miles of territory, the just rights of an unoffending people are invaded, their houses destroyed, their prejudices insulted; and all this without the shadow of a pretence at justification other than that "might is right." It is a subject for congratulation to Englishmen, that in her system of colonization (and what country has ever extended her empire so far?) it has been, broadly speaking, the humane policy of Great Britain to acquire her territory by purchase—a right as indefeasible and just between nations as is the purchase and transference of property between any two members of the commonweal.

FICTION.

Evenings with the Old Story-Tellers. Select Tales from the Gesta Romanorum. London, 1845. Burns.

THIS is one of those welcome contributions to the store of popular literature for which we are indebted to the taste of Mr. BURNS. It is an appropriate addition to the *Fireside Library*, of which series it forms a volume.

The *Gesta Romanorum* is a collection of tales, each having its moral, composed by the monks of the middle ages. They enjoyed a vast popularity in their time, but they have since fallen into undeserved neglect, for in truth they contain an immense fund of imagination, and are so universal in their application, so come home to the hearts of all men, that they need but to be revived in the vernacular of the nineteenth century to be received with hearty welcome even by our more utilitarian age. In their present form they will at least have a fair trial, for they are pleasantly introduced by dialogues critical, descriptive, and historical, which materially help to familiarize to the modern reader allusions which, unexplained, might throw the entire story into obscurity.

As specimens of the curious and interesting literature of our forefathers, we will take two tales only.

THE CLERK AND THE IMAGE.

In the city of Rome stood an image: its posture was erect, with the right hand extended; on the middle finger of the outstretched hand was written, "STRIKE HERE." Years and years had the image stood there, and no one knew the secret of the inscription. Many wise men from every land came and looked at the statue, and many were the solutions of the mystery attempted by them; each man was satisfied with his own conclusion, but no one else agreed with him.

Among the many that attempted to unravel the mystery of the figure was a certain priest. As he looked at the image, he noticed that when the sun shone on the figure, the shadow of the outstretched finger was discernible on the ground at some distance from the statue. He marked the spot, and waited until the night was come; at midnight he began to dig where the shadow ceased; for three feet he found nothing but earth and stones; he renewed his labour, and felt his spade strike against something hard: he continued his work with greater zeal, and found a trap-door, which he soon cleared, and proceeded to raise.

Below the door, a flight of marble steps descended into the earth, and a bright light streamed upward from below. Casting down his spade, the priest descended; at the foot of the stairs he entered a vast hall: a number of men habited in costly apparel, and sitting in solemn silence, occupied the centre; around, and on every side, were riches innumerable: piles of gold and enamelled vases; rich and glittering robes, and heaps of jewels of the brightest hue.

The hall was lighted by one jewel alone; a carbuncle so bright, so dazzling, that the priest could hardly bear to gaze upon it, where it stood in a corner of the hall. At the opposite end of the hall stood an armed archer, his bow was strung, and the arrow fitted to the string, and he seemed to take aim at the carbuncle; his brow blazed with reflected light, and on it was written, "*I am, that I am; my shaft is inevitable; yon glittering jewel cannot escape its stroke.*"

Beyond the great hall appeared another chamber, into which the priest, amazed at what he saw, entered. It was fitted as a bed-chamber, couches of every kind ornamented it, and many beautiful women, arrayed in robes as costly as those worn in the great hall, occupied the chamber. Here, too, all was mute: the beautiful damsels sat in silence.

Still the priest went onward. There were rooms after rooms, stables filled with horses and asses, and granaries stored with abundant forage. He placed his hand on the horses, they were cold, lifeless stone. Servants stood round about, their lips were closed—all was silent as the grave; and yet what was there wanting—what but life?

"I have seen to-day what no man will believe," said the priest, as he re-entered the great hall; "let me take something whereby to prove the credit of my story."

As he thus spake to himself, he saw some vases and jewel-handled knives on a marble table beside him; he raised his hand, he clasped them, he placed them in the bosom of his garment—all was dark.

The archer had shot with his arrow; the carbuncle was broken in a thousand pieces—a thick darkness covered the place; hour after hour he wandered about the halls and passages—all was dark—all was cold—all was desolate; the stairs seemed to have fled, he found no opening, and he laid him down and died a miserable death, amid those piles of gold and jewels, his only companions the lifeless images of stone. His secret died with him.

THE UNGRATEFUL MAN.

Vitalis, a noble Venetian, one day, at a hunting-party, fell into a pit, which had been dug to catch wild animals. He passed a whole night and day there, and I will leave you to imagine his dread and his agony. The pit was dark. Vitalis ran from the one side of it to the other, in the hope of finding some branch or root by which he might climb its sides, and get out of his dungeon; but he heard such confused and extraordinary noises, growlings, hissings, and plaintive cries, that he became half dead with terror, and crouched in a corner motionless, awaiting death with the most horrid dismay. On the morning of the second day he heard some one passing near the pit, and then raising his voice, he cried out with the most dolorous accent, "Help, help, draw me out of this; I am perishing!"

A peasant crossing the forest heard his cry. At first he was frightened; but, after a moment or two, taking courage, he approached the pit, and asked who had called.

"A poor huntsman," answered Vitalis, "who has passed a long night and day here. Help me out, for the love of God. Help me out, and I will recompense you handsomely."

"I will do what I can," replied the peasant.

Then Massaccio (such was the name of the peasant) took a hedgebill which hung at his girdle, and cutting a branch of a tree strong enough to bear a man,—"Listen, huntsman," said he, "to what I am going to say to you. I will let down this branch into the pit. I will fasten it against the sides, and hold it with my hands; and by pulling yourself out by it, you may get free from your prison."

"Good," answered Vitalis, "ask me any thing you will, and it shall be granted."

"I ask for nothing," said the peasant, "but I am going to be married, and you may give what you like to my bride."

So saying, Massaccio let down the branch—he soon felt it heavy, and the moment after a monkey leapt merrily out of the pit. He had fallen like Vitalis, and had seized quickly on the branch of Massaccio. "It was the devil surely which spoke to me from the pit," said Massaccio, running away in affright.

"Do you abandon me, then?" cried Vitalis, in a lamentable accent; "my friend, my dear friend, for the love of the Lord, for the love of your mistress, draw me out of this; I beg, I implore you; I will give her wedding gifts, I will enrich you. I am the Lord Vitalis, a rich Venetian; do not let me die of hunger in this horrible pit."

Massaccio was touched by these prayers. He returned to the pit—let down another branch, and a lion jumped out, making the woods echo with a roar of delight.

"Oh certainly, certainly, it was the devil I heard," said Massaccio, and fled away again; but stopping short, after a few paces, he heard again the piercing cries of Vitalis.

"O God, O God," cried he, "to die of hunger in a pit. Will no one then come to my help? Whoever you may be, I implore you return; let me not die, when you can save me. I will give you a house and field, and cows and gold, all that you can ask for; save me, save me only."

Massaccio, thus implored, could not help returning. He let down the branch, and a serpent, hissing joyously, sprang out of the pit. Massaccio fell on his knees, half dead with fear, and repeated all the prayers he could think of to drive away the demon. He was only brought to himself by hearing the cries of despair which Vitalis uttered.

"Will no one help me?" said he. "Ah, then, must I die? O God, O God!" and he wept and sobbed in a heartbreaking manner.

"It is certainly the voice of a man for all that," said Massaccio.

"Oh, if you are still there," said Vitalis, "in the name of all that is dear to you, save me, that I may die at least at home, and not in this horrible pit. I can say no more; my voice is exhausted. Shall I give you my palace at Venice, my possessions, my honours? I give them all; and may I die if I forfeit my word. Life, life only; save only my life."

Massaccio could not resist such prayers, and mingled with such promises. He let down the branch again.

"Ah, here you are at last," said he, seeing Vitalis come up.

"Yes," said he, and uttering a cry of joy, he fainted in the arms of Massaccio.

Massaccio sustained, assisted him, and brought him to himself; then, giving him his arm, "Let us," said he, "quit this forest;" but Vitalis could hardly walk,—he was exhausted with hunger.

"Eat this piece of bread," said Massaccio, and he gave him some, which he took out of his wallet.

"My benefactor, my saviour, my good angel," said Vitalis, "how can I ever sufficiently recompense you?"

"You have promised me a marriage portion for my bride, and your palace at Venice for myself," said Massaccio. But Vitalis now began to regain his strength.

"Yes, certainly, I will give a portion to your wife, my dear Massaccio, and I will make you the richest peasant of your village. Where do you live?"

"At Capalatta, in the forest; but I would willingly quit my village to establish myself at Venice in the palace you have promised me."

"Here we are out of the forest," said Vitalis; "I know my road now; thank you, Massaccio."

"But when shall I come for my palace and the portion of my intended?" returned the peasant.

"When you will," said the other, and they separated.

Vitalis went to Venice, and Massaccio to Capalatta, where he related his adventure to his mistress, telling her what a rich portion she was to have, and what a fine palace she was to live in.

The next day early he set out for Venice, and asked for the palace of the Signor Vitalis,—went straight to it, and told the domestics that he should come shortly with his mistress, in a fine carriage, to take possession of the palace which Signor Vitalis had promised to give him. Massaccio appeared to those who heard him mad, and Vitalis was told that there was a peasant in his hall, who asked for a marriage portion, and said the palace belonged to him.

"Let him be turned out immediately," said Vitalis, "I know him not."

The valets accordingly drove him away with insults, and Massaccio returned to his cottage in despair, without daring to see his mistress. At one corner of his fireplace was seated the monkey, at the other corner the lion, and the serpent had twisted itself in spiral circles upon the hearth. Massaccio was seized with fear. "The man has driven me from his door," thought he; "the lion will certainly devour me, the serpent sting me, and the monkey laugh at me; and this will be my reward for saving them from the pit." But the monkey turned to him with a most amicable grimace; the lion, vibrating gently his tail, came and licked his hand, like a dog caressing his master; and the serpent, unrolling its ringy body, moved about the room with a contented and grateful air, which gave courage to Massaccio.

"Poor animals!" said he, "they are better than the Signor Vitalis; he drove me like a beggar from the door. Ah! with what pleasure I would pitch him again into the pit. And my bride! whom I thought to marry so magnificently! I have not a stick of wood in my wood-house, not a morsel of meat for a meal, and no money to buy any. The ungrateful wretch, with his portion and his palace!"

Thus did Massaccio complain. Meanwhile the monkey began to make significant faces, the lion to agitate his tail with great uneasiness, and the serpent to roll and unrol its circles with great rapidity. Then the monkey, approaching his benefactor, made him a sign to follow, and led him into the wood-house, where was regularly piled up a quantity of wood sufficient for the whole year. It was the monkey who had collected this wood in the forest, and brought it to the cottage of Massaccio. Massaccio embraced the grateful ape. The lion then uttering a delicate roar, led him to a corner of the cottage, where he saw an enormous provision of game, two sheep, three kids, hares and rabbits in abundance, and a fine wild boar, all covered with the branches of trees to keep them fresh. It was the lion who had hunted for his benefactor. Massaccio patted kindly his mane. "And you, then," said he to the serpent, "have you brought me nothing? Art thou a Vitalis, or a good and honest animal like the monkey and the lion?" The serpent glided rapidly under a heap of dried leaves, and reappeared immediately, rearing itself superbly on its tail, when Massaccio saw with surprise a beautiful diamond in its mouth. "A diamond!" cried Massaccio, and stretched forth his hand to stroke caressingly the serpent and take its offering.

Massaccio then set out immediately for Venice to turn his diamond into money. He addressed himself to a jeweller. The jeweller examined the diamond; it was of the finest water.

"How much do you ask for it?" said he.

"Two hundred crowns," said Massaccio, thinking his demand to be great; it was hardly the tenth part of the value of the stone. The jeweller looked at Massaccio, and said, "To sell it at that price you must be a robber, and I arrest you!"

"If it is not worth so much, give me less," said Massaccio; "I am not a robber, I am an honest man; it was the serpent who gave me the diamond."

But the police now arrived, and conducted him before the magistrate. There he recounted his adventure, which appeared to be a mere fairy vision. Yet as the Signor Vitalis was implicated in the story, the magistrate referred the affair to the state inquisition, and Massaccio appeared before it.

"Relate to us your history," said one of the inquisitors, "and lie not, or we will have you thrown into the canal."

Massaccio related his adventure.

"So," said the inquisitor, "you saved the Signor Vitalis?"

"Yes, noble signors."

"And he promised you a marriage-portion for your bride, and his palace at Venice for yourself?"

"Yes, noble signors."

"And he drove you like a beggar from his door?"

"Yes, noble signors."

"Let the Signor Vitalis appear," said the same inquisitor. Vitalis appeared.

"Do you know this man, Signor Vitalis?" said the inquisitor.

"No, I know him not," replied Vitalis.

The inquisitors consulted together. "This man," said they, speaking of Massaccio, "is evidently a knave and a cheat; he must be thrown into prison. Signor Vitalis, you are acquitted." Then, making a sign to an officer of police, "Take that man," said he, "to prison."

Massaccio fell on his knees in the middle of the hall. "Noble signors, noble signors," said he, "it is possible that the diamond may have been stolen; the serpent who gave it me may have wished to deceive me. It is possible that the ape, the lion, and the serpent may all be an illusion of the demon, but it is true that I saved the Signor Vitalis. Signor Vitalis" (turning to him), "I ask you not for the marriage portion for my bride, nor for your palace of marble, but say a word for me; suffer me not to be thrown into prison; do not abandon me; I did not abandon you when you were in the pit."

"Noble signors," said Vitalis, bowing to the tribunal, "I can only repeat what I have already said: I know not this man. Has he a single witness to produce?"

At this moment the whole court was thrown into fear and astonishment, for the lion, the monkey, and the serpent entered the hall together. The monkey was mounted on the back of the lion, and the serpent was twined round the arm of the monkey. On entering, the lion roared, the monkey spluttered, and the serpent hissed.

"Ah! these are the animals of the pit," cried Vitalis in alarm.

"Signor Vitalis," resumed the chief of the inquisitors, when the dismay which this apparition had caused had somewhat diminished, "you have asked where were the witnesses of Massaccio? You see that God has sent them at the right time before the bar of our tribunal. Since, then, God has testified against you, we should be culpable before Him if we did not punish your ingratitude. Your palace and your possessions are confiscated, and you shall pass the rest of your life in a narrow prison. And you," continued he, addressing himself to Massaccio, who was all this time caressing the lion, the monkey, and the serpent, "since a Venetian has promised you a palace of marble, and a portion for your bride, the republic of Venice will accomplish the promise; the palace and possessions of Vitalis are thine. You," said he, to the secretary of the tribunal, "draw up an account of all this history, that the people of Venice may know, through all generations, that the justice of the tribunal of the state inquisition is not less equitable than it is rigorous."

Massaccio and his wife lived happily for many years afterwards in the palace of Vitalis, with the monkey, the lion, and the serpent; and Massaccio had them represented in a picture, on the wall of his palace, as they entered the hall of the tribunal, the lion carrying the monkey, and the monkey carrying the serpent.

POETRY.

Dramatic Sketches, and other Poems. By the Rev. James Wills, A.M. Author of "The Disembodied," &c. Dublin, 1845. Curry and Co.

"I think it right to explain," says Mr. Wills in his preface, "that, like many of the idlest acts of the most laborious lives, poetry has consumed no portion of mine that could be more usefully or appropriately employed." In this sentence he has written his own condemnation. Poetry—*true* poetry—was never yet composed in an *idle* hour. It has been from the beginning, and ever it will be, the extremest effort of the mind, when the string that ties it to humanity is strained to the very utmost, and the faculties are stretched to the limits of mortal ken, and are permitted even to catch dim glimpses of the spirit-world beyond. It argues a grievous ignorance of the nature of poetry to present a volume pretending to that high and holy title with such an apology for having attempted it as is conveyed in the expression, "poetry has consumed no portion of mine (life) that could be more usefully or appropriately employed." What *more* useful, more appropriate occupation could any man find than writing poetry?—we mean not mere verses, but veritable poetry—poetry which is the language wherein the divinity of our mixed deity and dust reveals itself—poetry, which is the voice of God, as interpreted by those oracles of nature, the flowers, the forests, the everlasting hills,—"in the blue sky, and in the heart of man!" Why, what more useful occupation than this have *you* found, oh! James Wills? It hath not been the measuring out of some certain yards of the newest pattern silk, at the counter of a West-end draper; nor in carving ells of cloth to a distant similitude to the human form divine; nor in covering parchments with the lumber of legal obscurities; nor even in patenting inventions for annihilating space by steam. The prefix of *Reverend* forbids any such like definition of thy notion of "an useful and appropriate employment." Teaching, in some shape, must have been thy business,—in the school-room, in the pulpit, or through the press. But surely the cramming of a few scores of boys with the words of dead languages, to the end that they may reproduce them in the shape of nonsense verses, will not compare in *utility* with the composition of a single page of new and true poetry, whose mission it is to stir the hearts of all men as with a trumpet, and educe the virtues and the holy aspirations that lie sleeping there. Surely, Mr. Wills, thou wilt not assert that thy most eloquent sermon could waken so much religion in the soul as *poetry*, which finds "sermons in stones, and good in every thing?" And as for the press, what hast thou ever written that can hope to achieve a millionth part of the good, present and future, which, if thou hadst the capacity, and nature had made thee *a poet*, thou mightst have accomplished by fifty pages of genuine poetry, even though its composition had been the business of thy whole life?

It is, we say, plain from the very apology with which he introduces to us a volume of no trifling bulk, that the Rev. James Wills has formed an inadequate conception of the nature of *poetry*. He has indited a few hundreds of metrical lines, some united by the bonds of rhyme, others preserving the single blessedness of blank verse; and supposing that, if these be strictly accordant with the rule of thumb, he has made *poetry*, he offers it with an apology, anticipatory of the charge for that he, a full-grown man, should have "consumed a portion" of his time in such an employ! As, indeed, well he may; for whereas the writing of *poetry* is the highest, the noblest, the most honourable, the most useful exertion of a man's genius, the writing of *verses* is the most frivolous, the most foolish, the most useless. It is just a degree better than draughts or cribbage, or such like kill-time contrivances, and it is a grievous waste of time and toil, that might be more advantageously employed. But verse-making is a sin of the verse-maker against himself alone. So he hides his folly in his desk or commits it to the flames, he is not amenable to public censure. Otherwise, if he rush into print and invoke criticism; he must then be judged according to the standard against which he has chosen to measure himself, and if his pretensions be found to be unsupported by his performances, he must expect of honest critics justice, and not mercy; and for this reason, that the reviewer's duty is to the readers who put their faith in him, that he will tell them the truth about a book, and not to do so is to deal with them unjustly.

And while touching upon the subject, let us take the opportunity, at this early period of the career of The Critic, resolutely to protest against the prevalent fashion of introducing a book with apologies for writing and publishing. If it be a good book, it needs none; if it be a bad one, no circumstances connected with its origin will justify its appearance. Publication is entirely a matter of choice; and to publish a stupid work, knowing it to be so, is an impertinence which cannot be too severely rebuked. When, therefore, an author deems it necessary to preface with an apology, it may be taken as a confession not only that his book is not a good book in itself, and of itself worthy of perusal, but that he has full knowledge of its inferiority, and he must expect the fate he has invoked.

With this long preamble, which, although suggested by the preface to Mr. Wills's volume, is intended to be of wide application, as indicating to the readers of The Critic the principles by which its judgments of books are guided, we proceed to a more specific notice of the poems before us.

It must then be pronounced of them as a whole, that they are precisely such as the preface would lead us to look for. They prove the justice of the remark, that Mr. Wills has no conception of Poetry. They are precisely the sort of composition which a man would produce who deemed the writing of poetry to be "one of the idlest acts of a laborious life;" an employment taken up when nothing more useful or appropriate presented itself—as "a grateful relief," and so forth. In fact they are, as this account of their origin would indicate,

not poetry at all, but very respectable specimens of the art of *versifying*.

The first piece in the volume is one of those dramatic rhapsodies made fashionable by BYRON and SHELLEY, and called *The Court of Darkness*. Although it appeared originally in the pages of *Blackwood's Magazine*, we have looked in vain for any of those flashes of genius which indicate the handiwork of a poet. It is a smooth, level array of common-place thoughts, set in the conventional language of poetry, and hence, perhaps, combined with correct metre, it may have imposed itself upon those who read not thoughtfully as a genuine poem.

The next and longest composition in the volume is a dramatic piece, entitled *The Last Days of Nero*. Of this it may be said with justice, that it is remarkably lively and dramatic; but it is not poetry, nor does it contain poetry, and the form of blank verse will not make it such. Mr. WILLS could write a good acting drama.

The third of the more elaborate pieces is a dialogue, also in blank verse, between *The Daughters of Time*, to wit, *Change and Custom*, who begin by railing at one another, and proceed almost to pulling hair and scratching faces, when old father *Time* interferes, and thus admonishes them :—

TIME'S ADDRESS TO CHANGE AND CUSTOM.

Peace, fools, till doomsday ye might thus contend,
If ye can find no sounder arguments—
Each right, each wrong in part; alike, in turn,
Grinding the same old strain of dissonance,
Renewing, breeding, or perpetuating
Abuses old or new;—both ignorant
That mortals are not destined to perfection,
Though thither tending, as the slow approach
Of lines, to meet indefinitely far:
So ranks and orders converge towards a point,
Of unattainable equality.
For there's a bound the highest cannot pass,
To which the lowest still approximate
In the long course of ages; the result
Of many deep and silent-working causes,
Beyond the depth of policy, together
Working the great completion; more retarded
Than favoured by your fierce collisions—
Each in her province striving, one to fix,
The other to advance. The one regards
Her sheltering laws and institutions
As fixed for ever, and immutable;
And so the world outgrows her; while the other
Would make enactments idle as the vane
That wavers in the wind. And so it is
Thou Custom, in thy slumber's long oblivion
Of the slow progress of humanity,
Art constantly deceived to think it still;
And so thou wilt not be induced to stir
Thy stubborn outworks, till 'tis all too late,
And the strong pressure of a stormy deep
Accumulates upon thee. Then begins
The rush of Change;—to do her needful task,
Compelled to rough and fierce expedients,
And gathering heat from desperation,
Does that by frenzy which she should have done
By slow sure-working adaptation.
So ye alternate fierce extremes, and boast
Of deeds ye do not, for I've other daughters,
The Arts and Muses, working peacefully
With Science, weaving the bright web of mind;]
And Commerce, over sea or mountain bearing
The great materials of the mighty task,
Combining distant realms—approaching ranks—
Binding in one broad sympathy the mind
Of this great world, which ye disturb with brawls,
Each in your charges too impetuous.
Thou, Custom, if allowed, would stop the world;
Thou, Change, impel it on into the void—
Even as the balanced forces which retain
The planet in its path;—one towards the centre;
One in the tangent line, preserving both
The line unsought by either, yet designed
By the one Power that made ye for one use,
And guides ye to one end—that end where all
Must meet, their roads however different.

This is admirable good sense, and approaches nearer to good poetry than any thing we have yet lighted upon. Nevertheless, it is *not* poetry; it is only eloquent declamation, and is an excellent specimen of Mr. WILLS's style.

The rest of the volume is occupied with a collection of minor poems, most of which have appeared in various magazines. But these do not exhibit his powers to better advantage. The greater portion of them are very magazine-like in their tone, and certainly were not worth the plucking from the leaves of the shelved volumes in which they were slumbering. Some are actually bad. What, for instance, can be more puerile than these verses taken from a poem called *The Passing Bell?* Any school-boy would write as good, or better.

THE PASSING BELL.

With its measured pause, and its long-drawn wail,
The minster bell swings on the gale,
And saddens the vale with its solemn toll—
That passeth away like a passing soul—
Pulse after pulse still diminishing on,
Till another rings forth for the dead and gone.

The minute-sound of that mourning bell
Is the lord's of the valley—the rich man's knell;
While it swells on his lawns and his woodlands bright,
He breathes not, hears not, nor sees the light;
On the couch of his ease he lies stiff and wan—
In the midst of his pomp he is dead and gone.

But Mr. WILLS *can* do more creditable things than this, as witness an elegant little lyric called

THE WILD FLOWER.

Flower, whom the desert beareth,
And human folly spareth—
Whose fragrant wreath
No worldlings breathe,
No tinsel fashion weareth.

O! born for nature only,
They err who call thee lonely,
The leaves that twine
Those gems of thine,
In living green enthrone thee!

The sunbeams woo thee brightly,
The showers fall o'er thee lightly;
With silent love
From heaven above
Stars look upon thee nightly.

The airs of heaven delaying,
And with thy beauty playing,
Bear from thy dell
New sweets that tell
The secret of their straying.

O! thou hast many lovers,
Ten myriad airy rovers,
With gay desire
The insect choir
Around thy beauty hovers.

The lark at morn doth press thee,
The loitering bees caress thee,
Sweet lips inhale
Thee on the gale,
And lovers turn to bless thee.

We have dwelt upon this volume at so great length, because it is one of a very numerous and increasing class, in which perfection in the mechanics of verse-making is substituted for the inspirations of genius, always to the grievous blundering of the author, often to the perplexity of the reader. It is the duty of the critic to undeceive them both.

MISCELLANEOUS.

Torrington Hall: being an Account of Two Days, in the Autumn of the Year 1844, *passed at that Establishment for the Insane.* By ARTHUR WALLBRIDGE, Author of "Jest and Earnest," &c. London, 1845. How.

IN no department of medical science has more rapid progress been made than in the management and cure of the insane. The revolution in the mode of treatment has been entire, and the madhouse, once a dungeon, where the worst affliction of humanity was made more terrible by the horrors amid which it was buried alive, has changed, step by step, from the prison to the palace. Restraint, once deemed essential, is now proved to be not merely unnecessary, but injurious; and the comforts, the elegancies, the recreations, nay, the intellectual pleasures of life, have been successively extended to the patients, not with safety alone, but with the happiest effects in hastening the progress of cure and restoring the diseased brain t a healthy condition.

To the phrenologists is wholly due that mighty stride in the march of humanity and civilization. They first indicated the real cause of insanity, and traced its physiology. This known, the requisite treatment to promote the cure was not difficult to be divined; a few benevolent persons were found bold enough to make the attempt and to follow in the pathway indicated by a science then denied and proscribed. The experiment succeeded beyond the most sanguine hopes of the proposers. Success led to further researches; the example was imitated first by one and then by another, as prejudice yielded

to reason, or experience informed the sceptical, until now there is scarcely a lunatic asylum in Europe which has not adopted the treatment taught by the phrenologists as deducible from their views of mind and its functions, and with such success, that the most terrible scourge of our race has been stripped of half its horror.

Torrington Hall, near Bath, is one of these enlightened and humane establishments, conducted by Dr. ELSTREE. A two days' visit paid to it by Mr. WALLBRIDGE so delighted him, that he resolved to publish the results of his observations, and they are contained in the little volume before us.

Torrington Hall was erected by a company, who were induced to subscribe the capital necessary for conducting, upon a large scale, an asylum in which all the advanced knowledge of the time in relation to the treatment of madness might have a deliberate and effectual trial. It receives 700 patients, and so eager are the applications for admission, that twice that number are seeking to be accommodated there.

To detail all the strange and interesting things our author witnessed would be but to repeat his book, which all should read, because it must engage the attention of all, not alone from the curious facts detailed, but the agreeable style and manner in which Mr. WALLBRIDGE has related his experiences. It should be observed that the inmates are engaged all the day in various employments, which are turned to pecuniary account; the evening is allowed them for recreation, and these were among

THE AMUSEMENTS OF THE INSANE.

All sorts of amusements and occupations were in progress. A drama was in course of performance in the theatre—a concert was going on in one part of the institution, and a ball in another—classes in various studies were formed in the class-rooms—the rattle of billiard-balls was heard as we passed the billiard-room—the reading-room was well filled—and little social parties were held in many private sitting-rooms: *ennui* seemed banished by universal consent.

The lecture-room was beginning to be occupied; and Dr. Elstree, Bryant, and myself took our seats, with the rest of the audience, in large arm-chairs, which I thought a decided improvement upon the benches, with or without backs, usually met with in such places. In a short time the lecturer made his appearance on a raised platform at one end of the room, and was received with great clapping of hands. I was struck by his person and manner, which were noble and commanding; but I had not sufficient practical skill in phrenology to recognise the characteristics which Dr. Elstree had mentioned. He proceeded at once to a table on the platform, provided with a decanter of water and a tumbler, and commenced his discourse, which was given without the aid of books or papers of any sort.

The lecturer was a madman. One other picture, to give our readers a taste of the quality of the volume, and we have done.

A DINNER-PARTY OF THE INSANE.

We found the drawing-room quite full of a company of both sexes, and all ages above the adult age. The assembly-room, which, in the evening, was devoted to dancing only, was, in the morning, used as an additional drawing-room; and this, as Dr. Elstree informed me, was now filled also with inmates of the establishment. Those whom I saw here were of various appearance and manner; but all had a certain *trained* air, and absence of vulgarity. They were dressed neatly and plainly in garments of different make and colour, according to individual taste; for, as I afterwards learned from Dr. Elstree, their regular daily work for the establishment was now over, and the interim, from dinner-time till bed-time, was at their own disposal. The doctor announced the names of Bryant and myself, and introduced us to the assembly generally. He then introduced us specially to the Rev. William Delany, chaplain of the institution. I was favourably disposed towards this gentleman at first sight: his pale, massive forehead and noble features, both to the phrenologist and less scientific physiognomist, indicated the presence of pure and elevated tendencies. We had not opportunity for much conversation; for, in five or six minutes, the sound of a gong was heard, and we moved towards the refectory. A very pretty girl intrusted herself to my care; Bryant selected another; all the men offered their arms to all the women; and we walked off to dinner in very much the same style that would be practised in Belgrave-square.

The entire length of the apartment which we now entered was occupied by three tables, running parallel with each other. That in the centre was rather larger than the other two, and had a great arm-chair at the upper end. Dr. Elstree took this chair—Bryant and myself were placed on either hand of him—and the inmates, and the assistants of Dr. Elstree, to the number of nearly three hundred and forty, seated themselves in commodious chairs, either at our central table, or a side one, as they preferred, or found it convenient.

Whilst we thus carried on operations in *our* refectory, under the superintendence of Dr. Elstree, another refectory of equal size was in possession of an equal number of inmates under the superintendence of the chaplain.

The viands with which we were served were plentiful, and capitally cooked. But no very rich dishes were present, and no wine was on the table—nor was any offered. It is a rule of the institution that all fermented liquors are forbidden to the inmates; and visitors have no indulgence shewn to their hankering after alcohol. We had sparkling cold water, instead of sparkling champagne; and this rational beverage standing in elegantly-formed cut-glass jugs all down the table, looked so tempting, and tasted so fresh and pure, that we could have wished for nothing better. A cheerful feeling seemed to prevail, with an inclination to please and be pleased, and a loud hum of conversation sounded over the hall, intermixed with frequent light laughter.

JOURNAL OF FRENCH LITERATURE.

Sicily, Naples, and Genoa, in 1843. By PAUL DE MUSSET.

THIS work of M. DE MUSSET is essentially French, both in feeling and construction. Evidently upon the most comfortable terms with himself, our traveller puts forth his opinions and his judgments with all the *à plomb* of a literary Cerito; and interweaves, even with his descriptions of places, so much of his own individuality, that he is somewhat difficult to follow upon paper. Nevertheless, there is much to amuse in the picture which he has drawn of Sicily, taken as a whole, and divested of the affectations with which he has overcharged it. We use the word *amuse* advisedly, for M. DE MUSSET contents himself with what chances to pass before his eyes: he has no repose of spirit; no care or interest to spare to the glorious past; and, unlike M. CHARLES DICTIER, whose work upon the same country we noticed last week, he brings neither historical nor archaiological scholarship to the illustration of his subject. If his exclamation may not, like that of one of his own kings, be, "Le royaume, c'est moi," he may at least declare, "Le Liose, cest moi," for all the man is therein betrayed to the reader as thoroughly as though he had been his intimate for years, *gratis anhelans, multa agendo nihil agens*. Still, M. DE MUSSET is a pleasant companion enough, and occasionally gives proof that, with a little more care, and a more moderate opinion of his own merits, he might produce a better work. His brain must resemble a kaleidoscope—it contains all the materials necessary to work out harmonious combinations, but the steadiness is wanted to maintain them; and there is an affectation of sarcasm paraded upon all subjects, and upon all occasions, which would barely be tolerable were it supported by a corresponding display of wit; to which, however, our author can make no justifiable claim whatever.

We have already, in a previous paper, remarked upon the Anglophobia which is at present raging among the French writers; and which, in its harmlessness, we account to be irresistibly amusing; poor M. DE MUSSET is actually rabid; as witness the very opening of his book.

ENGLISH AND FRENCH TOURISTS.

This is the simple recital of an excursion in Sicily, which I did not terminate without some encumbrances. Accounts of travels are very interesting for those who write them, because they are always compelled to be before the scenes themselves. There is no event too trifling to deserve mention, when one has personally figured in it. Despite the difficulty of avoiding this evil, I will put as much severity as possible in the choice of the details.

I have always admired those Englishmen who traverse the world without attaching themselves either to persons or things. Life is to them like a magic lantern, and by a just reciprocity they are for others nothing more than Chinese shadows. It is thus that they accomplish with exactness their end of being only English gentlemen who travel; and as this advantage never escapes them, I believe them to be perfectly happy. We fools of Frenchmen scarcely arrive in a town before we lose sight of our purpose. We are touched by the kindness which is shewn to us; we form friendships with people, and, God pardon me! we sometimes go so far as to burn ourselves at the flame of a pair of fine eyes. Then we fail to follow the itinerary already traced; we remain six months where we were only to have stayed a week,

and when we are absolutely compelled to leave, our heart is pained, a tear is in our eye, and we forget at the hotel our caoutchouc cloak.

At page 32 of the same volume the disease becomes still more rampant. Thus writes the author, of a nation about which he has, no doubt, possessed admirable opportunities of observation :—

THE ENGLISH IN 1845.

England will perish from intemperance, like Alexander the Great. Some day the hundred millions of Indians over whom she rules will become tired of obedience, and the captain of artillery who governs the first insurgent province will be informed of the fact too late by a drunken courier. He will himself require a delay of twelve hours to rid him of the punch of the overnight. His messenger, swelled out with spirituous drink, will burst under the hot sun on the road to Calcutta ; and, when the news at last reaches the palace of the Governor-General, it will find him under the table !

Enough, however, of this impertinent absurdity ; our business, as on reading the title of the work we supposed M. DE MUSSET'S to have been, is with Sicily. The tourist reached Messina by steam, and he found on board a gormandizing, wine-swilling English tradesman, with a pretty daughter, who, on the second or third day of their acquaintance, volunteered to confide to him her tale of unhappy love ! On his arrival he sallied forth to visit the town, which he found to be gloomy and inert. Here is his amusing account of

THE STREETS IN MESSINA.

The streets have not been swept since the time of the first Greek colonies. Never did I see so much dust, so many bits of straw, or so many pieces of flying paper. If any one were to look closely, I would lay a wager that they would find some MSS. upon papyrus among these vagabond fragments. They make strange noises when the wind drives them along ; and, in a few centuries, it will be necessary to dig for Messina through old paper, as Pompeii was excavated from the cinders of Vesuvius.

A tolerably good idea of the tone of the book may be gathered from these extracts. Now and then, for a brief interval, M. DE MUSSET vouchsafes to be serious. We will give a few examples of his better vein.

THE SICILIANS AND THE NEAPOLITANS.

The Sicilian is intelligent, proud, and passionate. He unjustly despises the Neapolitan, who would be at least his equal, if he had more natural dignity. The two people might suit each other and love each other ; they detest each other with all their hearts ; and as they both cling to their antipathies, it is in vain to reason with them. One never sees a Sicilian and a Neapolitan shake hands. On our way to Messina, we were accompanied by four inhabitants of Catania, who never opened their mouths because the *courrier* was a Neapolitan ; they restricted themselves to conversing by looks, signs, and gestures ; it is a method of discourse which they carry to a degree of perfection that can only be appreciated when they translate their dumb show into words. Never were a people better organised to be conspirators. The most sagacious eye could not penetrate the thought which they wish to conceal. Despite this profound dissimulation, they are open, frank, and gracious to those they love, and particularly to foreigners from whom they have nothing to fear. They will relate their hopes, their projects, and their desires to a stranger, who would naturally consider them imprudent and incautious, because he would not be aware with what admirable exactness a Sicilian guesses the sentiments of those to whom he speaks.

THE WOMEN OF PALERMO.

The true Palermitaine is slender as the Venus of Syracuse ; but, like her, she has the feet and legs too substantial. It is superfluous to mention the extraordinary size of her eyes, for in all Sicily there is not a pair of small ones. Those of Palermo have a peculiar softness, and an expression of kindness which, as I have been assured, rarely deceives. Their features are in general regular, their walk careless, and in all their appearance may be remarked to an extreme degree the true instincts of the woman *par excellence*. In Sicily levity and coquetry are not mere jests, as in the North, for they are based upon the sensuality of old times, heightened by warm blood and African passions, and constituting an interesting whole produced by the admixture of the Greek and Saracenic races. The Palermitaine attaches herself speedily and strongly. An affair of the heart is always a grave matter with her. Foreigners have been often caught, like Rinaldo in the meshes of Armida, who could never have escaped had not the infidelity of the enchantress delivered them. Other adventurers have fared less happily, and bear upon their faces, or between their ribs, traces of Sicilian jealousy.

M. DE MUSSET affects much respect for the religious feelings and habits of the Sicilians. We leave our readers to make their own comment upon the following story :—

THE PRINCE AND THE SAINT.

We were invited to dine with the Prince P***, and, on leaving the table, we walked in his beautiful garden, of which he gave us the history as he gathered some Japanese medlars. Three years ago it scarcely contained a dozen trees. The plantations had not yet been commenced, when a procession, issuing from the neighbouring little church of St. Francis de Paul, requested permission to enter the garden. The prince, having nothing to fear for his flower-beds, opened his gates. The procession moved in, with a band of musicians at its head, accompanying the silver statue of the saint, and followed by a great crowd. Before the tour of the garden had terminated, the spectators distinctly saw the statue raise its arm, and give its blessing to the house, to the grounds, and without doubt also, to the obliging proprietor. The miracle created much conversation, and every one believed that it would cause the house of Prince P * * * to prosper ; and, in fact, in less than three years, the soil was filled with rare and precious plants, trees from all countries, succulent fruits, and delicious flowers. All these things sprang from the blessed soil in profusion, making it the richest pasture in Palermo. No one had a doubt upon the subject of the miracle, except the prince, who appeared to me to suspect that his gardiner, and the enormous sum which he has spent upon his grounds, had powerfully assisted St. Francis de Paul in his good intentions.

Here is the best thing in the book.

A TUNNY-FISHING.

The tunny-fishing takes place at Palermo about the middle of May. It is a time of festival and fortune for the fishermen. Some days previously a number of coasting vessels establish themselves as a *cordon* of observation along the shore, and at the Cape de Gallo ; immense nets having been already spread along the bottom of the Mediterranean, at the spot over which the poor creatures pass every year, and constantly suffer themselves to be taken. In front of the caravan of fish are lighters, which can be seen at a great depth, and a courier is instantly dispatched to Palermo to announce the arrival of the tunny. The messenger generally reaches the city about midnight ; and at two o'clock the fishing population leave the town. We were in bed when a noise like that of a popular outbreak made us rise at once. *Le borgo* had already departed *en masse*, and the waggons were rapidly following. All the public carriages were provided with a third horse, decorated with bells. We made a bargain with one of these, and started. Waggons filled with people and fishing implements were travelling at the pace of mail-carts, by means of relays. One might have imagined that the inhabitants of Palermo were flying at the approach of a party of Normans or barbarians. The common people had exchanged their velvet vests for linen gaberdines. At daylight we arrived upon the shore, where a great number of boats were in waiting for the actors and spectators of the scene. The boats soon formed a semi-circle in battle array round the nets, within which the tunny were doubtlessly still asleep. The tunny, although of great size, is not gifted with much intelligence. He acts from innocent and simple instincts. That of emigration drives it to its ruin, on account of the regularity of its route and the wickedness of man. When once it runs, head-foremost, into the nets which bar its progress, the poor animal has no idea of turning back or of making a circuit. It endeavours to pass over the obstacle, and rises to the surface. There it is that its enemy awaits it, warned of its approach by the foam and fretting of the waters.

As soon as the battalion of tunny appear, the fishermen strike and stab with hooks and spears of iron. The more they kill the more victims present themselves. In an instant the whole scene is one sea of blood ; the spectators even are inundated with it. Ferocious cries attest the joy of the executioners. The massacre is horrible. Some of the boats are upset by the convulsions of the fish ; that is the only danger to which the assassins are subjected. Nothing is thought of but general destruction. In the confusion of despair the tunny remain a considerable time within reach of the boats, then they attempt to escape, and dive to discover some other outlet ; those which have not been struck succeed ; others, mortally wounded, go and expire in the open sea ; the principal number remain on the field of battle ; and when no more can be found to kill, the dead fish are collected and packed into the boats, whence they are ultimately transferred to the waggons, which return triumphantly to Palermo.

And here we take our leave of the volumes of M. de MUSSET ; and with the less regret, that throughout the volume and a half occupied by Naples and Genoa, we have not been able to discover a single paragraph which appeared to us to

be worthy of transcription. We see a work of fiction from the pen of this gentleman announced in a late list of novelties, and until it reaches us we are content to await it patiently in the hope of better things to come.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SWITZERLAND.

TO THE EDITOR OF THE CRITIC.

SIR,—I avail myself of the excellent and timely novelty you have introduced in devoting a department of your periodical to the travelling portion of the community, to ask of those who may have instituted inquiries, anticipatory of their own summer tour, whether the recent disturbances in Switzerland have in any manner interfered with the conveniences of travelling in that country, and if a family, comprising ladies, may undertake a tour there with perfect safety? As this question has, I know, occurred to others, any of your readers who can resolve it will be doing a service to many besides myself by communicating the results of his inquiries through the useful columns of THE CRITIC. Yours, &c. A TOURIST.

London, July 1, 1845.

BADEN-BADEN. — Avoid the *Hôtel d'Hollande*.—SENEX. [We agree with our correspondent; it was our misfortune to sleep there once.—ED. CRITIC.]

FRANKFORT.—(*From a correspondent.*)—Select the *Hôtel de Russie* if you can find a bed there, which it is difficult to do. You will find one of the waiters, a Swiss, I forget his name, a most intelligent fellow, and as obliging as he is well-informed. Remember the waiters on the continent are of a different class from ours, and should be treated differently. They are for the most part sons of hotel-keepers apprenticed to learn the business, and hotel-keepers are generally the magnates of the continental towns, both in fortune and position. Therefore treat the waiters with courtesy, and you will be richly rewarded in civility and attention. We English usually behave so churlishly to them, that when they *do* meet a civil Englishman, who will carry himself to them as *they are*, and not as if they were like our waiters at home, they are vastly pleased, and cannot sufficiently express their sense of such unwonted politeness. Be assured there is value in this hint of AN OLD TRAVELLER.

ART.

AN agreeable task is the critic's when the subject under consideration is of a nature congenial to his sympathies, and so handled as to win his admiration and justify his praise. The charming series of designs before us are the work of a gentleman already favourably known to the public by his set of published compositions from *Prometheus Unbound*, which were submitted in competition for the Art-Union premium of 1843, and to which that society voted the sum of twenty pounds as an honorary reward, after giving the original premium to the striking and masterly illustrations of *The Pilgrim's Progress*, by Mr. SELOUS, a notice of which appeared at the time in this journal.

The compositions under notice are fifteen in number, folio-size, engraved in outline, and illustrative of scenes in *The Tempest*. Those poems, dramatic and other, which combine within their parts a supernatural with a heroic action, are ever, from the varied imagery they present, the best fitted for the purpose of the painter. The impersonation of abstract ideas, such as fancy, mirth, hope, grief, and joy, and the embodiment of ideal beings, such as angels and genii, afford him opportunity for the display of infinite variety and beauty. Nor perhaps does the entire range of our dramatic literature offer a work which abounds with these elements in choicer or more exquisite profusion than the one which the artist has here selected for illustration.

In the composition of these outlines Mr. PATON gives undeniable evidence that he has carefully considered his author; for there is a propriety and truth in every figure and accessory introduced, which nothing short of the most thoughtful study, the most complete surrender of the imagination to the writer, and to him only, could have secured. These qualities, indeed it is, with graceful combination and beauty of form, that chiefly characterize the work. We have little originality, and there is occasionally a lack of that most essential requisite *expression*, to which latter deficiency in future undertakings of a similar nature Mr. PATON would do well to be more attentive. Not that in these compositions there is a glaring want of this quality, which is not the case, nor that where visible it is incorrect; but, taken generally, there is a feebleness in this particular, which detracts from the force and unity of merit of these otherwise clever outlines. Of the entire set, the most to our taste is Plate 7, where first on the storm-beaten shore Prospero shews Ferdinand to the astonished and delighted Miranda. Here the expression, equally conveyed by the attitude of the figure, as by the lovely countenance of the Princess, is perfect. Very beautiful, too, is Plate 6, which represents a group of water nymphs, hurrying through the waves, to join a band of Naiads and youths dancing on the shore, while Ariel above sings that sprightly song,

> "Come unto these yellow sands,
> And all take hands."

The figures of Miranda and Ferdinand throughout are exquisite; the first is a perfect model of feminine grace and loveliness; the last that of a finely-formedyoung man, on whose countenance beams intellect and the indication of an amiable temper. The drawing, from first to last, of these illustrations is good; the composition, always happy, is in many places eminently fine; the draperies are well cast; the accessories, as before stated, are ever appropriate; and the back-grounds—too often slovenly and hasty in similar works—are carefully elaborated. Taken altogether, Mr. PATON has produced an elegant and handsome series of illustrations, and we congratulate him on his success accordingly. It remains to add that the publisher and printer have done their duty, and turned the book out of hand very completely. As this, therefore, is really a work that will do credit to the taste of the most fastidious in selection, one, too, that makes an elegant and intellectual and amusing adjunct to the library or drawing-room table, we unhesitatingly recommend it to our readers.

ROYAL COMMISSION OF FINE ARTS.—It will be recollected that the result of the exhibition of fresco paintings in Westminster-hall last summer was the selection by her Majesty's commissioners of six artists, who were commissioned to prepare cartoons, to be subsequently (if approved) executed in fresco, for the decoration of the six arched compartments in the House of Lords. These cartoons were to be accompanied by coloured sketches and specimens of fresco painting, and sent in for exhibition during the first week of last month, each artist being guaranteed the sum of 400*l.* as his remuneration for the fresco. By the terms of the notice issued by the commissioners, the subject of these frescos were required to be illustrative of the functions of the House of Lords, and of the relation in which it stands to the sovereign. Three of them were required to be personifications or abstract representations of Religion, Justice, and the Spirit of Chivalry; and the remaining three (corresponding with such representation, and expressing the relation of the sovereign to the church, to the law, and, as the fountain of honour, to the state) were required to illustrate the following historical events: *The Baptism of Ethelbert; Prince Henry (afterwards Henry V.) acknowledging the authority of Chief Justice Gascoigne*; and *Edward the Black Prince receiving the Order of the Garter from Edward III.* The names of the six gentlemen commissioned were as follow:—Richard Redgrave, A.R.A., William Cave Thomas, Charles West Cope, A.R.A., John Callcott Horsley, William Dyce, and Daniel Maclise, R.A.; but the commissioners not binding themselves to adopt the work of either, unless fully approved, and being desirous to give opportunity to other artists to exhibit specimens of their ability, gave notice at the same time that the six subjects above mentioned were offered for general competition, and that three premiums of 200*l.* each would be awarded to those artists who should furnish specimens respectively deemed worthy of one of them, by judges appointed to decide on the relative merit of the works. It is gratifying to be enabled to state that this offer has been taken advantage of by upwards of thirty artists, whose works are now arranged round the walls of Westminster-hall. The exhibition is in many respects far more interesting than any which have preceded it. The cartoons (thirty-seven in number) include some very beautiful designs. They are each six feet high by nine feet wide. The finished sketches sent in by some of the artists are perfect gems of art, and the majority of the specimens of fresco painting shew a great improvement on those exhibited last year. It is under-

stood that the several works executed by the six selected artists are considered most satisfactory by the commissioners, but the competition invited has, it is said, had the effect of calling forth talents of a very high order, which may hereafter make their more fortunate brethren "look to their laurels."

INSTITUTE OF THE FINE ARTS.—The first conversazione of this Institute was given on Saturday last at Willis's Rooms, and the attendance of its friends and members was very considerable. The tables were covered with drawings of all descriptions, and various works of art were placed about the room, the examination of which afforded two or three hours of very rational pleasure. From the appearance of the company, and the interest which seemed to be manifested by all, it may be presumed that the institution is likely to take a firm root, and to become a point of union among those artists whose social position it strives to improve and consolidate. The presence of a few ladies would have been an advantage. Such meetings as these derive a principal charm from their drawing-room character, and measures should be taken in future to insure the brilliancy of aspect and cheerfulness of tone which the softer sex invariably diffuse.

The city of Ghent is about to erect a colossal statue to its famous tribune, Philip Van Artevelde.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—MERCADANTE'S *Il Giuramento* (the Oath) was revived here on Tuesday, and, sooth to say, with somewhat indifferent success, though supported by as powerful a cast as ever the composer was blessed withal. For a work to fall at all flatly on the ear, with such singers to sing it as GRISI, BRAMBILLA, MORIANI, and FORNASARI, argues terrible deficiency and feebleness in the composition, and such is the case with *Il Giuramento*, though it presents us here and there with a nice bit. Her Majesty was present with Prince Albert, and there was, as usual, an immense attendance. The ballet was *Esmeralda*, and there was a divertissement sustained by the Viennese *danseuses*, and other choregraphic notabilities, so that Terpsichore, at all events, had full reason to be satisfied, and they who her adore. *I Puritani* was performed on Thursday, for the last time this season, with a selection from *Roberto Devereux;* and TAGLIONI danced,—ye gods, how she did dance! She really looks as well as ever, and is as light and airy, so that for her to talk, as she does, of farewell nights, absolutely farewell nights, and only three or four of these, seems really adding insult to injury. While she can dance, she has no sort of right to leave off dancing; great artists of every class live not for themselves, but for the world. There is one comfort, however, that ninety-nine chances to one, when she does retire, she will not be able to stick to it for more than a few months, and there is this other contingent comfort, that if she does stick to it, it will be only out of obstinacy, and she herself, as well as we, will be perfectly wretched.

FRENCH PLAYS.—ST. JAMES'S THEATRE.—M. ARNAL appeared on Monday in a vaudeville new to this country, but which has been applauded to the echo in Paris, and deservedly, for it is one of the most agreeable comediettas we have seen, even at this theatre, so fertile of the agreeable; it is entitled *Renaudin de Caen;* its hero is a simple Norman, the son of a merchant at Caen, who is sent by his father to marry the daughter of an old friend in the capital, he having himself never seen either the old gentleman or the young lady. It so happens that the house to which he is consigned has a second entrance in another street, and hence the mystification in which honest *Renaudin* becomes involved; for ere he has delivered his credentials, he falls in love on his own account at a public ball, and *Mademoiselle Suzette*, the object of his flame, finding out who he is, and having a brother who is secretly betrothed to the old merchant's daughter, *Zoe*, and having, moreover, taken a fancy to *Renaudin* herself, appoints him a meeting at *Zoe's* own house, giving him the address, however, which does not appear on the superscription of his letter. Hereupon ensue a series of the most amusing mystifications, which, of course, are cleared up in due time to the satisfaction of all parties concerned. ARNAL enacted the simple, earnest, blundering, hearty young Norman to the life, and he was supported *con amore*. Mr. MITCHELL, the lessee, took his benefit on Wednesday, and for his sake, as well as for that of the public, whose character for ordinarily decent gratitude was at stake, we were glad to find a crowded and brilliant house assembled to do honour and yield profit to the occasion. Mr. MITCHELL'S management of this establishment has been characterized by an energy and spirit, a tact, an honourable adherence to engagements inevitably involving heavy expenditure, which well entitled him to the solid thanks of the public. Her Majesty, accompanied by Prince Albert and the King and Queen of the Belgians, and attended by a large suite, was present. The entertainments comprised *Les Gants Jaunes*, *L'Homme Blasé*, and *Passe Minuit*, in all of which M. ARNAL appeared. The season extends to but three nights more, of which those, more especially, who have not yet witnessed these entertainments would do well to avail themselves.

M. PHILIPPE'S last *Matinee Mystérieuse* takes place at this theatre on Monday.

FRENCH OPERAS.—COVENT GARDEN.—*La Muette de Portici*, as produced at this theatre by the Brussels company, is as different a thing from the *Masaniello* to which English playgoers have been accustomed, as fine linen from "filthy dowlas." We do not know whether it is to be repeated, for unhappily the brief season of this company in London for the present year necessarily terminates on the 15th; but if the opportunity does occur, let all who desire to hear AUBER'S *capo d'opera* worthily sung, resort to Covent Garden on the occasion. *Robert le Diable* was repeated, in consequence of the extent of applications for it, on Wednesday. On the Monday, after some delay, owing to hesitation, perfectly unaccountable to us, on the part of the Lord Chamberlain's office in granting, forsooth, permission to act it, MEYERBEER'S opera, *Les Huguenots*, was produced in a style corresponding with its transcendent merits. We observed of *Robert le Diable*, that, previous to the arrival of the Brussels company here, the only other occasion on which the English had had opportunities of hearing it adequately given, was at the Italian opera, under the direction of MONCK MASON. With reference to *Les Huguenots*, no such exception occurs; that extraordinary work has never before had any thing like justice done it in England. True, LUTZER proved herself justly entitled to her *soubriquet* of "the bird," by the peculiar quality of her voice, and STAUDIGL is unquestionably a great singer; but as a whole, the German presentation of the work was a miserable failure, while, as a whole, its performance by the Brussels company is a masterpiece—a combination of perfectly disciplined talent directed to one great result. Madame LABORDE takes the part of *Marguerite de Valois*, and is just what we should imagine *Marguerite de Valois* to have been and looked. Her portion of the *Si j'étais coquette* was perfectly charming. ZELGER'S *Marcel* exhibits a thorough appreciation of the character of the *rôle*, with entire capability of fulfilling the conception. M. LABORDE is the *Raoul*, and embodies the part in a most satisfactory manner. *Valentine*, his mistress, meets with a competent representative in Madame JULIEN. We sincerely trust that there may be another operatic *interregnum* at Brussels at Christmas, so that the *troupe* may be able to renew their visit.

PRINCESS'S THEATRE.—There is a laughable little piece nightly presented at this theatre, founded on JERROLD'S inimitable *Caudle Letters*. Little OXBERRY is especially amusing in it. The whole of the arrangements here are deserving of high commendation; the entertainments are judiciously varied—tragedy, comedy, and opera—drama, farce, and ballet—all being more or less worthily represented; and the result, as far as we have observed, appears to be as pleasant to the lessee as to his audiences.

STRAND THEATRE.—We looked in at this theatre on Tuesday, and found a tolerable attendance, susceptible, however, of augmentation. The performances, commencing with the adaptation of JERROLD'S *Story of a Feather*, comprised a farce, which we missed, wherein Mr. SMITH took the chief part; the farce of the *Married Bachelor*, sustained with considerable animation by Miss HAMILTON, and Messrs. J. WEBSTER and BOYCE; and two other pieces—variety enough, in all conscience.

ASTLEY'S.—Mr. GOMERSAL has resumed those impersonations of the Emperor NAPOLEON which heretofore procured for him so much applause, and for the DUCROW treasury so much profit. The applause continues, and we hope the profit has not fallen off. The imitation in itself is really very clever; and, independently of this, the entertainments provided under Mr. BATTY'S more immediate direction are excellent of their kind, and, moreover, we believe, *unique* in the metropolis.

ROYAL POLYTECHNIC INSTITUTION.—Monday and during the week Dr. RYAN has been lecturing on the causes of steam-boiler explosions, especially those arising from incrustations. The lecturer gave it as his opinion, and that opinion supported by experiments, facts, and citations of high authority, that by far the greater number of steam-boiler explosions arise from incrustations of the boiler, which prevent the boiler from acting efficiently as a conductor of the heat of the fire to the water. Almost all water, whether it be spring or sea water, holds a quantity of bicarbonate of lime in solution. The heat necessary to produce steam drives off one portion of the carbonic acid gas of this bicarbonate, and reduces it to the state of carbonate of lime, an insoluble compound, which is precipitated against the sides of the boiler, forming an incrustation, which becomes a nucleus around which other salts crystallize, which salts would not, how-

ever, become crystallized, were it not for the presence of this nucleus. It follows, that if the deposition of carbonate of lime could be prevented, the chances of explosions would greatly diminish. Dr. RITTERBRANDT has discovered a cheap, easy, and safe method of entirely preventing the incrustation of steam-boilers, with chloride of ammonium (the common rock sal ammonium of commerce), which prevents the formation of the insoluble carbonate of lime. The chloride of ammonium is composed of chlorine, ammonia, and hydrogen, and carbonate of lime of carbonic acid gas, calcium, and oxygen. The hydrogen of the chloride unites with the oxygen of the carbonate, and forms water. The chlorine of the chloride unites with the calcium of the carbonate, and forms chloride of calcium, a salt which is perhaps one of the most soluble compounds known; and the carbonic acid of the carbonate unites with the ammonia of chloride, forming corbonate of ammonia, a compound so volatile that it is driven off in the shape of vapour, and thus the incrustation of the steam-boiler is entirely prevented. Dr. RYAN deserves great credit for the plain and admirable manner in which he gave his explanations, which were so clear that a person, however ignorant of chemical science, could not fail to understand him.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

OBJECTS, USES, AND ADVANTAGES OF MESMERISM.

NEXT in value to the aid which the phenomena of Mesmerism bring to the cause of religion, is the insight they afford into the physiology of mind.

In the mesmeric condition we see mind under an aspect altogether new, operating and operated upon in a manner peculiar to that condition, more distinctly revealed to us than in any other state with which we are acquainted, and offering itself for practical experiment under circumstances that enable the observer to bring within the region of science, based upon demonstrative proof, that which hitherto has been little better than dreamy hypothesis and ingenious conjecture, offering to every man a field for the indulgence of his own fancies, because positive *facts* were wanting upon which the philosopher could build a secure and substantial edifice.

Mesmerism supplies precisely the information so long wanting to the science of mind; it offers an almost unlimited fund of *facts*, from which the philosopher may advance beyond his wildest hopes into the region hitherto wrapt in cloud; and explore fields of the loftiest knowledge, as yet unrevealed to human intelligence.

A review of what Mesmerism has already established, and of the probabilities it suggests, will best introduce the prospects it opens to the inquirer.

In the first place, Mesmerism establishes the existence of mind as distinct from the visible corporeal substance, and thus sweeps away the entire philosophy of materialism, and opens to man loftier destinies and duties here and an assurance of an immortal future. We have already stated the phenomena which prove the immateriality of mind, and therefore it is unnecessary to repeat them here; the phenomena that shew how matter and mind are connected and influence each the other remain to be reviewed.

A striking circumstance arrests our attention at the first step in this inquiry. At the very moment that the mind is receiving impressions by other than the ordinary media of the senses; even while it is seeing without the aid of the eye, and hearing without the help of the ear, it may be directly operated upon through the brain, and any one of its faculties excited at the pleasure of the experimentalist. Thus, although all the external senses are entirely shut up; though sight, hearing, taste, feeling are asleep; though a limb may be severed without pain or consciousness, the brain is not only as vigilant and as sensitive, but even more so than in its ordinary condition. The touch of a finger will call into instant activity any one or more of its faculties. The mental emotions may be awakened at will, and the mind, that is so far released from its usual bondage to the body as to communicate directly with other minds, read their thoughts, hear their commands, feel their emotions, share their perceptions, yet remains so much linked to the organism through which alone it is permitted to communicate with the material world, that its language is elicited by a touch, its dreams are moulded at the pleasure of the operator.

Let us next see what are the facts in relation to this strange state of being, which may be deemed *established*—meaning by that expression, facts upon which all observers are agreed, and which indeed occur so frequently, that no man who admits that there is any truth in Mesmerism, and has seen aught of it, would dispute their existence. But as we are approaching the limits assigned to this topic, and details so important to the argument cannot be hastily dismissed, we will defer this branch of the inquiry for discussion in another article.

MEETINGS OF THE SOCIETY FOR THE INVESTIGATION OF MESMERISM.

SINCE the last report, three or four meetings of the society have been held; as the experiments offered no novelty, but were simply investigations of some of the more familiar phenomena of Mesmerism, a formal report of them has been deemed unnecessary, and the society having adjourned for the vacation, we now briefly state some of the more curious and interesting of the observations and communications.

PHRENOLOGICAL MANIFESTATIONS IN ORDINARY SLEEP.—At one of the meetings of the society, a suggestion had been thrown out by a member, whether in fact the mesmeric condition was essential to the development of the phrenological phenomena, and whether it is not that, in truth, the brain is always subject to the influence of other minds when volition is suspended, and this alike in the natural as in the mesmeric sleep. A few days afterwards another of the members availed himself of an opportunity that offered to try the experiment, and the result he now detailed to the society.

It was made upon his brother, a young man, aged 23. The time was the early morning, before he had awaked from his night's sleep. The finger was first placed upon the region of the organ of mirth. For some two or three minutes no perceptible effect was produced. But presently there was a quiver of the lip, then a curl, then a laugh. The finger was changed to veneration; after awhile the smile vanished, and the countenance assumed the solemn expression peculiar to the excitement of that emotion. Again was the finger changed to combativeness; after the same interval, a frown was seen to gather on the brow; there was a grinding of the teeth, and then a muttered expression of anger. Once more the finger was restored to mirth. The signs of fury passed away, and presently the smile came back, then the hearty laugh, in the midst of which it was deemed desirable to wake the patient. On waking, he exhibited the usual appearance of a person coming out of sleep, but he laughed immoderately, and continued to do so for some time, in reply to inquiries, stating that he did not know why it was, but he could not help it; he felt in one of those merry moods when he must laugh at any thing or nothing. He was quite unconscious of the experiment that had been tried upon him; and, being asked what he had been dreaming about, he related a wild sort of dream, in which the successive influences of each of the organs that had been touched were distinctly to be traced.

This novel and interesting experiment seems to shew that whenever volition is suspended, the brain may be excited by contact of some other human being. If this be so—and how otherwise can the experiments narrated be accounted for?—not only is a new and wide field of speculation offered, but immediate practical results will follow. For instance, by the same process may the dreams of the sleeper be modified. Thus may undue excitement of any faculty be subdued; thus may habitual good emotions be encouraged, and bad ones checked; and if there be a power of rousing the activity of the mental organs in ordinary sleep, may there not be the same power of affecting them in the waking state of the body? At all events, it is a subject that demands immediate and careful investigation and experiments, and if any be induced to make trial and note results, a communication of their experiences to THE CRITIC will be a valuable assistance towards the progress of a science in which every step that we advance only lifts the veil from a still more vast expanse, that must be explored ere we can say that we have reached the limits of human research, and that we have learned of mind and its operations all that it is permitted to man to know.

MR. BRAID, MR. HOLBROOK, AND MR. HALL.

TO THE EDITOR OF THE CRITIC.

SIR,—If it were not that the theory of Mr. Braid is as changeable as a chameleon and as hungry as an ostrich—in the name of its propounder ready to adapt itself to or swallow up every thing coming in its way—there might be some hope in a discussion of its merits. For one, valuing his facts, I would not for a moment think less of Mr. Braid because he candidly expressed a change of opinion; but between such an expression and the assumption that he is right in setting all testimony at defiance unless it tend to qualify his own peculiar dogmas, there is a great difference.

I have called his theory a changeable and hungry one, and for this reason:—there was a time when he contended that the phenomena exhibited by La Fontaine and other Mesmerists arose entirely from the patient's *eyes being fixed* in one position. Mr. Catlow, of Manchester, proved that somnolence might be induced as easily by a continuous action upon any other sense as upon that of sight. Without giving Mr. Catlow or any other person credit for the hint, Mr. Braid afterwards quietly recognises the principle in *his* theory. In process of time it is proved that, without the eye being strained or fixed at all, and without somnolence being induced by any means, and even without the patient's precognizance, *local* effects can be produced quite as striking as those of Mr. Braid in his sleeping patients; whereupon Mr. B. so modifies and adapts his theory as to take in so much of this as suits his purpose; pretends to explain away the rest; hints that he has tried the experiments himself to such an extent as gratified *his own* curiosity; then modestly denounces me and others for trying them ourselves, on the ground that they are injurious, not to his theory, but to the patients, and advises us to cease trying them. The fact is, I, for one, should have relinquished them long ago, without his advice, if I had found them half as destructive of the health or comfort of my patients as they are of *his theory*: but as matters at present stand, I feel myself as well qualified to practise them as Mr. Braid, and shall continue to do so, either before your society for investigation or elsewhere, since I have yet seen no real injury they have done to any one, though, on the other hand, I believe them to be significant of several most important therapeutical powers.

In reference to Mr. Braid's insinuations against me and Mr. Holbrook, in his letters inserted by you in THE CRITIC of May 24th and June 14th, I give you a few simple statements, which ought to make him blush for his honour. As is well known, my experiments at Sheffield in the year 1842 excited considerable interest throughout the country. I was not then, nor have I ever been, *merely* what is understood by Mr. Braid's insinuation of a man "travelling about the country." Besides, being a member of the press, I was resident governor of a highly respectable philanthropic institution—the Hollis Hospital, Sheffield, and mixing with the best and most intelligent society of the counties of York, Nottingham, and Derby, to which my literary labours had made me welcome. It was possibly owing to this that, when my first lectures on Mesmerism were given (not for my own private emolument, but for the benefit of local institutions), they were attended by not less than 3,000 people; and from that time I found it almost impossible to lead a life of privacy. The most pressing invitations to lecture at York and Nottingham followed; the interest still increased; and Mr. Braid having read some of the reports, by which he learned to induce phreno-mesmeric phenomena—for he had not been able to do so before, though in his book he admits he had repeatedly tried—*he urged me in the most friendly and flattering letters to lose no time in visiting Manchester*, as he wished to see my phenomena and compare them with his own. And I now declare, upon my honour, that had it not been for Mr. Braid taking this course, and so repeatedly pressing me, I should not then have gone to Manchester; nor should I ever have sent for Mr. Holbrook—a young man who would scorn a meanness of any kind—if it had not been for Mr. Braid. Yet now, because Mr. Holbrook has chosen to express his virtuous indignation at Mr. Braid's assumption and exclusiveness, Mr. B. has thought well to stigmatise him as "a traveller round the country" with me, when it is well known to many that he came from his home at Nottingham to Manchester while I was there, after much persuasion, chiefly that Mr. Braid might have an opportunity of comparing upon him the effects of his mode of "hypnotising" with my mode of "mesmerising;" when the result was, that although my manipulations were salutary and refreshing, those of Mr. B. threw him into convulsions, and made him ill for hours after! No doubt Mr. Braid's theory can satisfactorily account for this result: for anything I know, it is capable of explaining the connection between Tenterden Steeple and the flooding of Goodwin Sands; but such are the facts; and I do not therefore wonder at Mr. Holbrook feeling somewhat uneasy when he reads Mr. Braid's deprecations of other experimenters—M. La Fontaine, Mr. Catlow, and myself included.

Mr. Braid seems to find fault with my publication of his letter to me of Dec. 21, 1842, in the first number of the *Phreno-Magnet*. It was in justice to him that I did so, as it professed to give an epitome of his theory. Having given in the same number the theories of Dr. Buchanan and Mr. La-Roy-Sanderland, and not then supposing that Mr. Braid would ever be ashamed of his own, I gave it too, that he might have a fair hearing with the others; and although he saw me not less than between fifteen and twenty times afterwards in Manchester, and paid me in private many more compliments than were agreeable, he never expressed any displeasure at the liberty I had taken with that communication.

To conclude, Mr. Braid has, in the opinion of most experimenters, committed an error in first propounding a theory, and then looking out for facts to support it, instead of waiting to see what facts themselves would teach. Facts have, however, arisen in such abundance and variety, and he has so endeavoured to weave them into consistency, that, at least, his theory is little better than a ravelled web. The philosophy of nearly every letter he has lately written on the subject is this: "I, James Braid, M.R.C.S. have found out a mode of accounting for a great deal that has been done in the names of magic, Mesmerism, &c. in all ages of the world; but as there are some phenomena that the circle I have chalked around me and called my theory does not comprehend—*clairvoyance*, and the indications of an affluence passing from one body to another amongst them—I beg leave to set the testimony of a hundred men, as intelligent and honourable as myself, at naught, until I have proved them by a method of my own. Such experiments, however, as tend to upset my theory altogether, I advise others not to try, as they are injurious and unjustifiable." If any one will take the trouble to read those letters again, he will find this to be the spirit pervading them throughout.

Some time ago Mr. Braid wrote several letters to me, with a view to involve me in experiments which he said were to set the question of *clairvoyance* at rest. It appears, from his recent publications, that he has been inviting a number of other experimenters to aid him in the same scheme. As I had not less faith in my own experience and in the reports of such able philosophers as had previously attested its existence, than in Mr. Braid's intended tests—as I did not suppose that those who question the testimony of Deleuze, Dupotet, Jung-Stilling, Townshend, and a host of other honourable men, would be likely to attach more importance to the assertions of Mr. Braid, I did not choose to insult *my own* understanding and the character of those philosophers, by mixing myself up with any thing implying that the question had not been already long settled; and this, it would appear, has given such great offence to Mr. Braid that he cannot think of any labours with the charity that becomes a true philosopher and a Christian; but must deprecate such experiments as were given before the Society for the Investigation of Mesmerism when made by me, though in the same letter declaring that he has *himself* REPEATEDLY performed such experiments successfully even on powerful men, &c.! Mr. Braid ought to learn, if he does not already know, that such a spirit is neither liberal nor modest.

If I have any thing now to add, it is that, on asking Mr. Holbrook the question, he replies that the sentiments of his letter to you were and still are *bonâ fide* his own, and that Mr. Braid's replication has only tended to confirm them; whilst for myself I have only one regular course in view—to go on hewing out facts from the quarry of truth, and not to run down others merely because they chance to be doing good in a way somewhat different to my own. For I do not for a moment deny the usefulness of Mr. Braid, although it cannot but be regretted that he should set so little value on the labours and feelings of those who chance to differ from him. I am, Sir, yours truly,

59, Pall Mall, London, SPENCER T. HALL.
June 26th, 1845.

A CURE.—(*From a Correspondent.*)—Since my last communication a case has occurred which demands a little space in your "Journal of Mesmerism." Mr. Davey, the professor of Animal Magnetism therein introduced to your readers, has found his benevolent efforts to benefit suffering humanity eminently successful. A young woman of this place, daughter of Mr. Adam Bulley, has for the last three months entirely lost her voice, being unable to utter a word louder than a whisper. Medical skill proved of no avail. Mr. Davey, being introduced to her, gave her hopes of a speedy cure, which have been fully realized.
